THE
MUNICIPAL JOURNAL

No. 618.—Vol. XIII. FRIDAY, DEC 2, 1904 REGISTERED AT THE G.P.O. AS A NEWSPAPER. One Penny.

Official Advertisements.

BOROUGH OF SOUTHWARK.

SANITARY INSPECTOR.

THE Council are about to appoint a SANITARY INSPECTOR, at a salary of £120 per annum, rising £10 per annum, on approved service, to a maximum of £180 per annum

The appointment will be subject to the approval of the Local Government Board, and in accordance with the Public Health (London) Act, 1891, and the General Orders of the Local Government Board.

Candidates must be holders of a certificate from the Sanitary Institute prior to December, 1898, or from the Sanitary Inspectors' Examination Board since that date, and be competent by their knowledge and experience to perform the duties of the office, and the person appointed is to devote the whole of his time to the performance of the duties prescribed.

The officer will be appointed to the district known as St. Pancras district or such other ward as the authority, with consent of the Local Government Board, may determine, and will be required to reside within the borough.

The appointment will be made on the understanding that there will be no pension or superannuation allowance.

Forms of application can be had any day at the Town Hall, Walworth Road, S.E.

Applications on the prescribed forms, accompanied by not more than three recent testimonials, and endorsed "Sanitary Inspector," must be sent to me not later than noon on Monday, January 2nd, 1905.

The Council will proceed to make the appointment on January 18th, 1905.

J. A. JOHNSON,
Town Clerk.

Town Hall, Walworth Road, S.E.
2nd December, 1904.

CITY OF BIRMINGHAM EDUCATION COMMITTEE.

CLERK AND STOREKEEPER.

THE Committee require the services of a Young unmarried Man as CLERK AND STOREKEEPER for the Shustoke Industrial School, near Coleshill. Commencing salary £60 per annum, with board and lodging.

Applications to be made in candidates' own handwriting, stating age, experience (if any), and enclosing copies of three recent testimonials, addressed to the undersigned, on or before Friday, the 9th December, 1904.

JNO. ARTHUR PALMER,
Secretary.

Education Department,
Edmund Street,
24th November, 1904.

PROMOTION impossible without good Penmanship. Rapid tuition. Particulars for stamp. N. Broadbent (Prizeman and Medallist), Alston's College, Burnley.

COUNTY BOROUGH OF CROYDON.

APPOINTMENT OF SUPERINTENDENT OF FIRE BRIGADE.

NOTICE is hereby given, that the Council are prepared to receive Applications for the above Appointment.

The salary will be £150 per annum, with living accommodation at the Central Fire Station, fuel, light, and uniform provided free. Age not to exceed 40 years.

The salary will be subject to an annual percentage deduction in accordance with the provisions of the Superannuation Scheme adopted by the Council under the powers of the Croydon Corporation Act, 1893.

Applicants should be qualified to carry out the administrative as well as the practical working of the brigade.

The person appointed will be required to devote the whole of his time to the duties of the office.

Applications, upon forms to be obtained at the Town Clerk's Office, Town Hall, Croydon, to be sent to me, with copies of three testimonials of recent date, not later than 11 a.m. on Monday, the 12th of December, 1904, endorsed "Superintendent of Fire Brigade."

Recent applicants, if re-applying, need only refer to their former applications.

F. C. LLOYD,
Town Clerk.

Town Hall, Croydon.
30th November, 1904.

BOROUGH OF EALING.

PUBLIC IMPROVEMENTS.

THE Town Council of this Borough hereby invite TENDERS for the WIDENING and IMPROVING EALING ROAD SOUTH and LITTLE EALING LANE.

The drawings and specifications may be seen, and forms of tender, together with schedule of quantities and other particulars, obtained from Mr. Charles Jones, M.Inst.C.E., Borough Engineer, Town Hall, Ealing, W.., any day during office hours, upon payment of a deposit of £2 2s., which will be returned upon receipt of a bona-fide tender.

Sealed tenders, in the envelope provided, endorsed "Tender for Widening and Improving Ealing Road South and Little Ealing Lane," must be delivered at my office not later than 4 p.m. on Thursday, the 8th day of December, 1904.

The Council does not bind itself to accept the lowest or any tender.

Dated this 23rd day of November, 1904.

By order of the Council,
GEO. E. BRYDGES,
Town Clerk.

Town Clerk's Office,
Town Hall, Ealing, W.

In replying to Official Advertisements please mention the "Municipal Journal.

CITY OF YORK.

LEASE OF TOLLS OF SKELDERGATE BRIDGE.

THE Corporation of York give notice that the TOLLS of and appurtenant to SKELDERGATE BRIDGE, YORK, together with the TOLL-HOUSE erected thereon, will be LET by Public TENDER for the term of three years from the 1st day of January, 1905.

The lease will be granted subject to the lessee contracting with such foot passengers as may desire it for a composition not exceeding threepence each person per week in lieu of the usual toll.

The Corporation will retain the statutory power and duty of opening and closing the bridge for purposes of the River Ouse navigation. and the lease will be granted subject to the obligation of opening the bridge for the purposes referred to during the periods prescribed by the Bridge Act, and at such other times as the Corporation may from time to time require, and to the right of the Corporation and its officers, servants, and workmen to enter at all times upon the bridge and toll-house for purposes connected with such opening and otherwise free of toll.

The lessee will be required to pay the rent in advance by equal monthly instalments, and to find sufficient sureties for the due payment of the same, and the performance of the covenants and agreements to be contained in the lease, and also to pay all rates, taxes, and other outgoings in respect of the bridge, toll-house, tolls, and premises over and above his rent.

The draft of the lease and schedule of tolls to be taken may be inspected at the Town Clerk's Office, Guildhall, and further information may be obtained there.

Sealed tenders or proposals, with the names and addresses of the proposed sureties, to be sent to the Town Clerk's Office, Guildhall, York, not later than 10 o'clock in the forenoon of Thursday, the 15th December, 1904, endorsed "Tender for Bridge Tolls" on the outside.

The highest or any tender will not necessarily be accepted.

By order.
R. PERCY DALE,
Town Clerk.

York.
30th November, 1904.

TENDERS FOR CONTRACTS, &c.—Official advertisements respecting works, supplies, &c., should always be sent for insertion in the MUNICIPAL JOURNAL, as its columns are constantly referred to by Contractors to Public Bodies, and the paper is generally recognised as the best medium for the purpose, its extensive circulation amongst those interested in public tenders ensuring the widespread publicity desired by County Councils, Corporations, District Councils, Boards of Guardians, &c. when inviting tenders for contracts of any kind.

(Official Adverts. continued on page 950).

THE MUNICIPAL JOURNAL
ESTABLISHED AS "LONDON." TWELFTH YEAR OF ISSUE.

No. 618.—Vol. XIII. DECEMBER 2, 1904.

ANOTHER NEW BOROUGH IN GREATER LONDON.

Wimbledon is to Have a Charter of Incorporation and the "Proper Municipal Government" it Desires. It is Well-Equipped with Local Institutions, and Quite Ready for a Mayor, Alderman, and Councillors.

THE announcement that the Lords of the Privy Council have decided to recommend the grant of a Charter of Incorporation to the urban district of Wimbledon will be received with gratification by the bulk of the residents in that favoured and thoroughly progressive suburb of London. It was in October of last year, as mentioned in the *Municipal Journal* at the time, that the petition praying for incorporation was formulated by a committee of active residents, headed by Mr. W. H. Hamshaw, the chairman of the Urban District Council, and the fact that the prayer has been heard and granted in so short a time is regarded as striking evidence of the strength of the case then presented. A sketch of the municipal history of the district was given in our issue of October 30, 1903, and it is only necessary to briefly recapitulate the main points. Wimbledon, which covers an area of 3,220 acres, and has a population of nearly 50,000, is the second largest and most important town in the county of Surrey. It has a rateable value of £380,000, and its indebtedness at the close of last year was £326,637. It is supplied with gas by a company, but the Council has spent £122,070 on electric lighting works, which last year showed a profit of £2,027, after providing for the repayment of loans and interest. The Free Libraries Acts are in force, and a fine technical institute has been erected at a cost of £7,000. The Council also owns public baths, an infectious diseases hospital, five fire stations (the central one costing £5,000), sewage farms, dust destructors, four recreation grounds, and a cemetery, the Council being the Burial Board for the district. The Council's cemetery has an area of about 20 acres, and a mortuary has been erected upon part of this land. The sanitary arrangements, taken as a whole, are thoroughly modern and up-to-date, and the death rate for 1903 was only 11·5 per 1,000 per annum, a figure which compares favourably with that of any other district. The Council has also taken up its educational duties in a businesslike manner, and the scheme it drew up was the first to be approved by the Education Department.

PUBLIC BATHS.
SUB FIRE STATION.

TECHNICAL INSTITUTE.

SEWAGE PUMPING STATION, &c.
ELECTRICITY WORKS.

It will be seen that Wimbledon has all the necessary qualifications for a corporate borough, and it is to be congratulated upon its coming dignity.

THE MILK SUPPLY IN TOWNS.*

Should the Milk Companies be Amalgamated or Should the Supply be Municipalised? An Expert is in Favour of the Latter Course, and Insists on the National Importance of the Question.

By DR. EDMUND CAUTLEY.

TWO courses are open if a reasonable scheme is to be adopted for the reform of the milk supply.

(1) Amalgamation of the Milk Companies.

As a means of carrying out my proposals on a limited scale, I snggest that milk companies should amalgamate and obtain Parliamentary powers, somewhat similar to those which the old water companies possessed. Chief among these should be an authorised area of distribution. Or each separate milk company might be granted a limited area in which it alone should be allowed to supply milk.

Milk is a national necessity. To the infant it is more necessary than water, and in later life it is nsed in some form or other by every adult, with rare exceptions. It is, therefore, a reasonable proposal that the milk snpply should be placed under much the same conditions and the same restrictions as the water supply. By this means it would be under more efficient control.

Let, then, Parliament grant to each milk company of a certain size, or, better still, to an amalgamation of several companies, an area of distribution such as a parish or borough, with certain definite restrictions, viz.:—

That the milk must be the undiluted product of the cow, uncontaminated by preservatives, filtered and bottled at the farm or local depot, cooled down to 40 deg. Fahr., containing 3·0 to 3·5 per cent. of fat and not more than 100,000 micro-organisms per cubic centimetre, and at a price not exceeding 2d. a pint.

It would be justifiable to allow the lower percentage of fat and dilution of the milk to this level, if it were really necessary to meet an increase in expenses.

(II.) Municipalisation of the Milk Supply.

The only plan for dealing with the matter thoroughly seems to me to be the mnnicipalisation of the milk supply. That the supply should be managed in a scientific manner, rather than according to the haphazard methods at present in vogue, will be generally admitted. Its management should pass as soon as possible directly into the hands of the municipal authorities rather than through the intervention of milk companies which will eventually have to be bought up in the same way as the water companies.

Of course, it is an immense undertaking to assume the complete control of the milk supply. It would lead to great opposition from the companies and from individual dealers, and probably from the numerous members of the public who have not an unlimited faith in municipal trading. Neither the County Council nor the borough councils have powers to undertake the functions of milk dealers. Let them obtain such powers, if possible, and then apply my suggestions practically, but tentatively, in a limited area (say one parish or borough), and note the effect on the infantile mortality and the spread of infectious disease.

The one drawback to the limited application of the system lies in the impossibility of guaranteeing that no other milk is bought by the inhabitants of the particular district. Milk is not like water, a fluid which can be laid on in pipes and delivered in practically unlimited quantity. The objection is not a serious one, for it is fairly certain that the inhabitants of the special district would very soon realise the superior qualities of the mnnicipal milk, and the advantages of the bottle system.

Municipal Milk for Infants.

Municipal bodies have already gone into the business of milk dealers to a limited extent, so I am not proposing something quite ont of their cognisance. Several of them, in various parts of the country, are undertaking the supply of modified—wrongly called humanised—milk for infants, and are supplying it in bottles. This milk has many advantages, but is not free from several disadvantages. It is obtained from special farms, though I doubt whether the management of the milk prodnction on the farms would fully meet my requirements. It is usually delivered in sealed cans.

On the other hand, there is no bacteriological examination made of the milk on arrival at the milk laboratory, and the process of sterilisation may be consequently applied to an unsatisfactory milk which will then be distributed under the ægis of anthority. If municipal bodies intend going on with the business, they ought to keep their own cows on their own farms, and have the milk sent up in bottles. The whole of the processes should be carried out at the farm, and the town establishment should be merely a distributing depot. Apart from objections arising from the way in which the system is carried on, there are others due to the system itself. It discourages breast feeding. It relieves the mother of the trouble of preparing the food, and thus diminishes the sense of responsibility she bears towards her infant. It makes the municipal body an inferior kiud of wet nurse. It is too expensive.

At Battersea the cost per child is 1s. 6d. to 2s. per week, and more if the child lives outside the borough. The modification of the milk and the management of the particnlar infant should be supervised by a medical man thoroughly conversant with the feeding of infants. If such supervision and control are provided, the establishment becomes nothing more than a kind of dispensary, and leads to panperisation. Statistical results are often quoted in illustration of the value of municipal milk, but they are of no real value.

In conclusion, let me insist on the great importance of the milk question to the nation as a whole and to the infants in particular. Time after time have I pointed out that on the food supply in infancy depend the health and strength of the adults; that a large infant population is a valuable economic factor in the welfare of the nation; that with a diminishing birthrate more vigorous attempts should be made to reduce the infantile mortality; and that we should hear little about the supposed physical degeneration of the nation if the food supply in infancy and childhood were more satisfactory.

London is a great city, the centre of a powerful nation, and there is much of which we can be justly proud. Conld we, however, transport ourselves into the future, there would be doubtless many things of which we should be more justly ashamed, and among these I assert that the management of our milk supplies would hold an unworthy pre-eminence.

* From a Paper read before the Council of the Charity Organisation Society.

MUNICIPALISING THE BRITISH CANALS.

THE British canals problem was discussed at the Society of Arts on Wednesday night, and it was the opinion of Sir Michael Hicks-Beach, the chairman, as well as of Mr. Arthur Lee, who read an exhaustive paper on the subject, that the way to solve it was to allow local authorities, either singly or combined, to acquire the canals and to work them. Sir John Brunner, M.P., unlike the Father of the House, thought the State should buy up the canals. Mr. Lee insisted upon the necessity for developing our waterways, observing that the Continental nations had set us a striking example in the spending of millions upon their construction aad improvement.

COST OF TECHNICAL EDUCATION.

DURING the year 1902-3 the local authorities of England and Wales expended £1,191,998 on technical education, this snm being exclusive of the sums allocated to intermediate and technical education under the Welsh Act of 1889. From the Blue Book just issned, which deals with the matter, we learn that the amount raised by loan, on the security of the local rate, was £149,665; that the amount outstanding of loans so raised was £1,159,941; and that the balance in hand of moneys received and allocated to technical instruction was £598,989.

The amount of the residue received by the councils and connty boroughs in England nnder the Customs and Excise Act during the financial year was £879,405. Of this sum £840,253 was appropriated to educational purposes, and £39,152 to the relief of rates, the latter sum inclnding £22,366 so devoted by the London Connty Council. Of 49 county conncils, 45 were applying the whole of the residue to edncation and three a part of it; 61 of the 64 county boroughs devoted the whole amount to the same purpose; whilst four connty councils, 31 county boroughs, 101 boroughs, and 211 urban districts in England were making grants out of the rates nnder the Technical Instruction Acts. Thirty local anthorities were devoting fnnds to technical education out of the rates levied nnder the Public Libraries and Musenms Acts; and 33 raised sums by loan under the Technical Instruction Acts. The total amonnt expended on technical education in England during the year was £1,149,216, and in Wales £42,781.

HULL DISTRICT WATER SUPPLY.

AT the last meeting of the Hull Council a report from Mr. F. J. Bancroft, the borough engineer, was submitted on the proposed extension of the water supply to South Holderness, including Hornsea, a matter which has already been the snbject of a Local Government Board Inquiry. The district embraces a number of small hamlets, with a total population of 8,639, and Mr. Bancroft estimates the cost of constructing the mains to Hornsea and Withernsea at £40,000, including £5,000 for land upon which the engine and boiler house would be erected. On the side of revenue it is estimated that the water conld be obtained from the Hull Corporation at 6d. for 1,000 gallons, which, on a sale of 250,000 gallons a day (equal to 91,250,000 per annum), would cost £2,881. Labour, &c., would require £1,140, and sinking fund and interest charges, £2,000, making a total of £5,421. Ninety-one-and-a-quarter million gallons of water, at 15d. per thonsand, would prodnce £57,403, leaving a balance of £282. The report will be further considered.

THE first "smoker" in connection with the staff of the Metropolitan Water Board took place on Wednesday evening at the Caxton Hall, Westminster. Mr. A. B. Pilling, the clerk to the Board, presided, and was supported by Sir R. Melville Beachcroft, the chairman of the Board, who had a most hearty reception. A capital programme was carried out under the direction of Mr. Charles Capper.

AT a meeting of the Streets Committee of the Swansea Corporation on Tnesday it was reported that the dnst destructor had dealt with 4,933 tons of refnse dnring the past four months—an average of 48¼ tons a day. The report of a sub-committee on a proposal to erect brick-making plant for the utilisation of the clinker produce of the destructor was discnssed. The Chairman (Mr. Merrells) said the labour cost was estimated at 5s. per 1,000, and if a like snm were added for capital and material they wonld have a cheap brick. It was decided that the surveyor should report on the snbject.

MISREPRESENTATION BY CIRCULAR

The Yorkshire Electric Power Company and Combined Electricity and Refuse Destructor Works. The kind of Letter that is Sent to Frighten Councillors. Misleading "Facts" and Erroneous Conclusions. Why Companies Oppose Dust Destructors. Enterprises that Pay.

WE have before us a circular letter issned by the Yorkshire Electric Power Company, and apparently one of a considerable number of such letters addressed to councillors in Yorkshire towns. The main object of the letter is evidently to stifle municipal enterprise in so far as electric lighting is concerned, and the attention of the councillor is especially directed to the economic advantages to be secured by taking electric power in bulk from the generous and accommodating company, rather than the municipal generation of current, in part from refuse.

At this time, when some 60 municipalities possess combined electricity and destructor works, it is not so easy to bamboozle the councillor, even in small and somewhat remote towns. The circular letter in question is singularly weak in its arguments against combined electricity and destructor works.

Nor is weakness the only featnre of this curious circular letter. We shall endeavour to show that it very seriously misleads the councillor. With this end in view, carefully selected statistics are qnoted; so carefully, indeed, have these figures been compiled that the returns of the Llandudno works for the year ending March 31st, 1904, are ignored when they show a *nett surplus* of £54, while the *previous year's* figures, which show a *loss*, are included instead.

The Truth of the Matter.

We have thought it advisable that the councillor and the ratepayer shonld know the truth of the matter, and in reviewing the question of combined electricity and destructor works, we shall discuss the said circular letter, showing the reader how and why power companies adversely criticise municipal undertakings, in the form of combined electricity and destructor works.

The reader may naturally ask why electric light and power companies do not take kindly to combined electricity and destructor works, and why they are not keen to take advantage of snch power as may be derived from towns' refnse? The reason is not far to seek, as we shall proceed to show.

It must be remembered that the refuse destructor *as a sanitary adjunct* possesses no interest whatever for a power company. What cares it abont refuse disposal? From the company point of view the destructor mnst be a dividend producer, and unless it fulfils this, the company's primary purpose, it is not worth a moment's consideration.

Destructors as Sanitary Adjuncts.

On the other hand, the municipal authority has to consider the destructor primarily as an economic sanitary adjunct. The municipality is responsible for the public health; its interests are comprehensive, and not isolated, personal, and financial; its duty is to serve the interests of the community in the best possible manner. and cannot in any broad sense be fairly compared with the obligations of the company, which are briefly but completely expressed in that attractive word *dividend*.

While sanitary improvement does not appeal to the capitalist because it cannot always be expressed in pounds, shillings, and pence at the end of the first financial year, it does appeal to the councillor and the citizen whose interests are not confined to the narrow groove of personal gain. Further, there are advantages which accrue to the community thereby which are ignored by those whose cult is monopoly.

Advantages of Destructors.

Generally speaking, it is advantageous to the ratepayer to combine a refuse destructor with an electricity works, for two reasons. Firstly, because the available power can be fully utilised; and, secondly, because the central location of the average electricity works means the minimum of cartage cost for the refuse and expeditious collection.

The following figures are available concerning the reduced cartage or collection cost in towns where destructors have been combined with electricity and other municipal works centrally located:—

Darwen ...	£300 to £350 per annum.
Kettering ...	Cartage costs reduced by one-third.
Mexborough...	£200.
Weymouth ...	£230 (combined with central sewage works).
Sheerness ...	£350 (combined with central water works).

It may be taken as a fact that in every case where a destructor is combined with an electricity works a good saving in collection cost is secured, and although this does not benefit the electricity works account, it does unquestionably benefit the ratepayer.

A Necessary Condition.

It shonld be made a condition of any contract with a power company that it not only provides a refuse destructor in combination with its electricity works, but what is more, *the local authority* should reserve to *itself* the sole right of choice in connection with the type and make of destructor.

Inferior generating plant wonld cause the company trouble and touch its pockets, bnt a cheap and inefficient destructor erected in a central position might be a source of offence to the community. It is, therefore, only reasonable that the local authority should decide upon that make of destructor which it is satisfied is perfectly efficient.

In taking up this attitude any local authority with a leaning towards monopolists will not frighten them; on the contrary, so anxious are the latter to secure the Provisional Order, that if the councillors stand firm on the destructor qnestion they will be masters of the situation and secure for their town sanitary efficiency in spite of the companies' allegations concerning the worthlessness of such combined undertakings.

We are told in the circular-letter already referred to that "even with destructors in existence, many local authorities have decided not to combine them with electricity stations. . . . ."

We fail to see anything extraordinary in this; many destructors were erected *before* electricity works were thought of, and consequently the former are located on sites which would be quite unsuitable for the latter; to take the electricity works to the destructor in such circumstances would be the height of stupidity.

Where Destructors Have Been Added.

On the other hand, many towns have decided to combine destructors with electricity works which have been in successful operation for many years before the destructor was thought of. Such value was, however, placed upon the refuse as to cause the following authorities to decide to generate power from refuse many years *after* the erection of the generating station. In short, the destructor has been brought to the electricity works.

Ayr	Lancaster
Barrow	Liverpool
Bradford	Nelson
Burnley	Nottingham
Hanley	Wolverhampton

All the above stations show a good annual surplus, but, as they well represent "the other side of the case," they are passed over in silence by the power company in its letter. It would obviously prefer that the councillor should know nothing about such unique examples; but its silence thereon cannot hoodwink any intelligent man, who can find full particulars concerning the whole of the towns here mentioned in the published official returns.

A Misleading Table.

It is necessary to reproduce the following table from the Yorkshire Electric Power Company's letter, in order to clearly show to what length monopolists will go in their attempt to secure the support of the councillor:—

"**Refuse Destructor Combined with Electricity Works.**

Financial result of the working of the above in towns of less than 30,000 inhabitants:—

Town.	Year of working.	Population.	Loss on the year.
Bangor ...	1903 ...	11,800 ...	£619
Beckenham..	1903 ...	28,200 ...	582
Dartford ...	1903 ...	18,600 ...	1,292
Grays ...	1904 ...	15,000 ...	74
Llandudno...	1903 ...	9,300 ...	368
Mexborough	1904 ...	10,417 ...	340
Shipley ...	1904 ...	26,500 ...	125
Wrexham ...	1903 ...	15,000 ...	560
Cleckheaton	(No figures published, but a loss has been incurred)."		

Before dealing with the cases quoted, it should be borne in mind that there is an early attempt on the part of the company to mislead. The statement at the head of Column 2, "*Year of Working*," as a matter of fact should read "*Year ended* March 31st."

In the case of each of the towns named in the table, it is assumed that the loss has been *pro rata* for the nine months *after* March 31st, for which no figures are available. This is an unwarrantable assumption, which might mislead the councillor, and support the case for the monopolist.

We will now deal with towns mentioned in the table. In the case of Bangor, the unfortnnate result may be mainly attributed to the unsatisfactory design of the station. The destructor, being an afterthought, is so located as to be inefficient in power production; but, while this is admitted, we may fnrther add that it will not be long before a considerable improvement is effected, the authorities having recently decided upon such alterations as will materially increase the general efficiency.

We come now to the case of Dartford, and we would ask the reader to carefully observe that the figures quoted refer to the year *ended* March 31st, 1903. Now, as a matter of fact, *the refuse destructor was not built at this time, and not one pound of refuse was destroyed until February 24th, 1904.*

What connection there can be with a destructor which was only erected eleven months *after* the end of the financial year, showing a loss of £1,292 on the electricity works, we fail to see; but it is undoubtedly a very forcible argument to lay before the councillor whose knowledge of the date of Dartford destructor opening would possibly be on a par with his experience of the stone age.

The Position at Grays.

Grays is the next town quoted in this remarkable table. There was a loss of £74 for the year ended March 31st, 1904 (not for the *year* 1904).

Mr. E. D. Long. the electrical engineer to the Grays Urban District Council, has kindly given us the following statement, covering the first two years' work, ended on March 31st last:—

	Year ended Mar. 31, 1903.	Year ended Mar. 31, 1904.	Increase.	Per cent. increase.
Revenue	£1,957	£2.604	£647	33
Expenditure ..	£1,297	£1,513	£221	17
Gross profit ..	£660	£1,086	£426	64
Lamps connected	5,353	7,124	1,771	33
Units sold ...	108,469	138,820	30,351	27

A gross profit of 5¾ per cent. on the capital expenditure for the second year's operation is an excellent result for such a small works, destroying an average of 9 tons of refuse daily; and it will be clear from the column of per centage increases that the year ended March 31st next will show a nett surplus. There is nothing to be ashamed of in the Grays fignres; the ratepayer in this small Eesex town has no complaint to make about a paltry deficit of £74 at the end of two years' working, and it may be observed that the power company must have been hard put to in the compilation of its table to include such an awful example as Grays.

An "Over-sight."

That well-known North Wales seaside resort, Llandudno, figures next in the table, but the reader is again misled. Why publish the returns for the year ended March 31st, *1903*, showing a *loss* of £368, when the returns for the year ended March 31st,

1904, showing a *nett surplus* of £54, are available and were published months ago?

We may be told that this was an oversight, but curiously every mistake is on the one side, *i.e.*, that of the monopolists.

Mexborough comes next in the table with a deficit of £340, but this was eight months ago, at the end of the second year. When the returns are made up to March 31st next, we shall see a very different result. It is confidently anticipated that this balance-sheet will show a nett surplus of £500; in fact, it is now known that a good nett profit is being earned.

With regard to Shipley, Mr. Schofield, the chief electrical engineer, states that "to suggest any loss as having been due to the destructor is absurd."

During the first year's operation of the Shipley undertaking a gross profit of £814 was earned, and this in spite of the fact that current was sold at a lower figure to consumers than is being offered for supply in bulk to local authorities by the Yorkshire Electric Power Company at the present time.

Now to deal with the second year, i.e., the year ended March 31st, 1904. A gross profit of £2,072 was earned, notwithstanding the increase of capital expenditure from £30,000 to £43,000, and after meeting all capital and standing charges there was a loss of £125.

It is safe to say that what has been accomplished at Shipley, under the able management of Mr. Schofield, could not be equalled by the Yorkshire Electric Power Company, or any other power company, under similar conditions. Enemies of municipal trading are welcome to any satisfaction they can derive from the example of Shipley, but we are able to state upon the highest authority that the Shipley ratepayers are well satisfied, and after all they are the people who are intimately concerned with the outcome of their own enterprise.

Refuting a Gross Error.

Mr. W. Sillery, the borough electrical engineer of Wrexham, in sending a printed copy of the electricity accounts, remarks as follows: "I hope you will refute so gross an error." As in the case of Mexborough, so with Wrexham. Since the issue of the last financial statement eight months ago, great strides have been made; there is a phenomenal increase in the revenue account, with the result that the undertaking is now being operated at a profit, in spite of increased capital expenditure for traction purposes.

Cleckheaton figures at the end of the list of alleged failures with the following remark: "No figures published, but a loss has been incurred." The first year's figures have not yet been published; possibly, therefore, the following details will be of interest: Gross profit, £1,000; capital and standing charges, £1,320; deficit for the *first year*, £280.

While this may be welcome news to the monopolists, we would commend for their consideration at the same time the statement of the chairman of the Council:—"If the destructor had *not* been erected in combination with the electricity station, the cost to the ratepayers would be £310 per annum in excess of the present expenditure. Further, there is a considerable saving in the cartage cost, as also on account of a refuse tip which would have to be provided if no destructor existed."

Towns Which are Omitted.

We have now disposed of this remarkable list, compiled with business acumen, but with a sorry disregard for the facts. It would not have served the interests of the monopolists to include the following list of towns where combined electricity and destructor works yield a good annual surplus:—

Station.	Year ended March 31.	Surplus after providing for interest and sinking fund.
Bermondsey	1904	£509
Hackney...	1904	5,546
Shoreditch	1904	996
Stepney...	1904	5,936
Ashton-under-Lyne ...	1904	1,270
Barrow	1904	479
Burnley	1904	5,124
Canterbury	1904	812
Lancaster	1904	1,506
Llandudno	1904	54
Nelson	1904	401
Partick	1904	623
St. Helens.	1904	2,600
Warrington	1903	129

No one would be so foolish as to suggest that it is possible to produce such a list as the foregoing, solely because a certain amount of power is being produced from refuse, but the fact remains that here we have a list of successful combined works, all of which monopolists must perforce leave severely alone. That it is possible to follow their crippled table with one so unique and beyoud criticism, is in itself a remarkable testimony to the success of municipal trading.

The urban district councillor, or even the borough councillor, may not be all that we should desire, but we can scarcely believe that he is likely to be influenced by such circular letters as we have discussed, and monopolists must clearly feel very uncomfortable about the future, or they would not endeavour to advance their interests by the issue of such a letter.

Monopolists are alarmed because the close of each financial year adds to the list of successful municipal undertakings and justifies municipal trading, a result pleasing to the citizen, but as gall and wormwood to the monopolist.

CITY OF LONDON BARBERS.

NEW RULES FOR HAIRDRESSING AND SHAVING.

HAVING dealt with bakehouses and restaurants, the sanitary authorities of the City of London have turned their attention to barbers and hairdressers, and the Court of Common Council has approved the following drastic rules:—

(1) All shelves, fittings, and tables on which instruments are placed to be of glass, marble, slate, or other similar material.

(2) Clean towels, &c., to be used for each customer, and a fresh piece of paper or clean linen to be placed on the back of chair or head-rest.

(3) No general powder puffs to be used, and powder pulverisers or cotton wool substituted. No sponges to be used.

(4) All hair clippers, razors, scissors, combs, or other tools, after use, to be placed in a disiufecting solution.

(5) Razors to be wiped on paper.

(6) Perfectly clean hair brushes only must be used.

(7) Shaving brushes after use to be placed in a disinfecting solution.

(8) Cut hair falling on the floor to be immediately swept up and removed, and floors to be cleansed daily.

(9) No general alum crystals or blocks as a styptic to be used, and a liquid powder to be applied on towel or cotton wool or by spray.

(10) The most scrupulous cleanliness to be observed in all that pertains to the business.

These regulations have been arrived at by the Public Health Department, in conjunction with the Incorporated Guild of Hairdressers, and as the latter body represents the chief authorities in the hairdressing business, the proposals, it is hoped, will have the approval of "the profession."

TRAFFIC TRACTION IN THE STREETS.

IN reply to a communication from the Finsbury Borough Council, relative to the annoyance and risk of damage caused by the passage of heavy traction engines through the streets, several London councils have stated their views on the matter. Deptford is against any bye-laws on the subject, as they would place a restriction on trade. Chelsea states that it is already in communication with the Local Government Board and the London County Council on the subject. Kensington has made repeated representations on the subject, and is awaiting the report of the London County Conference before taking further action. St. Pancras has passed a resolution on similar lines to that of the Finsbury Council, and Fulham, Holborn, Lewisham, Shoreditch, and Stepney state that they will be represented at the Conference.

AN advertisement appears in our columns for a fire brigade superintendent for the County Borough of Croydon. The vacancy is caused by the retirement of Superintendent Mitchell, who has taken up the post of brigade superintendent at Cape Town. The Croydon Council recently filled the vacancy by the appointment of the superintendent of the Wigan Brigade, who has since withdrawn from the appointment.

MUNICIPAL SECURITIES.

THE SOUTHAMPTON "DEFAULT" EXPLAINED.

THE Town Clerk of Southampton (Mr. R. R. Linthorne) writes us with reference to the case of "defaulting Southampton," alluded to last week in an article headed "The Safety of Municipal Securities." Mr. Linthorne also forwards us a print of the evidence he gave before the Joint Select Committee on Municipal Trading, during which he proved that the statement made by Mr. Tritton, that the bankers of the Southampton Corporation (the Capital and Counties Bank, Limited) had lost money in respect of an overdraft by the Corporation, was inaccurate. "Not a penny," stated Mr. Linthorne, "has been lost by them either in respect of an overdraft or anything else."

The facts of the case are as follow:—

In 1895 the borough boundaries of Southampton were enlarged so as to include among other things, the Urban District of Shirley and Freemantle. The extension of the boundaries was strongly opposed by the Urban District Council both at the Local Government Board inquiry and in Parliament. When the matter was before Parliament the Corporation agreed to give to the added areas certain immunities in respect of the general district rate, and this concession was inserted somewhat hurriedly by the representatives of the Corporation and the District Council in the Local Government Board's Order then before Parliament for confirmation.

Early in 1901 certain disputes arose as to the true interpretation of an article in the Order which contained the immunities. The added areas, through a gentleman appointed by them, took proceedings before the Recorder at Quarter Sessions to quash general district rate No. 6. The primary object of the proceedings was to obtain a judicial interpretation of the article in the Order, but the added areas, to ensure their obtaining the costs of the proceedings, included all possible grounds of appeal; one of which was the inclusion in the rate of certain overdrafts at the bank over six months old and of interest thereon.

Their leading counsel, in opening the proceedings before the Recorder, distinctly stated that his clients had no intention of preventing the bank being paid, but that for the purposes of the appeal the point they had taken was fatal to the rate. The Recorder, in quashing the rate, with costs (in November, 1901), gave an interpretation of the article in the Order, saying, in his considered judgment, that it was not suggested that the liabilities of the Corporation, however incurred, were not to be met.

At the time of the added areas taking proceedings to quash the rate, and also in November, 1901, the Corporation had a large overdraft at its bankers, in respect of £135,000, of which it held a Consent Order of the Local Government Board to issue stock, but it refrained from doing so, as the money market was unfavourable. The rest of the overdraft was composed largely of excess expenditure in respect of works which had been sanctioned by the Local Government Board. Early in February, 1902, the Corporation issued stock under the Consent Order, which was subscribed many times over on the day of issue. The nett proceeds of this issue were applied in reduction of the overdraft. The Corporation appealed against the decision of the Recorder, and the appeal was heard in the King's Bench Division in July, 1902, when the Recorder's judgment was affirmed, with costs. In November, 1902, the Local Government Board held a local inquiry by two of its inspectors into the subject-matter of the overdraft. The inquiry lasted three days, and the Local Government Board sanctioned, with a few trifling exceptions, the whole of the sum which then remained overdrawn.

The outstanding balance was afterwards paid. If it had not been paid the bank could have closed the account and sued the Corporation on the overdraft. The bank has never had the slightest uneasiness in regard to the matter; it has never lost anything.

L.C.C. AND SCHOLARSHIPS.

A Big Reform. Four Times the Number of Scholarships Proposed to be Offered. The New Conditions. Maintenance Allowances to be Separated from Free Education. A New Board of Examiners. The Method of Selection and "Local Committees." The Ultimate Annual Expenditure to be £275,000. An Attempt to Solve the Problem of How to Obtain Pupil Teachers.

ONE of the results of the passing of the Education Acts of 1902 and 1903 has been the recognition by many of the local education authorities of the new possibilities of the extension of scholarships, bursaries, and exhibitions to capable children, in order that the educational ladder may be brought within the reach of the poorest child in the public elementary school.

Schemes of other Authorities.

We have on several occasions in these columns, had the pleasure of notifying our readers of the efforts which have been made by many of the new education authorities in the direction of facilities for the children in the people's schools, to obtain the best education with the minimum of expense.

Prominent among these may be mentioned Manchester, Leeds, Salford, Sheffield, Gloucester, Nottinghamshire, Staffordshire, and Middlesex, and now we understand that the Education Committee of the London County Council is considering the details of a revised scheme of scholarships which, when matured, will involve an annual expeuditure of something like £275,000.

The Problem in London.

London, with its perplexing peculiarities and perennial problems, has always required a kind of imperial treatment for the successful solution of municipal difficulties. It is not wonderful, therefore, that an investigation into the present system of awarding scholarships should have produced a huge scheme of about 3,000 scholarships per annum.

For the last eleven years the metropolis has enjoyed the benefits of a well-devised system of scholarships and exhibitions, which, under the *ægis* of the late Technical Education Board, attained much success and well-deserved appreciation.

In the early days of the late Board the opportunities which existed for the clever scholars of the working classes to get on were few and far between.

A few scholarships were offered by certain endowed schemes and one or two of the City companies, but the want of the necessary advertisement precluded any use of the opportunities which the possession of the bursaries would have given. In addition, there were many insufferable limitations surrounding some of these awards, such as a poverty test, residential requirements, attendance at Sunday school, and the small financial value. All of these operated against the poor man's child of capacity.

When the Technical Education Board took up the matter, however, it became simply a question of time. As a consequence, at the time when educational control passed into the hands of the London County Council, the Technical Education Board retired, leaving behind it over 3,000 of its scholars actually holding awards at various schools and institutions.

Now, the Education Committee of the premier authority has gone one better. It has decided to continue the best features of the system which it inherited, and for the present has confined its suggestions to the three grades of county scholarships, viz., junior, intermediate, and senior.

Three Fundamental Principles.

A lengthy and valuable report has been under consideration by the committee this week, and three principles are put forth as having guided those who are responsible for the new departure. First, the total number of scholars must be largely increased, this being primarily due to the fact that pupil teachers under 16 may no longer be employed and paid, and consequently the cost of their maintenance and education up to that age must be borne by the help of scholarships. Secondly, as children are compelled to attend school nntil they reach 14 years of age, it is obviously unnecessary to provide them with any maintenance allowances up to that time. The maintenance grant will, therefore, be dissociated from the free education, and only paid in such and so many cases that circumstances require. Thirdly, it is felt that the method of selection of the scholars must be altered. The present system of examination is, naturally enough, the cause of criticism, and is certainly productive of some evils. The decision, therefore, to proceed, at any rate, with the junior county scholars, by the process of part selection, would appear thoroughly rational and up to date.

Selection cum Examination.

It is also proposed to establish a special board of examiners, who will select the scholars on (a) the recommendation of the head teachers, (b) the report of a local committee, to be formed of teachers of the primary and secondary schools in the districts, and (c) the results of a competitive examination. This last is, we are glad to see, to comprise but two subjects—arithmetic and English composition. Those candidates who reach a certain standard, determined by the examiners upon the abovementioned principles, will be accepted as successful.

The number of junior county scholarships proposed to be awarded for the first year is 2,600, and the age, instead of "under 13," is to be between 11 and 12. The number of intermediate scholarships is to be 100, and the limit of age is, instead of "under 16," to be from 15 to 17. This change is a wise deference to the new order of things in the training of young teachers, and it would appear that one of the main objects of the scheme is to endeavour to obtain enongh candidates for the teaching profession, for which there is a deplorable lack, especially of boy aspirants, in the metropolis.

The number of senior scholarships jumps from five to fifty, and these will, as before, carry free education (not exceeding £30 a year) at places of University rank, together with a maintenance grant not exceeding £60 a year.

The junior scholars must attend approved secondary schools; the intermediate scholars, suitable schools and nniversity or technical colleges, and the senior, institntions of the highest grade in the particular department of education chosen.

Estimated cost of	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11 and afterwards.
	£	£	£	£	£	£
(a) New	143,603	184,117	214,914	240,345	267,330	275,200
(b) Old	101,000	101,000	101,000	101,000	101,000	101,000
(c) Increase	42,603	83,117	113,914	139,345	166,330	174,200
Deduct saving through transfer from primary and secondary schools ...	8,000	19,250	29,250	32,500	32,500	32,500
Nett increase	34,603	63,867	84,664	106,845	133,830	141,700

£275,000 a Year.

The ultimate annual cost of the whole scheme, if adopted as it stands, is to be as follows:—

Junior scholarships	£242,500
Intermediate scholarships	12,500
Senior scholarships	10,200
Examination and other expenses ...	10,000
Total	£275,200

No provision is made in this huge sum for those excellent art, evening, domestic training, gardening, and other scholarships which at the present time run to about £10,000 a year.

It should also be stated that it will take five years for the maximum expenditure to be reached, and also that the additional expense of providing sufficient secondary school accommodation has been allowed for in the fignres given above.

A Nett Yearly Increase of £141,000.

It is interesting to compare the probable cost for each of the five years, as also the sums that would be required were the present system to be adhered to. The table at the foot of the preceding columns shows this clearly:—

We think the Education Committee is to be congratulated upon a statesmanlike scheme such as this; and when it is remembered that the cost of primary education under the old authority was about £3,000,000 a year, the annual expenditure of £275,000 for scholarships can hardly be considered excessive.

L.C.C. AND HOUSING.

To the Editor.

SIR,—Referring to your comments upon my letter regarding the rents of London County Council houses at Tottenham, I would submit that, although your explanations account for something, yet they are by no means satisfactory, because if we admit them to be sufficient, then we imply that a local authority cannot build at a price low enough for the pockets of the class for whom it professes to specially cater.

But it is because I am convinced that municipal bodies can and shonld provide dwellings at a reasonable rent, notwithstanding sinking funds and other requirements, that I am desirous of drawing public attention to the case in question. My own opinion is, that 13s. 9d. is far too much to charge for a five-roomed cottage in snch a locality as Lordship Lane, Tottenham. It is beyond the means of the average artisan, and is far more than is charged by other landlords. If honses are built at such a cost as to nccessitate such a rent, then there will be a tremendous deficit on account of empties. This deficit will involve a reduction of rents, and the end will be that the houses will be let at a cost insufficient to cover charges. Moreover, it is not necessary that such a rent should be involved. It ought to be possible to build a five-roomed honse, including all expenses of drains, roads, &c., at a cost of about £60 per room. This would make the outlay per house £300—and the necessary rent 10s. 6d. per week. This is a reasonable charge, and could be obtained.

I arrive at the rent as follows:—

	£	s.	d.
Interest and sinking fund on £300 ...	12	0	0
Ground Rent...	1	18	0
Repairs	3	16	0
Rates, 10s. in £ on £17	8	10	0
Management, insurance, &c.	1	2	0
Per annum	27	6	0

Equal to 10s. 6d. per week.

I sincerely hope that before more contracts are entered into for the Tottenham Estate, the L.C.C. will consider some revision of its plans, so that something more practical than the existing design may be adopted, otherwise the houses will not let, and the loss on empties will involve financial failure and consequent discredit to municipal effort.

Yours very truly,
S. H. HALFORD.

32, Fore Street, Edmonton.
Nov. 26, 1904.

[See "Notes and Comments."—ED.]

MUNICIPAL TRADING RELIEVES RATES.

Returns That Show the Ingredients of Which the Ratepayers' Burden is Composed, and How it is Lessened by Profits from Trading Enterprises and other Corporation Estates. Remarkable Figures that Refute Interested Criticisms.

WE publish this week the annual returns compiled by Mr. James Carter, the Borough Treasurer of Preston, whose activities are of such great value to municipal reformers. The first table gives particulars of the rates levied in various towns during the current year, and the second shows in detail how these rates are relieved by profits from trading enterprises and other estates:—

Name of Town.	Population.	Rateable value.	Poor, including overseers' expenses and cemetery rates.	Borough.	Watch.	Education.	Free library and museum.	Baths.	General district, including lighting rates.	County.	Any other rate.	Total.	Profits and rents. (See note.)
		£	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

* Includes profits marked with same sign. ‖ Public lighting.

THE City Guardians have before them an application from the Shoreditch Guardians asking if they have a workhouse for sale, and, if not, whether the board can offer them accommodation.

THE Strand Guardians have not received a single application for the post of third assistant schoolmaster at the schools at Edmonton, notwithstanding the post has been extensively advertised.

PHYSICAL DETERIORATION.

THE chief business transacted at a meeting on Wednesday of the executive council of the County Councils Association, held at the Westminster Guildhall, was consideration of the report of the Education Committee. This committee reported that it had considered certain of the recommendations made by the Inter-Departmental Committee on physical deterioration. It was not prepared to endorse the recommendation that school attendance in rural districts should not be compulsory till the age of six, or possibly seven, and should be discouraged, if not absolutely prohibited, under five. It, however, considered that the local authority should not be required to provide accommodation for children under the latter age.

In the opinion of the committee the proposals as to the establishment of special schools for retarded children and as to the feeding of underfed children in elementary schools, even if desirable, were not practicable, except possibly in the larger towns. As to the introduction of the teaching of cookery into schools, the Council adopted the committee's view that this could only be secured by providing efficient instruction in that subject in all training colleges for women teachers. It also approved of the course of physical exercises recommended by the Inter-Departmental Committee.

MUNICIPAL PROFITS AND THE UNEMPLOYED.

IN Nottingham there are about 3,000 men out of employment, the building trade being principally affected. The City Council on Monday decided to put in hand at once certain public works (for which Government sanction has been already obtained), at an estimated expenditure of about £15,000, and to supplement this by grants in deserving cases to workmen resident in the town, the money for the purpose being drawn from the profits of the gas undertaking.

AT last week's meeting of the Metropolitan Water Board, Mr. Walter Moon, formerly in the Offices of the New River Company, was appointed law clerk, at a salary of £500 a year. It was reported that 130 applications for the position had been received.

THE Norwich Education Committee spent some time at a meeting with regard to the re-naming of the Duke Street Higher Grade School. The vice chairman stated that it was found by experience that the name "Higher Grade School" did not attract teachers from a distance, who did not know the character of the school, anything like the name, "Secondary School" would do. It was decided that the school be called "The Duke Street Municipal Secondary School."

NOTES AND ANSWERS.

Powers of Mayors at Noisy Council Meetings. The Application of the Weights and Measures Acts to Asylums. Ratepayers and Rights of Inspection of Minutes. Compensation for Loss of Office Under the Local Government Act.

*** Queries intended for this column should be addressed to the "Legal Correspondent," MUNICIPAL JOURNAL, 12, Salisbury Square, E.C. They should be written on one side of the paper only, and be signed by a nom de plume or initials, the real name and address of the correspondent being written on the back of the paper.*

553.—ACCOUNTS—Method of Accounting for General District Rate.—A correspondent, who is the accountant of an urban council, writes in reference to the query and reply of last week under the above heading, and sends us an alternative arrangement:—

Dr.—General district rate *collection* account, with amount of rate.

Dr.—Collector with amounts collected by him.

Cr.—General district rate collection account therewith.

Dr.—Treasurer with amounts received by him from collector.

Cr.—Collector therewith.

At close of rate, deduct the amount of irrecoverables from amount of rate shewn in general district rate collection account; and

Cr.—General district rate account, with actual produce of rate.

Any recoverable arrears would be shown in the general district rate collection account.

Any balance remaining in collector's hands at end of year would, of course, be shown in collector's account.

It may be argued that it is not strictly correct to *deduct* the irrecoverables from the amount of the rate, but, as the general district rate account is invariably written up at the close of the year, it need not be any drawback: and, in practice, it will be found much better to credit the general district rate account with the actual product of the rate levied during the year in one amount, rather than show on the credit side the gross rate, and on the debit side the irrecoverables.

There is one difficulty which would occur in the method suggested by your correspondent, and that is, to show clearly in the collector's account any balance he may have on hand at the end of the year.

We are much indebted to our correspondent for the above, and also for an exemplification of his method duly received (for which we have no space). We do not propose to enter into the question of accounting further, except to point out, in reference to the last paragraph, that though the collector's account in the ledger will not show the actual balance he may have, under the system of accounts referred to in query No. 536, but only the balance due from the collector—including cash on hand and recoverable arrears—the actual cash balance will readily be found from the collectiug and deposit account which he is required to keep by the Local Government Board's Order of 1880.

554.—WEIGHTS AND MEASURES ACTS—Application of Acts of Scale and Measures in an Asylum.—(1) Will you kindly inform me if an inspector of weights and measures has power to inspect and adjust the scales and weights in an asylum or other public institution used for weighing rations issued to the staff, and provisions sold at contract prices to officers residing on the estate?

(2) Also, with reference to the weighbridge, can he legally examine the same? Old stores sold would be weighed out thereon. Would this be trading within the meaning of Sec. 19 of the 1878 Act?—"NEMO."

Sec. 48 of the Weights and Measures Act, 1878, provides that every inspector under the Weights and Measures Act, 1878, authorised in writing under the hand of a J.P., may at all reasonable times inspect the weights, measures, scales, &c., within his jurisdiction which are used or are on "any premises for use for trade." This provision appears to authorise the inspection, &c., of the weighbridge at the asylum, as this is clearly used for trading purposes. "Trade" is defined by Sec. 19 of the Act as including "every contract, bargain, sale, or dealing, made or had in the United Kingdom, for any work, goods, wares, or merchandise, or other thing which has been, is to be done, sold, delivered, carried, or agreed for, by weight or measure. . . . ." It seems to us that the two sections, when construed together may be regarded as authorising the inspector to inspect, &c., the scales and weights in the asylum. The selling of provisions to the staff would appear to come under the above definition, and, in any case, the words of Sec. 48 (which replaced an earlier and narrower provision) are purposely very wide in their scope. It seems to us, however, to be undesirable and unnecessary for an inspector to insist on this right in respect of the inspection of the asylum scales and measures, which can only be regarded as included in his jurisdiction by a somewhat extensive interpretation of the scope of the statute.

555.—TRAMWAY UNDERTAKING PROMOTED BY ELECTRIC POWER COMPANY?—What is a valid objection to such a scheme? (1) In the event of a private company applying for a Provisional Order for the introduction of tramways, what time may elapse from the date of the first notice and the lodging of objections?

(2) Would the appointment of a town council committee to consider the advisability of a municipal scheme be a valid objection to the granting of a Provisional Order?—"TOWN COUNCILLOR."

(1) Elaborate regulations have been promulgated by Parliament and by the Board of Trade as to the notices to be given of a proposed tramway scheme, and the procedure necessary to place a proposal, with due publicity and warning to all interests affected, before the legislature. In October or November of the year preceding the session when the application will come before Parliament, the undertakers must publish notice of their proposals by advertisements in the prescribed form. In the same months street notices are to be posted for 14 consecutive days. On or before the 30th November certain documents must be formally deposited. By the 15th December the promoters must serve notice on all local authorities affected. Any local or road authority, or other body or person, desiring to have amendments inserted in the Provisional Order authorising the proposed undertaking must deliver the same to the Parliamentary agents and to the Board of Trade not later than the 8th February. This last-mentioned date is probably the one in which our correspondent is interested.

(2) The appointment of such a committee would not have any effect as an objection, even if that committee passed resolutions against the proposed undertaking. Objections to be valid must be formally lodged in accordance with the statutory rules, and should come from the council as a whole, and not from a committee thereof.

556.—DISTURBANCE AT MEETINGS OF TOWN COUNCIL—Powers of the Mayor. Admission of Strangers.—I shall be obliged for any advice as to the power of the mayor or other presiding chairman of a meeting of the Town Council to deal with a disturbance caused by ratepayers present, not being members of the council. Recently we have had somewhat heated discussions in the council, and the attendance of strangers has been unusually large. They take sides, and make a disturbance when speeches are delivered on proposals submitted contrary to the popular view. Can the mayor exclude them?—"COUNCILLOR."

The Council is not bound to hold its meetings in public, and the admission of ratepayers, though a privilege commonly granted, remains a privilege, and may be withdrawn at any time. If withdrawn, it should be under a resolution of the Council. The mayor or presiding chairman cannot, we think, lawfully exclude all members of the public in general from the meetings of the council, though on a particular occasion he may do so where this course seems necessary to prevent a disturbance. If a disturbance occurs, the mayor, as chairman, can exercise all powers reasonably necessary to maintain order, even to the extent of ordering the withdrawal of the strangers making the disturbance, and the use of such a reasonable amount of force as seems to be required to remove the offenders and restore order. But it would be advisable to avoid violence, and instead to adjourn the sitting to another room or to another time, when the obnoxious disturbers may be excluded from admission in the first instance.

557.—COMPENSATION FOR LOSS OF OFFICE UNDER LONDON GOVERNMENT ACT, 1899. —Charge on Compensation Allowance.—I shall esteem it a favour if you will kindly answer the following query through your Legal Column:—I am in receipt of an annual compensation allowance from a borough council, which said council has declined to commute. Can I dispose of same to a private individual, and compel council to accept a charge on same?—"H."

There does not appear to be any statutory or other legal provision which would prevent our correspondent from assigning or mortgaging the amount of compensation payable to him by a metropolitan borough council in respect of loss of office under the London Government Act, 1899. Certain pensions granted for public service are not legally assignable or capable of being mortgaged, but such compensation as that referred to in respect of past services, and especially where the recipient is no longer in the service of the authority, would not come under that restriction. We doubt whether, except in the case of bankruptcy, our correspondent could insist on the council paying the amount of his compensation allowance as it falls due from time to time to any assignee. It seems to us that, as the compensation is a personal allowance and dependent on the life of the person entitled to it, the council may insist on paying it direct to him, and decline to pay it to a mere assignee.

558.—EDUCATION ACT, 1902.—Power of Education Authority to Reduce Salary of Teachers.—Will you kindly inform me whether the local education authority has power to lower the salary of a teacher in a council school under the Education Act, 1902? I hear it has not.—"RONDAR."

The local education authority has power, under Sec. 35 of the Education Act, 1870, to appoint teachers required for any school provided by it, and may assign them such salaries or remuneration as is thought fit, and may from time to time remove any of such officers. It will, therefore, be competent to the education authority to reduce the salary of teachers in a provided school, unless this power has been delegated to the Education Committee, to which the authority may depute the control of education.

559.—POOR LAW—Handbook on Duties of Relieving Officers.—I should esteem it a great favour if you could recommend a book to me from which I could learn the duties and qualifications of a "relieving officer," as I intend acquainting myself with such duties, with a view to obtaining a situation as such.—"INQUIRER."

There are two or three books devoted to the relieving officer and his duties. We have found the "Relieving Officer's Handbook," by W. H. Dumsday (Hadden, Best and Co., West Harding Street, Fetter Lane, E.C., 6s.) a useful and accurate work.

560.—RATEPAYERS' RIGHT OF INSPECTING MINUTES OF URBAN DISTRICT COUNCIL. —Has a ratepayer a general right to inspect the minutes of the urban council of the district in which he is a ratepayer? Kindly refer me to any statutory provisions on the subject.—"NEMO."

Sec. 247 (4) of the Public Health Act, 1875, provides that, in the case of urban district councils, a copy of the accounts of the council, together with all rate-books, account-books, vouchers, &c., referred to in such accounts, shall be deposited in the offices of the council, and be open to the inspection of all persons interested, during office hours, for seven clear days before the (yearly) audit. This provision would include the right to inspect the minute books of the council, so far as they relate to accounts, but, apparently, no further. It would seem to be open to the council or the clerk to take any steps reasonably necessary to prevent a ratepayer or person interested from investigating the minutes which are not concerned with accounts. The council, however, may have made same regulations on the subject under Schedule I., z. i., of the Public Health Act, 1875, and, if so, those rules, until rescinded, must be observed in so far as not in conflict with the general law. There does not appear to be any other statutory provision on the point. Article 13 of the Local Government Board's General Order of Accounts, issued in 1880 (which applies to urban district councils), provides that "all books and accounts" which the council is required to keep shall be open at the time of the audit to the inspection of "any owner of property or ratepayer interested in such accounts," so as, however, not

to interfere with the audit. This regulation would also include the right to inspect the financial portion of the council's minute-book.

561.—**EDUCATION ACT, 1902—Managers of Schools.**—The Town Council elects its Educational Committee at the first council meeting in November.

(1) Who appoints the local managers of schools to join the foundation managers?

(2) How long are they elected for?

(3) What is the method of their election and when?—"W. M. G."

Normally, the number of foundation managers of a non-provided (or voluntary) school is required by Sec. 6 of the Education Act, 1902, not to exceed four. To these, two may be added representing the local authorities. Where the local education authority is the council of a borough (as would appear to be the case in this instance), both of these managers are elected by that authority (Sec. 6 of the Act of 1902). There does not appear to be any special provision as to the method of election or time of election. The method would be by resolution of a majority of the education authority. The time would usually be, in the first instance, at the earliest convenient opportunity after the appointed day for the coming into operation of the Act, or after the occurrence of a vacancy. There does not appear to be any special regulation limiting the period for which a manager may be elected, but the local education authority may at any time remove the manager of a non-provided school whom it has appointed. (See Education Act, 1902, first schedule, B.)

RECENT DECISIONS OF THE HIGH COURT.

Council's Tramways—Is Council Liable for Accident to Passenger who Alights while the Tramcar is in Motion?—"Harmer v. the East Ham District Council."

A correspondent has drawn our attention to the recent case of "Harmer v. the East Ham District Council," which is of particular interest to local authorities owning tramway and other undertakings, in that the verdict was in favour of the authority—a not very usual result in these days of trial by the "twelve good men and true," whose sympathies generally lead them to mulct the great corporations and local authorities in favour of all comers and applicants.

The plaintiff, a woman passenger on the Council's tramcar, stated that whilst she was in the act of alighting at one of the usual stopping-places of the car, she was jerked into the road, and sustained personal injuries. The Council, in defence, said that at the time the conductor was on top of the car collecting fares, and that neither he nor the driver received any notification that the passenger wished to alight, but that the woman, seeing she was likely to be carried past her "desired haven," deliberately got off the car at her own risk, and fell into the roadway. The details of the plaintiff's claim for damages are interesting, and include items for loss of emoluments as a laundry woman and as an ironer, items for loss of lodgers (who left owing to her not being able to attend them), an item for wage of servant whom she was now obliged to keep, and finally an item to cover her weekly bill for food. Evidence was given on both sides, and ultimately the jury took the view that the plaintiff in alighting from the car whilst in motion did so entirely at her own risk. Judgment was accordingly given for the Council, with costs.

Sewer—Drain—"Single Private Drain"—Liability to Repair—Public Health Acts Amendment Act, 1890, Sec. 19—"Haldicke v. Friern Barnet Urban District Council."

Yet another case on the much litigated question as to what is a "single private drain" within the meaning of the section above mentioned. That section provides that where two or more houses belonging to different owners are connected with a public sewer by a "single private drain," an application may be made, under Sec. 41 of the Public Health Act, 1875 (as to nuisances from drains), and the local authority may recover any expenses incurred in executing works under that section from the owners of the houses affected. In this case H. had executed certain works in relaying a drain at the rear of his houses, and now claimed the money spent thereon from the authority. Held by the Court of Appeal, reversing the decision of the Court below, that the drain was a "single private drain" within the meaning of Sec. 19 of the Act of 1890, and that H. was therefore not entitled to recover from the authority the money expended thereon.

BETHNAL GREEN AND ELECTRICITY.

The Borough Council Agrees to Proceed with an Electric Lighting Scheme. It will Apply for a Loan of £75,000. An Outline of the Proposals is Given, with an Expert's Opinion as to the Financial Result.

ALTHOUGH a Provisional Order was obtained in August, 1899, it was not until last week that the Borough Council finally decided upon a scheme for the supply of electricity within the borough. A good deal of the delay has arisen from the difficulty of obtaining a site for a generating station in such a thickly populated district, with 172 persons to the acre. The extent of this difficulty can be seen from the fact that for the site which the council has at length obtained it has had to pay the large sum of £25,000. This contains 66,000 square feet, and the price works out at about £20 a square yard. Of the total cost, however, only £10,500 will be charged against the electricity scheme, and more than half the land will be reserved for other municipal purposes. The site in question is alongside the Regent's Canal, at a point called the Alexandra Wharf, and is known as Marian Square. The proximity of the canal will enable the council to have a lay-bye for the delivery of coal and other materials.

The Scheme Detailed.

It was at first proposed to erect electricity works in conjunction with a refuse destructor, and to employ the heat generated by the destructor for raising steam for the generators. It was estimated that the cost of such a combined scheme would be £106,000, and a scheme for the purpose was drawn up and submitted to the Council by Messrs. Hammond and Son, the consulting engineers. Of this £31,000 was to have been appropriated to the refuse destructor, but after careful inquiries and lengthy consideration, the Council has decided to hang up this part of the scheme, at any rate for the present, and to proceed with the erection of works for the supply of light and power. The system proposed is that known as a low-pressure continuous current direct supply, at a pressure not exceeding 480 volts, across the outer conductors of a three-wire system, the intermediate conductor being, with the approval of the Board of Trade, connected with earth at the generating works, but insulated at all other parts. Under this system the standard pressure of supply on consumers' premises will be 240 volts for lighting and small motors and 480 volts for motors larger than about five-horse power.

The Proposed Works.

The proposed electricity works buildings include the usual boiler house and engine room under two separate spans, the engine room walls being constructed to carry a 15-ton travelling crane. Foundations and seatings for two plants and three boilers are to be arranged for at present. Three marine type water-tube boilers are to be provided, each boiler being capable of evaporating 8,000lbs. of water per hour. There will be two steam-driven sets of dynamos, each consisting of a steam turbine, coupled to two tandem dynamos, either dynamo being designed for a normal load of 150 kilowatts. There will, therefore, be in all two turbines and four dynamos, the latter having a working pressure of from 240 to 270 volts, the arrangement being such that the three-wire system can be properly balanced by either of these sets. The total capacity of the two generating sets will be 600 kilowatts. A motor reversible booster and stand-bye will be provided in connection with the accumulators, and this will be so designed and arranged as to increase the terminal pressure of the battery when discharging, and to decrease the effective pressure of the battery in charging. The batteries included in the scheme will be capable of discharging for ten hours at 10 ampères, and for shorter periods it can reach a discharge corresponding to 300 kilowatts. It is pointed out that the great advantage of the accumulators is that they require very little attendance during the working. In electricity works depending upon accumulators for the day and post-midnight loads, the dynamos can be laid off for from eight to sixteen hours out of the twenty-four, according to whether there be a demand for motive power during the day or not. In Bethnal Green, where there is a number of factories and workshops it is anticipated that motive power will be largely taken.

Mains and Cables.

The length of the distributing mains will be about 21,000 yards, and they will be laid in the 18 principal roads and streets. The feeder cables to charge the distributing mains will have a length of 7,850 yards. Both feeders and distributors will be either triple concentric or three-core, lead covered, and laid in stoneware troughing filled in solid with a bituminous compound. The house service and public lighting cables will be armoured with two layers of steel tape and laid in the ground direct. In regard to public lighting, the estimates provide for 90 arc lamps and pillars, the arcs being arranged in two circuits of nine lamps each and traversing the following streets:—Bethnal Green Road, Hackney Road, Cambridge Road, Green Street, and Roman Road. Nernst lamps may be used for the lighting of the smaller streets, but these will have to wait for the present.

The Finances of the Scheme.

Now that the dust destructor scheme has been eliminated, it is estimated that the capital expenditure will be £75,000, with £3,200 additional for public lamps. The following is the estimate laid before the Council:—

The Works:	£
Buildings, foundations, chimney shaft, and lay-by	18,580
Boiler house plant	8,650
Engine house plant	9,950
Accumulators	2,890
Mains and services	27,200
House meters	1,250
Instruments and switchgear	1,590
Engineers' and architects' fees	3,496
General expenses	750
Contingencies	644
Total	£75,000

Public Lamps:	£	
90 arc lamps, with necessary gear	2,860	
Other expenses	300	3,200
Total cost		£78,200

Probable Results.

With regard to this important side of the scheme, Messrs. Hammond's estimates are as below. Taking the actual available capacity of the generating plant at 600 kilowatts, and deducting 45 kilowatts for the public lighting, the output is thus estimated:—

	Units.	Load factor.
Private Lighting and Power—		
Maximum load of 555 kilowatts used on an average for 3½ hours per day per annum	709,000	14·6 p.c.
Public Lighting—		
Maximum load of 45 kilowatts or 90 arc lamps half in use for 3,940 hours and half for 1,970 hours per annum	133,000	33·7 p.c.
Total	842,000	Aver. 16·0 p.c.

The nett cost of production and distribution of the 842,000 units, in the opinion of the experts, should not, on a 16 per cent. load factor, be more than 1·50d. per unit. With the plant fully occupied, and assuming that a tariff of charges is adopted which would yield an average price from the private lighting and power supply of about 3d. per unit, with a fixed rate charge for the private lamps of £15 per annum each, the financial results would work out thus:—

Revenue.	
Private lighting and power: 709,000 units, at average price of 3d.	£8,860
Public lighting: 90 arc lamps, at £15 per annum	1,350
Meter rentals and sundry receipts	250
Total revenue	£10,460
Costs.	
Cost of generation and distribution of 842,000 units, at 1·5d. per unit	5,260
Gross profit	£5,200

TO TOWN CLERKS,

POPLAR UNION.

CONTRACT FOR TEA.

THE Guardians of the above-named Union are prepared to receive TENDERS for the SUPPLY of

100 Chests of Indian TEA at 1s. 6d. per lb., duty paid, to the Workhouse, High Street, Poplar, E.

Samples of tea must be delivered at the Union Offices, 45, Upper North Street, Poplar, before 10 a.m. on Tuesday, the 13th December, 1904.

Printed forms of tender, which alone can be received, containing full particulars and conditions of contract, may be obtained on personal application at my Office, or by forwarding a stamped addressed foolscap envelope.

Sealed tenders must be delivered at the Clerk's Office, 45, Upper North Street, Poplar, on Wednesday, the 14th December, 1904, before 6.30 p.m., on which day they will be considered at the meeting of the Board, and on the envelope must be written the name of the contract tendered for.

The Guardians do not bind themselves to accept any tender, but the person whose tender is accepted will be informed by letter.

G. HERBERT LOUGH,
Clerk to the Guardians.

Union Offices,
45, Upper North Street, Poplar, E.
November, 1904.

BOROUGH OF SOUTHWARK.

TENDERS FOR FODDER.

THE Council of the Borough of Southwark are prepared to receive TENDERS for the SUPPLY of FODDER (for three months) according to specifications, to be seen at the Borough Engineer's Office any day between the hours of 10 a.m. and 4 p.m.

Tenders, duly signed, must be sent under cover, endorsed "Tender for Fodder," and addressed to the Town Clerk, not later than 12 noon on Wednesday, December 7th, 1904.

The Council do not bind themselves to accept the lowest or any tender.

J. A. JOHNSON,
Town Clerk.

Town Hall,
Walworth Road, S.E.
1st December, 1904.

WANTED, in London, a thoroughly capable AUDIT CLERK, trained in Accountancy. Inclusive salary £170. Applications, stating age, present salary, experience, and qualifications, with references or copies of testimonials, to be addressed to "District Auditor," care of the MUNICIPAL JOURNAL, 12, Salisbury Square, E.C.

SITUATION WANTED by a respectable Young Man, aged 22, as Junior Assistant in a Surveyor's Office. Over four years' experience. Salary moderate. Write H. G. Roberts, Two-Mile Hill, Bristol.

SITUATIONS.—Advertisements of Situations Wanted in Municipal and Poor Law Offices are inserted at Specially Low Rates. For particulars, address the Manager, "Municipal Journal," 12, Salisbury Square, London, E.C.

NOTES AND COMMENTS.

London Water Awards.

THE New River Company's award of £6,534,000 is the last of the settlements in the London water arbitration, and it is now possible to see what the ratepayers are having to pay for this enormous undertaking. The following table shows the amounts claimed by the various companies, the cash awards, and the debentures that are to be satisfied by the issue of "A" stock, as opposed to the "B" stock given in place of the cash awards:—

	Amount claimed.	Cash award.	Debentures.
Chelsea	£4,750,000	£3 305,700	£175,785
East London ...	7,204,144	3,900,000	2,251,000
Grand Junction (including Staines Reservoirs)	4,767,219	3,349,500	325,000
Kent	2,981,520	2,712,000	220,000
Lambeth	5,511,342	4,301.000	675,000
New River	11,666,666	6,534,000	*
Southwark and Vauxhall	5,674,140	3,603,000	2,290.000
West Middlesex ...	4,200,240	3,524,000	400,000
Total ...	£46,755,271	£31,229,200	£6,336,785

* Included in cash award.

It should be borne in mind that the £703,500 debentures of the Staines Reservoirs Joint Committee are included in the Grand Junction award, while with regard to the New River Company it was expressly provided that compensation should be paid wholly in Water stock, and that the undertaking should be transferred without any obligation for debenture stock. Hence the total cash to be paid comes to £31,229,200, or, if allowance be made for compensation to directors and sundry outgoings, to about £32,500,000, in round figures, and in addition debentures to the amount of £6,336,785, bearing various rates of interest from 3 to 5 per cent., have to be provided for. Quite recently an issue of just under a million and a-half of Water Board "B" stock was successfully made to provide the cash required for certain purposes, and this amount must be added to the equivalent in "B" stock of the cash award.

Awards as Stock.

IN the next table will be found the cash awards, what they represent in Stock at 109½, and the amount of Stock agreed to be taken by the members of the water companies:—

	Cash Award.	Equivalent in "B" Stock at 109½.	Amount of Stock accepted.
Chelsea	£3,305,700	£3,619,741	£3,600,242
East London ...	3,900,000	4,270,500	3,983,200
Grand Junction ...	3,349,500	3,667,703	2,986,973
Kent	2,712,000	2,969,640	2,954,091
Lambeth	4,301.000	4,709,595	4,664,700
New River	6,534,000	7,154,730	7.154,730
Southwark & Vauxhall...	3,603,000	3,945,285	3,443,563
West Middlesex ...	3,524,000	3,858,780	3,832,336
	£31,229,200	£34,195,974	£32,619,835

From these figures it will be seen that only a little over a million and a half of stock has not been accounted for, and it is quite possible that the amount by now is even smaller, as the figures given were those mentioned at a meeting of the board several weeks ago. Adding the amount of the recent issue, the total "B" stock aggregates about £35,650,000, and there remains the "A" stock to consider, by which the debentures are to be replaced. It is understood, although no exact statement can be found either in the Act or in the Order in Council relating to it, that debenture holders are to receive such an amount of Three per Cent. "A" stock as will yield the same interest as that hitherto received. On this basis, £7,495,000 "A" stock will have to be issued in order to replace the £6,336,785 of different interest-bearing debentures, and the combined amounts of "A" and "B" stock will represent a total of £43,145,000. The price is, therefore, enormous, and we cannot hold out any hopes to the ratepayers either of a reduction in charges or of a relief of the rates for a long time yet. Indeed, so well have the interests of the companies been safeguarded, that the expenditure shows a tendency to increase rather than to decrease. The savings of directors' salaries and other items will be more than counterbalanced by the pension list to officials.

Liverpool and Housing.

THE Liverpool Housing Committee is making a number of interesting inquiries into various aspects of the local housing question. A special sub-committee, in the first place, has been appointed to consider the cost of the dwellings erected, and to report as to the possible means of cheapening them. Another decision is to ascertain the cost of demolition, sites, street improvements, building, &c., in connection with rehousing schemes, with a view to ascertaining the loss to the Corporation of the operations, and further, to obtain a return showing what percentage of the dispossessed availed themselves of the Corporation dwellings, and what percentage declined to do so. Another interesting proposal is that while some of the dwellings may be let at rentals which the very poor are able to pay, the rents of the ground-floor dwellings be increased to the maximum now paid.

Municipal Music.

MR. SPENCER PHILLIPS, the chairman of Lloyds Bank, in his recent address, denounced the action of the Yarmouth Town Council in running a "music hall," which we were able to show was a source of relief to the rates. Yarmouth is not the only town which knows how to make municipal music pay. At Margate the Corporation provided the municipal Fetes Committee at the beginning of last season with £200 as working capital. The accounts, which have just been audited, show receipts amounting to £6.454, while the expenditure totals £5.153. The whole of the working capital has been repaid to the Corporation, together with a cash sum of over £1,000, leaving a good balance in hand to start the coming year's work. It is curious how facts always knock the bottom out of anti-municipal traders' "arguments."

Good Templar London Mayors.

ALTHOUGH the days when a teetotal Mayor was a *rara avis* have long since passed away, London has not hitherto presented many instances of the conferring of municipal honours upon those who claim membership with the independent Order of Good Templars. The present year, however, is an exceptional one in this respect so far as the metropolis is concerned, no fewer than six of its borough councils having elected Good Templars to the mayoral office. They include Chelsea, whose mayor is Mr. James Jeffrey; Fulham, the only borough which has for five successive years thus honoured a Good Templar, Mr. Sayer succeeding Mr. Timothy Davies; Hackney, Mr. Tom Hosgood; Battersea, where Mr. Alderman West is Mayor; Southwark, with the Rev. A. W. Jephson; and St. Pancras, where Mr. Purchese has been elected. In the City the newly-elected Sheriff, Mr. Thomas Vesey Strong, has been for many years actively identified with the Olive Branch of Good Templars; and of the London County Council both Mr. J. Williams Benn, the chairman, and Mr. A. E. Cornwall, the vice-chairman, belong to the Order. Another unusual circumstance is the fact that for all the riverside constituencies, from Chelsea to Twickenham, Good Templars have been selected as Parliamentary candidates. These facts have been duly noted by the Middlesex District Lodge of Good Templars, and it is in contemplation to arrange a public reception in honour of these several gentlemen, probably in the Chelsea Town Hall, at an early date.

Municipal "Stagnation."

MR. JAMES BOYLE, United States Consul in Liverpool, ought to be able to interpret the signs of the times better than he does in the November report to his Government. It is hardly accurate to say that "there is an unmistakable cessation of the tendency towards the municipalisation of industries." Parliament will have before it next session a very large number of municipalisation proposals, including one of the biggest that has yet been put forward—that for the purchase of the London docks and their administration by a public authority. We agree with Mr. Boyle, however, when he says that:—

> There are influences at work, well organised though quiet, which have for their object the wiping out, or at any rate the curtailment, of "municipal socialism."
>
> This movement is taking advantage of the

fact of the growing opposition to increased municipal taxes, the claim being made that the municipalisation of industrial enterprises not only kills individual effort, but adds to the municipal rates.

Mr. Boyle should know that this movement is by no means a new one. Its origin goes back to even before the formation of the Industrial Freedom League, which is an organisation avowedly formed to advance the interests of the British Electric Traction Company. The fact that others besides the Trust now contribute to its campaigning funds only makes it even more opposed than formerly to the public interests. The spirit of economy that animates local government at all times is a very proper one. It is not greater now than it ever was; all that has happened has been that financiers who want to blame some other cause than the real one for the depression that exists in their business, find a convenient scapegoat in the municipalities, which are unable to reply to slander in the effective way open to commercial enterprises generally.

The "Other Side."

MR. BOYLE adds that "of course there is another side to this question." It is a pity he does not proceed to tell his Government, and through them the American nation, how strong that other side is. The tables which have been prepared by the Borough Treasurer of Preston, and which we publish this week, contain facts that the Industrial Freedom League and the bankers may ignore, but which they can never explain to their satisfaction. These tables conclusively prove that rates are made up, not of losses from those terrible "trading" enterprises, but of expenditure necessitated by Education, Health, Poor Law, and other general services which Parliament has directed the municipal bodies to perform. The figures further show that, so far from adding to the rates, municipal trading is considerably relieving them, in this very year when the agitation against development has reached quite the hysterical stage. In all of the towns whose names are given by Mr. Carter, the rates would now be higher by amounts varying from 1s. 8d. to 1½d. in the £, were it not for the allowances that have been made for profits from markets, gas, water, electric light, tramways, and other estates belonging to municipal bodies. And these are the very undertakings, it must always be remembered, in respect of which the Industrial Freedom League is continually agitating in favour of those who so generously contribute towards its funds. The League says nothing against municipal enterprise in baths and washhouses, because there is very little to be got out of them. It is equally silent for the same reason concerning cemeteries. But if its object is to reduce the rates, as it says it is, the League should surely attack those services which burden the rates, and not those which, as is proved by Mr. Carter's tables, relieve them. We invite the League and its colleagues on the platform and in the Press to live up to their principles, and, instead of opposing those particular branches of municipal enterprise now proved to produce rate relief, to turn its activities to those which really do add to the ratepayers' burdens. We should not support the Industrial Freedom League even if it opposed educational development and good drainage, but we should be conscious of the fact that its advocacy was not designed to serve the personal interests of its members.

N.T.C. Tactics.

HOW opposed to the public interests are the actions of the companies which the Industrial Freedom League represents is illustrated by the case of the National Telephone Company at Liverpool. For some time past the Liverpool Chamber of Commerce has been agitating for lower rates, but so far it has been unsuccessful. The company has in some places, however, conceded lower rates, but curiously enough there is municipal competition in those towns. The company now explains that the adoption of cheap rates in other places is experimental. As these experiments have now been going on for two or three years, one would think that ample time has now elapsed to find out whether the experiments are satisfactory or not. The company appears to adopt experiments only where it meets with municipal competition, and only in these places does it adopt such a large variety of tariff charges as are in operation in Glasgow, Hull, and other places. It is remarkable that in places like Liverpool, Manchester, and Birmingham, which not only grant the company extensive way-leave privileges, but by abstaining from competition permit the company to enjoy a free-handed monopoly, there is nothing given in return for these concessions by way of cheaper rates. On the other hand, at a place like Glasgow, which has not only strenuously competed with the company, but has steadily refused to give undergound facilities, the citizens are rewarded by being offered cheap telephone rates and frequently concessions of various kinds which hitherto were undreamt of. It seems paradoxical to reward one's enemies and handicap friends, but this appears to be the attitude of the telephone company. The only way for places like Liverpool, Manchester, Birmingham, &c., to extract concessions from the company is, in addition to an expression of public opinion, to let the company understand that it is within the power of these corporations to withdraw the way-leave facilities. Our readers will be interested to note that an article dealing with the Hull Exchange, opened on Monday, will appear in next week's issue.

"Running Powers."

MR. STEPHEN SELLON yesterday (Thursday) evening read an interesting paper on "Running Powers" before the Tramways and Light Railways Association. With his views on the general question very few will disagree. That running powers are desirable when they can be arranged satisfactorily with due consideration of the public interests no one will dispute. But in this country the circumstances are such that public interests often clash with company interests. The position here is that in the towns the tramways are mainly controlled by the corporations, and that in the country districts companies are largely in possession. To say that because the general principle of running powers is a good one the latter are entitled to compulsory facilities over the former, is grossly inequitable. The circumstances of the two cases are not synonymous. Municipal authorities operate tramway lines wholly in the interests of the public; companies conduct them solely with the object of making dividends. Companies often close down lines because they do not earn sufficient revenue, as the Trust has done this year in the Midlands; municipalities often run along routes that may be financially unprofitable in order to open up new districts, and to help solve the housing problem. To argue that under these circumstances both kinds of undertakers are entitled to the same consideration is absurd. The contention that corporations as road authorities have no right to control tramway companies running through their districts is equally fallacious. Mr. Sellon said at the beginning of his paper:—

> The road authorities have no right over the roads they maintain superior to those of the traveller from the most distant county or foreign lands. They have duties in respect to the roads; mainly to keep them open, safe, and unobstructed to all comers; they have certain legal powers given them to enable them to perform those duties and to meet the consequent expenses, but proprietary rights or powers to obstruct, tax, or detain the traveller are not in their possession.

If road authorities have all the duties and no rights why were they given the tramway veto? "Proprietary rights or powers to obstruct, tax, or detain travellers" certainly are in their possession to an extent, or they would not be able to prevent companies carrying those travellers in a particular way. "The public road is the King's highway: free, peaceable, unobstructed passage is the right of every wayfarer thereon," chanted Mr. Sellon last night. There is not much of the "King's highway," or of "free, peaceable, unobstructed passage" about High Street, Brentford, when Mr. Clifton Robinson's tramways are blocking that exceedingly narrow, inconvenient, and dangerous thoroughfare. And yet Mr. Robinson wrote to the papers about "blackmail" when the local authority wanted the street widened by the company which is making a fortune out of it! Mr. Sellon's amiable suggestion that local authorities merely exist to provide roads for tramway companies may be a cardinal point in the belief of the British Electric Traction Company, but it is not the opinion of the legislature nor of public bodies. Companies which make money out of the public roads ought to be made to surrender at least a share of their plunder to the people they exploit.

"L.C.C. and Housing."

IN a letter published in another column Mr. S. H. Halford professes himself dissatisfied with our "explanations" of the London County Council's inability to house the poorest. He says we imply that "a local authority cannot build at a price low enough for the pockets of the class for whom it professes to specially cater." If Mr. Halford means, as we suppose he does mean, the "poorest class," there is no doubt about the inability of a local authority to cater for them. No local authority, so far as we know, has yet claimed that it is able to house the poorest of the poor without going upon the rates. We entirely agree with Mr. Halford that 13s. 9d. per week is far too much to charge for a five-roomed cottage at Tottenham, and that it ought to be possible to build more cheaply. It certainly ought, but the fact remains that, under present conditions, which we explained last week, it isn't. If the London County Council attempted to revise its plans on the lines suggested, it would at once have a Government Department down upon it for evading its obligations. No practical end is secured by attempting to blame the Council for observing conditions which it cannot at present avoid. If our correspondent will endeavour to assist the Council in getting less stringent conditions and longer loan periods, he will be making some real contribution towards the solution of the problem.

POOR LAW OUTLOOK.

The "C.O.S." Still Believes in Private Charity, and Criticises Mr. Long. The Tide of Pauperism is Rising Both North and South. Leicester has a Drastic Scheme for the Unemployed. Chelsea Does Not Favour Labour Colonies.

The "C. O. S." and Mr. Long.

FOLLOWING on the report of its special committee, which was referred to in last week's *Municipal Journal*, a special meeting of the Council of the Charity Organisation Society was held on Monday at the Royal United Service Institution. The attendance was a large one, and, for the most part, the speakers appeared to be actuated by a desire to criticise Mr. Long's scheme, and to contend that there was no exceptional distress with which well-organised charity could not cope. Sir Arthur Clay was responsible for three resolutions. The first of these laid it down that any money required for the provision of employment and relief should be provided by voluntary subscriptions. The second was to the effect that borough councils should limit the providing of work to such as would be undertaken in the course of their normal duties; and the third objected to the establishment of a central metropolitan fund out of grants made from the rates by borough councils for providing employment for the people.

❦ ❦ ❦

The Virtues of Organised Charity.

SOME luminous speeches were made in the course of the discussion. The Rev. C. F. Rogers declared that properly organised charity was perfectly able to meet all distress. Mr. Russell Barrington, who comes from Somersetshire, was certain that there was no exceptional distress—in Somersetshire. "We cannot be more unpopular than we are," said Mr. Crowder; and a lady speaker attributed all the distress to the wicked trade unions. "Is it to go forth," asked Mr. Morris, "that we are opposed to everything?" And another gentleman hoped it would not be thought that they were merely obstructionists. In the end, after the Rector of Poplar had asserted that there was a large mass of distress which could not be met by the Poor Law or by private charity, the Council agreed to a resolution urging its members to join the joint committees connected with Mr. Long's scheme and to co-operate with them.

❦ ❦ ❦

Yorkshire Pauperism on the Increase.

THERE is very little that is comforting in the report which has just been issued by Mr. Philip H. Bagenal, the Poor Law inspector for the East and West Ridings, on the subject of pauperism in those divisions of the county. In nearly every direction Mr. Bagenal has to report an increase, and there is an upward tendency all round. The percentage of paupers to the population for the whole district for the first week in the present year was 1·8, as against 1·7 in 1903, 1·6 in 1902, and 1·5 for the same period in 1901 and 1900. A comparison of the numbers relieved during the five years gives a clearer idea of the increase. In January, 1904, the total was 56,581; in January, 1903, 54,842; in January, 1902, 54,048; in January, 1901, 51,981; in January, 1900, 51,642. In the district there are 46 workhouses, three separately administered infirmaries, 51 scattered homes for children, four groups of cottage homes, four certified schools and other institutions, bringing the total to 124.

❦ ❦ ❦

The State of the Workhouses.

IN view of recent remarks which have been made with reference to the increased attractiveness of workhouses and the consequent growth in the number of inmates, Mr. Bagenal's figures are interesting. There are 35 workhouses in the West Riding, and of these 26 had more inmates in January, 1904, than twelve months previously; eight showed a slight falling-off; and one remained at the same total. The numbers on out-relief were also increased from 31,364 to 32,380; and taking both classes there was a total of 44,713 in 1904. As compared with 1903, this showed an excess for the present year of 1,640, or 3·8 per cent. In the inspector's opinion, the most important feature in the pauperism of the district is undoubtedly the increased number of people who have gone into the workhouses, but he appears to derive some consolation from the fact that most of the important boards of guardians have been for some time preparing for an extension of their buildings.

❦ ❦ ❦

In the South of England.

THAT the rate of paupers is increasing in other parts of the kingdom is evident from Mr. Baldwyn Fleming's annual report to the Local Government Board on pauperism in Hants and Dorset. This report, which covers the union counties of Dorset and Southampton, and parts of Wilts and Surrey, shows that pauperism is not only increasing throughout the district, but that the ratio of increase stands in a worse position than it did a few years ago. Vagrancy is also extending, and on this subject Mr. Fleming makes some strong suggestions. Dividing the vagrants into three classes—those who cannot work, those who can work but will not, and those who can and will—he points out that the last form a very small proportion of the total. There is "a very large sprinkling of men in the casual wards who are evidently incapable of earning their own living by honest means." They should be prevented from pursuing their miserable course of life, and a way in which this could be done would be by obtaining powers to remove them compulsorily to their own unions and to keep them there.

❦ ❦ ❦

Alcohol and Temporary Insanity.

DEALING with cases of temporary insanity induced by an excessive use of alcohol, Mr. Bagenal repeats a complaint of the clerk to the Leeds Board, that his guardians get more than their fair share of such cases. This arises from the practice of the magistrates in committing to the workhouse for temporary detention, as of unsound mind, of persons suffering from the effects of drink. In some cases magistrates have sent "black-listers" to the workhouse rather than commit them to prison. Such a custom, Mr. Bagenal argues, is not satisfactory, and places an expenditure upon the rates which is by no means fair. There is, he says, no chance of a permanent reform during detention in a workhouse, and when a man is released he has not been punished in the slightest degree.

❦ ❦ ❦

The Police and Relieving Officers.

THE Stafford Board of Guardians has just had submitted to it a correspondence which raises a point of general interest. It commenced with a letter sent to the Local Government Board by Captain the Hon. G. A. Anson, the chief constable of the county, in which a series of questions was asked with reference to the position of the police in regard to persons whom they found destitute, helpless, or injured, and conveyed to the workhouse infirmary without an order. To whom, asked the captain, must the police look to relieve them of the charge of such persons, and to defray the necessary cost? Before answering, the Local Government Board desired the opinions of the relieving officer. This official, in his reply, said that for 18 years, to his knowledge, the police had until recently recognised it as their duty to remove to the workhouse infirmary people whom they had found on the road in a distressed condition, without waiting for an order of admission from him. In such cases the master had power to admit [illegible] to send th[illegible] authorit[illegible]

❦ ❦ ❦

York Guardians Surcharged.

A SOMEWHAT interesting situation has arisen at York in connection with the surcharge of a sum of £383 paid as wages to able-bodied men at the workhouse for whom employment had been provided. The workhouse master appealed to the Local Government Board on the subject, and stated that he had acted under the orders of the guardians. At Friday's meeting of this body the clerk presented a draft letter asking for a remission of the charge, which it was proposed to send to the Local Government Board. On this there was a considerable amount of discussion, the rural guardians disclaiming any responsibility, and some of them protesting that they had warned the Board again and again of the illegality of their action. At the close of the discussion it was decided to send the letter as drafted.

❦ ❦ ❦

Leicester and the Unemployed.

IN this column, a fortnight since, reference was made to the serious condition of affairs in Leicester, and to the great increase in pauperism which was recorded. Since then matters appear to have grown worse, and the fact that close upon 1,200 men have registered themselves at the local Labour Bureau is a testimony to the state of employment in the town. It is stated, however, that the Unemployed Committee is "desperately in earnest," and has decided that "either the Government must deal at once with the question, or, if the Legislature declines to realise the responsibilities of the nation in the matter, the Corporation and other public bodies ought to unite in forcing legislatiou which will give them greater powers to deal with the question in a more permanent and rational way."

❦ ❦ ❦

Still Another Scheme.

IN the meantime, Alderman Smith, who, besides being a member of the committee, is the local representative of the Board of Trade, has drawn up a scheme, for the carrying out of which he recognises that greater Parliamentary powers would have to be given to local authorities. For *bona-fide* resident workers requiring temporary help, he would give local authorities power to acquire land near towns for the purpose of cultivation by the unemployed and for division into small holdings and allotments. The same authorities in times of necessity should also have power to expedite and pay for works of public utility, the acceptance of employment thereon not to carry with it the penalty of disfranchisement. For the physically incapacitated and the chronic out-of-works, Mr. Smith would give groups of guardians power to establish labour colonies and other works, with power of detention; and for habitual vagrants the Government should find employment in labour colonies, &c., with power of detention until such persons had been taught self-restraint and acquired the power and will to do honest work. These suggestions are to be considered at a joint meeting of the town council and the board of guardians.

❦ ❦ ❦

Chelsea Guardians and Land Colonies.

THE Chelsea Board of Guardians, at its last meeting, devoted a considerable amount of attention to the question of labour colonies. The Rev. J. Pullein Thompson moved, "That in view of the present state of the labour market, and the large numbers out of employment, it would be wise on the part of the board to consider the advisability of providing work for the unemployed on the land by starting a labour colony on the lines of the Poplar labour colony, which is meeting with great and unqualified success." Mr. Thompson supported the motion in a speech which Mr. Jeffery, L.C.C., declared the most radical he had ever heard, but the board was not prepared to go so far as the reverend gentleman, and decided by nine votes to six to delete all the words after "land." Notice was given of a resolution to form a committee on the subject.

GAS EXHIBITION

THE Gas Exhibition, now being held at Earl's Court, is not only interesting but nnique, in that it is the first of its kind that has been held in this or any other country. The aim of the promoters has been to provide a really international exhibition, exclusively devoted to the display of towns' gas in its many applications; and the result is an attractive exhibition, which illustrates in a marked manner the great strides which have been made in the gas industry since it came into competition with electricity—that is, within the last quarter of a century. Both the mannfacture and the application of gas in all its varied forms are illustrated in the numerous attractive stands which make up the exhibition in the Qneen's Palace, the Princes' Hall, and other buildings, and the exhibitors include some of the best-known companies and firms in the world.

Lighting, Heating, and Cooking.

The development of the incandescent system of gas lighting, which has progressed so much in late years, has special attention, as does also the provision of the most efficient high-power lamps for public lighting in the streets and other places, and some of the results achieved are distinctly in advance of anything that has gone before.

Lighting is not, however, the whole end and aim of the exhibition, for a large amount of space is devoted to the latest specimens of gas stoves for heating and cooking purposes, and to illustrations of a number and variety of trade and special uses for gas. Gas engines, a handy source of distributed power, are also present in their latest forms.

An interesting section of the exhibition is that devoted to showing the improvements which have been made in the mechanical resources of the gas manufacturer. These have completely changed the character of the operation, and machinery for hanling coal and coke has superseded hnman mnscle.

Some Mechanical Improvements.

Perhaps the most notable exhibit in this latter direction, and one which is seen immediately upon entrance, is that set up by Messrs. Graham, Morton and Co., Limited, of Leeds (No. 13). It is the largest exhibit of working machinery that has ever been put np, and shows five different classes of conveyors applicable for hanling coal and other heavy material. The original idea of the design has been carefully kept, and the machinery shown passes the coal antomatically and continuously ronnd the whole of the plant, and through each section of the apparatus, which is self-contained and works with admirable precision.

In order that visitors may be able to take full advantage of the exhibit, Messrs. Graham, Morton and Co. have erected a bridge immediately over it, from which the whole of the operations of the plant can be clearly seen, and may be closely followed—an opportunity not to be missed by engineers and others interested in gas, electric, and other works.

The plant may be described as follows:—A receiving hopper placed at one end antomatically feeds the gravity bncket conveyor, a noteworthy feature in the design of the latter being the overlapping of the bnckets, facilitating the feed so that there can be no spilling of the material at the point of feed. Large installations of both these types of gravity buckets have been erected by the firm for gas and electricity power stations, and the conveyor is a perfect one for conveying and elevating coal, coke, and oxide in gas works.

The overlapping buckets convey the coal overhead and deliver into the Graham's Patent Rubber Belt Conveyor, the principal advantages of which are the small amount of horse-power reqnired to drive it, the length of belt which can be utilised, and the perfect control of varying speeds. The "Idler Rollers" are built up of drawn steel tubing, and are nnbreakable.

Conveyors at Work.

Another class of conveyor exhibited is extensively applied in the storing of coal in gas-works, electric light works, boiler honses, &c., a tripper carriage throwing the coal off the belt automatically. It can be moved antomatically along the whole range of coal stores or tanks in either direction, the power for this purpose being transmitted to the propelling gear by the motion of the belt itself. From this conveyor coal is delivered on to another type known as a continuous double-sided pnsh-plate conveyor, the novelty of which is, that both the top and bottom tronghs may be ntilised. A double duty is thns accomplished.

This system of antomatically filling and emptying coal stores completes a cycle of operations; and an economic consideration that shonld be borne in mind is the fact that the work of emptying the coal stores costs nothing, bnt is included in the cost of filling. Thus two operations are performed at the cost of one. A fine example of this class of conveyor may be seen at the Nanterre Gas-works, where the coal is taken from the boat into the coal stores, and automatically from the latter into the bnnkers of the retort house, at a total cost of 1d. per ton.

From the point of vantage which the bridge offers, it will be noticed that the gravity bucket delivers the whole of its coal on to the belt conveyor, and in turn the belt conveyor delivers the whole of its load on to the double push-plate conveyor, and from this conveyor, by means of the doors and slides in the top trongh, the coal is fed about equally on to the push-plate conveyor and the tray conveyor. The two latter discharge the coal into the receiving hopper, whence it is fed into the gravity bucket conveyor, thus completing the cycle of operations.

In the small space available, it has only been possible for the firm to give visitors but a faint idea of the plants which they have erected and have now in course of construction at their engineering works in Leeds; for large as this working exhibit is, its capacity is but as that of a toy model in comparison with the vast

(Continued on Page 959.)

"RONUK" (SANITARY) POLISH

For Floors of Hospitals, Asylums & other Institutions.

POLISHES, PRESERVES, AND PURIFIES.

Awarded Bronze Medal of Sanitary Institute.
Only Award ever granted to a Polish.

When "RONUK" is used the floors present a hard smooth surface which prevents the harbouring of germs.

"RONUK" Ltd., make a speciality of the first preparation for all kinds of flooring, and keep a large staff of Polishers for the purpose.

Awarded Bronze Medal of Sanitary Institute.

ELECTRICITY SUPPLY.

Eastbourne, with Exceptional Capital Charges, Shows a Surplus on the Year's Working. Poplar Continues the Story of Rapid Growth in the East End of London. The Two Annual Reports are Compared.

THE south coast watering places were pioneers in the electrical supply world, and by this very fact have, perhaps, suffered through the plant being anything as a rule but of the modern character. In consequence of this and of the seasonal character of the load, coupled with the lack of progressive ideas which seems to be the rule with the southern railway companies, and the distance from the coal-fields, the electrical undertakings along the south coast are characterised by higher costs and greater charges than are to be found in other parts of the country. In recent years there has been a revival, and steps have been taken to as far as possible modernise the plant and improve the conditions of supply. Thus, at Eastbourne the public were up to the end of the last financial year asked to pay 6½d. per unit for lighting and 3d. for power, but these charges have been reduced by a halfpenny in each case, and public lamps which cost £25 per annum now are rated at £22 each. This should tend to bring about an increase in custom, which will assist the load of 743 kilowatts and help to fill up the plant, of which there is plenty to spare, as 1,200 kilowatts are installed. The results for last year at Eastbourne, as shown by the abstract of accounts to the 31st of March, 1904, are as follows :—

The revenue derived from sales of current, &c., amounted to		£21,421
And the working expenditure to		8,412
Leaving a gross profit of		£13,009
Out of this sum the following requirements were met :—		
Dividends on stock	£4,327	
Sinking fund	4,744	
Stamp duty	84	
Total of capital and special charges		9,155
Nett surplus for year		£3,854
Add interest received		4
Gross surplus for year		£3,858

The Cost of an Exhibition.

THE figures require some slight modification before they can be held to exhibit the working results of the supply portion of the undertaking. Including in the revenue account are the receipts and charges for the electrical exhibition. The particulars given are interesting, as they show how difficult it is to make ends meet on such a venture. The receipts from rents for stands, &c., amounted to £45, and from admissions to £25, making a total of £70. On the other hand, the expenses incurred included wages, £20; hire of hall, £21; advertising, £8; bands, £14, while sundry office charges brought the total up to £73, so that the deficit is small. In the motor-hiring department £79 was paid for purchase and £107 received from sales and hire, yielding a profit of £27. Installation work produced £88, and cost £29, so that there was a profit of £63 under this head. Eliminating the expenditure of this special department, and dealing only with the profits, the revenue was made up in the following manner :—

	Units.	Yielding.	Per unit.
Private consumers took ...	733,322	£18,176	= 5·949d.
Public lamps consumed...	163,871	2,357	= 3·452d.
Interim total ...	897,193	£20,533	= 5·493d.
Meter rentals	—	444	= ·119d.
Sales of goods, work done, and rents received, &c.	—	177	= ·071d.
Profits on installations...	—	63	
Motor hiring and repairs	—	27	
Total receipts ...	897,193	£21,244	= 5·683d.
Units used on works ...	13,841		
Total accounted for	911,034		
Utilised on distribution	195,232		
Total units generated	1,106,266		

Exceptional Capital Charges.

THE number of consumers is large for the output, being 888, with 62,998 lamps connected to the mains. This partly explains the exceptional capital charges, which exceed the total cost, and indicate the importance of cultivating the bye-uses of electrical energy. 2·427d. per unit for interest and sinking fund appropriation is a heavy tax to meet. The local authority allowed a company to pioneer the supply in Eastbourne, and when it was decided to take over the undertaking a large sum had to be paid as purchase price, namely, £88,749, to which the cost of acquisition added £1,080, and on the top of this expenses were incurred in the erection and equipment of new works at Roselands, bringing the total to £145,989, after allowing £7,880 for the sale of the old works and plant. The cost per kilowatt works out at £121, about double what might be anticipated in the case of an entirely new undertaking. In spite of these difficulties, the surplus for the year is £3,858, produced by maintaining the rates charges at a remunerative level—a course fully justified on financial grounds. The costs are by no means out of the way, and show very considerable improvement over those which have hitherto been recorded. The expenditure was covered by the following items :—

	Amount.	Per unit.
Works cost	£5,905	= 1·580d.
Rates, taxes, management, and stamp duty	2,117	= ·566d.
Total cost...	£8,022	= 2·146d.
Public lamp maintenance...	293	= ·078d.
Gross cost	£8,315	= 2·224d.
Dividends on stock	4,327	= 1·158d. } 2·427d.
Sinking fund	4,744	= 1·269d. }
Total actual cost of units sold	£17,386	= 4·651d.
Surplus for year	3,858	= 1·032d.
Revenue in all	£21,244	= 5·683d.

Increased Output in Poplar.

THE East End districts of London have proved to be exceptionally rich fields for the electrical engineer, and it is an astonishing fact that they have shown a more rapid growth than similar areas—so far as size goes—in the higher-class neighbourhoods of the West End. We have already given the results of Stepney and West Ham, and now present a summary of the accounts of the Metropolitan Borough of Poplar to 31st March last, the third complete year of the undertaking, which commenced working in October, 1900. The rapid increase in output is shown by the comparative figures for the past three years.

Year ended 31st March	1902.	1903.	1904.
Private consumers ...	439,611	1,322,447	1,527,557
Public lamps	327,574	465,100	678,840
Total units sold	767,185	1,787,547	2,206,397
Percentage sold to generated	Per cent. 87·7	Per cent. 90·6	Per cent. 89·7
No. of public arc lamps .	185	220	320
No. of public incandescent lamps	1,277	1,530	1,649
Maximum load in 32 watt lamps	16,750	28,500	38,250

A bold attempt has been made to oust gas for street lighting, but it cannot be said that the result is entirely successful. The use of incandescent electric lamps may be favourable to the Council in assisting the output of their works, but some radical alteration in the illuminating agent will have to be effected before the public will be brought to regard the change with favour. This is evidenced by the production of large globe lamps of the Meridian (British Thomson-Houston Co.) and the Whitelight (General Electric Co.) type, by the favour that the Nernst lamp has enjoyed, and the hopes which are centred upon the Mercury vapour lamp of the Cooper-Hewitt and Bastian patterns. Whether the latter, with its pale moonlight effect, will be acceptable to the wayfarer remains to be seen; but the carbon filament lamp has been tried and found wanting. Poplar has not only given the latter an opportunity of practically proving its usefulness, but also ventured upon what appeared to be a promising experiment in erecting some forty Bremer flame arc lamps for street lighting. Unfortunately, this attempt to lead has been shown to be a little before it [illegible] light so [illegible] valuable [illegible] period as [illegible] difficulty.

A Satisfactory Balance-Sheet.

THE results for the year ended 31st March last were as follows :—

Revenue derived from sales of current, &c., amounted to		£25,458
And the working expenditure to		14,671
Leaving a gross profit of		£10,787
Out of this sum the following requirements were met :—		
Interest on loans	£6,331	
Redemption of loans	1,463	
Bad debts	8	
Total of capital and special charges		£7,802
Surplus for year		£2,985

The Rates of Charges.

THE revenue was made up almost wholly of receipts from sale of current, the only items outside this being test fees amounting to £7 and sale of old materials, £135. Meter rents are not charged, except in special cases, but the minimum charged is enforced, a very useful precaution against the reckless placing of a burden on the undertaking by being called to lay service lines without some return therefrom. It will be seen that Poplar received £356 from these minima, which would otherwise have been lost without the consumer appreciating the concession.

The rates of charge are graded to such an extent that it would appear every possible class of consumer has been considered. Lighting is charged at 5d., 4½d., 4d., 3½d., 3d., and 1·8d. per unit; power at 3d., 1½d., 1·8d., and 1·65d. per unit, and the encouragement which the low-power rates have given in an important industrial district is shown by the excess output in this department over the lighting sales, good as these are. 695,502 units were sold for lighting, and 832,055 for power; the street lighting coming out with a consumption almost equal to that for private lighting. In the next table the whole of the private output is taken together. Itemised, it may be noted that 338,902 units at 3d. were sold for lighting, and 239,398 at 5d. per unit, the remainder being spread over the various rates already mentioned. The average for lighting is 3·585d. per unit, and for power 1·716d. per unit. These averages support the argument we have so often brought forward that low rates are the means — if not the only, the principal means—of creating a large demand for electricity, and in a district like Poplar it cannot be denied that it has been due wholly to the cheapness of the supply that it has been popularised to such an extent that in three and a half years the business has been built up until the sales reached over two million two hundred thousand units, with a load-factor of 20·58 per cent.

Receipts and Expenditure.

THE receipts were obtained from the following sources :—

	Units.	Yielding.	Per unit.
Private consumers took ...	1,527,557	£15,719	= 2·470d.
Public lamps consumed ...	678,840	9,232	= 3·264d.
Interim total	2,206,397	£24,951	= 2·714d.
Meter rentals...	—	2	= ·039d.
Minimum charges	—	355	
Fees and goods sold ...	—	142	= ·015d.
Total revenue	2,206,397	£25,450	= 2·768d.
Units used on works ...	170,229		
Total accounted for ...	2,376,626		
Utilised on distribution ...	89,702		
Total units generated ...	2,466,328		

The amount received was taken up and appropriated thus :—

	Amount.	Per unit.
Works cost	£9,100	= ·990d.
Rates, taxes, management, &c.	3,491	= ·379d.
Total cost	£12,591	= 1·369d.
Public lamp maintenance...	2,080	= ·227d.
Gross cost	£14,671	= 1·596d.
Interest on loans	6,331	= ·689d. } ·848d.
Redemption of loans ...	1,463	= ·159d. }
Total actual cost of units sold	£22,465	= 2·444d.
Surplus for year	2,985	= ·324d.
Revenue in all	£25,450	2·768d.

ST. PANCRAS AND FREE LIBRARIES.

THE ACT ADOPTED.

THE little group of London boroughs which has stood out against the adoption of the Public Libraries Act has been still further reduced by the vote which was taken at a special meeting of the St. Pancras Borough Council last week. As in the case of Islington a few months since, the trend of the elections in November last left no doubt as to the opinion of the electors on the question. All the Progressives were pledged to vote for adoption, and the council hardly needed the exhortations which were addressed to it by a series of deputations. The formal resolution was moved by Mr. T. W. Idris, London County Council, the ex-mayor, who threw out a hint that Mr. Carnegie might be disposed to assist in the provision of the library buildings.

There was the usual plea for delay, Mr. Cox-Sinclair and Mr. E. Barnes asking for a postponement until the ratepayers have had an opportunity of expressing their views. To this it was pointed out that they had already done so by returning a Progressive majority. After an animated discussion it was resolved by a large majority to adopt the Act, and a rate not exceeding one penny in the £.

There have been two ballots on the question in St. Pancras. In June, 1894, 4,574 votes were given in favour of adoption and 6,248 against. In October, 1898, the result was:—In favour, 4,840; against, 8,278. Under the new London Government Act the Acts can be adopted by a borough council without a ballot. Paddington, Marylebone, and Bethnal Green have not yet fallen in line with the other boroughs.

TRAMWAY TOPICS.

South Shields will have Nothing to Do with the Trust. Electric Railways to Pierce the Heart of Snowdonia. How the Linking-up Policy is Progressing in Essex. Companies and the Purchase Clauses. Electrification Proceeding at Exeter. Extensions at Dover and Colchester.

WE are glad to see that South Shields remains firm to its decision to have nothing to do with the Trust. After the disclosures that have taken place it could hardly act otherwise. A meeting of the Tramways Committee was held during last week for the purpose of considering what action should be taken in regard to the new system. There were three proposals before the committee—one to take out contracts at once for the laying of the new routes; to delay the whole matter until the expiration of the lease at present held by the British Electric Traction Company over the old lines; or to buy out the British Electric Traction Company. The last proposal was promptly abandoned, and although no definite decision was arrived at, there was a unanimity of opinion that the first-named course was the best one. It was urged that the Corporation should proceed with new lines, and have all that work completed by the time the existing lease expires, in order that there should be a continuity of service.

Other Details.

THE question of the car-sheds was also discussed, and it was agreed that it would be better to proceed with the erection of entirely new car-sheds rather than extend and alter the present premises. It was stated that the available site was altogether inadequate, and a sub-committee was appointed to inspect another, which is already the property of the Corporation, and other sites in the town. The question of proceeding with the work at once was deferred pending the preparation of reports by the town clerk and the sub-committee.

Snowdonia Light Railway.

THE final sanction of the Board of Trade has now been given to the Order under the Light Railways Act for the proposed electric railway from Bettws-y-Coed to the junction with the new Portmadoc and Beddgelert line. The work of constructing the line will be commenced in the course of a few months, but in the meantime much energy is being concentrated upon the section of railway down to Portmadoc, which will probably be finished and opened for traffic by the beginning of next summer. These lines, with others in the district, are the offspring of the North Wales Power Company, which is progressing very rapidly with the building of a new power station. The electrical machinery for this, and the turbines for driving it with water, are in course of manufacture; and the conduits from Llyn Llydaw are being laid. When the schemes now authorised are completed, the heart of Snowdonia will be pierced with electric lines, and it will be possible to travel by car from Carnarvon to Portmadoc.

Electrification at Exeter.

IN connection with the Exeter Municipal Tramways, which are now in process of electrification, the corner stone of a new car-shed and offices was laid on Saturday by the Mayor (Mr. Councillor Perry.) The shed is 182 feet long, and will accommodate 22 cars. It has been erected at a cost of £5,395, and the site was purchased for £1,890. In the course of his speech on the occasion, Mr. Perry said the length of the sections under construction was 3⅜ miles and the single track length 5½ miles, the contract being for £29,227, besides £4,841 for electrical equipment, £6,933 for twelve cars, and £5,395 for the shed, making altogether £47,000, or £54,900 with the £7,900 paid for the horse trams. In the nine months during which the Corporation had run the horse-trams it had carried 414,645 persons, or 7,600 more than the previous owners carried in the whole year; whilst the nine months' fares were £1,730 compared with £1,690 in twelve previously. These figures, relating to an inadequate service, showed the wisdom of electrifying and extending the service.

Extensions at Dover.

AT Tuesday's meeting of the Dover Town Council, the Tramways Committee submitted the surveyor's estimate of the cost of a proposed extension of the municipal electric tramways from Buckland Bridge to Minnis Lane, a distance of just one mile and a quarter. The statement showed a total of £21,000, made up as follows:—Land, £750; permanent way and equipment, £13,892; new cars, £2,400; alterations to cars, £624; paving streets to be formed, £1,394; cost of Provisional Order and legal expenses, £1,500; and contingencies, £440. On the other hand, the general manager reported as to the estimated traffic receipts, the cost of operation, and the capital charges. Putting the number of passengers per annum at 4,268,100, the receipts would be £1,677 12s. 6d., with £80 additional for advertising on the cars—a total of £1,757 12s. 6d. The expenses for operation were put at £1,201 16s., showing a balance of £556. The capital charges per annum to be met are £1,312, representing 7·41d. per car mile. The Council was recommended to take over the Order, apply for the sanction of the Board of Trade, and proceed with the work.

Birmingham Corporation Tramways.

IN connection with the Bill which the Birmingham Corporation is to promote next session the Tramways Committee has prepared a special report, to be submitted to the Council on Tuesday. It states that since submitting the draft Bill approved by the Council it has been deemed advisable to include certain additional properties in Dale End for the purpose of street widenings, necessitating the increase of the sum which it is proposed to borrow by £34,200, and raising the total under the head of purchase of land for street widenings to £202,200. The committee recommends the substitution of this amount for that previously included in the Bill.

Linking-up Suburban Tramways.

AN important extension of the electric tramway system is being made by the Barking Council, which is linking-up through Barking the tramways of East Ham and those of the Ilford District Council. The constructional powers of these tramways were obtained by an Order issued in 1902, but the work has been delayed because it was necessary first to build a bridge over the Roding, widen another over Loxford Water, and make extensive street widenings in order to lay down double lines of rails. A new bridge over the London, Tilbury, and Southend Railway at Barking has yet to be built to take the place of the existing level crossing; but this will only be a matter of a few months, and will not stop the linking, as the trams, until the bridge is finished, will run up to each side of the level crossing. When completed, the Barking tramways will go a long way towards joining up the main suburban systems, making transit from place to place quick and easy. At the West Ham Council, this week, the tramways manager was instructed to confer with East Ham and Barking to ascertain the conditions upon which he could arrange the through running of cars.

Colchester Corporation Tramways.

IT is officially announced that the Mayor, aldermen, and burgesses of the borough of Colchester are about to apply to the Board of Trade for a further Provisional Order under the Tramways Act to construct a tramway wholly [illegible] which i[illegible] in length[illegible]ways in Magda[illegible]an[illegible] to Old Heath Roa[illegible]a siugle [illegible]alf the distance, and d[illegible]ble the rem[illegible] Power is also to be sought to work a[illegible]use the intended tramway, or any of the existing or authorised tramways of the Corporation by "steam, gas, air, electrical, or other mechanical power."

New Lines in the Kingston District.

IT is interesting to learn from a published interview with Mr. J. Clifton Robinson, the manager of the London United Tramways Company, that work is to be commenced almost immediately upon the authorised lines connecting the present system with Kingston, Surbiton, Thames Ditton, Molesey, New Malden, and Wimbledon. This will, it is said, entail an expenditure of £500,000, of which £200,000 will be paid in the shape of wages. Whether Kingston Bridge is to be reconstructed or not is uncertain, but the probability is that it will be widened and strengthened. It is hoped that the work will be completed by the end of 1905.

Companies and the Purchase Clause.

A BILL is to be promoted by the Metropolitan Electric Tramways Company to secure power for the widening of streets and the compulsory purchase of lands in the Edmonton Urban District, and for other purposes. One of the clauses in the proposed Bill is worthy of attention. It will seek "to provide that notwithstanding anything contained in Sec. 43 of the Tramways Act, 1870, or any Act or Order relating to any tramways of the company with or by which that section is incorporated or made applicable, the powers of the local authorities for purchasing the portions of the said tramways within their respective districts shall not be exercised until such time or times and upon such terms and conditions as may have been or may be agreed upon between the company and any such local authority or as may be prescribed or provided for by the intended Act."

Absent-Minded Travellers.

THOSE who have occasion to use tramcars can have little conception of the almost inexhaustible variety of articles of necessity and ornament which are left in the cars by the absent-minded. A sale which took place a day or two since at Cardiff well illustrates this. Umbrellas there were in hundreds. Gloves, walking-sticks, handbags, and books are often unconsidered trifles, and these were plentiful at the sale, but when someone leaves an afternoon tea tray, or a silver watch, or a set of musical instrument "cylinders" behind and never claimed, the case is a hard one to understand. Four trimmers' shovels suggested tired toilers sleeping in a corner of the car suddenly awakened and rushing out without their shovels. "Sundries" there were in basket loads. Here a tiny pair of baby's shoes peeping behind a lady's fur boa; there a labourer's muffler. A plumber's roll of lead piping was one of the strange things forgotten in the tramcar. A pair of pince-nez glasses may have been accidentally dropped, but what about ballroom slippers and an exquisite hair brush?

New Cars for West Ham.

THE Electric Tramways Committee of the West Ham Corporation is about to purchase 35 new cars. Seven tenders were submitted to its consideration from the following firms:—The Brush Electrical Engineering Company, Limited, Loughborough, £528 10s.; Witting, Eborall and Co., Limited, London (Tender B), £542 15s.; Hurst, Nelson and Co., Limited, Motherwell, £547; the British Westinghouse Company, Limited, Manchester, £552 15s.; Witting, Eborall and Co., Limited London (Tender A), £555 17s.; the British Thompson-Houston Company, Limited, Rugby, £575 15s.; Dick, Kerr and Co., Limited, London and Preston, £582. After careful consideration of the various tenders the

The Glasgow and Paisley Dispute.

IN connection with the dispute between the Glasgow Corporation Tramways Committee and the Paisley Tramways Company, as to the question of the former running its cars over the latter's lines, Lord Balfour of Burleigh has just issued his award as arbitrator on the subject of fares, compensation, and expenses. The award is as follows:—

(1) The Tramways Company to receive £250 from Glasgow Corporation on 1st December, 1904, for constructing the siding.
(2) Corporation to pay the company whole fare received from local passengers, and two-thirds of a penny for each "through" passenger.
(3) Corporation to receive from company 3 1-3d. per car mile for working expenses.
(4) Extra expense of checking tickets, &c., to be borne equally.
(5) Award to last till 31st December, 1914.
(6) Expenses incidental to the arbitration (i.e., arbiter's and clerk's fees, &c.) to be borne equally, and *quoad ultra* each party to pay its own expenses.

It is further stated that to the sum of 3 1-3d. which will be allowed to the Corporation for working expenses there will, of course, fall to be added the cost of the electric current, which is supplied by the Paisley Town Council, and about the cost of which there can be no dispute.

Extensions in Glasgow.

MR. JAMES DALRYMPLE, the new manager of the Glasgow Corporation tramways, has, with the consent of his committee, decided to proceed at once with the construction of the extension from Pollokshaws East to Giffnock, the object being to provide employment for between 80 and 100 men, and to that extent relieve the prevalent distress. The work will be done direct by the department, as has been sometimes the case on previous occasions. Usually such work is only undertaken in open weather, and owing to the hardness of the ground it will be more costly at this season of the year. The men will be paid the standard rate of wages. At the relief works at Provan 130 men are engaged.

Social Amenities.

THE first of a series of smoking concerts in connection with the West Ham Corporation Social and Athletic Club has just been held at the Langthorne Rooms. Mr. H. E. Blain, the tramways manager, presided, and there was a large attendance of such members of the staff as were off duty. The Chairman, in a short address, reminded the employés of their responsibilities to the service and the public, and said that it was only by the combined efforts of all concerned that real efficiency could be attained. A second concert of an equally successful character was held last Wednesday for those who, being on duty, were unable to be present at the first.

NON-PROVIDENT SCHOOLS.

THE Durham Education Committee has reported as follows:—"We have taken the opinion of Mr. W. S. Robson, K.C., M.P., on the following questions:—(1) In cases where non-provided schools were deficient in furniture and fittings either in quantity, quality, or kind on the appointed day is it obligatory on the local education authority to purchase the furniture, &c., necessary to make them efficient? (2) In the case of newly-erected non-provided schools or extensions of old schools, does the obligation of the local education authority to "maintain" the school carry with it the obligation to bear the initial expense of furnishing and fitting-up the new school or the enlargement, or only to make good the damage to furniture, &c., due to fair wear and tear? (3) If not, are the local education authority at all liable for the purchase of new furniture or things in non-provided schools? And he has advised us as follows:—(1) Yes. The local education authority is bound to maintain and keep efficient all public elementary schools within their area, and the school cannot be maintained or kept efficient without furniture. In the extreme case of a school being so destitute of furniture as to be unable on the appointed day to earn a grant, it would then be the duty of the Board of Education to decide (on the application of the local authority) that it was not a public elementary school, and need not be taken over. (2) and (3) The answer to these questions is suggested by the foregoing answer. The local authority is only bound to take over schools which can be properly described as public elementary schools. The Act of 1870, Sec. 7, defines a public elementary school as a school carried on according to the regulations therein prescribed, one of which (Sub-section 4) is that it shall be conducted so as to be capable of earning a Parliamentary grant, and according to the code such a school must be properly provided with furniture to the satisfaction of the department. Unless, therefore, a newly-erected non-provided school be furnished, it would be the duty of the Board not to allow it a status as a public elementary school, but once it is furnished, the furniture must be maintained, and replaced as may be necessary, by the local authority."

BOROUGH OF SOUTHWARK.

SANITARY INSPECTOR.

THE Council are about to appoint a SANITARY INSPECTOR, at a salary of £120 per annum, rising £10 per annum, on approved service, to a maximum of £180 per annum

The appointment will be subject to the approval of the Local Government Board, and in accordance with the Public Health (London) Act, 1891, and the General Orders of the Local Government Board.

Candidates must be holders of a certificate from the Sanitary Institute prior to December, 1898, or from the Sanitary Inspectors' Examination Board since that date, and be competent by their knowledge and experience to perform the duties of the office, and the person appointed is to devote the whole of his time to the performance of the duties prescribed.

The officer will be appointed to the district known as St. Peter's district or such other ward as the authority, with consent of the Local Government Board, may determine, and will be required to reside within the borough.

The appointment will be made on the understanding that there will be no pension or superannuation allowance.

Forms of application can be had any day at the Town Hall, Walworth Road, S.E.

Applications on the prescribed forms, accompanied by not more than three recent testimonials, and endorsed "Sanitary Inspector," must be sent to me not later than noon on Monday, January 2nd, 1905.

The Council will proceed to make the appointment on January 18th, 1905.

J. A. JOHNSON,
Town Clerk.

Town Hall, Walworth Road, S.E.
2nd December, 1904.

POPLAR UNION.

POTATOES.

THE Guardians of the above-named Union will, at their Meeting to be held on the 14th December next, proceed to consider TENDERS for the SUPPLY of POTATOES
for period ended at Midsummer next.

Printed forms of tender, which alone can be received, containing full particulars and conditions, and estimates of quantities required, may be obtained on personal application at my office, or by forwarding to me an addressed envelope, foolscap size, duly stamped.

Sealed tenders must be delivered at the Clerk's Office, Upper North Street, not later than 6.30 p.m. on Wednesday, the 14th December.

The party whose tender is accepted will be informed thereof by letter.

G. HERBERT LOUGH,
Clerk to the Guardians.

PARISH OF SAINT LEONARD, SHOREDITCH.

CONTRACTS FOR SUPPLIES.

THE Guardians of the Poor of the above-named Parish will meet at the Board Room, 204, Hoxton Street, N., on Wednesday, the 14th day of December, 1904, at 5.30 o'clock in the afternoon precisely to receive TENDERS from persons willing to CONTRACT to SUPPLY them with such Butcher's Meat, Cheesemongery, Coal, Cornchandlery, Fish, Flour, Grocery, Potatoes, and Vegetables and Tea at 1s. 5d. per lb. (samples of the last-named are required on or before the 12th December) as may be ordered for the use of their various establishments from the 31st day of December, 1904, to the 25th day of March, 1905, both days inclusive.

Payment for Butcher's Meat, Coal and Flour will be made monthly.

Forms of tender and contract may be obtained at my Office as under.

By order.
ROBERT CLAY,
Clerk to the Guardians.

Clerk's Office,
213, Kingsland Road.
30th November, 1904.

CITY OF BRADFORD.

DEPUTY TOWN CLERK AND CHIEF ASSISTANT SOLICITOR.

THE Bradford Corporation invite Applications from duly qualified solicitors for the above position. Candidates must be thoroughly experienced in local government law and practice, and have an intimate knowledge of the work of a town clerk's (or equivalent) department in a large district, including conveyanciug and common law, and must also be fully competent to act as advocate in conducting important cases before magistrates. &c.

The salary (subject to approved service) will be £500 per annum, with annual increments of £50 to a maximum of £750.

Applications (endorsed "Deputy Town Clerk"), stating age, and setting out the candidate's career and experience, with copies of three recent testimonials, to be sent so as to reach me not later than first post on Wednesday, the 21st inst.

Canvassing in any form by, or on behalf of any candidate, will disqualify, but candidates may send a copy of their application and testimonials to the members of the selection committee (list can be obtained on application at my office), and selected candidates may subsequently send such copies to the other members of the council.

FREDERICK STEVENS,
Town Clerk.

Town Hall, Bradford.
3rd December, 1904.

CITY OF YORK.

LEASE OF TOLLS OF SKELDERGATE BRIDGE.

THE Corporation of York give notice that the TOLLS of and appurtenant to SKELDERGATE BRIDGE, YORK, together with the TOLL-HOUSE erected thereon, will be LET by Public TENDER for the term of three years from the 1st day of January, 1905.

The lease will be granted subject to the lessee contracting with such foot passengers as may desire it for a composition not exceeding threepence each person per week in lieu of the usual toll.

The Corporation will retain the statutory power and duty of opening and closing the bridge for purposes of the River Ouse navigation, and the lease will be granted subject to the obligation of opening the bridge for the purposes referred to during the periods prescribed by the Bridge Act, and at such other times as the Corporation may from time to time require, and to the right of the Corporation and its officers, servants, and workmen to enter at all times upon the bridge and toll-house for purposes connected with such opening and otherwise free of toll.

The lessee will be required to pay the rent in advance by equal monthly instalments, and to find sufficient sureties for the due payment of the same, and the performance of the covenants and agreements to be contained in the lease, and also to pay all rates, taxes, and other outgoings in respect of the bridge, toll-house, tolls, and premises over and above his rent.

The draft of the lease and schedule of tolls to be taken may be inspected at the Town Clerk's Office, Guildhall, and further information may be obtained there.

Sealed tenders or proposals, with the names and addresses of the proposed sureties, to be sent to the Town Clerk's Office, Guildhall, York, not later than 10 o'clock in the forenoon of Thursday, the 15th December, 1904, endorsed "Tender for Bridge Tolls" on the outside.

The highest or any tender will not necessarily be accepted.

By order.
R. PERCY DALE,
Town Clerk.

York.
30th November, 1904.

TENDERS FOR CONTRACTS, &c.—Official advertisements respecting works, supplies, &c., should always be sent for insertion in the MUNICIPAL JOURNAL, as its columns are constantly referred to by Contractors to Public Bodies, and the paper is generally recognised as the best medium for the purpose, its extensive circulation amongst those interested in public tenders ensuring the widespread publicity desired by County Councils, Corporations, District Councils, Boards of Guardians, &c. when inviting tenders for contracts of any kind.

ESTABLISHED AS "LONDON." TWELFTH YEAR OF ISSUE.

No. 619.—Vol. XIII. DECEMBER 9, 1904.

MUNICIPAL TELEPHONY.

Hull is the Sixth City in the Kingdom to Establish a Municipal Telephone System. The Encouraging Attitude of Would-Be Subscribers. Negotiations with the National Telephone Company, and Reasonable Offers Refused. Two Thousand Lines Provided. A Glance at the Work Carried Out. Other Towns and Cities Contemplating Municipal Undertakings.

ANOTHER interesting chapter in the history of municipal telephony has been written by the Hull Corporation, which last week brought to a completion and formally opened what promises to be a system of the greatest benefit to the inhabitants of that busy city, in which municipal enterprise has been greatly developed on progressive lines.

CENTRAL EXCHANGE SWITCHBOARD.

Tramways, baths, electric lighting, docks, cemeteries, markets, free libraries, and even a crematorium are in the hands of the Corporation, which has also a very large interest in the Hull and Barnsley Railway, and it is estimated that the value of municipal property in and about the city is over a million and a half, or considerably in excess of the rateable value. In a progressive city of this description the provision of a municipal telephone system seemed a natural corollary, but it has taken something like five years to arrange for and develop the service which is now in operation.

The story of the undertaking commences in 1899. At that time the National Telephone Company was in sole possession, and in Hull, as in other parts of the country, there was a great deal of dissatisfaction caused by the heavy charges which the company made, and other alleged shortcomings of the service. This induced a number of the leading merchants to petition the Corporation, and to pray that it would come to their assistance with a municipal system. This was towards the end of the year, and during the session of Parliament just then closed an Act had been passed (the Telegraph Act, 1899) which enabled municipalities, in the public interests, to establish and work competitive telephone services in their areas.

The outcome of this was the appointment by the Council of a Telephones Committee. This committee, having consulted Mr. A. R. Bennett, M.I.E.E., and after careful inquiry, came to the conclusion that the establishment of a municipal system was desirable. This conclusion was endorsed by the Council as a whole, and steps were taken to carry it into practical effect. Before, however any formal proceedings were entered upon, tradesmen and likely subscribers were circularised and canvassed so as to make certain that a sufficient number of persons was prepared to avail themselves of a corporation service at the rates offered. The answers were in every way satisfactory, and, in addition, resolutions in favour of the scheme were passed by the Chamber of Commerce, the Chamber of Trade, the Hull Guardian Society, and other bodies.

CENTRAL EXCHANGE.

The first step was to apply to the Postmaster-General for the necessary licence. This application was, of course, opposed by the National Telephone Company, but, in spite of this, the licence was granted in August, 1902. Armed with this, the Corporation sought to come to some arrangement with the company, in order, if possible, to save the laying down of a duplicate system. An endeavour was made to purchase the company's undertaking in the city, but the lowest price required would have precluded the Corporation from giving a cheaper supply, and no

satisfactory arrangement for purchase could be arrived at. Negotiations for purchase having been unsuccessful, efforts were made to arrange with the company for a substantial reduction in its rates, on condition that the Corporation did not enter into competition. These were again unsuccessful, the company being bound by an agreement with other towns in which a reduction would also have to be made if any occurred at Hull.

These negotiations necessarily occupied a considerable period, and caused a delay in carrying out the work; but the Corporation felt it would not be justified in going to the cost of laying down a duplicate system until it had exhausted every effort to avoid it by obtaining satisfactory terms from the existing company. One result was, however, obtained, an arrangement by which Corporation subscribers were to have free intercommunication with those of the company in Hull and other towns.

Having decided upon the provision of a municipal system, the Corporation applied to the Local Government Board for the sanction of that authority to a loan of £43,202, the estimated cost of the undertaking. The usual official inquiry was held, and the case presented on behalf of the Corporation seems to have satisfied the Inspector and the Board, for in a short time the sanction was formally given.

In the matter of a Central Exchange, the Corporation was fortunate in having at its disposal a building which was easily adaptable to the purpose. This was the Trippett Baths, which had become out-of-date and had been closed, and its utilisation not only provided a site but removed a charge upon the rates.

The necessary plant and equipment having been purchased, and contracts entered into, work was commenced in January of the present year, Mr. Thomas Holme, A.M.I.E.E., being appointed as manager. The operations were carried on with expedition, and although the formal opening was only last week, some of the connections were previously at work.

ALDERMAN F. LARARD
(Mayor of Hull).

COUNCILLOR J. BROWN
(Chairman Telephone Committee).

MR. A. R. BENNETT
(Consulting Engineer).

MR. E. LAVERACK
(Town Clerk).

MR. T. HOLME, A.M.I.E.E.
(Telephone Manager).

Nineteen miles of trenching have been excavated in the streets, wherein has been laid 33 miles of stoneware ducts, which contain 4,910 miles of copper wire. All the lines in the city are laid underground with the exception of those brought up and distributed to consumers in the particular neighbourhoods. At the central exchange, where the alterations have been carried out under the supervision of the city architect, the switchboard, with its quarter of a million soldered joints, is of the latest pattern, with all modern improvements. It has accommodation for 2,000 subscribers, which can be extended to an ultimate capacity of 5,000. Sections are set apart for intercommunication and for the trunk lines. The system, which is a silent one, is invaluable, particularly for trunk line messages to other towns—a very important matter in a city like Hull. A district exchange has been opened at Hessle, and others will shortly follow at Cottingham and Beverley. At the central nearly the whole of the 2,000 lines provided are represented by orders, and it is probable that an extension will be required in a very short time.

The tariff arranged by the Corporation is as follows:—

Exclusive line, unlimited use for business premises, £6 6s. per annum; second connection, £5 15s. Special quotations for large users.

Exclusive line, unlimited use, £5 per annum for private houses.

Exclusive line, toll rate £3 per annum, and 1d. per outward calls; all inward calls free.

Extension instrument in the same building as Exchange line, £1 per annum. Desk sets, 5s. per annum extra.

Against this tariff the National Telephone Company maintains its charges of £10 per annum for instruments for business purposes, but for a service limited to a certain number of calls the tariff is £5. In other municipal undertakings the tariff for an unlimited service is £5 5s. in Glasgow, £5 10s. in Brighton, £5 17s. 6d. in Portsmouth, £5 in Swansea, and £5 in Guernsey (for 3,200 calls). The Hull tariff is higher than any of these, but, as Councillor Brown, chairman of the Telephone Committee, pointed out at the opening ceremony, the flat rate of £6 6s. per annum had been given because the Corporation wanted to be on the safe side. It is satisfactory to note, also, that three-fourths of the subscribers are on the six-guinea rate, which shows that the man who had been called upon to pay £10 to the National Telephone Company is one who appreciates the relief afforded by the municipal service. It is a curious fact that the Chamber of Commerce, which was among the original 800 petitioners for a better and cheaper service, has not yet adopted it.

The contractors for the work were Messrs. Henley, Limited, and the Ericsson-Bell Company, and a noteworthy feature in connection with the business is the fact that the contract was completed three months before the time limit. Mr. A. R. Bennett, the consulting engineer, has had the supervision of the undertaking, and that gentleman has the satisfaction of knowing that in spite of certain criticisms which were passed upon his estimates the latter have been in excess of the contract price.

Hull is the sixth town of importance in the kingdom to adopt a municipal system of telephony, but one of these (Tunbridge Wells) has since sold its undertaking to the company. The others are Glasgow, with a surplus last year of £2,092, Portsmouth, Swansea, and Brighton. Manchester, Salford, and Stockport, are arranging for a joint municipal service. Guernsey has also an efficient system, and likely followers are Scarborough, Cambridge, Bournemouth, Belfast, Oldham, Burnley, Aberdeen, and Barrow-in-Furness.

INCORPORATED ACCOUNTANTS AT CARDIFF.

ON Friday, the 25th ult., a banquet of Incorporated Accountants and their guests, members of other professions, took place at the Park Hotel, Cardiff.

On the following Monday a lecture was delivered at the Y.M.C.A. Rooms, Cardiff, by Mr. Fred. J. Warren, F.S.A.A., incorporated accountant and borough accountant of Haverfordwest. The subject was "Municipal Accountancy." There was a good appreciative attendance. The speaker exemplified the effect of charging depreciation as well as loan repayments against the revenue of the trading undertakings of corporations, showing that it overburdened the undertakings unfairly, as the loan instalments should be sufficient in themselves to cover every question of depreciation.

It should be clearly understood by outsiders that the depreciation of the assets of such undertakings during the lives of the assets is *prevented* by the wear and tear, &c., on such assets being made good annually out of revenue.

"MUNICIPAL OCTROI."

Glasgow's Much-Discussed Tax on Market Commodities. What It Means and What Has Led Up to It. The Principle of Representative Government and Sound Municipal Finance. The Substitution of a Market Toll for Market Rent.

"GLASGOW, the most progressive municipality in the kingdom, is contemplating a return to the Middle Ages in its commercial regulations." "The French octroi system is to be established, and food entering the city's limits will be taxed, to the ruin of the merchants, and to the detriment of the population." These are some of the cries that have been raised in certain sections of the Press and elsewhere during the week.

What are the facts? On Wednesday the Corporation met to consider the promotion of a Provisional Order, Part III. of which provides for the adoption of the Markets and Fairs Clauses Act, 1847, and the transfer of all the wholesale markets within the city to the Corporation. Increased borrowing powers to the extent of £250,000 are sought for the purposes of the Order, and provision is made for the levying of rates, tolls, dues, and stallages in terms of a schedule annexed to the Order.

The Proposed Changes.

According to this schedule, the rents in the bazaar will be for compartments on the ground level per square foot per month, 1d.; above the ground level, 4d.; on the ground level, 7d.; or *tolls may be levied* varying from ½d. for each package containing less than 84lb. gross to 4d. for packages of 7½cwt. and over.

> Baskets, hampers, &c., containing under a bushel will be charged ½d., over a bushel 1d., and similar charges on other articles are authorised. For vegetables the charge will be:—Potatoes in bags of 9 stones and under, ½d.: exceeding 9 stones, but not exceeding 18, 1d.: carrots, turnips, and other vegetables in like proportion. For flowers, roots, and plants, &c., there will be charges varying from ½d. for each fruit tree to 1½d. for pot plants packed in a case, or otherwise every six. In the cheese market the rate will be 3d. per cwt., and additional rates of from ¾d. to 1½d. per cwt., according to the time the cheese is left in the market. In the Clothes Market the rents exigible will be 5s. for each compartment or stance per week, and for each store 1s. per day. A toll of 2d. for each parcel carried will be charged on every person entering the market with clothing for the purpose of selling the same to dealers, and every dealer entering the market to purchase only will be charged 6d. per day. In lieu of the above rents, tolls of from ½d. to 2d. may be levied on each article sold. For a stance in the market for the sale of birds, dogs, &c., the rent will be 3s. per week. A toll of ½d. will be charged for each bird, animal, or article taken to the market for sale.

Crush an Anomaly.

One of the principal markets in the city is the bazaar, to complete extensions and alterations of which—now in progress—probably £80,000 or £100,000 will have to be advanced out of the Common Good.

It is argued that markets required in the interest of the whole community should be carried on under statutory authority as municipal undertakings. If they are not so required—if it is not for the advantage of the public at large to have such markets available—and they are merely kept up for the convenience of the traders who use them, the question arises whether the Corporation is justified in carrying them on. Why should not these traders be left to provide markets for themselves, as other traders and merchants in the city do? But, in particular, why should the funds of the Common Good be employed to further the interests of a small section of the community?

Wasting Public Money.

The money so spent might be a good investment if the Corporation were sure that the markets would be fully used. At present the money is being advanced without adequate security, as there is no guarantee whatever that the stance-holders may not leave the market and sell outside whenever it suits them better to do so. If these markets became Parliamentary markets, and were placed under the Markets and Fairs Clauses Act, 1847, as proposed, they would be protected as follows:—

> Should any person other than a licensed hawker sell or expose for sale elsewhere than in the statutory markets, except in his own house or shop, any articles upon which tolls are by the special Act authorised to be taken in the market, he shall for every such offence be liable to a penalty not exceeding forty shillings.

When these markets were established, municipal enterprise was in its infancy, and the methods familiar to-day were practically unknown. Had the Corporation now for the first time to provide a market for the sale of fruit, cheese, &c., it would never think of doing so except under Parliamentary authority, with borrowing powers, provision for sinking fund, &c. In short, the undertaking would be put on a proper business footing.

The bazaar was established in 1836. It is not separately valued in the books, but is included in a lump sum applicable to the bazaar, City Hall, and adjacent properties. There is no sinking fund, nor any equivalent arrangement for paying off debt, while the indebtedness to the Common Good is always increasing. In 1888 the bazaar (site and buildings) was valued at £83,000, but the nett return received from it during the last 10 years has only been on an average £2,602 per annum, or equal to £3 2s. 8d. per cent. on valuation.

What has been stated regarding the bazaar applies generally, although in a less degree, to the minor markets, except that these latter have hitherto yielded a better return on the money invested in them. The Old Clothes Market, which stands in the books at £27,500, was opened in 1875, and the Bird and Dog Market, which is valued at £4,000, in 1876.

Paying Authority No Voice.

Apart from the considerations stated, it is pointed out that the Finance Committee of the Corporation, which is charged with the administration of the Common Good, has no voice as a committee in the management of these markets. It is true the proceedings of the Bazaar Committee are subject to the review of the Corporation, but no effective control can be exercised except in committee. The Bazaar Committee spends the money, but keeps no separate accounts, and takes no financial responsibility whatsoever, while the Corporation Finance Committee provides the funds, but has no control over the expenditure.

It is submitted that these markets, if they require to be maintained, should be put on a proper municipal basis; that the committee which manages them should have all the authority and responsibility which the other committees in charge of municipal undertakings possess; that the Common Good should be relieved of the burden of providing funds for these undertakings; and that the money required to take them over be provided by the loans fund.

The Edinburgh Corporation has, in the Edinburgh Markets and Customs Act, 1874, statutory powers in connection with its fruit and vegetable market. The Corporation received power to bestow a sum for covering and otherwise improving the then existing market, and it also obtained power to levy the rates specified in the schedule annexed to the Act.

Protection under Local Act.

In order that the Corporation, in connection with the markets under the administration of the Markets Department, should receive the protection provided in the Markets and Fairs Clauses Act, 1847, any application to be made to Parliament should include the repeal of Sec. 52 of the Glasgow Markets and Slaughterhouses Act, 1865, which provides that

> every person who shall sell or expose to sale any cattle or any horse, mule, or ass *in any public place* within the limits of this Act, or within three miles of the Cross of Glasgow, except in the market-places established or to be established, shall be liable to certain specified penalties . . . provided always that none of the penalties shall extend to . . . any private sale thereof in private premises, or to any sale thereof in such premises by a licensed auctioneer.

It should be pointed out that some years ago counsel advised that the Corporation had no power under its local Acts to put a stop to sales of cattle, &c., in private premises outside its own markets. If, however, the provisions of the local Act were repealed, and the provisions of the Act of 1847 stood alone, the powers possessed by the Corporation would be much wider, and, according to decisions given in a number of English cases, would enable the Corporation to prohibit a great many sales carried on in premises which cannot be regarded as a "dwelling place or shop" of the person conducting the sale.

Years of Consideration.

This much-discussed clause in the proposed Provisional Order has been put forward with no guilty haste. The case has a history.

The markets owned by the Corporation are six in number, three of which are now statutory markets, but at one time, in common with the other three, they belonged to the magistrates and the Corporation, and formed part of the Common Good of the burgh. An Act of George III. specifies, *inter alia*, the dues to be levied in order to indemnify the magistrates and Town Council for their outlay in erecting the markets, and empowers a penalty to be exacted from persons selling cattle, &c., in the public streets. By a later Act slaughtering of animals in any other than a public slaughter-house is prohibited under special penalties. These and many more facts have been brought out and local Acts dissected since 1900, when a special committee was appointed by the Corporation to report on the position. This committee reported last year strongly in favour of the Corporation receiving the protection provided in the Markets and Fairs Clauses Acts, 1847, and also that "it is desirable that the Bazaar should be constituted a statutory undertaking."

The extraordinary divergence of opinion as to what are the real nature and force of the proposals is shown by the following report of the discussion which took place at the Glasgow City Council meeting on Wednesday, when the provisions for the imposition of rates were remitted to a committee for further consideration:—

> Mr. Gray, conveuer of the Parliamentary Bills Committee, moved the approval of the clauses of the order dealing with the markets. The scale of charges in their markets they proposed, he said, should only be sufficient to meet interest on the necessary expenditure and sinking fund. A little anxiety had been shown about the phrase "rates and tolls." Some members thought that this might mean tolls. The phrase, however, meant that the present state of things should continue. Some seemed to suppose that they wished to impose petty Customs duties. There was no proposal to do anything of the kind. He had heard it said that a lot of money would be exacted from fruit merchants in various ways. Nothing of the kind.
>
> Mr. Alexander Murray seconded the motion. A good deal had been made, he said, of the schedule of tolls or dues which was attached to the draft Provisional Order, and it had been made to appear that this was an attempt to levy dues on every parcel of fruit coming into the city. There was nothing in the Bill to enable the Corporation to levy tolls in the way suggested. It was inteuded rather to follow up those who sought to evade the market, who sought to take advantage of the market to dispose of goods without being in the market or without paying any rent whatever to the Corporation. It was iutended to follow them up, not by exacting dues, but by exacting a penalty not exceeding 40s. for each offence.
>
> Bailie Burrell moved that the Order be sent back for further consideration. Of all the proposals that had ever been put before the Council, he said, this was one of the most remarkable. It was simply that a charge should be put on every package of fruit or vegetables, or every suit of old clothes sold in their markets or in any other market in the city.

It was agreed to approve of the Order, so far as it provided for the transfer of the markets from the Common Good to the Markets Committee.

The Corporation wishes to bring about a change that will place its municipal markets upon sound business lines, but whether this and the general good of the public are best secured by taxing commodities is a question which we are surprised should have been even considered by so Progressive a Corporation as that of Glasgow.

THE Oswestry Town Council has instructed its town clerk to oppose the application of the Tanat Valley Light Railway Company for an order to postpone the mortgage of the Oswestry Corporation to any moneys proposed to be borrowed under that order.

EDUCATIONAL NOTES.

Bath Pays for Medical Certificates. The Inspection of Private Schools. Attendance at Church. The Right of Entry of Members of Education Committees. Lancashire and Middlesex follow London in its Scholarships Scheme. Travelling Expenses of Members of Education Committees. Teachers' Agreements at Torquay.

Bath.—The Education Committee has arranged with the members of the Bath Medical Committee to visit children of necessitous parents, who are kept from school on suspicion that they are sickening for contagious or infectious disease; and to issue medical certificates at a fee of 2s. 6d. in each case, payable by the education authority qnarterly. It was decided that each of the attendance officers be supplied with a book of blank medical certificates to be supplied at their discretion, and that they be reqnested to report as to the use of such certificates at the monthly meetings of the attendance committee. It was reported to the Education Committee that one of the attendance officers had taken proceedings against parents who had withdrawn their children from elementary schools within the borough, and sent them to a private school outside. The bye-law stated that children had to attend a school recognised as being efficient. It was decided to send a communication to the Board of Education requesting that H.M. Inspector be empowered to visit and report to the committee as to the efficiency of the instruction given in such private schools as the education authority may from time to time consider advisable.

Bromley.—A letter was read at the Education Committee from the managers of the Addison Road School, stating that they had heard unofficially that the Education Committee had fixed the school honrs for schools under the Bromley Borough Council from nine to twelve o'clock; and having regard to the circular issned by the Board of Edncation, No. 512, to His Majesty's inspector upon the subject of taking children to church during school hours, the managers have unanimously passed a resolution applying formally to the Education Committee for permission to continue the practice of taking the children of the above-mentioned school to church for a short service of instrnction upon Holy days for observance of which provision is made in the Church of England Prayer Book. After a long discnssion it was decided to decline the request.

Chelmsford.—At the monthly meeting of the Education Committee a letter was read from the Board of Education with reference to the liability of the committee to pay for books required for religious instruction, stating:—"In view of the practical difficulties which might be occasioned if a local education authority should be called upon to provide books and apparatus of a denominational character, the Board would in all such cases be disposed to advise managers to make such provision for themselves, whatever may be the pecuniary liability of the local education authority regarded from a strictly legal standpoint." It was resolved that the managers of the varions schools be requested to accept the suggestion of the Board.

Hove.—The Board of Education has intimated to the Education Committee (with reference to the right of a member of the committee to enter a voluntary school) "that even a manager of the same school which he has a right to enter at any time without the specific authority of the other managers, would not be justified in giving directions to the teacher or interfering with the curriculum of the school without the authority of the managers as a body."

Lancashire.—The chairman of the Education Committee, in introducing the scheme of scholarships, said that the educational ladder was now fast being completed. It began with children over 11 and under 13, who were allowed to enter the junior exhibitions for proficiency in elementary school subjects. Of these exhibitions the county provided 120 of the annual value of £12, and tenable for three years—80 confined to elementary schools and the remaining 40 to be competed for by any children fulfilling the requirements as to age or residence in the connty. The next rung in the ladder was for children over 14 and under 16, and for these the committee provided 40 senior exhibitions for proficiency in secondary school subjects of the annual value of £20, and tenable for two years. After these came scholars between 16 and 25, and for these had been provided 15 scholarships of the annual valne of £60, tenable for three years. With these scholarships the holders could proceed to the university or to a place of higher education. In addition, other scholarships and exhibitions were being offered in certain special snbjects. Among these were 600 exhibitions for candidates intending to become pupil teachers, providing free tuition and travelling expenses if necessary, the exhibitions being tenable for two years. It was estimated that the total cost wonld amount to £27,500, or an increase over last year of no less than £17,000.

Middlesex.—The Education Committee has adopted a scheme for granting scholarships to boys and girls who desire to become teachers in elementary schools. The scholarships will be tenable at secondary schools within the county supported or recognised by the Education Committee, and will cover school fees (including cost of books), and carry maintenance allowances at the following rates:—

Age on 1st June.	Boys.	Girls.
Under 14 ...	Nil	Nil
14 to 15 ...	£6	£5
15 and over	£10	£8

Northumberland.—The Education Committee has adopted the following scale for letting council school-buildings out of school hours:—Meetings in one room which do not involve any disturbance of school furniture, with fire, 2s., without fire, 1s.; meetings which involve a substantial disturbance of school furniture, with fire, 5s., without fire, 2s. 6d.; social gatherings—large rooms, 10s.; class-rooms, 2s. 6d. each; Sunday schools, religious service, and educational classes, where school furniture is not substantially disturbed, with fire, 9d., without fire, 6d.

Torquay.—The Education Committee and the managers of the Cockington Church School are at variance over the terms of a proposed agreement. The managers refuse to accept the following clause:—"The trust deeds, Charters, Orders of the Board of Education, bye-laws, rules, or other instruments defining the foundation and governing the management of the school, and so much of the minutes of the proceedings of the managers as relate to the appointment, remuneration, dismissal, and duties of the teacher shall be open to the inspection of the teacher at all reasonable times, and he shall be entitled to make copies thereof, or extracts therefrom, without charge." The Education Committee has consulted the Board of Education as to the action of the managers, and at its last meeting decided not to recognise the Cockington schools in any way, financially or otherwise, until they have signed the committee's agreement.

Yorkshire (West Riding).—At the Edncation Committee, the sub-committee recommended, and it was agreed, that where any members of the Education Committee are appointed to report as to any site or other special purpose, the reasonable out-of-pocket expenses of snch members be paid.

WE are informed that the overseers of the Preston Union have appointed Messrs. Myres, Veevers and Myres, snrveyors and valuers, of Preston, to report on the value of the docks, &c., tramways, gas and water mains, Thirlmere Aqneduct, and other large properties in the Union, for assessment pnrposes.

STREET PROCESSIONS.

LIVERPOOL'S DRASTIC PROPOSALS MODIFIED.

THE extraordinary proposals of the Liverpool Corporation, by which powers were asked to enable it to prohibit street processions, have now been considerably modified. According to a report presented to the City Council this week, the town clerk and head constable have visited the Home Office for the pnrpose of ascertaining the attitude which wonld be taken by that department to the scheme.

They saw the legal advisers of the office, and submitted to them an account of the state of affairs which led the committee to pass the resolntion, and the Under Secretary, though expressing the desire of the department to assist the committee as far as possible, pointed out that, at all events for the present, the department did not think it likely that the Home Secretary would support the proposal.

He pointed out that it would be very difficult for Parliament to distingnish between the use of a street by a procession, which is a legitimate exercise of the rights of highway, and that which is an abuse of those rights, and that any attempt to limit rights of highway would not be likely to meet with the approval of Parliament, even though it were backed up by a stronger case than that presented by Liverpool. He pointed out how those powers might possibly be strengthened by bye-laws, of which the Home Secretary would in all probability be prepared to approve.

The town clerk and head constable therefore snbmitted that it might be better if the Watch Committee wonld recommend the conncil to endeavour to obtain bye-laws to the following effect, which wonld strengthen the hands of the police in checking the nuisance which caused the committee to pass its resolution.

The town clerk and the head constable therefore suggested that after the preamble of the resolution already passed by the committee the resolution should proceed as follows, after the word "city."

It be recommended to the council

That in the interests of good order the following bye-laws be adopted:—

(1) No person shall sonnd or play upon any musical or noisy instrument or sing in any street or public place within 100 yards of any dwelling-house or office to the annoyance of any inmate thereof, after being requested to desist by such inmate either personally or throngh his servant, or throngh a constable. Provided that this bye-law shall not apply to properly conducted religious services except when the request to desist is made on the ground of the serious illness of any inmate of the house.

(2) No person shall sound or play upon any musical or noisy instrnment, or sing in any street or public place within 100 yards of any place of pnblic worship, or public entertainment, or other place of pnblic assembly, in which persons are for the time being assembled, to the annoyance or disturbance of any person or persons so assembled, after being requested to desist by any constable, or by any person so annoyed or disturbed, or by any person acting on his behalf.

(3) No person shall sound or play upon any musical or noisy instrument, or sing in any street or public place within 100 yards of any hospital, infirmary, convalescent home, or other place used for the reception or treatment of the sick, after being requested to desist by any constable, or by any inmate or officer of such hospital or other place, or by any person acting on his behalf.

(4) No person shall in any street or public place, or in any place within view or hearing of any street or public place, use any threatening, abusive, or insulting language, gesture, or conduct, with intent to put any person in fear, or so as to occasion a breach of the peace.

(5) No person shall wilfully and persistently loiter at or near the entrance of any church, chapel, or other place of public worship to the annoyance or obstruction of any persons going to, attending at, or returning from Divine worship in such church, chapel, or other place of public worship.

These bye-laws would strengthen the provisions of the Liverpool Improvement Act, 1842, as to disorderly behaviour, Sec. 149 (26), and those of the Liverpool Improvement Act, 1883, Sec. 29, as to street music; and, further, as they would be made under the Municipal Corporations Act, 1882, the penalty could be fixed at a sum not exceeding £5 instead of the forty shillings fixed by the local Acts.

LOCAL FISCAL OPERATIONS.

The Spending Policy of Local Governing Bodies as Shown by a Dissection of the L.G.B. Local Taxation Returns. The Greater the Return from Trading Concerns the Lower the Rates. Proportion of Total Debt Devoted to Remunerative Undertakings. Growing Spirit of the Urban District Councils.

THAT part of the Local Taxation Returns of England and Wales for 1902 3 dealing with corporations and urban district councils outside the metropolis has just been issued by the Local Government Board. The corresponding volume for 1901-2 was not brought out till the end of January last, so that there is on this occasion a further improvement in the date of publication of two months, making nine months altogether during the past three years. Time is a matter of great moment in appraising the value of municipal statistics, and we congratulate Sir Samuel Provis's department on its recognition of the fact, and again express the hope that before very long we shall be accommodated with the returns within a year of the close of the financial period with which they deal. The present volume embraces the fiscal operations of 69 county boroughs, 250 other boroughs, and 812 urban district councils, the corresponding figures for 1901-2 being 67, 250 and 811 respectively. The two new county boroughs are Rotherham and West Hartlepool, and their promotion from the ranks of ordinary municipalities is made good by the accession of Bexhill and Morecambe. The number of urban district councils is a much more variable quantity than that of the higher class of local authority on account of the constant readjustment of areas to improve the administrative efficiency, and to allow for the natural expansion of the larger bodies. Thus, though the number this time only shows a nett increase of one, it really includes six new districts—Foot's Cray, Watchet, Ellesmere Port and Whitby, Compstall, Scalby, and Narberth—the same number that was added in the preceding year.

Fluctuating Millions.

The accounts present no new features of the first importance, the only noteworthy change being the inclusion in the case of boroughs of their receipts or disbursements as burial boards and harbour, pier, dock and port sanitary authorities. The figures have been shown in previous returns in marginal columns, but they were not merged with the ordinary revenue and expenditure, and were omitted from the totals. It is, perhaps, characteristic of the methods of the Local Government Board that whilst this alteration has been made in the accounts of municipalities the old style is still retained in the case of urban district councils, though we are promised a change in the next volume. We append our customary tables showing the main features of the returns, ignoring as usual the exchequer contribution section, the transfers from which are all covered in other branches. We have also amalgamated the two departments of borough finance in order that our readers may not be confused by a division as arbitrary as it is obsolete. The table below compares the current revenue and expenditure of the authorities for 1902-3, with that for 1901-2:—

CURRENT REVENUE.

	1902-3.	1901-2.	Increase.
	£	£	£
County boroughs ...	29,467,416	26,063,509	3,403,907
Other boroughs ...	8,063,489	7,678,791	384,698
Urban district councils	8,392,573	7,680,266	712,307
Total	45,923,478	41,422,566	4,500,912

CURRENT EXPENDITURE.

	1902-3.	1901-2.	Increase.
	£	£	£
County boroughs ...	26,814,232	24,436,615	2,377,617
Other boroughs ...	7,738,196	7,390,116	348,080
Urban district councils	8,350,991	7,678,225	672,766
Total	42,903,419	39,504,956	3,398,463

The Progressive U.D.C.'s.

Income shows an increase of nearly 11 per cent., as against 8 per cent. in the previous two periods, and expenditure, which in 1901-2 fell from 10 to 7 per cent., has moved up again to 8 per cent. It is worth while observing the increasing importance of the urban district councils, the magnitude of whose financial dealings now for the first time surpasses that of the boroughs other than counties. The sources of revenue are classified into four convenient groups in the table below:—

SOURCES OF REVENUE.

	Amount. 1902-3.	Amount. 1901-2.	Proportion of total revenue. 1902-3.	Proportion of total revenue. 1901-2
	£	£	%	%
County Boroughs.				
Rates	11,674,556	10,525,735	39¾	40½
State subsidies	1,123,816	1,110,849	3¾	4¼
Reproductive undertakings	12,228,040	11,208,472	41½	43
Miscellaneous..	4,441,004	3,218,453	15	12¼
Other Boroughs.				
Rates	3,796,660	3,546,119	47	46
State subsidies	205,488	195,125	2½	2½
Reproductive undertakings	2,477,658	2,444,514	30¾	31¾
Miscellaneous..	1,583,683	1,493,033	19¾	19¼
Urban District Councils.				
Rates	4,943,707	4,593,607	58¾	59¾
State subsidies	107,963	93,698	1½	1¼
Reproductive undertakings	1,600,260	1,418,964	19	18½
Miscellaneous..	1,740,643	1,573,997	20¾	20½

Municipal Trading Reduces Rates.

The relative status of these groups has not materially altered, nor was it to be expected that they would, but the changes that have taken place are certainly interesting. In the case of the county boroughs a smaller proportion is raised by rates, yet the income from State subsidies and reproductive undertakings is also lower, all the increase being thrown on the miscellaneous section. In the case of the other boroughs and the urban district councils, however, the usual rule holds good, a diminished return from trading concerns in the boroughs leading in a rise in the amount collected by rates, and an improvement in trading income in the urban district councils being accompanied by a lesser proportion taken out of the householder's pocket. The sum contributed by reproductive undertakings includes the gross receipts of tramways, markets and gas, water and electricity works. The argument may be pursued by showing the average rates levied by the three classes of authorities:—

AVERAGE RATES.

	1902-3. s.	d.	1901-2. s.	d.	Increase. d.
County boroughs ...	5	4·0	5	1·2	2·8
Other boroughs	4	3·5	4	1·7	1·8
Urban district councils	3	3·1	3	3·0	0·1

The average increase is equal to about 1½d. in the £, and compares with an advance of 1¼d. in 1901-2, and of 1d. in 1900-1. The gain is not startling in view of the much larger ratio of advance exhibited by expenditure generally. It will be observed that in the case of county boroughs, though the aggregate sum raised by rates constitutes a smaller proportion than usual of the total income, there is an increase in the average rate levied, which was to be looked for with a diminution in the relative income from trading ventures. The average rates given require adjusting to enable a proper comparison to be instituted, and we have, therefore, in the appended table deducted the average School Board rate from the boroughs and added the average county rate to the minor municipalities and urban district councils:—

AVERAGE RATES ADJUSTED.

	1902-3. s.	d.	1901-2. s.	d.	Increase. d.
County boroughs ...	4	3·9	4	1·5	2·4
Other boroughs	4	6·1	4	2·6	3·5
Urban district councils..	3	10·7	3	9·0	1·7

Instructive Comparisons.

We again draw attention to this very remarkable showing, which proves incontestably that the municipalisation of public services by the great county boroughs, so far from adding to the burdens of ratepayers, makes their areas less heavily rated than those of minor authorities who do not or cannot take up trading with the zeal that the big towns do.

Loan receipts and disbursements in 1902-3 exhibit a marked change in the spending policy of the lesser bodies, as a glance at the following table will show:—

LOAN RECEIPTS.

	1902-3.	1901-2.	+Increase or −Decrease.
	£	£	£
County boroughs...	14,613,350	14,288,178	+325,172
Other boroughs ...	2,812,662	3,318,488	−505,826
Urban district councils...	3,932,119	4,183,597	−251,478
Total... ...	21,358,131	21,790,263	−432,132

LOAN EXPENDITURE.

	1902-3.	1901-2.	+Increase or −Decrease.
	£	£	£
County boroughs...	14,770,543	14,365,999	+404,544
Other boroughs ...	2,867,853	3,219,337	−351,484
Urban district councils...	3,916,421	4,095,985	−179,564
Total... ...	21,554,817	21,681,321	−126,504

TOTAL INDEBTEDNESS.

	1902-3.	1901-2.	Increase.
	£	£	£

Debt for Remunerative Purposes.

The increase in income and outlay in the case of the county boroughs is very small, whilst the decline in the case of the other boroughs and the urban district councils is considerable. The alteration is the more notable as it compares with a gain of 21 per cent. in receipts and of 24 per cent. in expenditure in the previous year. The last time the boroughs recorded a drop in loan receipts was in 1896-7 and the urban district councils in 1895 6. The aggregate debt shows an increase of about 12 as against 10 per cent. The sinking funds amount to £12,319,200, reducing the nett debt to £209,086,988, as compared with £186,929,718. This nett figure is equal to 224 per cent. of the assessable value, as against 209 per cent., and to £10 3s. 9d. per head of population as compared with £9 2s. 2d. The bulk of the debt still retains its character of being a highly remunerative investment instead of a dead burden, despite the fact that recently the tendency has been to spend more on public improvements which, whilst eminently desirable, do not make a direct return to the householder like tramways and gasworks. The following table shows the gross outstanding liability in respect of the five principal trading undertakings and the ratio of each to the total indebtedness of the respective groups of authorities:—

LIVE DEBT.

	Amount. 1902-3.	Amount. 1901-2	Proportion of total debt. 1902-3.	Proportion of total debt. 1901-2.
	£.	£	Per cent.

Gasworks ...	3,278,203	3,277,803	11¾	12¾
El'ctricity w'rks	1,497,066	1,112,049	5½	4½
Tramways ...	613,324	400,719	2¼	1½
Markets	354,231	325,075	1¼	1¼
Total ...	10,846,161	9,821,263	38¾	38½

There has been a considerable advance in the amount of capital devoted to electricity undertakings, and tramways have also absorbed an increasingly large share of public funds. A significant feature of the table is the way it emphasises the growing importance of the urban district councils, to which we have already alluded. This group, indeed, is the only one of the three that has increased the ratio of its live debt to total indebtedness. Street improvements still represent 12 per cent. of the aggregate debt; sewerage systems and sewage disposal plants stand for another 11½ per cent.; and housing schemes stagnate at the utterly inadequate proportion of 2 per cent.

EDMONTON LIGHT.

COMPANY OR MUNICIPAL ENTERPRISE.

FOR several years electric lighting matters have engaged the attention of the Edmonton District Council. It was originally decided that the Council should itself carry out the powers of its electric lighting Order, and a complete scheme, involving a capital cost of £44,000, was prepared and submitted to the Council by Messrs. Robert Hammond and Son, the consulting engineers. The scheme was adopted, and the necessary specifications were prepared, but at this stage the North Metropolitan Electric Power Supply Company (a section of the Electrical Trust to which we have so often had to refer) came upon the scene, and urged the council to accept from it a supply of electricity in bulk, or to allow it to carry out the provisions of the order. After considerable discussion the council felt that it would be the proper thing not to limit the competition for the right of carrying out those powers to one company, but publicly to invite offers for different schemes. In response to that invitation five offers have been made to the Council, and these were considered at a special meeting last week. At that meeting Mr. Spencer Hawes, a member of the firm of consulting engineers, was in attendance, and according to our local contemporary, he gave a very clear and instructive verbal report upon the offers.

The offers may be summarised as follows:—

(1) **North Metropolitan Electric Power Supply Company.**

This is an offer to take over the Council's powers for a period of 26 years, prior to the expiration of which period the company cannot give the Council the right of purchase. The supply would be provided in bulk from the company's tramway power station, and the system would be high-pressure three-phase alternating. (On this point Mr. Hawes explained that Edmonton was eminently suited to a direct current low-pressure system, and the disadvantage of this offer, therefore, was that if the Council ultimately took over the undertaking, it might not find the company's system best suited to the requirements of the district.)

The prices named for the supply of current to cousumers were on the maximum demand system of 7d. per unit for oue hour per day and 2d. after for lighting, and 5d., 4d., aud 1d. for power.

(2) **Foote and Milne**

Offered to construct and maintain the works for 25 years and to give the Council the right to purchase after reasonable periods on terms of payiug any losses and interest thereon. This offer, however, was incomplete as it did not specify the rates of charge to be adopted.

(3) **Industrial Engineering Co. of Hyde**

Offered to construct works and to maintain them for five years only, but made it an absolute coudition that their own gas plant should be employed. The prices to be charged for current were higher thau those specified in other offers.

(4) **National Electric Construction Co., Limited.**

This company are specialists in this class of contracting for the construction and maintenance of electricity undertakings for municipalities, and already have several such schemes in hand. They offered to submit a teuder for the complete scheme exactly to the Council's own requirements, and upon the total they would require a payment of 5 per cent. for their mauageineut and superintendenco of the differeut sections of the works. They agreed to maintain for 25 years, to give the Council the right of taking over the undertaking at periods of 7, 10, 15, and 25 years on the basis of a dimiuishiug bonus payment, and to share with the Council all nett profits beyond 3 per cent. The prices quoted for the supply to cousumers were—for lighting, a flat rate of 5d per unit, and maximum demand rates of 7d. for one hour and 2d. after; and for power a sliding scale ranging from 2½d. to 1½d. per unit.

(5) **North Metropolitan Power Company.**

This offer is for a supply of electricty in bulk to the Council, under which the Council would have to provide its own central distributing statiou, equipped with a transforming apparatus, together with the distributiug mains system, aud to arrauge a complete staff for dealing with the administrative work and the distributing system.

It seems to us that the course which the Council should take is made quite clear by these offers. If it desires to avoid every risk, it cannot accept the second or "bulk" supply offer of the Metropolitan Company, while the first offer of that company embodies the very objectionable feature that the Council would part with its statutory rights for as long as 26 years, and would have no voice in the control of the undertaking. Moreover, the company would not provide a self-contained scheme for Edmonton, but would supply the current from works miles away from the district. The National Construction Company's offer, on the other hand, provides for a complete undertaking for Edmonton, with works erected in Edmonton, and on the direct-current system, and the company takes all the risks of losses. If it be decided that the risk of a few years of loss on the working of the undertaking cannot be accepted by the Council, then the Council must, in justice to itself and to the ratepayers, give the National Company's offer the preference. But in our opinion the Council would be well advised to follow the example of other municipalities and to carry out its original intention of providing a municipal undertaking to be worked by the Council, and to be under the direct control of the Council. It may be that for the first two, or possibly three, years a loss would be incurred, but these losses would very soon be out-balanced by the profits which would arise so soon as the undertaking became properly established.

Edmonton is a district distinctly favourable for an electricity undertaking, and the Council will commit itself to an irremediable error if it allows the statutory powers, for which it had to fight so hard and at such enormons cost, to pass into the hands of the very company which was responsible for the opposition to the granting of those powers.

OFFICIAL & PERSONAL.

BATH TOWN CLERKSHIP.

Bradford Deputy Town Clerk Appointed.

THE Bath Town Council last week elected a town clerk in succession to the late Mr. Benjamin Hick Watts. The selected candidates were:—Messrs. Moore and Shum, two local solicitors, Mr. Shum having been a member of the Council for 11 years; Mr. J. W. Halloran, deputy town clerk of Chatham; Mr. D. Arthur Nicholl, town clerk of Scarborough; Mr. F. Darlington Wardle, deputy town clerk of Bradford; and Mr. W. H. Wise, principal assistant to the Bristol town clerk. Each candidate addressed the Council, and the election was made by a series of ballots. The local candidates failed first, then Messrs. Halloran and Wise. The final ballot resulted in 40 votes being given to Mr. Wardle and 12 to Mr. Nicholl, the former being accordingly elected.

MR. F. D. WARDLE
(New Town Clerk of Bath).

Mr. Frederick Darlington Wardle was appointed deputy town clerk of Bradford on August 12, 1902. Prior to that he had been chief assistant solicitor to the West Riding County Council, having followed Mr. Herbert Hankinson (late deputy town clerk of Bradford, and now town clerk of Northampton) in that position. He followed Mr. Hankinson to Bradford at a salary originally of £500 a year, which was subsequeutly increased to £600, with annual advances up to £750. Mr. Wardle specialised at Wakefield, as did Mr. Hankinson, on questions of sewage disposal, and in this respect his knowledge was of special value to Bradford.

The son of Sir Thomas Wardle, silk manufacturer, of Leek, Staffordshire, and chairman of the Silk Association of Great Britain, Mr. Wardle, who is 37 years of age, was educated and articled locally. Prior to his appointment by the West Riding County Council he was in private practice with firms at Leek and London. By his promotion Bradford loses an exceedingly able, courteous, hard-working, and efficient official. His commencing salary at Bath will be £800, but it is probable that the separate offices of town clerk and clerk to the urban sanitary authority will ultimately be combined.

THE BRADFORD VACANCY.

THE Finance and General Purposes Committee of the Bradford Corporation has accepted with deep regret the resignation of Mr. F. D. Wardle, deputy town clerk.

The committee has decided to advertise for a successor to Mr. Wardle on the same terms and conditions observed by him, viz., a commencing salary of £500, rising in annual instalments of £50 to £750. A sub-committee was appointed to consider applications, and it is to recommend six candidates to the Finance Committee.

GLASGOW TOWN CLERKSHIP.

Resignation of Mr. J. G. Monro.

MR. JAMES GEORGE MONRO has resigned his position as town clerk of Glasgow. Mr. Monro states that he has decided to withdraw from the service of the Corporation, his intention being to retire into private life.

So far as length of service is concerned, Mr. Monro is the oldest member of the department over which he presides, having been associated with it for the long period of 36 years, during which he has given assiduous attention to his duties.

In 1885 Mr. Monro was appointed a deputy town clerk. In November of last year he was chosen by the Town Council unanimously to act as interim town clerk, the Corporation having decided to postpone for a twelve-month the appointment of Sir James Marwick's successor. That period has now expired.

SCARBOROUGH MEDICAL OFFICER.

DR. F. DITTMAR, M.A., medical officer of health for Scarborough, has been appointed medical inspector for the Local Government Board of Scotland, and also inspector of the Vaccine Institution of Scotland. The former appointment is a very lucrative one, and is made by the Crown.

Dr. Dittmar, who succeeds Dr. McKenzie, is 34 years of age. He was appointed medical officer of health for Scarborough on the 8th of January, 1903, at a salary of £400, out of a list of 45 applicants. Previous to that he was assistant medical officer of Glasgow. Dr. Dittmar is the son of the late Professor Dittmar, who was a well-known analyst and professor of chemistry in Anderson's College, Glasgow.

L.C.C. VACANCIES.

OWING very largely to the great amount of work caused by the additional educational duties transferred to the London County Council, there is an abnormal number of existing and prospective vacancies for clerks in the Council's services. An open competitive examination for clerkships in the fourth class will be held under the new syllabus in January next, and for this occasion the age limits will be extended, so as to include candidates whose age is not less than 17 nor more than 24 years.

Officials in the fourth class commence at £80 a year, and rise by £5 annually to £100. Positions in the classes above the fourth class are obtained up to the third class (limit £150 a year) by promotion according to merit, and into the second (limit £200 a year) and first (limit £300 a year) classes according to the nature of their duties.

There are also a few positions at higher salaries. Particulars as to the examination are given in the official advertisement appearing in this issue.

BRICKS FROM CLINKER.

Fulham Borough Council is Successfully Carrying Out a Scheme by which Bricks are Made from the Clinker that Comes From the Dust Destructor. The First Building Erected of Clinker Bricks. A New Industry for a London Borough.

ONE of the incidental benefits of a dust destructor is that the local anthority which owns it is able to turn to good account material that under other circumstances would be wasted. According to the agenda of a recent meeting of the Fulham Town Council, the borough surveyor reported that in the past six months the flag and brickmaking plant had turned out—

5,069 3ft. by 2ft. flags,
7,373 2ft. by 2ft. do.
50,830 bricks,
and 141½ cubic yards mortar;

that the walls enclosing the plant had been erected with the bricks, and that up to the present 12,000 had been used in the Town Hall extension bnildings.

Mr. Francis Wood, A.M.Inst.C.E., the borough surveyor and engineer, has nndoubtedly brought to a successful issue the making of a highly satisfactory brick (equal to if not better than either the best London stock or any other local building brick) with the clinker that is taken as it comes from the furnaces of the refuse destructor.

The systematic making of bricks from clinker refuse and cement was initiated by Mr. Wood, who two years ago designed a plant for Fulham, which he considered would bring the manufacture of bricks from clinker within the range of practical politics. The plant was erected by Messrs. Fielding and Platt, the well-known hydraulic engineers of Gloucester, who have greatly assisted in overcoming the difficulties which it was natural to expect in the installation of a new idea such as this.

The plant is of the simplest character. The clinker is thrown into a hopper, and after passing through certain stages or processes it is discharged from a machine either as a brick or as a flag, depending on which is being made or required.

The intermediate processes are merely the crushing of the large and small pieces of clinker of from 3in. to 16in. to dust, which is attained by crushing machines, granulators, and screens. The resultant powder then falls into the hopper of a conveyor, and is taken to a mill, where cement is added.

The crushed clinker and cement is mechanically poured into the mill in a constant ratio, which also depends on whether bricks or slabs are being made. Water having been poured on to the mixture, the cement and clinker are ground and mixed together nntil the mixture reaches the stage when the cement is found to be thoroughly incorporated with the clinker. A slide is then opened, and the mill discharges the mixture through to a shute to the brick or flag-making machine, which applies an enormous pressure, and turns out bricks or flags at the rate of nine per minute and 30 per hour respectively.

The photograph shows the building in which these processes are in progress. It illustrates the first building in this or any other country which has been built with bricks made from the clinker from a refuse destructor.

The bricks are placed on trays resting on a trolley—a trolley load contains about 150—and this is sent with its load along tram rails to a desired position, and the trays are left on the track, and the trolley drawn away for another load.

The bricks after 24 hours' exposure to the open air are ready to be handled and stacked, and in a week or a fortnight, depending on the weather, the bricks when knocked together begin to have a ring. In six weeks they attain such strength that they require a pressure equal to 216 tons per square foot before they are crushed, and at 14 weeks old they crush at 282 tons per square foot. The tests were made by Messrs. Kirkaldy and Son.

When the price of cement and lime is in the ratio of 4 to 1 the bricks can be made cheaper by using more cement than lime.

Mr. Wood is of opinion that the finer the clinker grit the better will be the brick, and the more grinding that is given the less will be the quantity of cement required.

He has made them at the rate of 4,400 to the ton of cement equally as strong as those made at the rate of 3,200 to the ton.

The cost of the bricks approximated closely to £1 per thousand, and this includes special men picking and taking out the iron, laying the bricks out, and afterwards stacking them ready to be carted away. If the machines worked day and night the bricks would, of course, be cheaper.

The outlay of £1,000 will go a long way to cover the cost, and more especially so when the greater portion of the machinery required is necessary for the manufacture of slabs for paving purposes.

A FULHAM MUNICIPAL BUILDING BUILT FROM CLINKER BRICKS.

"MISREPRESENTATION BY CIRCULAR."

A REPLY FROM THE YORKSHIRE ELECTRIC POWER COMPANY.

FROM Mr. W. B. Woodhouse, the resident engineer of the Yorkshire Electric Power Company, we have received the following reply to the article published in our last week's issue, headed "Misrepresentation by Circnlar":—

To the Editor.

Sir,—I shall be pleased if you will grant me space to answer the amazing attack made in your issue of December 2nd on figures contained in a letter sent out from this office, and entitled "Combined Electricity and Destructor Stations."

The letter referred to dealt with towns of less than 30,000 inhabitants, as was clearly stated; results obtained in snch places as Hackney (230,000 inhabitants), Shoreditch (118,000), and so on, are of no value in forecasting those to be expected in small towns such as were dealt with.

The figures contained in my letter were taken from the *Electrical Times* of October 27th and previous issnes, and were the latest to hand at the time. Yonr contributor in no way controverts their accuracy, and he correctly interprets "year of working" to mean the "financial year" ended March 31st, except where it suits his purpose to do otherwise.

The Dartford results were included in good faith; the fact that the electrical undertaking made a loss of £1,292 without the help of a destructor in no way affects the accuracy of the other figures. In a supplementary return (*Electrician*, September 30, 1904) of the Dartford Electric Lighting Committee, the nett deficit on the past year's working is put at £1,619. which shows *that since the destructor was added the loss has increased.*

I have embodied the later information given by your contributor in the following table:—

FINANCIAL RESULTS OF THE WORKING OF COMBINED REFUSE DESTRUCTORS AND ELECTRICITY STATIONS IN TOWNS OF LESS THAN 30,000 INHABITANTS.

Town.	Year of Working.	Financial result.
Bangor	1901-2	£886 loss
,, ...	1902-3	619 ,,
Beckenham	1901-2	696 ,,
,, ...	1902-3	582 ,,
Canterbury	1902-3	54 ,,
,, ...	1903-4	812 profit
Cleckheaton	1903-4	£280 loss
Llandudno	1902-3	386 ,,
,, ...	1903-4	54 profit
Mexborough	1902-3	179 loss
,, ...	1903-4	340 ,,
Shipley	1902-3	447 ,,
,, ...	1903-4	125 ,,
Wrexham	1901-2	461 ,,
,, ...	1902-3	560 ,,

And these figures are referred to as "vague arguments"!

The Yorkshire Electric Power Company, far from wishing to stifle municipal enterprise, desires to assist municipalities in avoiding unnecessary losses, and that such losses are unnecessary the case of Bridgend, quoted in my letter, shows.

Mr. Woodhouse merely repeats the figures he has previously pnblished, with our own added. He makes no attempt to refute the facts we gave last week regarding the special circumstances of practically every case he quoted. As these facts constitute the whole of the argument, there is no need to go over them again in order to demonstrate the ingenuousness of the Yorkshire Electric Power Company.

We see that Mr. Woodhouse again refers to the case of Beckenham, which we purposely omitted last week. It is particularly curious that he should include it, as this is really not a municipal undertaking in the strict sense of the word. *The Beckenham works were erected and are being run by a company.* The admitted loss is the company's concern, and does not affect the happy ratepayers, but such an example cited by another company rather approaches the ludicrous.

NOTES AND ANSWERS.

Surplus on the Borough Funds may be Applied to Educational Purposes. Adulteration of Milk, and the Weight in Law of the Certificate of the Inland Revenue Analyst. Can Local Authorities Compel the Construction of Private Drains to Connect with Proposed Sewers? Interesting Legal Points under the Education Act, 1902. Powers of Corporations to Compel Owners to Pave Private Streets.

**** Queries intended for this column should be addressed to the "Legal Correspondent," MUNICIPAL JOURNAL, 12, Salisbury Square, E.C. They should be written on one side of the paper only, and be signed by a nom de plume or initials, the real name and address of the correspondent being written on the back of the paper.*

562.—**BOROUGH FUND—May Surplus be Applied in Aid of Library Rate, or General District Rate, or Education Rate?**—I shall be glad if you can give me a reply to the following:—

(1) Can a municipal corporation use a surplus on its borough fund for free library or education purposes, or is it compelled to lay a library rate or education rate?

(2) My corporation does not lay a borough rate. Can it use its surplus on borough fund for general district fund purposes?

Kindly give authority for answer.—"X. Y."

(1) Sec. 18 (1) (a) of the Public Libraries Act, 1892, provides, that the expenses incurred in a library district in and incidental to the execution of the Act, may be defrayed "where the library district is a municipal borough, out of the borough fund or borough rate. . . . ." Sec. 18 (1) of the Education Act, 1902, provides, that the education expenses of the council of a borough shall be paid "out of the borough fund or rate. . . . ." Hence the surplus of the borough fund is applicable both to the expenses of administering the Public Libraries Acts and also to that of the Education Acts.

(2) Sec. 143 (2) of the Municipal Corporations Act, 1882, provides that, if the surplus of the borough fund arises from the rents and profits of the municipal corporation, and not from a borough rate, and the borough is a sanitary district (which most boroughs are under the Public Health Act, 1875), then the corporation may apply such surplus in payment of expenses incurred by it as a sanitary authority "in improving the borough, or any part thereof, by drainage, enlargement of streets, or otherwise, under the Public Health Act, 1875 . . . ." It would seem, therefore, that the surplus of the borough fund is not applicable generally in relief of the general district rate or for purposes other than those specified which would ordinarily be a charge upon such rate. The incidence of the borough rate and the general district rate, it may be pointed out, is not the same.

563.—**ADULTERATION OF MILK—Food and Drugs Acts, 1875-1899, Sec. 21—Analysis by Commissioner of Inland Revenue.**—By Sec. 21 of the Act of 1899 the Court can cause a sample of any food to be sent for analysis to the Inland Revenue on the request of either party. In a prosecution under Sec. 6 of the principal Act the magistrates sent the third sample on the request of the defendant for analysis by the Inland Revenue authorities. On the return of the certificate showing the analysis at Somerset House it is found that the adulteration is not so large as represented on the borough analyst's certificate, though still considerable. The milk had, however, been kept for over a month. There is therefore a discrepancy in the two certificates. The Act does not state what is the effect of this, but it is presumed that this slight discrepancy would not be sufficient reason for dismissing the summons. Are there any decisions on the point? I should be glad of a reply through the medium of your columns on this point.—"SUBSCRIBER."

It seems clear on the construction of the Act, and on general principle, that the discrepancy between the borough analyst's certificate and that of the Inland Revenue analyst would not be a sufficient reason for dismissing the summons. The Act does not make the certificate of the Inland Revenue analyst conclusive, though, of course, great weight will be attached to it. A Scotch case—"Fyfo v. Hamilton" (1894)—(cited in Bell and Scrivener on the Sale of Food and Drugs) may be usefully referred to in this connection, as it would in all probability be followed in the English courts. The district analyst, in a milk prosecution, had certified an abstraction of 15 per cent. of fat. Another analyst, on behalf of the defendant, certified that no abstraction had taken place. The Inland Revenue authorities certified an abstraction of 26 per cent. On these facts the "sheriff substitute" acquitted the defendants, and the Court of Justiciary, on appeal, held that he was not bound to acquit. In other words, it is a question of evidence in each case. The magistrate will naturally attach great weight to unbiassed and expert evidence of the Inland Revenue authorities, but he is not bound by their certificate. The magistrates must decide the case upon the whole of the evidence before them.

564.—**NEW SEWERS—Are Owners of Houses Bound to Lay New Drains to Connect with Newly-Laid Sewers?**—I beg to submit the following queries:—

(1) Is a house "effectually drained" within the meaning of Secs. 23 and 24 of the Public Health Act, 1875, which has a 6in. pipe in good condition and communicating with an old road sewer (about to be reconstructed), and taking sink and surface water, such being the only drainage required to be disposed of?

(2) When laying new road sewer, should the existing drains be disconnected from old sewer and connected to new one by local authority, or is the authority entitled to require owner or occupier to make entirely new drains, by notice to that effect, as provided by Sec. 23 of the Act, thus ignoring the existing drain and sewer, to which Sec. 24 of the Act appears to relate?—"SURVEYOR."

(1) Sec. 23 of the Public Health Act, 1875, above referred to, empowers the local authority to enforce, at the expense of the owners of houses in its district, the drainage of such houses where they are "without a drain sufficient for effectual drainage." What is "effectual drainage" is a question depending on the facts of each particular case. Usually the local authority provides in its bye-laws for a certain minimum size of pipe. In the model bye-laws framed by the Local Government Board, and extensively adopted throughout the country, the minimum size of drain is a four-inch pipe for an ordinary house. We should say that, apart from any special considerations affecting the present case, the six-inch pipe already provided would be of ample size for the effectual drainage of the premises concerned.

(2) Sec. 24 of the Public Health Act, 1875, authorises the local authority in the case of houses which may be already effectually drained, but are not adapted to the general sewerage system of the district, to close the drains of such house, and to provide new drains for the effectual drainage of the houses to communicate with such other sewer as it thinks fit, and to pay the cost of the necessary works out of the general district rate. In the circumstances suggested, therefore, if, as would appear to be the case, the house in question is effectually drained, the local authority cannot compel the owner or occupier to make new drains to connect with its proposed new sewer. The authority must execute the necessary works, and bear the cost of so doing.

565.—**PRIVATE STREET WORKS ACT, 1892.**—My council has served notices, under the Private Street Works Act, 1892, to make up a certain street within the urban district, and objections have been lodged by the whole of the owners, with one exception, under the whole of the clauses contained in Sec. 7, and a sub-committee appointed to report to the council, having considered such objections, has decided to recommend the council not to proceed further in connection therewith, but allow the matter to drop. Will you, therefore, kindly advise me whether it is competent for the council to drop the scheme, and in the event of the owners obtaining an indictment against the council, would such action in any way prejudice the council's position. I have also received a communication from a certain owner, intimating that he has decided to withdraw the objection, "That the works are unreasonable and unnecessary," and will rely entirely upon the objection "That the street is a highway repairable by the inhabitants at large," but this being received after the expiration of the mouth allowed by the Act, I take it no notice need be taken of such communication?—"INQUIRER."

The council is not bound to proceed with its scheme for making up this street, although a resolution has been passed and certain steps may have been taken in this direction. Withdrawal from the scheme would not necessarily prejudice the council in any legal proceedings which might hereafter be taken against it in respect of the road. At the same time it is highly probable that this step would have considerable weight as evidence against the authority, tending to show, as it might be argued that it does, that the council to some extent admitted responsibility for the making up and repair of the road. Should the council determine to proceed with the scheme, it is clear that the notice of objection which has been received after the expiration of the month allowed by Sec. 6 of the Act of 1892, is of no validity.

566.—**URBAN DISTRICT COUNCILLOR—Retirement of One-third of the Councillors Annually.**—I am a member of an urban district council the whole of which retires once in every three years. I am wishful to bring about a change so that six members shall retire each year. How am I to proceed, and what is necessary to be done?—"READER."

The Local Government Act of 1894—Sec. 23 (6)—provides, that the term of office of a councillor shall be three years, and one-third, as nearly as may be, of the council shall go out of office on the 15th of April in each year, and their places shall be filled by newly-elected councillors; provided that a county council may, on request made by a resolution of the urban district council passed by two-thirds of the members voting, direct that the members of such council shall retire together on the 15th of April in every third year. In the present case, no doubt, the county council made an order under this section in due course. It will now be necessary for the county council to pass a resolution (in pursuance of a formal application from the urban district council) rescinding such order, and restoring the effect of the general law, as laid down in the section above mentioned. The power to pass such a resolution rescinding the earlier one is expressly conferred by Sec. 1 of the District Councillors and Guardians (Term of Office) Act, 1900. It is there enacted that, where an order has been issued by a county council with respect to the retirement of members of an urban or rural district council, or a board of guardians, the county council may, on the "like application or request" as is referred to in connection with the earlier order, rescind such earlier order. The rescinding order shall require all councillors or guardians to go out of office, and their places to be filled by newly-elected councillors or guardians on the 15th of April next following the date of the county council's order.

567.—**APPORTIONMENT OF PRIVATE STREET WORKS—Has Owner of Property the Right to be Informed as to the Total Cost of the Work?**—Will you be good enough to answer the following query?—An account has been sent to a property owner charging him with an amount as his portion of the cost of making a back passage, the work having been done by the Corporation. Is it not within his right to ask for, and be shown, an account of the total cost of the work done; and also to be informed what is the proportion of the whole he is called upon to pay? In this case, I understand he has asked for the above information, and has been refused, on the ground that a local Act of Parliament has a clause providing that the certificate of the surveyor shall be sufficient, and this clause reads as follows:—"Such cost or apportioned cost may be recovered by the Corporation from the owner or owners in default in a summary manner in like manner and subject to the like provisions in all respects as the costs and expenses mentioned in Sec. 104 of the Public Health Act, 1875, are by that Act recoverable, and a statement of such cost or of the apportionment thereof made up and certified by the surveyor shall be conclusive."—"H. L. S. C."

On the construction of the clause above quoted, it seems to us that there is nothing to compel the local authority to give the property owner information as to the total cost of the works for part of which he is liable. The words—". . . . a statement of such cost, or *of the apportionment thereof*, made up and certified by the surveyor, shall be conclusive"—do not seem to warrant an owner of property in demanding information to the extent suggested by our correspondent. Whether it would not be advisable for the authority, as a

matter of policy, to afford full information when desired, is a question upon which a different answer might well be given. It may be pointed out that the property owner will have the right, as a burgess, to inspect the minutes of the proceedings of the council, and may take a copy or make an extract therefrom, in pursuance of Sec. 233 of the Municipal Corporations Act, 1882, and he may there find the required particulars of cost and apportionment.

568.—**EDUCATION ACT, 1902—Education Committees—Joint Burial Committees.**—A council for an urban district with a population of less than 20,000 appointed four of its members, along with three representatives nominated by the county council representing the rural areas, to act as the higher education committee for the school area, which committee possesses full delegated powers from the council in relation to the administration of the Education Act, 1902, except with regard to the borrowing of money. The council has also nominated two of its members to serve upon the elementary education committee for a period of three years, acting altogether independent of the council, being a committee with executive powers under the county council. The council also appoints five members to serve upon the Joint Burial Acts Committee, along with two representatives appointed by a neighbouring parish council. Will you, therefore, be good enough to advise me upon the following points:—

(1) Whether a member of the higher education committee resigning the office of councillor thereupon ceases to act upon the higher education committee?

(2) Whether the members appointed to serve upon the elementary education committee require to be re-appointed at the annual meeting of the council?

(3) Whether Query (1) also applies to a member of the elementary education committee and our Burial Acts joint committee?

In these education matters much may depend on the terms of the scheme made by the council and approved by the Board of Education. The urban district council in this case having a population of less than 20,000 is not a local education authority, but has concurrent powers with the county council of supplying or aiding the supply of education other than elementary.

(1) The education scheme has, no doubt, provided (as required by Sec. 17 (3) (a) of the Education Act of 1902) "for the appointment by the council of at least a majority of the (Higher Education) Committee." The sub-section mentioned requires that the persons so appointed shall be persons who are members of the council; and it would seem that a member of such committee who has been appointed to the office as a councillor, in pursuance of the statutory provision, would cease to be a member thereof on resigning office as a councillor.

(2) Apparently, in the absence of any special provision in the education scheme to the contrary, it is not necessary to reappoint annually the members of the council appointed to serve on the Elementary Education Committee—which, in this case, is a committee of the county council.

(3) It seems doubtful whether resignation of office as a councillor would involve resignation of office as a member of the Elementary Education Committee. Reference should be made to the scheme to ascertain whether it is there provided that the representatives of the urban district council on such committee must be councillors. In the absence of any such provision, it would appear that resignation of the councillorship does not involve loss of office as a member of the committee. Joint committees under the Burial Acts are appointed in pursuance of Sec. 53 (2) of the Local Government Act, 1894. That sub-section seems to contemplate the appointment to such committee of members only of the respective councils concerned, and the better opinion would seem to be that a member of any such committee on resignation of office as councillor ceases also to be a member of the committee.

559.—**LIBRARY CHARGES.**—As an occasional reader of your "Notes and Answers," I should appreciate the service you will render me if you can inform me whether I have any chance of successfully resisting the library charges of my general district rate under the following circumstances. This is the fourth time the rate has been laid, and our council has got no further than considering a scheme, with very little prospect of carrying it out, and the fund has thus accumulated this last three years. Has not the rate to be used within three years of its being laid, or can they go on collecting it indefinitely.—"Q."

Sec. 18 (1) of the Public Libraries Act, 1892, provides that the "expenses incurred" in a library district incidental to the execution of the Act may be defrayed in a municipal borough out of the borough fund or borough rate, and, in the case of an urban district other than a borough, out of the general district rate, or, in each case, out of a rate similarly levied. As our correspondent mentions the general district rate, we infer that the library district coincides with an urban district, and is not a borough. The general district rate (whether in borough or in urban districts) is levied in pursuance of Sec. 210 of the Public Health Act, 1875. That section places a limit of six months upon the time during which the expenses incurred by the urban district council (or borough council) may be paid out of the rate, but does not limit the period of prospective expenditure covered by such rate. "Any such rate may be made and levied prospectively in order to raise money for the payment of future charges and expenses." It is clearly contemplated that the rate shall be made to cover the expenses likely to be incurred within a limited period, but the Act does not require it to be so made. Usually the rate is made for six months, and it is clearly irregular to continue levying a rate for purposes which are not likely to involve expense within the period of such rate. The council is, in effect, accumulating a large balance. If our assumption is correct that the complaint comes from an urban district, we suggest that our correspondent should bring the matter before the district auditor at the next audit of the council's accounts, or that he should cause the point to be raised in the council through his representative thereon. There is no statutory requirement which we are aware of directing that a rate shall be used within three years of its being collected.

570.—**ACCOUNTS—Method of Accounting for General District Rate.**—In further reference to Queries 536 and 553, we have received the following communication from "Reader":—In the method suggested by me under Query 536, the general district fund would be credited with the actual product of the rate. The principle at stake is, whether the *collector* should be debited with the total rate to be collected; and I contend he should, because it seems absurd to debit a person with what he himself accounts for. He should be debited with what he is expected to account for, and in this case the collector would be given credit for any amounts which he could prove to be irrecoverable. The recoverable arrears and cash in hand at the end of the year could, as you explain, be very easily shown separately.

571.—**PRIVATE STREET WORKS.—Street "Repairable by the Inhabitants at Large."**—When a new house is built in the street or highway of a borough or an urban district who has to go to the first cost of kerbing, paving and channeling the footpath? The case in point is that of a house built some years ago on a side of the street which is only partly paved. Can the owner be compelled to pave, or can he compel the Corporation and urban district council to do so? The street is a public one repairable by the inhabitants at large. Does the paving in this case constitute a private improvement? Nearly every street in the town has been paved out of the rates. Some of the councillors say they are going to make all owners pave in the future. Have they this power? The Private Street Works Act has not been adopted. What constitutes a private street work?—"INCORPORATED ACCOUNTANT."

The general rule is that where a street is "repairable by the inhabitants at large," the frontagers (or any of them), cannot be made liable for the repair of such street, or any part thereof. This rule is occasionally subject to exceptions under the provisions of a local Act. Our correspondent should inquire whether the councillors referred to have any such local Act in view in connection with their resolution to make frontagers liable in the circumstances set out above. Apart from this, the council can have the street in question, including the footpath, made up, paved, &c., and charge the cost of the works to the general district rate. Such works cannot under the circumstances be declared to be "private improvement works" under Sec. 150 of the Public Health Act, 1875. "Private street works" are works which come within the provisions of that section, or of the Private Street Works Act, 1892. To define them would be impossible in our space, but, shortly, they consist of the works necessary to make up and maintain a street which has not been taken over by the local authority, and which is not repairable by the inhabitants at large.

572.—**IS A BURGESS WHO NOMINATES A COUNCILLOR DISQUALIFIED FOR ACTING AS RETURNING OFFICER?**—Will you kindly answer the following question:—Is it illegal for a person to act as returning officer at a municipal election after having signed a candidate's nomination paper as an assenter?—"R."

We are not aware of any statutory provision or regulation which would render it illegal for a burgess who has signed the nomination paper of a candidate for office as counsellor to act as returning officer. We should say, however, that it is inadvisable that the returning officer, having regard to his responsible position, should take such an active part in procuring the election of any candidate.

RECENT DECISION OF THE HIGH COURT.

Liability of L.C.C. as Tramway Authority for Negligence of Contractor in Executing Works for the Tram System—"Sanders v. Reid Brothers, and the L.C.C."

In this case the L.C.C. and its contractors, Messrs. Reid Brothers, were held liable for damages inflicted on the carman of a lorry which struck against a manhole provided by Reid Brothers for the L.C.C. in connection with the provision of electrical conduits for the tram system. The manhole jutted above the road and was dangerous. No doubt the London County Council will recover its share of the liability from the contractors, with whom it had a contract of indemnity, but the case illustrates the well-established principle that a public authority cannot get rid of its responsibility to the public by entrusting the works it has to execute to third parties.

MUNICIPAL THEATRES.

ONE THAT DOESN'T PAY.

ADVOCATES of the municipal theatre in this country will be interested in the results of the first year's working of an Australian experiment in that direction.

The Corporation of the town of Geelong, which is about fifty miles south of Melbourne, submitted the question to a referendum of the ratepayers, and a majority decided for a civic palace of entertainment. So Her Majesty's Theatre was erected on a valuable Corporation site.

The balance-sheet for the first year submitted at the last meeting of the Corporation shows a debit balance of 15s. 6d.! But, according to a number of protesting ratepayers, the actual loss really runs into thousands. The new Mayor of Geelong has advised his council to "candidly admit the unfortunate result of their theatrical speculation."

SOUTHPORT'S AMBITIONS.

COUNTY BOROUGH POWERS APPLIED FOR.

THIS week Major Norton, of the Local Government Board, has been conducting an inquiry into the application of the Southport Corporation for county borough powers.

Since Southport's first local Act was obtained, 58 years ago, the population has increased from 4,000 to 51,323, and the rateable value from £10,000 to £362,216. In 1872, four years after the charter of incorporation was granted, the population was only 18,086, and the rateable value was £96,101. Therefore, in the intervening years, the population has been nearly trebled, and the rateable value almost quadrupled.

Southport now owns the markets, marine lakes, cemetery, destructor, police and fire stations, science and art schools, parks and recreation grounds, the electric lighting undertaking, the gas undertaking, and the tramways, though part of the latter-named are leased to a company. From 1879 to 1897 the Corporation rates have averaged 3s. in the £, but with a water rate in aid about 6d. and an education rate of 3d., the rates have gone up to 3s. 11d. in the £.

Southport is the largest non-county borough within the county area, and the rateable value is more than double that of any other.

THE ROYAL BOROUGH OF KENSINGTON.

APPOINTMENT OF OFFICE CLERK.

THE Council of the Royal Borough of Kensington require the Services of an additional OFFICE CLERK in the Borough Treasurer's Department, at the commencing salary of the fourth class, viz., £70 per annum, rising by conditional annual increments of £7 10s. to £100 per annum.

Candidates must write a clear and good hand, and possess an aptitude for figures and a knowledge of bookkeeping and accounts. Previous experience in the finance department of a municipal or other similar authority is essential.

The Council reserve the right to test the qualifications of candiates by examination.

Applications must be made in the candidates' own handwriting on printed forms, to be obtained ot the Borough Treasurer at the Town Hall, Kensington, and must be delivered to the undersigned, accompanied by copies of not more than three testimonials of recent date, by 4 o'clock in the afternoon of Friday, the 16th December, 1904.

Personal canvassing of any member of the Council will be a disqualification.

WM. CHAMBERS LEETE.
Town Clerk.

Town Hall,
Kensington, W.
8th December, 1904.

BOROUGH OF LEICESTER.

INSPECTOR OF FOOD.

THE Town Council of Leicester require the Services of an INSPECTOR of NUISANCES, whose chief duties will be the in spection of slaughterhouses, meat, game, fish, fruit, milk, and other articles of food. Applicants must state fully their qualifications for the appointment.

Preference will be given to one who has had experience in the inspection of food, and has obtained the certificate of the Sanitary Institute. Salary £120 per annum.

Applications, accompanied by three recent testimonials, must be endorsed "Inspector of Food," and addressed "Chairman of the Sanitary Committee," Town Hall, Leicester, and sent in not later than Saturday, the 24th day of December instant.

Canvassing is strictly prohibited.

By order.
E. V. HILEY,
Town Clerk.

Town Hall, Leicester.
6th December, 1904.

METROPOLITAN BOROUGH OF DEPTFORD.

WORKS DEPARTMENT.

DISTRICT FOREMAN.

THE Council of the above Borough are prepared to receive Applications from qualified persons for the Appointment of a DISTRICT FOREMAN, at wages after the rate of 37s. 6d. per week.

The person appointed is to have under his control, so far as his district is concerned, the road scavenging, dusting, street watering, gully cleansing, and slop removal. His duties will include reporting daily upon any defects or encroachments on the highways, or any defects in the street lighting.

Applications, which must be made upon forms to be obtained from the undersigned, should be accompanied by copies of not more than three recent testimonials, and must be sent to me at the undermentioned address not later than 9 a.m. on Monday, the 19th December, 1904, the envelope to be endorsed outside "Application for District Foreman."

The person appointed will be required to devote the whole of his time to the duties of his office, and will not be allowed to undertake or be directly or indirectly concerned in any other business than that of the Council.

Canvassing any member of the Council, either directly or indirectly, will disqualify candidates.

(Signed) VIVIAN ORCHARD,
Town Clerk.

COUNTY OF LONDON.

EXAMINATION FOR FOURTH-CLASS CLERKSHIPS.

THE London County Council Hereby gives Notice, that an EXAMINATION under the New Syllabus for FOURTH-CLASS CLERKSHIPS will be held as follows:—Part I. at 9.30 a.m. on the 16th and 17th January, 1905, at the Northampton Institute, St. John Street Road, Clerkenwell, London; and Part II. on 30th January, 1905, and the five following days, at a centre in London which in due course will be announced to intending candidates.

Candidates must not be under 17 or over 24 years of age on 11th January, 1905. Each candidate sitting for Part I. of the examination will have to pay to the cashier at the County Hall, Spring Gardens, S.W., on 12th January, 1905, between the hours of 12 and 2, a fee of 10s., and candidates sitting for Part II. will be required to pay a fee of 10s. on 24th January, 1905, between the hours of 12 and 2. Candidates may send their fees for Parts I. and II. by post, but they must reach the cashier at the County Hall, Spring Gardens, S.W., not later than 10 a.m. on 12th January and 18th January, 1905, respectively.

Candidates who have passed or obtained the necessary certificates in any of the undermentioned examinations will be exempted from sitting for Part I. of the examination:—

(a) The following matriculation examinations:—The Universities of London, Liverpool, Birmingham, and Leeds, the Royal University of Ireland, the University of Wales, the Victoria University of Manchester, and Trinity College, Dublin.
(b) The Cambridge Higher Local examination.
(c) The Oxford, Cambridge, or the Durham Local examination for senior students.
(d) Oxford and Cambridge (Joint Board) Schools examination higher certificate.
(e) The leaving certificate given by the Scotch Education Department (provided a higher grade certificate has been obtained in three subjects); the school leaving examination of the University of London, and the certificate of the senior grade of the Irish Intermediate Education Board.
(f) Part I. of the Council's examinations for fourth-class clerkships held on 2nd and 3rd June, 1904, and 31st October and 1st November, 1904.

Candidates so exempted must at the time of paying the fee produce their certificates or other evidence of having passed the abovementioned examinations. If the fee be sent by post the certificate must be forwarded therewith.

Forms of application and particulars of the appointments and the conditions under which they are held may be obtained either by applying personally or by sending a stamped addressed foolscap envelope to the Clerk of the Council, County Hall, Spring Gardens, S.W.

Candidates sitting for Part I. of the Examination must send in their applications by 10 a.m. on 11th January, 1905, and in the case of candidates exempted from sitting for Part I. the latest time for receiving applications will be 10 a.m. on 16th January, 1905.

NOTES AND COMMENTS.

Next Session's Bills.

THE budget of private Bill legislation for the next session of Parliament, notwithstanding the many statements recently made that local authorities have no money for new schemes, is a heavy one. The number of Bills promoted is 224, a decrease on the previous year of 48. Included in the total are 67 electric light, power, and traction schemes, promoted by local authorities, and 82 by companies. There are nearly a score of omnibus Bills promoted by county, town, or urban district councils in connection with general police regulations. The wide range is suggested by the following list:—Processions, milk supply, the manufacture and sale of ice cream, sky signs, powers for inspectors on the construction of buildings, whose wages are to be paid for by the fees exacted; registration of restaurants, cafés, common lodging-houses, drovers, porters, shoe-blacks; the limits of air-space provided in sleeping-rooms, the inclusion amongst compulsory infectious diseases of tuberculosis of the lungs. Liverpool, which has a very extensive scheme, seeks powers also regarding noises, animals, hairdressing saloons, and the prevention of the smoke nuisance. The London County Council proposes to insist that vans engaged in the delivery of bread shall carry weights and scales; while Accrington further intends to institute a municipal fire insurance fund.

Various Works.

THE London County Council proposes once again to run a tram line over Westminster Bridge, along the Victoria Embankment, and back south over Blackfriars Bridge, so as to secure a circular route and obviate termini at the southern ends of the bridges, where vehicular traffic is very extensive, and is obstructed by the present arrangement. The Glasgow Corporation proposes several lines, principally in the West End. Bury Corporation proposes 15 miles of new tramways, Halifax five miles, Bradford three miles, Liverpool a considerable extension in the Bootle district, and Wigan several additional lines, while quite a number of councils project extensions. Electric Lighting Provisional Orders are applied for by 30 local authorities and 33 companies. Ten Electric Lighting and Power Bills are promoted by local authorities, and 11 by companies. Several interesting proposals are raised in connection with harbour works. Of waterworks, perhaps the most important are those in connection with the Bolton Corporation. Four large reservoirs are proposed, ranging up to 83½ chains long, and formed by great dams across existing brooks.

Piccadilly Widening.

WE hope that the London County Council, in considering the question of the Piccadilly widening next Tuesday, will deal with it in a businesslike way. The proposal of the Improvements Committee is to widen that part of the thoroughfare between St. James's Street and Duke Street, at an estimated outlay of £72,500. The scheme will not be defeated on grounds of expediency, but we understand that it may be if the Council insists that the contribution of the Westminster authority shall be greater than the circumstances of the case demand. The Improvements Committee recommends that the contribution shall be £10,493—a seventh of the cost—which the Westminster authority is prepared to pay, but an amendment will be moved in favour of £18,125—a fourth—which the City Council is not prepared to pay. The guiding principle in these matters is the extent to which the proposed improvement is a local as distinguished from a London improvement. Piccadilly is certainly a London, and not a Westminster, thoroughfare. Its traffic is almost wholly general traffic, travelling from one part of the City to another. Next to the Strand—or perhaps equally with the Strand—it is the most purely London thoroughfare in London. The contribution of a seventh of the cost of the widening from Westminster is even generous when we consider what has occurred with the other London improvement schemes. The county improvements undertaken by the Council comprise 62 schemes. In 29 of these cases no contribution whatever was made by the local authorities concerned; in three cases a contribution of one-tenth was made by the local authorities, in one case one-eighth, in one case one-seventh, in three cases one-sixth, in one case one-fifth, in nine cases one-fourth, in ten cases one-third, in four cases one-half, and in one case two-thirds. Therefore, as we have said, the contribution from Westminster is generous.

"Shall Companies Vote?"

OUR well-meaning contemporary, the *Journal of Gas Lighting*, is backsliding again. It represents ourselves and others as "having gone hysterical over the attempt to remedy a piece of

flagrant injustice which has completely deprived limited liability companies of voting power in the matter of representation in municipal affairs":—

> In the eyes of the ultra-municipalists such companies are, although the largest ratepayers in a district, nothing better than pariahs who have no right to hearing or representation. Suffice it, they say, that in their individual capacity, these people have a vote. But before even a molecule of equity will be discovered in this argument, it necessitates the residence of all stockholders in the municipal area within which the business premises or works of the company are situated.

The *Journal of Gas Lighting*, as is perhaps natural with a publication which desires to advance company interests, confuses the stock with the stockholders. Stockholders do not vote because they hold stock; they exercise the franchise simply because they are citizens. A man may hold a million pounds worth of stock in companies whose offices are situate in Holborn, but that fact does not make him a citizen of Holborn, nor confer upon him a right to take part in Holborn's municipal affairs. And why should it? Holborn already allows him to make money in the borough, for which privilege he is naturally called upon to pay rates. The *Journal of Gas Lighting* says "it is only those municipal bodies who fear who will oppose" Holborn's scheme. Certainly. All municipal bodies have occasion for fear at the prospect of their affairs being controlled by joint stock companies. For then it would be the company, and not the community, which would govern. And that would be bad for any municipal enterprise from which it is possible to make profits for rate relief.

The Bankers Again.

THE bankers are evidently alarmed at the discovery that local authorities are able to obtain money without going to them for it. Mr. F. E. Steele, of Parr's Bank, speaking at Manchester on Friday, deprecated the employment, on works of a permanent nature, of deposits obtained by municipalities from the public, "subject to notice." "The works in which such moneys were sunk might be of a desirable nature, but they should not be financed by means of funds which could only be repaid by further borrowing in other quarters—borrowing which might be difficult and even impossible in certain contingencies." We have previously pointed out that the great drawback of municipal savings bank schemes up to the present has been that they do not provide for the consequences of a run of withdrawals. This difficulty, however, could be overcome by making the bonds negotiable, as is done on the continent. The Deptford scheme, too, is not subject to the danger of which Mr. Steele speaks. None of these schemes, however, would have become necessary had not the bankers developed an attitude of hostility towards the development of municipal enterprise. It is not usual for persons who have articles to sell to criticise their customers for buying them.

"Local Rates and Taxes."

MR. JOHN HOLT SCHOOLING may be very clever at drawing diagrams, but he has evidently given a very cursory study to the problems of local government. In an article published in the current number of the *Windsor Magazine*, which in other respects is a highly creditable production, he comments on the vastness of our local expenditure in the following terms:—

> For example, what is the explanation of conditions often seen, when a road is so badly re-metalled that in a few months the job has to be done again? When a piece of public drainage is constantly being tinkered by a leisurely group of workmen, who pull up the road again and again to re-tinker?

Apart from the absurdity of criticising an annual expenditure of 112 millions sterling on such trifling grounds as these Mr. Holt Schooling will be surprised to learn that in a great many cases the contractor suffers for the delinquencies he describes, and not the poor overburdened ratepayer. Mr. Holt Schooling adds:—

> When, owing to mismanagement of, and extravagance in, local finance, many of the houses in a very important southern town by the sea remain unlet, inhabitants being constrained to leave the town rather than submit to further extortion, one must think either that the local authorities who do the spending are not competent to see that work is done properly, or that someone connected with the spending of rates does in some way receive benefit from public work being done badly or being done unnecessarily.

Mr. Holt Schooling does not give us the name of the town referred to, which is a pity, for when vacant houses stand unlet at seaside resorts the cause is not always high rates, but the fact that the local authorities do not make the towns sufficiently attractive. In other words, they do not spend enough money upon them. If they did, the local debt which Mr. Schooling laments would be even greater than it is, but the incubus would be more than balanced by the increase in the town's prosperity.

"Municipal Trading."

MR. HOLT SCHOOLING'S remarks upon municipal enterprise are unusually wild for a methodical statistician. He says:—

> For my part, although I am ready to admit that there is a good deal to be said in favour of these costly "reproductive enterprises" undertaken by local spending authorities, I think they should be left to the private enterprise of business men who would, it is likely, take good care to protect the capital invested in them.
>
> With local bodies, if things go wrong, it is merely a matter of more pence in the £ put on to the rates; with the result that residents are actually driven away from the town, whose trade and position generally starts on the down grade burdened with a heavy debt.
>
> The citizens have to bear the burden, not the local authorities who sanctioned the foolish expenditure, possibly to their own individual benefit.

As a popular statistician Mr. Holt Schooling should be interested in the tables we published in our last week's issue, which show that these enterprises, so far from increasing the rates, actually relieve them. If he will only learn the lesson these tables convey we shall have no more of this new style of ghost story in the *Windsor Magazine*.

"Municipal Oratory."

APROPOS our note under this head, Mr. Labouchere in last week's *Truth* quoted the following chaste sample of platform eloquence from the report of a municipal election meeting at Carlisle:—

> Major Spencer Ferguson said that everything possible had been said about Mr. Hope and about that other man. (Laughter.) He would be hanged if he wanted to be represented by an infernal fellow—(laughter)—who came from the other side of the river and damned the town as much as he could. (Laughter.) They did not want that sort of a rascal put in the Town Council. (Laughter and cheers.) If he had his way he would get a devilish short shrift. (Great laughter.) He intended to vote at eight o'clock on Tuesday morning for the right man.

"This gallant orator," says *Truth*, "is an officer of the Northumberland Fusiliers, at present acting as adjutant to the 1st V.B. Border Regiment. I do not know whether the paragraph in the King's Regulations prohibiting officers on the active list from taking part in political meetings would apply to a mere matter of municipal electioneering; but that it should do is evidently desirable in some cases, if only for the sake of officers themselves."

Tax Land Values.

SOME remarkable figures in favour of the case for the taxation of land values are contained in a leaflet just issued by the Tyneside branch of the English League. To-day the land tax is still levied on the values of 1692, and, instead of one twenty-fifth part of our national revenue, it yields only £750,000 out of £140,000,000, or one 186th. If levied on present values the land tax would realise £40,000,000, the land values of the United Kingdom being estimated by the "Financial Reform Almanack" at £200,000,000 per annum. Under this land tax, therefore, the landlords pay every year £39,250,000 sterling less than they ought to pay, and as a necessary consequence the labour and capital of the country are forced to pay under other taxes £39,250,000 every year more than they ought to pay:—

> In the United Kingdom at present some 12,000,000 acres of good cultivable land, capable of supporting a family to every 5 or 10 acres, are held idle for deer forests, game preserves, &c., while millions of acres more are only half used, "labour-starved." Were the land tax of 4s. in the £ levied on the full yearly value of all land, whether in use or not, these 12,000,000 acres would soon be put to use.
>
> This means that 1,200,000 families, or 6,000,000 men, women, and children, would be drafted from the slums and the mining districts into the country. There would be 1,200,000 families fewer competing for wages in the towns and the mining districts, therefore higher wages; 1,200,000 families fewer competing for house room, therefore more house room for those left behind, and lower house rents. . . .
>
> These 1,200,000 families on the now derelict 12,000,000 acres would afford a home market of upwards of £62,000,000 per annum for all the products of mine and factory, while the great increase in the amount of home-grown food would immensely strengthen the position of the Empire.

There is one matter which the writer of this pamphlet has apparently disregarded, and which we mention, not, of course, as an argument against the taxation of land values, but as a proof that side by side with this reform must go reform in the conditions under which local authorities are able to build workmen's dwellings. The 1,200,000 families who would go back to the land were these predictions fulfilled would have to find houses to live in. At present the accommodation in rural districts is not even sufficient to house the existing scanty population. Incidentally, therefore, the taxation of land values should give a very great impetus to building enterprise in country districts.

POOR LAW OUTLOOK.

A New and Admirable Scheme for the Emigration of State Children to Canada. Attitude of the Canadian Government and of English Boards of Guardians. A Comparison Favourable to Bradford, and the Secret of its Economy in Pauperism. Favourable Conditions Under Which the Submerged Might Rise—Not Doles. A Great Moral Lesson.

ANOTHER scheme—and an admirable one—is put forward this week for the emigration of State children to Canada. The author is Mrs. Close, of Eaton Square, who has for many years taken an active interest in the subject. The proposal marks a somewhat new departure. The intention is to combine the principles of the best of the Poor Law systems of dealing with the children now being adopted in England with the principle of emigration, and to establish cottage—or rather farm—homes in Canada, to which children should be sent at an early age to be brought up on the land, each farm to take from 15 to 20 children under the charge of two ladies.

Draining the Sources of Pauperism.

WITHIN the past six months there has been a movement amongst certain metropolitan boards of guardians for the establishment of a Poor Law Receiving Home in Canada. Realising the immense advantage this class of children reap from emigration, we welcomed the proposal, notwithstanding that we realised the danger of aggregating children in any building approaching a barrack school. Sir John Gorst condemned the scheme largely on the ground that the pauper taint would attach to children coming from an establishment of this kind. This objection may be shown to be chimerical, inasmuch as no child is taken into a Canadian farmer's home without some investigation, and the fact that it has been emigrated through a religious agency is too superficial a disguise to deceive any one.

Objections to Poor Law Receiving Homes.

BUT this scheme of Mrs. Close overcomes several of these difficulties. The children would be brought up in the healthiest manner on the land, and without the evils of aggregation. The boys would help in the fields, the garden, and the farm-yard, as soon as they were old enough; the girls would learn kitchen, dairy, and housework. They would be taught in the public schools, and it is now generally recognised that in England the teaching in the regular elementary schools is much better for Poor Law children than that provided in special schools. They would be free from all contact with pauper associations, and would be prepared to take their place in the world among other citizens and on the same footing. A striking feature of the scheme is that on reaching the proper age boys who choose the army, navy, or mercantile marine as their profession should be returned to England; and similarly, any boys or girls for whom good situations are found at home.

Bright Prospects for the Emigrants.

AND in Canada the project is not only considered feasible, but is warmly welcomed. The most suitable parts of the Dominion appear to be the provinces of Nova Scotia and New Brunswick, and the North West Territories. The provincial Governments of Nova Scotia and New Brunswick have recently transmitted their formal approval and willingness to assist and promote the scheme. The Government of New Brunswick, according to a letter from the Attorney-General, dated November 9,

> Will make a free grant of two hundred (200) acres to the guardians in respect of each group of, say, four adults and 20 children placed upon a farm purchased by the guardians, and that in respect of such grants the usual conditions for settlement will be waived for a period of years, and special regulations made in respect thereto, which will be subject to the approval of the guardians. . . . Of course, it will be understood that the proviucial Government shall be satisfied that suitable arrangements will be made which will ensure the proper care of the children, and that the Government shall have the right to periodical inspection of the homes.

Attitude in Canada.

The Government of Nova Scotia equally embraces the suggestion, a cablegram having been received from the Premier, stating "Our Government approves and will assist in a practical way."

A WIDE door may thus be thrown open to a large proportion of the 42,000 State children in our land. But a still more important question is, will permission be granted to the children to go? English boards of guardians do not take kindly to the emigration of their little wards. The guardian who "stood on the seashore and saw with tears in his eyes the sturdy sons and daughters of England leaving their native land" is typical of a large class. The *Times*, in outlining the scheme and reproducing the various official letters of welcome that have been penned from the other side of the Atlantic, has entirely overlooked this main fact at home. Interviews by representatives of the *Municipal Journal* with Mrs. Virginia M. Crawford, of the St. Marylebone Board School, who was one of a deputation to Canada to study the question of emigrating State children, and Miss Penrose Philip, secretary of the State Children's Association, have brought out this unfortunate characteristic of English guardians. No one denies that emigration is the most economical as well as the most thorough method of dealing with State children. Is it true that guardians like to see fine institutions and the tangible results of their work before their eyes? If so, it is a human failing that will have to be conquered.

English Guardians' Prejudice.

ONE of the Local Government Board inspectors (Mr. P. H. Bagenal) has been comparing the expenditure of the Bradford and Sheffield Unions, and showing how unfavourable the latter is, both on in-door and out-door relief, although Bradford is very little smaller. A good deal of attention has been drawn to this comparison in the north of England, and speculation is rife as to the cause of so great a discrepancy in two neighbouring unions. An article which appeared in the *Municipal Journal* last year went a long way to explain how Bradford's policy helps to reduce demoralisation by pauperism. The system has three great features. The first is the rotation of members on the relief committees. The union is divided into four districts, with a relieving officer for each, and the members of the Board do not sit perpetually in one section, but they move from section to section—each of which has a permanent chairman, who keeps in touch with the policy of the Board—by a process of rotation.

Reducing Pauperism.

THE great result of the rotation rule is that no member thinks it necessary to press specially for relief in the cases of his own particular parish, and this has an enormous bearing on the cases treated. The second point is the appointment of a superintendent relieving officer, who sees that the relief is uniform, and that orders relating to the relief are carried out. The third point is the lady cross visitor. After relief has been given, the superintendent relieving officer makes a list of those cases she has to visit—that is, those persons who have been relieved for the first time—and she makes a report, according to a prescribed plan, to the Finance Committee, who constitute the Revision Committee, and have the power of revising the whole of the relief allowed.

Justice—Not Favouritism.

THESE regulations have aroused considerable soreness of feeling recently amongst the unemployed of the town, and the leader of a deputation to the Board not long ago described them as "fiendish." Academic opinion, as represented on the one hand by Sir William Chance, M.A., author of "Our Treatment of the Poor," regards the Bradford policy as an admirable one, while, on the other hand, Mr. J. Theodore Dodd, M.A., the well-known author and lecturer on Poor Law administration, says:—"They (the Bradford Guardians) have greatly cut down out-relief. It is perfectly easy to do this in any union. All that guardians have to do is to 'offer the house.' Many will prefer semi-starvation outside to semi-imprisonment within." As illustrating the working of the Bradford system, it may be mentioned that, though the population of the town has increased from 216,000 to 228,667 since 1899, the average daily number of outdoor paupers fell from 1,634 to 1,257.

Varying Opinion on the Policy.

MR. BAGENAL, the kindest of men, is making a name for himself as a follower of the strict school of Poor Law administration. This week, commenting on the statistics of pauperism at the Barnsley Board of Guardians, he compared the cost of relief in the Rotherham Union at 2s. 4d. per head with that of Barnsley at 1s. 11d. per head. He said he thought the difference was due to the greater existence of friendly societies in the Barnsley Union.

> There was evidently a greater desire not to be maintained at the public cost. The Barnsley Guardians' system of first asking an applicant if he was not receiving anything from a club or society was teaching a great moral lesson, and comparing the three mining unions, Pontefract, Rotherham, and Barnsley, he thought the figures of Barnsley showed great evidence of thrift and the maintenance of independence of mind.

Thrift and independence of mind are worth more than gold, but when careful regulations are made to promote these qualities they are howled down in uninformed quarters as fiendish.

Thrift and Independence.

LAX administration, like indiscriminate charity, are great evils. What reformers should turn their attention to is not so much the best system of dole-giving, but the amelioration of the conditions of those on and below the border-line of subsistence. Mr. Walter Long was so far right on Tuesday evening when he asked his hearers at a Conservative dinner at the Holborn Restaurant

> Whether, if men were industrious, honest, anxious to work, and could not get work, anybody could blame them if, lacking other assistance, they joined the ranks of those who told them that somewhere there was a fairy godmother who would wave her wand and give them a share in a prosperity which otherwise they could not realise.

But when the President of the Local Government Board spoke of the dangers of the unemployed "joining the ranks of those who said that all the laws of the land were bad, and that nothing but a radical change could save them from difficulties of that kind," he was what is somewhat vulgarly called "talking through his hat." No serious-minded person ever says that *all* the laws of the land are bad. From an alteration of *some* of the laws, which tend to widen the gulf between the very poor and the very rich; more good would result than from the best schemes of relief, even, if we may say so, including that just put forward by Mr. Long himself.

Mr. Long and Laws of the Land.

LIVERPOOL has no work which can be undertaken by the unemployed beyond those now in operation under the various committees of the Corporation, and yet the Local Government Board has this week intimated that it cannot sanction an excess of expenditure in order to relieve the men. A crowd of 200 men waited on the Fulham Guardians at their last meeting. The stoneyard which the Lewisham Borough Council opened a fortnight ago for the benefit of the unemployed has presented an all too busy scene during the last few days.

ELECTRICITY SUPPLY.

The Story of Two South Coast Undertakings as Shown by a Summary of the Last Published Accounts. Southampton's Rapidly-Rising Traction Load, and a New Phase in Its History. Changes in the Right Direction at Hastings. A Comparison Between the Two Towns.

THE fortunes of the undertakings purchased by municipalities from companies have been varied, but they generally show a rapid improvement under the change of management. This is largely attributable to the ability to expend capital in modernising the plant and extending the area of supply. The character of the change so brought about was referred to in our last week's issue when discussing the accounts at Eastbourne, and this week we lay before our readers a summary of the last published accounts of two other south coast undertakings, Hastings and Southampton. The latter is becoming more important through its rapidly rising traction load, while Hastings has to struggle on with only lighting business. Like Eastbourne, Southampton has entered upon an entirely new phase in its history by the laying down of an up-to-date generating station, and by converting its system of supply gradually from a mixed alternating and direct current system to a continuous current one, one of the advantages derived from the location of the new works in a position better fitted to cope with the load in the district where the consumers are most dense. The committee may well consider that the past year has shown very satisfactory business, as the number of consumers increased on the old tariff, and the reduction in the price to 4½d. per unit from the commencement of the current financial year should greatly add to the custom, especially as extensions of mains have been carried into many parts of the town previously untouched. The reduction in price has not been—as is too often the case—a blind attempt to improve the output without attention being paid to the probable result on the expenditure, as the new works must enable many economies to be effected in the working expenses by a lessened consumption of coal, &c. It is, moreover, an indication of the sound policy controlling the undertaking that the surplus should have been devoted to meeting expenditure involved in the changes carried out, instead of transferring the amount to the general rate fund, which, in the case of Southampton, must have been a strong temptation.

❦ ❦ ❦

The Surplus at Southampton.

THE several results of last year's working, as set out in the abstract of the electric light works accounts, are as follows :—

Revenue derived from sales of current, &c., amounted to		£27,639
And the working expenditure to		14,352
Leaving a gross profit of		£13,287
Out of this sum the following requirements were met :—		
Interest on stock	£3,471	
,, on transfer from sinking fund ...	288	
,, on overdraft	795	
Sinking fund	4,144	
Interest on consumers' deposits	6	
Total of capital and special charges		8,704
Surplus, to appropriation fund		£4,583
Receipts from tramways department		229
Provision for tramway battery		228
Gross surplus		£5,040
Appropriated : Capital expenditure paid out of revenue	£5,000	
,, Depreciation and renewals fund	40	
Total as above	£5,040	

It will be seen that the actual surplus from the supply revenue account was £4,583. This was transferred to an appropriation account, to which was credited the fees for work on the tramway system carried out by the electrical staff, amounting to 2½ per cent. on £9,171, and an amount provided for the maintenance of the tramway battery in the previous year, and not expended. These brought the total to £5,040. As the new buildings were designed by the borough engineer, 2½ per cent. on £19,184, or £480, was paid as fees; £1,709 expenditure on capital account in excess of sanctions, the heavy expenditure incurred in the re-erection of plant removed from the old works, extensions of public lighting, switchboard enlargement, and replacement of copper strip mains and sundry other works of a permanent character, were paid for out of this available surplus, aggregating £5,000; much of which would be in other places debited to capital. The balance of £40 was carried to the depreciation and renewals fund, but as the committee considers that this needs to be very considerably strengthened, it is probable that future profits will be applied towards building up a substantial reserve.

❦ ❦ ❦

Appropriation of the Revenue.

PUBLIC lighting is now charged at 2½d. per unit, traction supply 2⅛d., and motive power supply at 3d. and 2½d. The public lighting comprises 72 ten-ampere arc lamps and over a hundred incandescents, the total being 176. During the year under review the public lighting paid 3d. and traction 2¼d. per unit, so that reductions have been effected in all departments. The receipts were obtained from the following sources :—

	Units.	Yielding.	Per unit.
Private consumers took ...	654,034	£13,312	= 4·885d.
Public lamps consumed ...	137,353	1,717	= 3·000d.
First interim total ...	791,387	£15,029	= 4·558d.
Traction sales amounted to	1,298,392	12,172	= 2·250d.
Second interim total ...	2,089,779	£27,201	= 3·124d.
Meter rentals	—	327	= ·037d.
Miscellaneous receipts ...	—	111	= ·013d.
Total revenue	2,089,779	£27,639	= 3·174d.
Units used on works... ...	96,332	(The maximum load was 1·335 k.w.,	
Total accounted for... ...	2,186,111	representing a load	
Utilised on distribution ...	413,336	factor of 17·87 per cent.).	
Total units generated ...	2,599,447		

The gross cost, which includes the maintenance of the public lamps, was 1·648d., capital charges 1d., and the surplus on supply revenue account ·526d., making the total receipts 3·174d. per unit on an average load-factor of 17·87 per cent. The traction and public lighting rates, with their higher load-factors, should, therefore, even at the reduced figures now in force, be profitable, and it would seem desirable to offer rather better terms for motive power, so as to extend this class of custom. The appropriation of the revenue is set out in detail below :—

	Amount.	Per unit.	
Works cost	£11,723	= 1·346d.	
Rates, taxes, management, &c.	2,350	= ·270d.	
Total cost	£14,073	= 1·616d.	
Public lamp maintenance...	279	= ·032d.	
Gross cost	£14,352	= 1·648d.	
Interest charges	4,560	= ·524d.	1·000d.
Sinking fund charges ...	4,144	= ·476d.	
Total actual cost of units sold	£23,056	= 2·648d.	
Surplus for year	4,583	= ·526d.	
Total revenue	£27,639	3·174d.	

❦ ❦ ❦

Uniform Working Expenditure.

IT is a curious coincidence that the total working expenditure last year and the gross cost this year work out at the same figure per unit, *i.e.*, 1·648d.; the amounts were £11,891 and £14,352 respectively, being in the same proportion as the increase in units sold. The changes are all in an upward direction in the totals : 357,766 additional units were sold, earning £3,810 extra, but costing £2,461 more to produce, and the capital charges were £1,034 more than before, owing to the new works carried out. Deducting the latter figure from £1,349, extra gross profit leaves £315, by which the surplus exceeded that at March, 1903. Taking the averages per unit, as the working costs remained the same, and capital charges fell by ·063d., while the surplus was ·066d. less than before; the average at which the sales were made was ·129d. below that for 1902 3. The growth of the output and its relation to the reduction in charges is shown by the following figures covering the period from the purchase of the undertaking by the Corporation :—

Year to March 31.	1897.	1899.	1901.
Units sold, private	131,843	263,465	524.795
,, ,, public	—	1,616	114.205
,, ,, traction	—	—	424,124
,, ,, total	131,843	265,031	1,063,124
Number of public lamps ...	—	24	165
Percentage lost	14·1	6·7	11·3
Maximum load	187 kw.	330 kw.	568 kw.
Total nett working expenses per unit	3·703d.	2·810d.	2·892d.
Total nett interest and redemption charges per unit	2·603d.	3·200d.	1·458d.
Total nett expeuditure per unit sold	6·311d.	6·010d.	4·350d.
Nett surplus	£21	—	—
Nett deficiency	—	£641	£2,793

Year to March 31.	1902.	1903.	1904.
Units sold, private	589,042	624,312	654,034
,, ,, public	117,701	130,297	137,353
,, ,, traction	723,479	977,404	1,298.392
,, ,, total	1,430,222	1,732,013	2,089,779
Number of public lamps ...	166	166	176
Percentage lost	19·9	19·9	15·9
Maximum load	1,143kw.	1,263kw.	1,555kw.
Total nett working expeuses per unit	2·093d.	1·648d.	1·648d.
Total nett interest and redemption charges per unit	1·215d.	1·053d.	·999d.
Total nett expenditure per unit sold	3·308d.	2·711d.	2·648d.
Nett surplus	£368	£5,041	£4,811
Nett deficiency	—	—	—

❦ ❦ ❦

Improvement at Hastings.

THE position at Hastings at the end of the 1903 financial year was rather better than before, but the change from a deficiency of £1,080 to one of £950 does not support the opinion that the undertaking will be self-supporting for some years to come. Lighting only, even at the comparatively high rates obtained, will not allow of much being done to meet the exceptionally heavy capital charges, which come to nearly 2½d. per unit, and absorb almost 50 of the income. The income is bearing a rather greater ratio to the capital expenditure, having increased from 13·10 to 13·64 per cent, while the deficiency has fallen from 6·39 to 5·29 per cent. The changes, such as they are, are in the right direction; and the load-factor is by no means a poor one in the absence of a motor or traction load, being 15·95 per cent. The last published accounts of the electricity works department cover the financial year 1903, and show that—

The revenue derived from sales of current, &c., amounted to		£17,978
And amount received from rates, to		1,000
Making total receipts of		£18,978
While the working expeuses amounted to ...		10,104
Leaving a gross profit of		£8,874
Out of this sum the following requirements were met :—		
Dividends on redeemable stock	£3,553	
Bank interest	943	
Sinking fund	4,311	
Interest on deposits	6	
Bad debts	11	
Total of capital and special charges		8,824
Difference between total iucome and expenditure, credit balance applied to reduce outstanding deficit		£50

❦ ❦ ❦

Sales.

THE rates charged for private lighting were 6d. per unit, or on the special tariff, which had an initial or stand-by charge of 10s. per eight candle-power lamp demanded, with 1½d. per unit for the consumption. Public lighting was charged on the same scale. The average received was over 5d. per unit for private and 4·233d. for public lighting, if all receipts were included. The operation of this scale is interesting, as it would seem very unlikely that the public would favour a method which required a fixed payment of £1 per annum for a sixteen candle-power lamp, yet a large num-

ber of units were disposed of on this system. The actual sales were :—

	Private supply. Units.		Public lighting. Units.	
6d. units	309,186 =	£7,730	—	—
Fixed charge ...		3,325		£1,305
1½d. units	314,476 =	1,965	228,432 =	1,428
Sales by contract ...	—	47	—	—
Interest and sinking fund charges repaid	—	—	—	572
Repairs, attendance, and carbons repaid	—	—	—	724
Totals ...	£623,662	£13,067	£228,432	£4,029

After deducting bad debts the amounts became as follows :—

	Units.	Yielding.	Per unit.
Private consumers took ...	623,662	£13,056	= 5·024d.
Public lamps consumed...	228,432	4,029	= 4·233d.
Interim total ...	852,094	£17,085	= 4·812d.
Meter rentals	—	653	= ·184d.
Sundry receipts and rents	—	229	= ·065d.
Total revenue for year.	852,094	£17,967	= 5·061d.
Units used on works ...	19,490	(The maximum load was 610 kilowatts, corresponding to a load-factor of 15·95 per cent.)	
Total accounted for	871,584		
Utilised on distribution	117,978		
Total units generated	989,562		

Room for Expansion.

THE 104 arc lamps of the Brush-Vienna, Gilbert and Lewes types for public lighting cost about £38 14s. each per annum. The current was sold at 2·871d. per unit, ·601d. was paid for capital charges, and ·761d. per unit for maintenance. The fixed charge on the private supply units sold on the demand system represented 2·537d. per unit, which, with 1½d. running, or consumption charge, made an average total of 4·037d. per unit. The fixed charge on the public lighting units averaged 1·371d. per unit. The number of lamps connected was 34,000. The plant is capable of supplying a larger load than that at present demanded, as it is of 1,200 kilowatts, while the maximum last year was only 610 kilowatts; in other words, the sales could be increased by at least 50 per cent. without additional expenditure being incurred on plant. It is in this direction that success is to be sought; whether Hastings has reached saturation point or not is a question, but we should imagine that, as over a thousand pounds' worth of new business was obtained last year, there is still room for expansion.

Capital Expenditure.

THE first statement above shows the result after including the sum received from the general rate. Eliminating the outside aid, the deficiency was £950, and omitting bad debts, the revenue received was taken up and appropriated thus :—

	Amount.	Per unit.	
Works cost	£7,350	= 2·070d.	
Rates, taxes, management, &c.	1,928	= ·543d.	
Total cost...	£9,278	= 2·613d.	
Public lamp maintenance...	826	= ·233d.	
Gross cost	£10,104	= 2·846d.	
Interest charges	4,502	= 1·268d.	2·482d.
Sinking fund charges ...	4,311	= 1·214d.	
Total actual cost of units sold	£18,917	= 5·328d.	
Less net deficiency for year	950	= ·267d,	
Revenue for year ...	£17,967	= 5 051d.	

The capital expenditure for these undertakings was spread over the following items :—

	Southampton.		Hastings.
Lands	£6,359	...	Expended during previous year £128,944, and during current year (as per accounts) £2,888, leaving a balance of sanctions unexpended of £4,685. Plant capacity, 1,200 kilowatts.
Buildings	35,443	...	
Machinery and plant ...	47,222	...	
Accumulators	6,238	...	
Mains and services ...	38,847	...	
Transformers	2,887	...	
Electrical instruments ..	1,746	...	
Meters	5,486	...	
Public lighting	2,882	...	
Purchase of company...	21,100	...	
Various	4,756	...	
Total capital invested ...	£172,966	...	£131,832

HYGIENE IN ARCHITECTURE.

AN all-important aspect of the public health question is dealt with in the presidential address of Dr. J. F. J. Sykes, before the Society of Medical Officers of Health, the subject being "Public Health and Architecture." It is a matter that has hitherto received far too little attention, the question of sanitation having been for the most part subordinated to the requirements of architectural style, and in most of our finest buildings the problem of sanitation seems to have been carefully evaded.

Apropos of this question, our attention has been drawn to a building material for which hygienic merits of a high order are claimed. It is known as Asbestos-Slate, and is manufactured by the Calmon Asbestos and Rubber Works, Limited, 6, Sheppy Place, Minories. The material is specially adapted for covering all kinds of roofs (wood or iron), and is of the greatest value for walls, in place of match-boarding, and also cheaper than lath and plaster. As a substitute generally for quarry slates, tiles, corrugated iron, or boarding in connection with light buildings, such as hospitals, sheds, and temporary structures, it gives the most successful results. As bearing directly on the sanitation problem, it is pointed out that asbestos-slate is impervious to the ravages of vermin, is not liable to rot, and can be easily and thoroughly cleansed, so that bacilli and germs of infection cannot adhere to it.

The vital importance of some such material as this in the construction of hospitals, infirmaries, and similar institutions, cannot be denied; and in this direction asbestos slate should have before it a wide field of usefulness.

It is, however, not only from the directly hygienic point of view that the material is to be recommended. The manufacturers state that it is absolutely fire-proof, water-proof, weather-proof, and damp-proof, a combination of advantages that should gain for it the widest possible vogue. It is extremely light in weight, but at the same time strong, hard, and durable; easy to work, and it can be sawn, nailed, or screwed, having no tendency to split or crack. It is characterised by high insulating resistance, in consequence of which an always even temperature, unaffected as far as possible by heat or cold, is maintained within walls lined with, or constructed of, this material.

Although asbestos-slate buildings are much lighter, and also cheaper, than is the case with many structures in which heavy materials, such as brick and stone, are used, they compare very favourably in point of stability, and offer the special advantages of being easily and quickly erected and (if desired) taken down for re-erection elsewhere.

The material is made in two qualities, one for roofing and general purposes and one for lining purposes. It is supplied in sheets in thicknesses ranging from ⅛in. upwards, and in various colours.

Our illustration shows asbestos-slate, used for lining the walls of a fever hospital, at Durham. The building, erected 15 years ago, had been condemned by the medical authority as insanitary and not fit for habitation, owing to the wood lining having become defective and so draughty as to be very dangerous to fever patients.

On the recommendation of Mr. Pegge, the city surveyor, the wards were lined with Calmon's Asbestos-slate, and this work has been so extremely successful as to dispose of all former objections to the building, and has rendered the interior very pleasing and comfortable, and the building will now probably last another ten years.

STOURBRIDGE DESTRUCTOR WORKS.

THESE works, which have involved an expenditure of about £5,000, were inaugurated this week. The Stourbridge Council decided several years ago on the provision of destructor works. The scheme carried out includes what is known as a two-cell plant, and will deal with between 7,000 tons and 8,000 tons of refuse per annum. It is thoroughly up-to-date, and the buildings are sufficiently large to deal with the refuse from double the present population of the Stourbridge district. A large Lancashire boiler is provided in the works, and the power, though put to no use at present, will be used probably for pumping sewage at the pumping station of the Stourbridge Main Drainage Board.

TRAMWAY TOPICS.

The Award in the Manchester and Pendlebury Arbitration. Purchasing Authority Not Bound to Acquire and Pay for the Depot. More Middlesex County Council Tramways. Tramcars as Parcel Distributors. Running Powers and the Differences Between Arrangement and Compulsion. Something Big in Tramway Contracts.

Manchester and Pendlebury Arbitration.

THE Master of the Rolls and Lords Justices Stirling and Mathew, in the Conrt of Appeal on Saturday, gave judgment in the case of the "Manchester Carriage and Tramway Company, Limited, v. the Swinton and Pendlebury Urban District Council." The district conncil had under statutory powers given notice to the respondent company of its intention to acquire the lines of tramways passing through its district, and the qnestion of the amount to be paid was referred to the late Sir Frederick Bramwell, as arbitrator. By Sec. 43 of the Tramways Act, 1870, a local authority may require the promoters of a tramway to sell their undertaking, or so much thereof as is within the district of the local anthority, npon terms of paying the then value of the tramway and all lands, buildings, works, materials, and plant of the promoters suitable to and used by them for the purpose of their undertaking within such district. The question raised by the appeal was whether the words in the section "within such district" qualified the word "nndertaking," so that a depôt situated outside the council's district, but submitted by the company "to be suitable to, and used by them for, the purpose of such part of the undertaking as was within the said district," ought to be taken and paid for by the purchasing authority.

The Award.

THE arbitrator found that the depôt in question, which was valued at £24,000, was suitable to, and used with, the undertaking; but owing to the way his finding had been stated there was an ambiguity of language which left it open to argument whether he so found as a fact, or, assuming that to be the case, he left, or had intended to leave it, as a point of law for the High Court to decide—whether a depôt, if suitable to, and used with their undertaking, but situated geographically outside the district of the purchasing authority, must, nevertheless, be purchased under a legal liability imposed by Sec. 43; or whether the purchasing authority had only conferred on it an option to purchase it, which it could exercise or not, as it liked. Mr. Justice Channell, before whom the special case was first considered, said he felt bound by the findings of the learned arbitrator, regarded as a finding of fact, but if Sir Frederick Bramwell had been still alive he should have remitted the case, in order that the ambiguity of the language might be cleared up. With some hesitation, his lordship upheld the contention of the company—namely, that the purchasing authority might acquire and pay for this depôt.

Judge's Decision.

THE Master of the Rolls, in the course of a long and exhaustive judgment, said he came to the conclusion, though with some hesitation, that the appeal must be allowed, as in the circumstances he did not think that the purchasing authority was bound to acquire and pay for the depot. Although, therefore, the decision of Mr. Justice Channell would be reversed, he thought that they were expressing the view that the learned judge himself would have expressed had he seen his way out of the legal entanglement which had arisen from the ambignity of the language in which the point had been submitted by the learned arbitrator. The Lords Justices concurred, and the appeal was allowed with cost.

New Lines in Middlesex.

MUCH interest was manifested on Satnrday in the opening for public use of a new and important tramway ronte in the north-western suburbs of London. The new line extends from the Crown at Cricklewood to Edgware, a distance of five miles, and has been constructed by the Middlesex County Council, acting with the Metropolitan Electric Tramways Company, which is working the line under an agreement with the Council. The cars will hold 30 passengers inside and 38 ont, and the fare for the entire distance is threepence, with intermediate penny and twopenny stages; the cars running from 7.20 a.m. to 11.30 p.m. The system adopted is that of the overhead trolley, and the speed laid down by the Board of Trade regulations varies from 12 to 14 miles an hour.

Parcels on Tramcars at Bury.

THE Bury Town Conncil, at its meeting last week, sanctioned a scheme for the collection and delivery of parcels on tramcars. The scheme provides for the conductors of cars travelling into Bury receiving parcels at any stopping place at charges of 2d. np to 7lb., 3d. 14lb., and 4d. 28lb. The parcels will be distributed from the central office to within half a mile of any part of the system, or forwarded by parcels post or train at railway charges. Forward parcels will also be collected within half a mile or a mile of the system at additional charges.

Sheffield Tramwaymen's Clnb.

A LARGE number of the men employed in the Sheffield Tramway Department met last Thursday night, at their recreation clnb in High Street, to enjoy the first entertainment of the present winter season. The entertainment took the form of a concert, the prime mover in the promotion of which being the general manager, Mr. A. R. Fearnley, whilst inspectors S. H. Wallett (secretary of the club) and J. Dickenson (treasurer) saw that all minor details were satisfactorily carried out. A capital programme was submitted, and was thoroughly appreciated.

Employees' Interests at Ayr.

LAST week, at a meeting of the Ayr Corporation Tramway Committee, the application by the manager, Mr. Fred Coutts, for a recreation-room and hall for his men was again discussed and met with a good deal of support, and it was remitted to a small committee, along with the manager, to go more fully into the matter and report as to probable costs. In support of his application Mr. Coutts pointed out that at their monthly social meetings there were always over one hundred present.

Running Powers.

IN our "Notes and Comments" last week we referred to the paper read by Mr. Stephen Sellon before the Tramways and Light Railways Association on the Thursday evening. Mr. Alfred Baker, the General Manager of the Birmingham Corporation Tramways, made an interesting speech during the discussion. Mr. Baker remarked that if compulsory running powers, which Mr. Sellon had preached in season and out, really meant what that gentleman said they meant, there could be no great objection to them. But had the seekers after compulsory running powers always been willing to forego all the profits earned on the lines over which they sought to run? He thought not. In the Birmingham case was it even stated that the British Electric Traction Company wished to make no profit out of Birmingham? If so, everybody had been under a most extraordinary misapprehension. The company moved heaven and earth to persuade Parliament to grant compulsory running powers over the lines of the Corporation within Birmingham, and wonld have succeeded but for the wise and reasonable attitude taken up by the Corporation. That authority was quite as anxious as the company to give proper traffic facilities to the travelling public, and not to cause inconvenience by having a break of the service at the city bonndary. It was willing, therefore, to allow the company's cars to come in from outside districts, bnt it said this must be by arrangement and not by compulsion. The company scorned the idea that a satisfactory, friendly agreement was possible.

A Through Service.

FORTUNATELY Parliament took the view of the Corporation, with the result that arrangements had been made enabling the Corporation and the company to run jointly a through service of cars. The proximity of the Aston boundary to the centre of the city, and the frequency of the service of cars, especially on Saturdays and football match days, rendered it impracticable to adopt there the system of changing car crews, but in cases where the conditions were favonrable he regarded the plan recommended by Mr. Bellamy as the best. The method agreed upon in the case of the Aston line was working exceedingly well, notwithstanding the fact that the company told Parliament that no friendly arrangement was possible. Such a plan would serve well when both parties were anxious to do right and to work well together.

Business Must be Protected.

MR. BAKER did not believe in a dog in the manger policy in tramway matters, but he strongly believed that it was the bounden duty of every authority to protect the business which it had built up for the benefit of its citizens. The danger of compulsory running powers lay in the fact that every authority might sooner or later have to guard itself against unscrupulous persons promoting outside tramways, not in the public interest, bnt with a view to exploit municipal tramways. He saw no justification for an enactment giving general running powers, because he was convinced that wherever there was a legitimate demand for running powers public opinion would be strong enough to make those inclined to be unreasonable come to terms.

Another Parliamentary Strnggle.

THERE appears to be some prospect that in the next session of Parliament there will be a renewal of the fight on the question of compulsory running powers. The Blackpool, St. Annes, and Lytham Tramways Company is seeking compulsory powers over the Tramways of the Blackpool Corporation. The Company offers the Town Council similar facilities over its line to Lytham.

A New Tramway Association.

AT a meeting of tramway managers, held at the Municipal and County Clnb, 4, Whitehall Court, S.W., on the 24th ultimo, it was resolved to constitute a Metropolitan Association of Tramway Managers, the membership area to cover the County of London, Croydon, Bexley, Erith, West Ham, East Ham, Ilford, Barking, Leyton, Walthamstow, South Middlesex, and other districts in close proximity to London where electric tramways are being developed either by municipalities or companies. Mr. A. L. C. Fell, chief officer of the London County Council tramways, was elected chairman. and Mr. H. E. Blain, tramways manager, West Ham Corporation, hon. secretary. The members of the newly-constituted association will meet together at stated intervals, subsequently discussing tramway topics.

Great Tramway Contracts.

TWO of the biggest inclusive tramway contracts which have ever been given out have just been secured by J. G. White and Co., Limited, London. One is for the reconstruction for electric traction of the whole horse tramway system of Belfast, at an inclusive price of £543,404. Of course, there will be

numerous sub-contracts, as Messrs. White do not themselves make steam and electric machinery nor tramway cars, their own speciality being the permanent way. The work is to be completed within nine months. The same company has almost simultaneously secured an inclusive contract for the reconstruction of the Monte Video tramways, also at present worked by horses, and the figure is about £450,000. These two pieces of work thus total about a million sterling. It is of interest to note, as an example of the present tendency, that the Tramways Committee of Belfast Corporation recommended that separate contracts for different branches of the work should be awarded to separate firms, but the Town Council, by a majority, took the view that it would be much more convenient to have only one firm of contractors to deal with, and to make it responsible for everything. Messrs. White and Co. were the contractors for a large part of the permanent way of the London County Council's electric tramways.

❦ ❦ ❦

"Extensions at Dover."

WE have received the following letter from Mr. E. Carden, the general manager of the Dover Corporation Tramways:—"Sir,—Will you permit me to call attention to a slight error in your last week's issue? In quoting the figures comprising my estimate for the proposed extension of this system, the 'number of passengers' is given as '4,268,100,' instead of '426,810'; the extra '0,' of course, puts a queer complexion on the 'receipts.'"

❦ ❦ ❦

Birmingham Tramways Bill.

THE town's meeting held in Birmingham Town Hall on Wednesday night to consider the proposed Tramways Bill was in striking contrast to that held twelve months ago, when the opposition was taken part in by the British Electric Traction Company. The fact that there were less than a hundred people present showed conclusively that the citizens generally are satisfied with the intention of the Corporation to acquire possession of and run the whole of its tramways. The Bill provides for an extensive development of the tramway system in all parts of the city, and includes proposals for the construction of new lines from growing suburbs to the centre of the city, and loops to connect the whole of the lines to reduce the inconveniences of changing cars to a minimum. Alderman Beale, in moving the resolution authorising the promotion of the Bill, regretted that Birmingham was not yet educated up to the benefits of an up-to date tramway service, and said other tramway committees would not hesitate to use their principal thoroughfares in order to obtain a good service. The resolution was unanimously adopted.

❦ ❦ ❦

The Position at Crewe.

A LETTER was read at Crewe Town Council meeting, on Wednesday, from Dr. W. G. Rhodes, of Manchester, inquiring whether the Council would consider the question of a private company constructing electric tramways in Crewe. A decision on the subject was postponed until the next meeting. Another letter was from Mr. Samuel Jackson, of Wistaston, who stated that it was proposed to promote a company for the purpose of acquiring a service of steam motor-omnibuses for use in the borough and outlying towns. The town clerk was instructed to inquire as to the success of municipal omnibuses in other towns and to report to the next meeting.

❦ ❦ ❦

Parcels at Bradford.

ON the preceding page we record the fact that Bury is about to inaugurate a tramways parcels service. Our Bradford correspondent writes us that Bradford is about to embark on a similar enterprise. Up to the present the Corporation has not used its powers in this respect to any great extent, but a good deal has been done in a quiet way, as during the past twelve months about 250,000 parcels have been handled. The new scheme, however, is of ambitious proportions. Premises have been taken for the establishment of central offices and storerooms, and forty-eight sub-offices have been arranged for in all parts of the city. Within a radius of half a mile from the town hall, the traffic will be dealt with by three motor vans; but outside that area the parcels will be delivered in bulk at the sub-offices by the car-drivers. Thence boys will distribute them on wicker trucks, collection being effected by the same means. It is expected that the Corporation will be appointed agent for the railway companies, and passengers' "luggage in advance" will be dealt with as well as parcels. Arrangements are being entered into with some 20 or 30 wholesale firms to stock large quantities of goods at the central depot. When a shopkeeper requires to replenish his stock he will simply present an order, and his needs will be promptly supplied, thus obviating vexatious railway delays. It is hoped to inaugurate the scheme in the first week of the new year.

AN unusual Corporation inquiry is now in progress in Cardiff. Allegations having been made by certain townspeople that the horses owned by the Corporation were badly fed, the Town Council has just begun a formal investigation into the matter. There was a dramatic pause in the proceedings until the men were assured that they should not suffer in their employment if they made any statement.

COUNTY BOROUGH OF NORTHAMPTON.

WEIGHTS AND MEASURES INSPECTORSHIP.

THE Corporation of Northampton invite applications from fit persons to fill the office of INSPECTOR and (if required) ADJUSTER, under the Weights and Measures Acts, and as INSPECTOR under the Bread and Sale of Food and Drugs Acts, at a salary of £100 per annum, rising on approved service by annual increments of £5 per annum to £120 per annum.

The person appointed must hold the Board of Trade certificate of qualification or undertake to obtain such certificate within six weeks from the date of his appointment, and will be required to devote his whole time to the duties of his office.

Applications, in candidate's own handwriting, stating age, experience, qualifications, and present employment, with copies of not more than three recent testimonials, and endorsed "Inspector W. and M.," must reach me on or before Tuesday morning, 20th December instant.

Canvassing by or on behalf of any candidate will disqualify.

HERBERT HANKINSON,
Town Clerk.

Guildhall, Northampton.
9th December, 1904.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE.

APPOINTMENT OF GENERAL MANAGER OF TRAMWAYS.

THE Tramways Committee of the Corporation of Newcastle-upon-Tyne are prepared to receive Applications for the Appointment of a GENERAL MANAGER, to undertake the complete control and management of the working of the New Electric Tramways. The gentleman appointed will be required to devote the whole of his time to the duties of the office, and not to undertake or engage in any other employment. Salary £700 per annum, with increases of £50 per annum for two years.

Candidates for the appointment are requested to send their applications, stating their age, qualifications, experience, and the date they could enter upon the appointment, and enclosing copies of not exceeding three testimonials of recent date (which will not be returned), addressed "Chairman of Tramways Committee, Committee Clerk's Office, Town Hall, Newcastle-upon-Tyne," and endorsed "Appointment of General Manager of Tramways," not later than 7th January, 1905.

Canvassing will be considered a disqualification.

HILL MOTUM,
Town Clerk.

Town Hall,
Newcastle-upon-Tyne.

CITY OF BRADFORD.

DEPUTY TOWN CLERK AND CHIEF ASSISTANT SOLICITOR.

THE Bradford Corporation invite Applications from duly qualified solicitors for the above position. Candidates must be thoroughly experienced in local government law and practice, and have an intimate knowledge of the work of a town clerk's (or equivalent) department in a large district, including conveyancing and common law, and must also be fully competent to act as advocate in conducting important cases before magistrates, &c.

The salary (subject to approved service) will be £500 per annum, with annual increments of £50 to a maximum of £750.

Applications (endorsed "Deputy Town Clerk"), stating age, and setting out the candidate's career and experience, with copies of three recent testimonials, to be sent so as to reach me not later than first post on Wednesday, the 21st inst.

Canvassing in any form by, or on behalf of any candidate, will disqualify, but candidates may send a copy of their application and testimonials to the members of the selection committee (list can be obtained on application at my office), and selected candidates may subsequently send such copies to the other members of the council.

FREDERICK STEVENS,
Town Hall, Bradford. Town Clerk.
3rd December, 1904.

BOROUGH OF FULHAM.

APPOINTMENT OF SURVEYOR'S GENERAL ASSISTANT.

THE Council invites Applications for the Appointment of a GENERAL ASSISTANT in the Borough Surveyor's Department, at a commencing salary of £110 per annum, rising by annual increments of £10 to a maximum of £140 per annum, subject to the usual conditions attaching to the Council's service.

Candidates, whose age should not be less than 25 nor exceeding 35 years, must be neat and expeditious draughtsmen, experienced in surveys, levels, setting out work, and supervising construction.

Applications, endorsed "Surveyor's General Assistant," giving full particulars as to age and qualifications, and accompanied by copies of not more than three recent testimonials, should be delivered to the undersigned on or before Tuesday, the 27th December, 1904. No forms of applications are required or issued in respect of this appointment.

Canvassing the members of the Council, directly or indirectly, is strictly prohibited, and will disqualify.

By order.

BOROUGH OF SOUTHWARK.

SANITARY INSPECTOR.

THE Council are about to appoint a SANITARY INSPECTOR, at a salary of £120 per annum, rising £10 per annum, on approved service, to a maximum of £130 per annum

The appointment will be subject to the approval of the Local Government Board, and in accordance with the Public Health (London) Act, 1891, and the General Orders of the Local Government Board.

Candidates must be holders of a certificate from the Sanitary Institute prior to December, 1898, or from the Sanitary Inspectors' Examination Board since that date, and be competent by their knowledge and experience to perform the duties of the office, and the person appointed is to devote the whole of his time to the performance of the duties prescribed.

The officer will be appointed to the district known as St. Peter's district or such other ward as the authority, with consent of the Local Government Board, may determine, and will be required to reside within the borough.

The appointment will be made on the understanding that there will be no pension or superannuation allowance.

Forms of application can be had any day at the Town Hall, Walworth Road, S.E.

Applications on the prescribed forms, accompanied by not more than three recent testimonials, and endorsed "Sanitary Inspector," must be sent to me not later than noon on Monday, January 2nd, 1905.

The Council will proceed to make the appointment on January 18th, 1905.

J. A. JOHNSON,
Town Clerk.

Town Hall, Walworth Road, S.E.
2nd December, 1904.

COUNTY BOROUGH OF SUNDERLAND

THE Corporation are prepared to receive LOANS of £50 and upwards on security of the Rates of the Borough, at six months' notice or for a fixed period.

For further particulars apply to Haswell Brown, Borough Accountant, Town Hall, Sunderland.

13th December, 1904.

£25 (TWENTY-FIVE POUNDS) BONUS.

GENTLEMAN (27) desires permanent Berth in a Municipal or Urban District Council Office (seaside or country preferred), having many years' experience in all matters relating to Finance. No. 620.—Vol. XIII. DECEMBER 16, 1904.

MORE BOROUGH AMBITIONS.

The Rapidly-Growing Urban District of Chiswick is Preparing to Make Its Second Application to the Privy Council for a Charter of Incorporation. Why the Time is Considered Ripe for Action. The Position To-Day Compared with the Non-County Boroughs of England. New and Coming Municipal Institutions.

ONE by one the growing urban districts within the county of Middlesex are struggling to a higher form of municipal life. The protesting County Council has lost Ealing and Hornsey, and now Chiswick is giving every indication that it wishes to become a non-county borough. Perhaps—who knows!—it aspires one day to become a full-fledged county borough, acknowledging no superior authority.

But the burning question at present is how it shall get its Charter of Incorporation as a non-county borough. A town's meeting will in all probability be held early in the new year, a decided majority of the Council being in favour of the convention.

This will be the second application by Chiswick to the Privy Council for the Charter, the first being in 1900. No reasons were then given for the refusal, but it may be that in the petition there were too frequent references to works which were "in contemplation." Since that date, as our readers know, Charters have been given to Hornsey, East Ham, and Bromley, and a Charter is in course of preparation for Wimbledon.

Chiswick is progressing so rapidly that even now, with several public buildings still unfinished, it fears that it will not make so good a case before the Privy Council as it can when these are finished. There is a disposition consequently on the part of some of the councillors to hold back proceedings for a few months. But meanwhile it is felt that the time is quite ripe for it to take upon itself the higher privileges and responsibilities of a non-county borough. Its rapid growth in population and rateable value are shown by the following figures:—

[*Photo by* CHISWICK "TOWN HALL." *Wyndham, Acton.*]

	Population.	Rateable value.
1861	... 6,505 ...	19,607
1881	... 15,972 ...	84,509
1891	... 21,963 ...	117,982
1901	... 29,809 ...	—
1904	... 32,000 (estimated)...	217,019 (estd.)

Now of the 150 non-county boroughs in England, only 40 have a larger population than Chiswick, and only 16 a larger rateable value. The average rateable value per head of population for England is £5 19s. 9d. as compared with Chiswick, which is within a fraction of £7. Another considerable point

in favour of this western suburb of London is that the debt of the Council is small, being only £160,000—considerably less than one year's assessable value; whereas the restriction in the Public Health Act, 1875, is two years' assessable value.

Further, the rates of the district are below the average of the districts near London, and the properties and undertakings of the Council are considerable. It is the owner of the handsome town hall, shown in our illustration, which comprises a large hall, smaller halls, and numerous public offices, recently enlarged at a cost of £22,000. For the good of its people, the local authority holds very valuable open spaces, including three commons and a recreation ground. There are also two open spaces known as Chiswick Park Club (12 acres), and the Royal Horticultural Gardens (13 acres), belonging to private persons or societies.

Historic Residences.

Some well-known historic residences are within the parish of Chiswick. The Duke of Devonshire formerly owned a great deal of the land, just as he now holds Eastbourne. Chiswick House, the property of his Grace, where the present King lived for some years when he was Prince of Wales, is perhaps the best known. Hogarth House, where Hogarth lived for many years, is still standing.

The Council owns a commodious fire station, erected at a cost of £7,000, with up-to-date appliances, and there is a volunteer fire brigade. Adjoining is a public mortuary and a parish depot for stables, stores, workshops, forges, cart sheds, &c. A new isolation hospital has recently been erected by the local authority at a cost of £12,500, and a free library, extended at a cost of £1,000. It has now acquired a site for the erection of public baths, and is proceeding to erect the same at a cost of £16,000.

A site has also been acquired for the erection of workmen's dwellings, and an application is before the Local Government Board for sanction to a loan of £11,000. Adjoining the Council's sewage disposal works additional eighteen acres of land are being acquired for the purposes of constructing filter beds, settling tanks, &c., and for the purposes of a large works depot. A Horsfall refuse destructor is being erected at a cost of £8,000. In connection with these works, flag-making plant, new gas engine pumping plant for pumping the sewage, together with offices, caretaker's lodge, and other buildings, are being erected. The Council's engineer, Mr. J. H. Abbott, is preparing the scheme for the sewage works extension.

The Council has jurisdiction over 104 acres of the foreshore of the Thames, and is putting forward two very noteworthy proposals to add to the attractiveness of the district.

Big Thames Embankment Scheme.

The first is to build an embankment 60ft. wide on the foreshore for the distance of about a quarter of a mile, and it is hoped ultimately to extend the same as buildings are erected a further distance of upwards of a mile. The second proposal is a new lock and weir on the river, which is receiving the active support of the Council, of landowners and others.

The parish and district of Chiswick are within the Poor Law Union of Brentford and within the Parliamentary Division of Ealing, and are also within the metropolitan police area. Petty sessions are held daily before the stipendiary magistrate, sitting at the West London Police Court. An Order is to be made immediately constituting Acton and Chiswick as a portion of the Willesden Petty Sessional Division, and a weekly Court will be held at the Town Hall, Chiswick. It is anticipated that Acton and Chiswick will in a few years be constituted a separate Petty Sessional Division, with a Sessions House at Acton.

Between the years 1858 and 1883 the parish and district of Chiswick were under an authority for local government purposes known as the Chiswick Improvement Commissioners, and in the latter year were constituted a local government district, with a local Board, within the meaning of the Public Health Act, 1875. Upon the passing of the Local Government Act, 1894, it was formed an Urban District Council, consisting of eighteen councillors, elected by two wards, nine from each ward.

Last March an order of retirement for one-third of the Council annually came into operation, which will lead to greater continuity in policy and smoothness in administration.

The district under the jurisdiction of the Council of Chiswick extends for an area of 1,349 acres, of which 700 acres are already built upon, and building operations are continually proceeding. It is practically the sole local authority in the district, nearly all the powers, duties, and liabilities of the overseers having been transferred to it under the provisions of Sec. 33 of the Local Government Act, 1894. It is the burial authority, and possesses its own burial ground within the district. This comprises an area of seven acres, of which four acres were acquired two years ago, and it is estimated to be sufficient for the needs of the parish for the next 30 years.

The Council is, of course, the education authority, and stands unique in that it has no denominational schools within its district. The clash of the creeds is there unknown. As the school authority it has recently erected a new three-storey school, at a cost of £22,000.

Some Advantages of Incorporation.

The clerk of the Council (Mr. Ernest F. Collins) has prepared a very able report on the matter, and has just presented it to the Incorporation Committee of the Council. It deals with the advantages of incorporation from a general standpoint—a subject very thoroughly covered by articles in past issues of the *Municipal Journal*—and the comparative statistics of existing non-county boroughs have been culled from the *Municipal Year Book*. It sets forth, *inter alia*, that the status of a municipal borough is higher than that of an urban district council. Chiswick certainly would have additional powers, dignity, and importance as a municipal borough. A better standing and more weight and value would attach to any petitions, representations, or applications to Parliament, and the Government Departments—for the Government has, in many statutes, distinguished between a municipal borough and an urban district, to the disadvantage of the latter. In several recent Acts a municipal borough of 10,000 inhabitants has been placed on an equality with an urban district of 20,000. That opinion is no doubt reflected in many ways and directions to the disadvantage of even a large urban district, despite its large population, rateable value, and importance in other ways. The greater state and ceremony attendant upon the functions of a corporation must not be ignored. The general public do appreciate them, although their value may be a spectacular one only, and, in the case of a newly-fledged borough could not, for one moment, be compared with those of an ancient and historic Corporation. The mayor of a borough is entitled to precedence, socially and otherwise, in all matters appertaining to the borough, and is recognised as the head of the local community, both officially and socially. Far more importance and dignity attaches to the office than that of chairman of an urban district council. The calls upon the mayor's time are more numerous. The mayor in a borough is an *ex-officio* justice of the county during his year of office and for one year afterwards. Corporations are empowered to pay the mayor a salary. The matter is, however, entirely within the borough council's direction, and in no way compulsory. In many towns no salary is paid, and in others small sums are allowed to cover certain expenses. One view of this matter is sometimes taken that, in the case of a gentleman who for many reasons it might be desirable to appoint as mayor, and yet whose financial position might preclude his acceptance of the position, the provision mentioned provides the means of overcoming the difficulty.

That these and other advantages are to some extent realised in the district is shown by the fact that the petition sent to the Privy Council in 1900 contained 1,340 signatures, and there was a supplemental petition signed by 400 ratepayers and property owners.

CHEAP COTTAGES EXHIBITION.

ON Tuesday afternoon, in the Birkbeck Bank Chambers, London, was held the first meeting of the organising committee of the exhibition of cheap cottages and building materials which it is proposed to hold in the summer of next year near Hitchin, in Hertfordshire.

The promoters are "The *County Gentleman*, Limited," and the First Garden City Company, Limited. The cottages are not to cost more than £150, this being estimated as the lowest figure at which landlords can build labourers' cottages and at the same time ensure any return on the outlay. It was announced that many prominent provincial land-owners had associated themselves with the project, among those who had consented to become patrons being the Duke of Devonshire (who had promised £100 towards organising expenses), the Earl of Ducie, Earl Roberts, the Earl of Jersey, Lord Avebury, Lord Brassey, the Bishops of Hereford and Chester, Lord Heneage, Lord Robert Cecil.

The *County Gentleman* is also contributing £100. Substantial prizes will be offered to builders competing, and many of the best-known firms have applied for space.

GLASGOW OCTROI.

PROPOSALS OF THE COMMITTEE ABANDONED.

THE Town Council of Glasgow at a meeting on Wednesday definitely abandoned the proposals to levy a tax upon vegetables, fruit, and clothing on sale within the city boundaries.

The decision, it is understood, has to some extent been governed by advice of the Corporation Parliamentary agents in London, who were consulted by the town clerk upon the advisability of introducing such a tax into the body of a Parliamentary Provisional Order.

The abandonment of the scheme has been hailed with unbounded satisfaction by traders in Glasgow, who were much alarmed at the proposals brought forward.

"MERSEY CITY."

Proposed Federation of Liverpool, Birkenhead, and Bootle. A Huge Scheme. How the Present Arrangements Overlap and Produce Wasteful Administration. The Advantages of Large Local Government Areas. The Assets of the Three County Boroughs.

SEVERAL newspapers have this week announced that a scheme is on foot for the federation of the county boroughs of Liverpool, Birkenhead, and Bootle. The amalgamated community would be known as "Mersey City," and would consist of nearly a million inhabitants. Here are some of the principal facts relating to these boroughs expressed in tabular form :—

	Population.	Rateable value.	Area.
		£	Acres.
Liverpool ...	710,337	4,114,876	17,792
Birkenhead ...	114,814	606,465	3,850
Bootle ...	58,556	527,143	1,576
Total ...	883,707	£5,248,484	23,218

Although the scheme has not yet been put forward in an official form, negotiations, we understand, are proceeding. The suggestion is that by means of a joint conference, established on a permanent basis, many mutual interests would be advanced. The feeling is growing, not only in the Liverpool district, but throughout the country, that it is an anomaly that, while the non-county boroughs and other local government areas within the administrative counties are associated for united action by means of county councils, the county boroughs remain isolated, and without any machinery for concerted counsel or decision.

Advantages of Federation.

Among the advantages looked forward to is the establishment of a universal penny fare for Liverpool and Bootle, and probably through booking arrangements with the Birkenhead and Wallasey tram systems. Some enthusiasts have in view the freeing of all the ferry services at the expense of the whole community.

The ferry charges are regarded by up-to-date people as mere relics of the old toll-bars on the highways, and it is argued that the highways of the Mersey should be as free as Dale Street, Liverpool, or Argyle Street, Birkenhead. There are visions, also, of the Mersey bridged and tunnelled by municipal enterprise.

Of first-class importance, also, is regarded the idea that the unified municipal authority should embrace the whole of the dock system on both sides of the river. This view of the matter would necessitate the inclusion in the scheme of the urban district of Wallasey, whose area comprises a large slice of the docks on the Cheshire side.

A Self-Contained Community.

The three boroughs of Liverpool, Birkenhead, and Bootle, as the majority of our readers are aware already, are, for all practical purposes, one self-contained community; and it is doubtless this fact of common interest that is responsible for the present proposal. It is becoming increasingly evident that for local government purposes the larger the administrative area the better.

In his book, entitled "Anticipations," Mr. H. G. Wells has demonstrated the absurdity of limiting local government areas for such purposes as tramways, electric lighting, water, gas, and other general supplies. It is ridiculous that a tramway should be unable to run beyond a certain point because of the existence of a purely artificial boundary. In practice, the system leads to waste and unnecessary overlapping. Many plants of various kinds have to be installed when one of each kind should suffice; and the public is put to inconvenience to which it ought not to be subject. A glance at the municipal position of Liverpool, Birkenhead, and Bootle will show how in these cases these drawbacks are intensified.

Liverpool.

Liverpool supplies electric light and water, and owns electric trams, markets, artisans' and labourers' dwellings, extensive baths and washhouses, free public libraries, museums, a nautical school, six city hospitals for the treatment of infectious cases, &c. It already supplies Bootle, Chorley, and other adjoining districts with water. The city is rich in real and personal estate. The income from renewal and sale of leases for the year ended December 31st, 1903, was about €45,109, yearly rents came to £16,056, rents from an estate in Birkenhead £9,097, Kensington Fields estate £5,709. The total income from the estates, together with £7,900 in interest on loans and other receipts from reserved rents and miscellaneous sources, was £109,394, and the expenditure was £25,034. The estates are, therefore, a very valuable asset. St. George's Hall is corporate property, and was erected out of the profits of the docks. Up to 1858 the Corporation was the dock authority, in which year the Mersey Docks and Harbour Board was created. The duties of paving, sewering, and watering the city were in the hands of Commissioners until taken over by the Corporation in 1845. The Hospitals Committee acts as port sanitary authority, and has jurisdiction beyond the city limits.

Birkenhead.

Birkenhead draws the water supply from within the borough, has its own gas and electric lighting undertakings, electrical tramways, baths, libraries, a cemetery, markets, abattoirs, dust destructors, magnificent parks, and a steam ferry service. It owns ten steamers for passengers and goods. The Corporation has erected a handsome new town hall, a new infectious diseases hospital, laid out Hamilton Square Gardens, built 88 artisans' dwellings, &c. Birkenhead is naturally closely associated with the control of the Mersey, and the shipping interest is represented on the Mersey Docks and Harbour Board. The Corporation provides police service for its side of the harbour, the expenses of which are paid by the Harbour Board.

Bootle.

Bootle, which Liverpool unsuccessfully sought to absorb last year, has made remarkable progress. In Bootle is situated an important part of the Mersey Dock and Harbour Board system, including the Hornby, Alexandra, Langton, Brocklebank, and North and South Carriers' Docks, having together an area of about 109 acres. The Corporation maintains a successful electric lighting system, and supplies electric energy for the tramways, which are leased to the Liverpool Corporation. The district receives its water supply from the Liverpool Corporation, and its gas is supplied by a Liverpool company. The town possesses a fine town hall and municipal offices, free libraries, a museum, open-air and other public baths, gymnasia, assembly rooms, police-courts, parks, recreation grounds, an isolation hospital, and a technical school, the Corporation spending about £8,500 every year on higher education.

How It Could Be Done.

A glance at this summary shows, as we have said, that these county boroughs are really one in fact though three in name. The only question for consideration should be on what terms the federation should be effected. It could be brought about in either of two ways. The three towns could be amalgamated into one county borough, in which case they would lose their individual characteristics, or a joint authority could control those services that are general to all, while leaving to the local councils the administration of details affecting each only. In the latter case, the separate existence of Liverpool, Birkenhead, and Bootle would be preserved, while the principal objects desired by the federalists would be attained. A scheme of the latter character would, however, be based upon sentimental considerations almost entirely, and the most statesmanlike policy would apparently be to create one large county borough, treating it as an organised unit for all purposes.

POLICE TELEPHONES.

EDINBURGH FOLLOWS THE EXAMPLE OF LIVERPOOL.

SOME eight years ago a system of police telephones was installed at Liverpool, and has worked with conspicuous success. Edinburgh has now adopted a similar scheme, and already 24 boxes are in operation in the four police divisions of the city. In addition, it should be stated there are ordinary fire signal-boxes in direct communication with the central fire station at Lauriston.

The most ingenious feature of the police signal system is the arrangement whereby the operator at the central police station in High Street may readily establish communication with the policeman on the beat. On account of the fewness of the boxes, the system, of course, has not yet a fair chance, but when these become more numerous communication should be speedy. In the centre of each signal-box is a tiny round disc, like a miniature bull's-eye, visible to the passer-by through transparent glass let into the cover of the signal-box. This disc is coloured red.

Should the operator at the central station desire to call the attention of the policeman in a particular beat, all he has to do is to turn a lever. Instantly the discs of every signal-box in the beat operated by the lever show a conspicuous white. The policeman on the beat, who by force of habit keeps an eye on the discs, seeing the white, understands he is being silently "rung up" by headquarters. He opens the signal-box with the key with which he is provided, unhooks the telephone receiver, and in a few seconds is conversing with the "office."

Should he have occasion to use the signals, he can have recourse to any of the half-dozen levers in the box, whose purposes are distinctly labelled. There is a lever to signal an outbreak of fire, a second to announce that a serious fire is raging, a third that the ambulance is wanted, a fourth that the police wagon to remove a prisoner or a "drunk" should be turned out. A fifth lever indicates that a force of policemen is wanted at a particular spot.

The operator is able to call up a police waggon, and as it proceeds to the spot where assistance is required it quietly picks up its load of constables *en route*. This last-mentioned lever is only to be used in case of riot or grave public danger. Then there is an ordinary telephone lever by which messages can be transmitted in the usual course of police duty.

At the Central Office the equipment is equally interesting and marvellous for its simple ingenuity. Each signal-box in the city is connected up with a receiving instrument, there being 20 boxes to each recorder. At present in Edinburgh there are three recorders in operation. Each recorder is fitted up with the usual telephone bell, which calls the attention of the operator that a message is being sent. Immediately there is telegraphed on a roll of white tape the nature of the message.

The dashes which the instrument records are quickly read by the central operator. If it is a fire signal, he instantly calls up the brigade to the scene; or if it be any of the other signals, he is able to put the police machinery in operation to meet the requirements. Thus in a few minutes a waggon full of policemen may be conveyed to surround a "burgled" house, or an ambulance horsed to attend to a street accident. The time at which the message has been received is also stamped on the tape, this being automatically controlled by an electrical clock.

It will be seen that the possibilities of the system from the police point of view are very great. The National Telephone Company has been responsible for the installation, which in several points is an improvement upon the admirable system in Liverpool, and it is claimed for it that it is unequalled in any city in the world. Mr. Richard York, one of the company's electricians, has been in charge of the work, and a satisfactory test of the new method was given last week in presence of some of the magistrates, Mr. Ross, the chief-constable, giving the necessary explanations.

EDUCATIONAL NOTES.

The Local Government Board and Medical Certificates. Too much Detail at Birkenhead. Birmingham and its Babies. Excluding Children at Exeter. Fees at Secondary Schools. What the L.G.B. has to Tell Lowestoft about Exchequer Grants, and Worcestershire about the 2d. Rate. Surrey and Essex in Trouble re the Training of Teachers.

Bexhill.—The Local Government Board has informed the committee (with reference to the question of the legality of payment for medical certificates) that the onus of supplying evidence of non-attendance at school rested upon the child's parents; that if, through poverty, the parent did not obtain a certificate, and the education authority required one in order to decide to prosecute or not, the Board thought that a reasonable cost of obtaining such certificate would be a legal charge upon the rates.

Birkenhead.—The Education Committee has appointed a special committee to consider and suggest some method by which the ordinary sub-committees may be relieved from the necessity of considering matters of detail.

Birmingham.—The Education Committee has issued a circular containing exhaustive suggestions on the training of babies.

Bristol.—The Education Committee has sanctioned the use of certain of its schools for soup kitchens should circumstances necessitate it.

Cumberland.—The Education Committee has drafted a scheme for the use of endowments of schools within its area. The chief provisions are that the endowments shall go towards the up-keep of the schools, the payment of rates, and the remainder to the provision of scholarships for pupils or pupil teachers.

Essex.—A special committee has been appointed to report upon the desirability of establishing some course of study for the third year uncertificated teachers, with a view of their obtaining the teacher's certificate.

Exeter.—The Board of Education has written to the Education Committee respecting the exclusion of children from outside the municipal area. The Board expressed the opinion that Sec. 7 (1) (a) of the Act gives the education authority the power—as between it and the managers—to give directions regarding the exclusion of particnlar children from a school for whatever reason, but that it was open to the managers to appeal to the Board under Rule 7 (3).

Gloucestershire.—The Education Committee decided, subject to the approval of the Board of Education, in order to afford facilities to children whose parents wished them to attend church or some other place of worship, that it would be prepared to receive applications from managers that, on specified days, not more than six a year, the schools should be open only during the hours set apart for secular instruction.

Isle of Wight.—The Board of Education disagreed with the education authority as to the necessity of a voluntary school and also as to the suitability of the premises. The Board has accordingly put into force the Local Authority (Default) Act, and has appointed managers for the school in question.

Leeds.—The Board of Education has called attention to the proposed tuition fee of 9d. per week in the higher grade school, and suggested that a fee so low was open to serions objection on educational grounds. The Board considered that, unless in very special circnmstances, a tuition fee of not less than £3 per annum should be imposed. The Board, however, does not propose to take any action for the present.

Liverpool.—The Education Committee granted the request on behalf of the managers of Roman Catholic schools to be allowed to close them on the 8th December, being a feast day.

London.—The Education Committee has received particulars of a draft scheme from the Board of Education, proposing to allocate the sum of £40,000 for the advancement of domestic science teaching under the will of the late Richard Berridge. One condition is that all children eligible for exhibitions must be scholars at National schools. The scheme is to operate in England and Wales.

Lowestoft.—The Board of Education states that the estimates for each financial year only provide for payment of one year's grant for each school; that the institution of a system of quarterly instalments of annnal grants would involve the anticipation in one financial year of grants which do not mature for payment until the following financial year; and added that the fnnds placed at the Board's disposal by Parliament are not sufficient to enable this to be done.

Northamptonshire. — The Education Committee has offered the managers of volnntary schools 7d. per head per child on account of "wear and tear" for the present year. This grant is to be limited to schools which have been certified by the authority's officers as in a proper condition when taken over.

Oxford.—Twenty-five scholarships are to be offered each year to boys and girls between 14 and 16 who desire to become pupil teachers. The scholarship is tenable for two years, £5 for first, and £7 10s. for the second year.

Radnorshire.—The Board of Edncation has informed the Education Committee that it had no power to give instructions respecting the giving of religious instruction in voluntary schools.

Ripon.—An undenominational hostel has just been opened in connection with the Ripon and Wakefield Training College. The hostel has been erected near the college, and accommodates 22 students. It is to be managed by a joint committee of Chnrchmen and Nonconformists.

Rochdale.—The Education Committee has decided not to permit any prizes being given in the schools other than those under its own rules.

Surrey.—The Education Committee has appointed a standing committee to inquire into the training of teachers. The terms of reference include the instruction of uncertificated teachers for their certificates, and the training of certificated teachers who have not been through a college course.

Wiltshire.—The Board of Education has stated, in reply to the Education Committee, that the provision of a stove, being part of the heating apparatus, should be made by the managers of a voluntary school, and not by the local education authority.

Worcestershire.—The Education Committee has been informed by the Local Government Board that so long as the council's expenditure was within the prescribed 2d. rate there was no limit as to the amount which it might call upon individual districts to pay for the provision of higher education in the respective districts.

PUBLIC LIBRARIES FOUNDER.

IN Jnly, 1903, Mr. J. Passmore Edwards offered to present to the City Council a marble bust of the late Mr. William Ewart, M.P., the promoter of the first Public Libraries Act, to be placed in the public library, Great Smith Street, which was the first pnblic library erected under the Public Libraries Acts in London.

The bust has now been completed, and is to be unveiled by the Mayor of the City of Westminster (Major-General Lord Cheylesmore) to-day (Friday) at the Great Smith Street Library.

Mr. J. Passmore Edwards was annonnced to attend the ceremony.

TAXATION OF GROUND VALUES.

UNSATISFACTORY ATTITUDE OF THE GOVERNMENT.

AT the Westminster Palace Hotel on Monday a meeting was held of the committee appointed by the Conference of Rating Authorities on the question of the taxation of ground values. Bailie Ferguson, of Glasgow, presided, and there was a large attendance of municipal representatives.

It was reported that, as arranged at the conference held in October, the Prime Minister had been asked to receive a deputation from the conference, but that he had suggested that the conference should approach the Local Government Board, as in his opinion, at the present time, the question was one for that department. Accordingly, negotiations had been entered upon with the Local Government Board, but the President of the Local Government Board (Mr. Walter Long) had replied that he had already dealt with the subject a year ago, when he had received a joint deputation from the Conference of Rating Authorities and the Association of Mnnicipal Corporations, and that he had nothing to add to what he then stated, and it did not appear to him there would be any advantage in his receiving a further deputation on the same subject.

The Conference Committee passed a resolution expressing regret at the decision of Mr. Balfour, and expressed the opinion that, inasmnch as the second reading of the measnre received the approval of the House of Commons last session by a majority of 67 votes, and there were now associated with the movement some 450 rating authorities in the United Kingdom, the measure could not now be regarded as departmental, as suggested by Mr. Balfour, and they hoped that the Prime Minister would see his way to reconsider his decision. Arrangements were then made for the ballot for private Bills next session.

BRADFORD SCHOOLS' BATHS.

A NEW SCHEME.

THE Baths and Edncation Committees at Bradford have at last arrived at a clear understanding upon the question of the management of the schools' baths in the city, and it is hoped that the new scheme which the Baths Committee on Monday approved of, and which the joint committees had accepted at a meeting earlier in the day, will remove any possibility of friction between the two bodies in the future.

Under the new arrangements, matters relating to the discipline and instruction of the children will be controlled by the Education Committee, and the whole of the staff at the baths, with the exception of those engaged in this work, will be under the control of the Baths Committee, and will be responsible to the baths engineer and superintendent for the due performance of their duty.

The ablutionary baths are to be given by assistants in an annexe opening into the swimming hall where possible, and certified male and female instrnctors are to instruct the boys and girls in the art of swimming.

The baths are to be used by scholars on certain days of the week, and they will be open to the public only on the remaining days. The number of days in each week is to be decided by the Education and Baths Committees. A ticket clerk responsible to the Baths Committee will be in attendance for the sale of tickets, the custody of money, and the keeping of the necessary books when the baths are open to the pnblic.

The allocation of the dnties of the staff is to rest with the Baths Committee, except so much as relates to discipline and instruction of the scholars, when they will be subject to the snperintendents of the Education Committee.

The scheme now awaits the sanction of the City Council, and no difficulty is anticipated in that direction.

LONDON WATER PURCHASE.

An Approximate Balance-Sheet of the Largest Municipal Water Purchase Scheme ever Carried Out. The Ratepayers Stand to Save at Once about £95,000 a Year. The Handicap of the Companies' Huge Awards.

THE London Water Board has now completed the purchase of the eight metropolitan companies—the biggest thing ever undertaken in municipal water enterprise. The final report of the Court of Arbitration in the New River case represents the last stage in the transfer procedure, and it is now possible for the London ratepayer to estimate—at least approximately—the effect of the purchase upon his demand note. "Shall I have to pay more, or shall I have to pay less, for water?" is the question he is asking, and the answer is that, although there will be a saving on the year, his individual payments will for some time remain almost as they are now.

The awards of the Court having all been delivered, and the cases finally disposed of, with the exception of the ascertainment of certain costs in the case of the East London, Grand Junction, and Southwark and Vauxhall Companies, the special Arbitration Committee of the Water Board has been able to prepare a statement showing the approximate financial result. It must, however, be borne in mind that until various items have been settled, such as the Board's and the New River Company's costs, the costs above mentioned in the case of three of the companies, the directors' compensation, stamp duty, &c., the total liability placed upon the Board in respect of the transfer of the undertakings cannot be precisely determined.

Sinking Fund Clause.

Before proceeding further it will be as well to indicate the nature and functions of the "Chamberlain's Sinking Fund," which has had a very important influence upon the awards. The operation of the sinking fund clause is explained in the following paragraphs of the report of Lord Llandaff's Commission, viz.:—

> [Paragraph 63.] . . . Whenever a company obtains power to borrow money on debenture stock—and since 1886 no company has obtained power to increase its capital in any other way—the clause assumes that the money so borrowed earns profit, at the average percentage of the dividend or interest paid on all the capital of the company, whether share capital or loan capital. The excess of that average percentage over the interest payable on the debenture stock issued, plus 1 per cent. for management of such debenture stock, is taken as the profit earned by the new capital, and the company is required to pay the whole of the excess to the Chamberlain of the City of London, as trustee, for the purpose of purchasing and holding shares of the company, and of investing the dividends thereon, with a view to ultimately extinguishing the capital of the company, or for such other purposes as Parliament may from time to time determine.
>
> The effect of the clause is, therefore, to prevent any additional value accruing to the undertaking from the new loan capital and to withdraw from the otherwise divisible profits of the company, the sum paid over to the Chamberlain for the benefit of possible purchasers in the future.
>
> [Paragraph 68.] . . . Whatever differences of opinion may exist as to the policy of Parliament in subjecting the companies to these clauses, the deliberate intention seems to have been that fresh borrowing powers should be granted to the companies, only on condition that the future profits assumed to result from additional expenditure, should be appropriated for the benefit of a purchaser representing the interests of the public.

The question of this fund was the subject of an appeal to the Court of Appeal, and subsequently to the House of Lords. In order to facilitate the delivery of the awards, the Court of Arbitration delivered its awards in four of the cases in alternative forms, the first on the basis that its judgment with regard to the sinking fund was correct (namely, that the undertakings of the companies should be valued as subject to, and not free from the payments to the sinking fund), and the higher figure on the assumption that that decision was wrong.

Over a Million Saved.

The difference between the two alternative awards in the four cases in question will indicate the amount which has been saved in the compensation awarded by the operation of the sinking fund clauses. This difference is as follows:—

East London Company	£400,000
Grand Junction Company	203,000
Lambeth Company	288,000
Southwark and Vauxhall Company ...	323,000
Total	£1,214,000

Two further points should also be noted—(1) that whereas a part of the profits of the water companies was required to be paid to the Chamberlain's fund, the Board will in future be free from any such liability; (2) that the water companies' stock held by the Chamberlain of the City of London will be cancelled, so that practically that fund will act as an abatement of the compensation payable by the Board to the water companies. This fund will, when all the payments due up to the appointed day have been made, represent approximately a sum of about £200,000 in water stock. The "sinking fund" clause was first introduced into the Companies' Acts in 1886, at the instance of the Metropolitan Board of Works, and the clause has been inserted in various Acts since that date, largely on the representations of the London County Council.

The total of the awards in cash would amount to a sum of £30,662,323. This represents, on the respective bases on which the stock has been issued, £33,564 281 in 3 per cent. Water Stock. The figure of £33,564 281, however, does not represent the total amount of Water Stock issued in respect of the transfer of the undertakings, expenditure having to be also taken into account in respect of the costs of the Board and the companies in the arbitration, stamp duty on vesting, expenses of the Court of Arbitration, expenses of issue of Water Stock, costs of winding-up not included in the awards, costs of the Bill for the Metropolis Water Act, 1902, and directors' compensation. Some of these items have not yet been ascertained, but they will probably not exceed in the aggregate the sum of £850,000. If this sum is converted into Water Stock at the average price at which the recent issue was made to the public, it will represent £917,266 of Water Stock.

Water Stock.

The total amount of water stock issued in respect of the acquisition of the undertakings will thus be as follows:—

Compensation awarded to the companies ...	£33,564.281
Other items above referred to	917,266
	£34,481,547
Deduct Chamberlain's Sinking Fund ...	200,000
	£34.281,547

On this amount of stock (£34,281,547) the annual charge for interest will amount to £1,028,446. In addition to this charge, however, allowance must be made for the annual cost of composition for stamp duty on the stock, and for the cost of management of the stock. These two items represent a sum of about £29,000 a year.

There is included in the capital cost of the acquisition of the undertakings a sum in respect of directors' compensation, but against this it must be borne in mind that the fees formerly paid to the directors will no longer form an item of expenditure on management. In the year 1903 4 a sum of £32,538 was paid to the directors.

It will be seen from the table that the profit distributed by the companies as dividend for the year 1903-4 amounted to £1,079,078. This figure, after making allowance for payments to the Chamberlain's Sinking Fund and to the directors, will compare with the annual charge to be met by the Board in respect of water stock issued in connection with the transfer.

The following may, therefore, be taken as representing the approximate annual saving

Company.	Amount of Claim.‡	Amount of Award. in cash.	Loan capital issued at the appointed day. — Debenture Stocks. Rate of interest	Debenture Stocks. Redeemable.	Debenture Stocks. Irredeemable.	Mortgages. Rate of interest	Mortgages. Amount	Total.	Income for year 1903-4.	Interest paid on loan capital in 1903-4.	Dividends paid on share capital in 1903-4. 			3	151,880									
Staines Reservoirs Joint Committee	—	—	3	1,226,700				1,226,700	—	36,105	—	—	—
5 per cent. on claims other than New River Company‡	49,145,624 1,794,274												
Total	50,939,198	30,662,323		7,217,838	4,365,110		42,000	11,624,948	2,587,089	353,895	1,079,078	40,652	32,538

‡ NOTE.—Except in the case of the New River Company, each of the Companies claimed in addition a sum equal to 5 per cent. of its claim, or the amount of the Award, for possible loss of interest pending re-investment and for the costs of re-investment. In each of such cases, the Award included a certain amount in respect of this claim.

* NOTE.—The Award in the case of the New River Company amounts to £6,534,030 Water Stock, but the figure of £5,967,123 is the cash equivalent, taking as the basis of calculation the price at which the agreement to take stock in lieu of cash was arrived at with the other Companies.

† NOTE.—Under the Award the Lambeth Company had to pay the Board the sum of £42,678, in respect of the repair of a culvert.

to the ratepayers consequent on the acquisition of the water undertaking:—

Profits of the water companies in the years 1903-4		£1,079,078
Add payments to Chamberlain's Sinking Fund in the same year		40,652
Add directors' fees		32,538
		£1,152,268
Annual charges to be met by the Board—		
Interest on £34,281,547 of water stock	£1,028,446	
Annual cost of composition for stamp duty on and management of the stock ..	29,000	
		1,057,446
Approximate annual saving		£94,822

It must further be borne in mind that the awards of the Court of Arbitration have been based on anticipations of future additional profits, and that if those expectations are realised the profit which will accrue to the ratepayers will proportionately increase. Substantial economies resulting from amalgamation may also be anticipated.

No allowance, however, has been made for payments to sinking or redemption funds for the extinction of the Water Stock, as the Act provides that during the first 20 years of the period of 100 years within which Water Stock issued in consideration for the undertakings of the companies, or in substitution, or in consideration for any debenture stock or mortgage debts must be discharged, the Board shall not be required to make any payments towards the discharge of such stocks or debts other than the payment of the amount (if any) by which the receipts on revenue account exceed the expenditure in any one year.

A £3,000,000 Premium.

Mr. W. H. Dickinson, L.C.C., who was foremost in the London Progressive movement for the transfer of the companies' undertakings to the County Council, says that the London ratepayers are having to pay three millions sterling more than they ought.

"What do we find London is being made to pay for the companies' undertakings," said Mr. Dickinson to a Press representative. "If we leave out the New River Company, we find we are paying the seven other companies £24,000,000 for something which was worth in the open stock market four years ago £21,000,000. The shareholders have thus got £3,000,000 more than the then accepted value.

"If we go into details the case is still more striking. On an average each holder of £100 worth of shares has got, in addition to the market value, a present of £15 from the London ratepayers. But this magnificent bonus does not fall evenly upon all shareholders. Some of the good companies, like the Kent, for instance, which have been doing their work well, have received a bonus considerably below the average. On the other hand, the bad companies, like the Southwark and Vauxhall, receive a bonus of £30 on every £100.

"That may be very good business for the companies, but it is bad business for London. It means that the London water supply would in all probability have been conducted at a loss had it not been for the fortunate decision of the Arbitration Court in regard to the New River Company. That decision, which was largely brought about by the London County Council, reduced the claims of that company by £3,000,000. Had the County Council's policy been followed in regard to the other companies, the shareholders of those companies would not have been allowed to take from the rates an average of £15 for every £100 of stock purchased."

It is obvious, however, that, admitting the accuracy of Mr. Dickinson's figures, the increased sum which London has to pay is not due to any laxity on the part of the Water Board, but rather to the delay that occurred in passing the Purchase Act, and the company safeguards that were introduced into the Bill by the Government. The general concensus of opinion seems to be that under all the circumstances the Board has done its work remarkably well. Whether the authority could not have been better constituted, and whether the purchase could not have been carried out more satisfactorily under other circumstances, are questions of politics and not of administration.

OFFICIAL & PERSONAL.

WIMBLEDON CLERKSHIP.

Mr. A. Steele Sheldon Appointed.

WIMBLEDON, as our readers know, will be a borough next year. The first town clerk will probably be Mr. A. Steele Sheldon, town clerk of Burnley, who has just been appointed clerk and solicitor to the District Council. The present clerk to the Council (Mr. R. H. Smethurst Butterworth) is resigning to follow the legal profession.

Mr. Sheldon, who is 45 years of age, was educated at Congleton Grammar School (1866-9), and at Harrogate College, Yorkshire (1870-5). Immediately upon leaving school he was articled to Mr. Robert Bygott, solicitor, Sandbach (Cheshire), and afterwards to Mr. J. W. Hickin, of Sergeant's Inn, London. He passed the final examination for solicitors in April, 1881, and had the honour of being placed third in order of merit, and was awarded the New Inn Society's prize. Admitted as a solicitor in July, 1881, during the ensuing 18 years he was in general practice (including advocacy) in his native town of Congleton and in the adjacent borough of Macclesfield. Up to this time (1899) he had interested himself in, and had practical acquaintance with, many matters pertaining to local government. In the office in which he was articled the work of the appointments of clerk to a Poor Law union, to two local boards of health, and to a burial board, was transacted. He was for

Mr. A. STEELE SHELDON
(Wimbledon U.D.C.'s New Clerk.)

some years an active member of the Town Council of Congleton, and, in July, 1894, was unanimously elected town clerk of that borough. In April, 1896, he was also unanimously elected to the position of clerk to the Urban District Council of Biddulph, Staffordshire. In 1899 he determined to devote himself wholly to public work, and, in December of that year, applied for and was appointed to, the position of town clerk of Burnley, a county borough of nearly 100,000 inhabitants, and having the well-merited reputation of being a progressive and excellently-governed town. That appointment he still holds. During his five years' residence in Burnley he has had a wide and valuable experience of local government.

The clerkship of the Burnley Joint Hospital Board—a combination of four local authorities—is also held by Mr. Sheldon. He has had a long and varied experience of educational work. Prior to coming to Burnley he was a member of a technical instruction committee for six years, honorary secretary thereof for three years, a voluntary school manager, and clerk to the Biddulph School Attendance Committee. Here he acts as legal adviser to the Education Committee, attends its meetings, and is constantly being consulted upon the many questions arising in the administration of the Education Acts, and relating to elementary, secondary, and technical instruction.

BURNLEY CLERKSHIP VACANT.

MR. SHELDON'S appointment to Wimbledon has created a vacancy in the town clerkship of Burnley. At a special meeting of the Burnley Town Council last week, Mr. Sheldon's resignation was accepted, the Mayor expressing the deep regret of the Council at the loss.

Mr. Sheldon was appointed town clerk five years ago, at a salary of £600, since increased to £900.

HULL ACCOUNTANT'S SAD END.

MR. RICHARD BROWN, the Hull city accountant, committed suicide on Sunday. For some time he had suffered severely from nervous depression, and a few months ago his friends had to insist upon his taking a rest. Accordingly, he spent a holiday in Cornwall, and the change seemed to have improved him, for he attended regularly at the office up to Saturday afternoon.

On Sunday morning, after taking his breakfast about ten o'clock, Mrs. Brown suggested that he should sit with one of his children, who was ill. About a quarter of an hour later she found the child alone, and on seeking her husband discovered him in his bedroom hanging by a cord from the foot of the bed. The distracted wife raised an alarm, and a milkman, named Preston, entered the house, but before medical aid arrived Mr. Brown was dead.

The deceased, who was 39 years of age, leaves a widow—his second wife—and six children. He had been many years in the service of the Hull Corporation, and was appointed city accountant, at a salary of £350, when Mr. T. Milner was promoted to the treasurership. In that position he had the entire confidence of the financial department, as a man of undoubted ability. No one can offer any explanation which would account for his end beyond a fit of overpowering depression.

ABERDEEN CITY CHAMBERLAIN.

THE death occurred last week of Mr. P. M. Cran, City Chamberlain of Aberdeen. Mr. Cran, who was 63 years of age, was a native of Banffshire. He was a son of the late Mr. James Cran, deputy chief-constable of Aberdeenshire, and was educated at the old Grammar School, Aberdeen, and at King's College.

In 1876 Mr. Cran was appointed city chamberlain, and during the 28 years he occupied that position he rendered excellent service to the Corporation. On the celebration of his official semi-jubilee three years ago tangible acknowledgment was made by the Town Council and other representative citizens of the value of his work and of the esteem in which he was held.

CORPORATION AND STREET BETTING.

AT the instance of Mr. W. Norfolk, the Yarmouth Corporation has unanimously passed a resolution recommending the Watch Committee to make more stringent efforts to prevent street betting.

Mr. Norfolk said he believed the whole blame for the prevalence of street betting in the borough rested with the Council, which was not doing its duty, and he appealed to it to realise its responsibility in the matter. He had watched the careers of numbers of young men, and knew their downfall was due to street betting. Seven out of every 10 bankruptcy cases could be traced to betting, directly or indirectly. Hundreds of working men—and he was ashamed to say women, too—gave money to betting men's touts, and did it openly. He hoped the Council would use every effort to stamp it out.

PORT OF LONDON.

THE London Chamber of Commerce on Wednesday discussed the Port of London question. Mr. Albert Spicer, who presided, said the meeting had been convened to afford facilities for a discussion of the question from all points of view, in view of the important Bills of which the London County Council, the Thames Conservancy, and others had given notice.

Although no resolution was proposed, it appeared that the general feeling of the meeting was in favour of a conference being held in the near future between the various interests concerned.

NOTES AND ANSWERS.

A Small Set-Off Against the Many Advantages of Incorporation—Disfranchisement of Lodgers and Others. How to Dispose of a "Find." The Qualifications of an Alderman for Election. When is a Town Councillor "Pecuniarily Interested?" Qualification of Surveyor for Office.

*** *Queries intended for this column should be addressed to the "Legal Correspondent,"* MUNICIPAL JOURNAL, *12, Salisbury Square, E.C. They should be written on one side of the paper only, and be signed by a nom de plume or initials, the real name and address of the correspondent being written on the back of the paper.*

573.—COUNCILLOR AND GUARDIAN—Want of Qualification for Office—Effect.—A gentleman who is a guardiau of the poor and a member of the local borough council has been objected to upon the Parliamentary list, and the objection was sustained. He had no other qualification. Under these circumstances, can the person in question retain his position, either as guardian or councillor, to the period covered by his election, and, if not, when does he cease? Should he continue to act aud vote in either capacity, does any penalty accrue, and under what statutes?—"VERA."

It is provided by 10 and 11 Vict., c. 109, Sec. 25, that "in no proceeding shall it be lawful to question the qualification or validity of the election of any person as a guardian after the end of twelve months next following the election, or the time when the alleged disqalification or want of qualification of the person against whom such proceeding shall be directed, shall have arisen." Before the lapse of that period it would seem that the election of a guardian may be questioned by *quo warranto* on the ground of his want of qualification. It is not clear that the guardian referred to would incur any penalty by sitting and voting as such under the circumstances indicated. If he were *dis*qualified (as, for example, through being adjudged a bankrupt or being interested in a contract with the Board), it would be otherwise. In such case the provisions of Sec. 46 (8) of the Local Government Act, 1894, would apply, and render the disqualified guardian liable to a penalty of £20. But it is doubtful whether this enactment would apply to the want of qualification as distinct from a positive disqualification.

574.—POLICE FORCE—Reserve Class.—I shall be much obliged if you will kindly inform me in an early issue of your valuable journal what Acts of Parliament euable a police authority to establish a reserve class from members of the police force who have served their full time: and also, as I uuderstand reserve meu are really equivaleut to special coustables, whether it is necessary for meu acting in the reserve class to retake the oath before discharging all the duties of a police constable?—"MERLIN."

This question is somewhat outside the scope of our column, and we regret we cannot deal with it at length. We are not aware of any special Acts providing for the formation of a police reserve force. The retirement and pensioning of constables is regulated by the Police Act, 1890. Under that Act constables become entitled, after 25 years' approved service, to a pension for life, and, in case of incapacity, pensions are obtained on a medical certificate after 15 years' approved service. Retired constables would, in effect, form a reserve police force, and it would apparently be necessary for them to retake the oath when at any time they might be recalled and, voluntarily, return, to duty. Our correspondent may possibly obtain further information from the Home Office.

575.—INCORPORATION OF AN URBAN DISTRICT—Effect on the List of Voters.—Is it uot a fact that upon an urban district having obtained a charter of incorporation, lodgers, service men, and certain other classes who have been voters become disfrauchised? And is not opposition to incorporation, in your opinion, on the part of a lodger (like myself) in an urban district so threatened by an attempt of others, more privileged, to obtain such charter a perfectly reasouable opposition?—"UT INFRA."

Under Sec. 51 (2) of the Municipal Corporations Act, 1882, only persons enrolled in the burgess roll are entitled to vote at an election of councillors for a borough. The qualifications for a burgess are set out in Sec. 9 of the Act, and include occupation of a house, warehouse, shop, or other building, twelve months' residence in the borough, or within seven miles thereof, and the being rated in respect of the qualifying property to all poor rates made during such period of twelve months for the parish within which the property is situate. The prescribed qualifications for burgess-ship will thus exclude lodgers, those exercising the service franchise, and owners of property, where no other qualification exists in those cases. As regards the concluding question asked by our correspondent we can only say that in our opiniou the disfranchisement of a small class is hardly a sufficient reason to outweigh the advantages to be derived from incorporation, and unless it is supported by some substantial objections, we should think it an unreasonable ground of opposition to such a scheme.

576.—LOST PROPERTY IN LONDON—Must the Finder Deliver it to the Authorities?—Does there exist in the metropolis any Police Act, or other Act or regulation, which would compel the finder of a lost article in the public street to deliver up the article to the police authorities? I may mention that the general Police Act of 1892 (55 and 56 Vict., c. 55) applies only to Scotland.—"W. M."

We are not aware of any statute or police regulation in force in the metropolis which would require the finder of lost property to deliver it up to the police authorities. Our correspondent will be familiar with the provision contained in the London Hackney Carriage Act, 1853, as to property left in hackney carriages, viz., that the driver of every hackney carriage within the metropolis wherein any property is left by any person shall, within 24 hours, carry such property, if not sooner claimed by the owner, in the state in which he finds it, to the nearest police-station. Apart from this enactment, the common law would seem to apply to the finders of lost property. Under that, the finder is entitled to it against all persons except the real owner ("Armory v. Delamirié"); and this rule obtains even where such property is found on the floor of a shop by a person other than the shopkeeper ("Bridges v. Hawkesworth," 18 L.T. (54). It is not necessary to refer to the exceptions to this rule which obtain in the case (not only of hackney carriages, but also) of railways, inns, canals, &c.

577.—ELECTION OF ALDERMEN—Qualification of Aldermen.—(1) Can you say what is the proper way to elect aldermen in a meeting of the council? The method followed in our council was as follows:—A meeting in committee was first held to select names to submit to the council on November 9th. The committee decided to uominate six persons. However, a seventh name was submitted. The six gentlemeu who received the highest number of votes were declared to be the names that should be put before the council. On the 9th of November a paper was handed to each member of the council with the names of the six gentlemen printed on it. At the foot of the paper a space was left for each member to sign. No mark iu any way was made opposite to any name. The chairman said that each person who signed the paper was voting for all the uames on the paper. They were collected by the town clerk, who handed them to the Lord Mayor, who declared that each paper that was signed was oue vote each for the names printed thereou. Three papers sent up uusigned were not counted. Is this the proper way?

(2) What is tho qualification that entitles a person to be elected an aldermau?

"COUNCILLOR."

(1) The regulations for the election of alderman laid down by the Municipal Corporations Act, 1882, and explained by legal decisions in some cases, are few and simple, and should be rigidly observed. They are, briefly, as follows:—The election shall ordinarily be held on the 9th of November at the quarterly meeting of the council. It shall be held immediately after the election of the mayor, or, if there is a sheriff, the appointment of the sheriff. Outgoing aldermen may not vote, except when an outgoing alderman acts as chairman, he may exercise the chairman's prerogative of giving a casting vote. Every councillor and alderman entitled to vote may vote for any number of persons not exceeding the number of vacancies, by signing and personally delivering at the meeting to the chairman a voting paper containing the surnames and other names and places of abode and description of the persons for whom he votes. It has been held that the requirements of the Act have been complied with where the voting papers, instead of being handed by the voters personally to the chairman, were collected by the town clerk, and passed on by him to the chairman ("Baxter v. Spencer" (1895), 59 J.P. 376). Apart from these statutory requirements, the election of aldermen may be regulated by the council. Dealing particularly with the procedure in the case submitted, we do not think the above regulations have been violated. It was open to any councillor to strike out any name upon the list prepared by the committee, or even to submit for election persons other than those nominated. The rejection of unsigned papers was of course valid. At the same time, it seems to us it would have been distinctly preferable to require each councillor voting to indicate by a mark against each name on the list whether or not he desired to vote for such person.

(2) Sec. 14 (1) of the Municipal Corporations Act, 1882, requires that "the aldermen shall be fit persons elected by the council." Sub-section (3) of the Sec. 14 provides that "a person shall not be qualified to be elected or to be an alderman unless he is a councillor or qualified to be a councillor." The qualifications for the office of councillor are laid down by Sec. 11 of the same Act, and include the following:—

(1) He must be enrolled, and entitled to be enrolled, as a burgess, and for this he is required to be in occupation of a building of any value, or of land of the annual value of £10, in the borough; he must reside in or within seven miles of the borough; and he must be rated and pay rates.

(2) Or, being entiled to be so enrolled, in all respects, except that of residence, he must reside within from seven to fifteen miles of the borough, and be entered on the separate non-resident list directed to be made by the Act.

(3) And, in either of the above cases, he must be possessed of real or personal property amounting in value to £1,000, in the case of a borough of four or more wards, and of £500 in the case of any other borough, or, be rated to the poor rate in the borough on the annual value of £30, in the former case, and of £15 in the latter case.

(4) Lastly, as an alternative to these qualifications, it is provided that every person shall be qualified to be elected and to be a councillor who is at the time of election qualified to elect to the office of councillor.

578.—TOWN COUNCILLOR—Pecuniary Interest in Matter Before the Council—May not Vote Thereon.—At a meeting of a certain towu council, the following paragraph was on the agenda of the Lighting Committee:—

"Your committee, having considered the question of lighting these streets with electric lights, recommend that 15 lamps be fixed in positions to be selected by the borough surveyor and electrical engineer."

The paragraph was about to be criticised by an individual who is a holder of shares in the local gas undertaking, which is in competition with the corporation system of electric lightiug. The town clerk advised the mayor, who ruled accordingly, that, by virtue of that iuterest as a shareholder in the gas compauy, the critic had therefore neither the right to criticise nor power to vote ou the question before the council. You will note that no reference whatever is made, in the proposal in question, to the use of gas; and so long as the member who was debarred from speaking confined his remarks to the direct question of electric supply, should not he have been allowed to speak and to vote?—"IVES HARLEY."

Sec. 22 (3) of the Municipal Corporations Act, 1882, provides that, "a member of the council shall not vote or take part in the discussion of any matter before the council, or a committee, in which he has directly or *indirectly*, by himself or by his partner, any pecuniary interest." It seems to us that this sub-section will exclude the member in question from speaking or voting on the question raised, for, though gas is not mentioned, there can be no doubt that such member is *indirectly* interested in a pecuniary sense in the matter under discussion. The advice given by the town clerk seems, therefore, to be good in law.

579. — MINUTES OF TOWN COUNCIL — May Reading be Dispensed With and the Printed Minutes be Taken as Read?—Will you please inform me if it is necessary for the minutes of a council meetiug to be read by the town clerk before being confirmed, or if it would

be possible to have the minutes printed and circulated so as to take them as read and confirm them at the commencement of the following council meeting?—"CIVIS."

Rule 12 of Schedule 2 to the Municipal Corporations Act, 1882, provides that the minutes of the proceedings of every meeting of the town council shall be drawn up and fairly entered in a book kept for the purpose, and shall be signed in manner authorised by the Act. Sec. 22 (5) dealing with the latter point, provides for the signing of the minutes of the proceedings at the same or at the next ensuing meeting, by the mayor, or by a member of the council acting as chairman of the meeting. Subject to these requirements, the council may, from time to time, make standing orders for the regulation of its proceedings and business, and vary or revoke the same. (Rule 13 of Schedule 2). It is, perhaps, a straining of the regulation as to entering the minutes in a book to hold that the printing and binding together of the minutes will satisfy such regulation. But this plan is constantly adopted in practice, and it would be unwise to raise any objection. There is no doubt that the council may make a standing order under the powers conferred upon it by Rule 13 above cited, provided that printed minutes of a meeting shall be circulated amongst the councillors, and taken as read, and signed by the chairman or mayor at the following meeting of the council. Each member has an opportunity of raising any objection to the minutes before they are read, in the same way as he would raise an objection after the reading, if such minutes were read out. This method is, we believe, adopted frequently where the minutes are lengthy and the business before the council heavy.

580.—**SURVEYORSHIPS**—Would you be so good as to inform me, through the medium of your valuable paper, what routine I must go through in order to get a position in the Surveyor's Department—either in the London County Council, one of the London borough councils, or in a provincial council. Will you enlighten me on the following points also:—

(1) What examinations should I be required to pass?

(2) Is there any age limit?

(3) The rate of remuneration?

"READER."

In the country at large—excluding London—surveyors to urban sanitary authorities (including under this description both borough councils and urban district councils) are appointed under Sec. 189 of the Public Health Act, 1875. No particular qualification for the office is prescribed by statute, and the matter is one for the authority appointing in each case to decide. We understand, however, that it is a frequent custom to select a professional surveyor or engineer for the office. The post of surveyor is often combined with that of inspector of nuisances. For the latter office the Royal Sanitary Institute (address Parkes Museum, Margaret Street, W.) holds examinations from time to time, and grants certificates of qualification. Amongst other qualifications for admission to the examination is that of having served a local authority as surveyor or assistant surveyor. Such certificate does not, of course, imply any responsibility on the part of the Institute for securing appointments for candidates. Surveyors of metropolitan borough councils are appointed under Sec. 62 of the Metropolis Management Act, 1855. Here again no specific qualification is prescribed by statute, and the above remarks will apply to these officers, as also to any who may be appointed by the London County Council under Sec. 3 (ix.) of the Local Government Act, 1888. Application should in each case be made for the necessary particulars of any office, and the qualifications therefor, to the council under which a vacancy may occur.

A QUIETER LONDON.

SIR PHILIP BURNE-JONES, Bart., presided on Monday at a conference respecting the abatement of unnecessary street noises, held at 1, Finsbury Circus.

There was a representative attendance of gentlemen interested in the question, and the following resolution was adopted:—

> That, in view of the increasing noises in the streets of London occasioned by organ-grinders, coal hawkers, milk vendors, news-boys, &c., by traction engines by night, noises for the most part unnecessary, and which are disturbing and distressing to those engaged in professional or commercial pursuits, and injurious to invalids, in the opinion of this conference it is desirable that fuller powers should be granted to the police for dealing with the nuisance, and that active steps to bring the matter before the various authorities should be taken by the Betterment of London Association.

HOW TO ADVERTISE.

American Cities, which are Far Behind the English Municipalities in Civic Enterprise generally, are Imbued with the National Appreciation of the Value of Advertising. Across the Atlantic the Art of Municipal Advertising has Reached its Highest Development. How it is Done, and the Methods that are Employed.

AMERICA is renowned for its advertising, and the spirit of the times is taking hold of its cities. The municipalities of this country are sometimes rather backward in making known their attractions and advantages, but, on the other side of the water, no scruples of modesty restrain the publication of information that is calculated to arrest the attention of the manufacturer or the settler. Chambers of Commerce, municipal authorities, and others interested in seeing certain cities grow, now realise that not natural advantages alone make growth, but also systematic activity in publishing those natural advantages in the proper quarters. Manufacturers come more quickly to an ideal industrial centre when they know that cheap fuel, free sites, low taxes, and freedom from labour annoyances are offered. Farmers can be brought into the wheat lands of Canada's North-west Territory ten times as fast through active newspaper advertising of advantages and terms as they can by being left to learn about these advantages themselves. Some States and cities have beautiful scenery to attract tourists, while the climate of others is beneficial to invalids. Few localities, indeed, but have something to offer outsiders that will increase their prosperity and importance.

A Successful Instance.

As an instance of the possibility of getting good results from a modest outlay, the exhibit of Nebraska at the World's Fair at St. Louis affords a good example. The appropriation was only £7,000, which made a State building possible, but by careful management and the intelligent work of the commission the State of Nebraska has been given a representation at the Fair, which ranks first in point of advertising value. The main exhibit is in the agricultural building. A complete little theatre has been built in the centre of the exhibit, equipped with a stage. Exhibitions, lasting 15 minutes, are given 13 times a day, so that fully 3,000 people witness the exhibition daily. The Nebraska exhibits are more frequently mentioned in the press than those of any other State.

Louisville's Method.

In the street cars of St. Louis during the Fair have appeared cars calling attention to the advantages of Louisville, Kentucky, as a manufacturing centre. The public is invited to visit the Kentucky building, the Kentucky exhibits, and to correspond with the Commercial Club of Louisville for any further information that may be desired. The Commercial Club pays for this sensible form of municipal advertising.

Not Always Successful.

Municipal advertising is not always successful, and is frequently the result of impulse, we are told by the New York *Municipal Journal*. A city wakes up to the fact that a neighbouring municipality gets a good many conventions or new factories. In the spirit of emulation a fund is quickly raised and a committee appointed to compete. Started off with a spurt, the campaign often ends with a depleted treasury. The entire fund may have been invested in an expensive souvenir book that had no real advertising value. Or in the rivalry of bidding for a large convention the whole fund may have been pledged for entertainment purposes. If the advertising committee used the fund to seek manufacturers, it may have found the wrong kind—the manufacturer who secured a bonus for a wornout plant or who sold stock in a concern that was ridiculously over-capitalised. The moment a municipal advertising fund is raised it is made the object for the attack of enemies.

The Kind of Medium to Be Used.

Municipal advertising is confined to no single set of mediums. In some cases the best results can only be secured through newspaper publicity. In others, the magazines may be the most profitable medium. In still others printed literature or personal letters reach the class to be interested, while many auxiliaries are employed, such as travelling expenses of products, stereopticon lectures, &c. The first essential to good advertising is to have something to offer. The advertising should be constant, but sane.

Principles to be Followed.

The underlying principles to be followed in municipal advertising, proceeds our interesting contemporary, are not materially different from other lines of work. The first problem should be, what are the advantages offered? The second, to what class will these advantages appeal? A city or district has a character. If it is worthy of advertising effort it must have some especial advantage. Among the more common advantages are climate, improvements, shipping facilities, and the present character of its inhabitants. These and many other conditions are fit subjects for advertising. The ordinary newspaper "write-up" or the ordinary illustrated booklet telling of the great smartness of some of the town's "leading citizens" is quite inefficient. The average newspaper writer cannot grasp the situation. The element of selfishness in human nature must be taken into account in municipal advertising. Few people select a factory site from the statements chronicled by newsvendors. The advertising must be explicit, direct. It must be devised with a full understanding of conditions. Boards of Trade and similar organisations are apt to delegate this work to some one able to dash off a lot of gushy matter. The prospective investor pays little attention to generalities, but if he has the facts presented in a logical, sensible way, he will read them and be interested.

The municipality must have something other than the mere desire to attract outside capital, residents or visitors. If it has an excuse for calling attention to itself nationally, some intrinsic value or advantage, then it can make splendid use of publicity. The work should be delegated to an experienced man, not a theorist, one who has observed the development of many municipalities. Take care of both the human side, the social side, and the practical side of your prospective customer and you will get him to locate with you. He will build his shops in your midst and thereby benefit the entire community. Get him into the notion that he is going to have the hearty co-operation and support of good citizens and that the town will take an interest in his affairs and help in every legitimate way to promote his welfare. He wants to make money, live in a good community surrounded by cheerful, optimistic people; and it is the business of the Board of Trade to set the facts before him in the best possible light.

RELICS OF OLD LONDON.

ADDRESSING the London Topographical Society on Tuesday, Mr. F. G. Hilton Price said there was little of London left—of London before the great fire. Not only had the superstructures gone, but the substructures had also disappeared; and it behoved them, therefore, to watch very carefully for anything of value that was to be seen in the foundations of the present-day buildings. There was little doubt, he continued, that old London was really a very handsome city; but after the great fire in 1666 new buildings were built on the foundations of the old houses, and a new city sprang up and the sites of the old houses had to be scraped up to make room for the new buildings.

A NOTABLE BOOK.*

How Succeeding Generations Have Dealt with the "Won't Works" and the "Cant't Works." The Gentle Practices of Ear Splitting and Whipping. Limits of Legislative Action. Some Hardy Annuals.

IT is becoming quite the thing just now to discuss the problem of the unemployed.

With great naïveté the question is being asked, as though it were quite new, "What causes lack of employment: why does not Parliament do something?" What Parliament has been doing during the last three hundred years—since 1601, when the first Poor Law was enacted—is the theme of these three interesting volumes.

The brilliant man who would crack the hard nuts of destitution and unemployment by a single stroke of genius should read these volumes. The obscure statemen of the bar-room who would "make the beggars work" will find that it took Parliament a hundred years before it was convinced that that was *not* the way. First, simple imprisonment for "feitors and vagabonds" was tried, and after this had been tried and failed, other punishments were resorted to, such as whipping the half-naked offender, whilst tied to the back of a cart, round the parish or wapentake. Even so late as 1603-4, for punishment of rogues, vagabonds, and sturdy beggars:—

> Shall be branded in the left shoulder with a hot burning-iron of the breadth of a shilling, with a great Roman R, upon the flesh, that the letter R may be seen and remain for a perpetual mark upon such rogue during his or her life.

It appears at length to have been seen that severe punishment loses its terrors in the presence of actual want—that a man will beg, or steal, or resort to violence rather than starve, and that the first step towards putting down begging and vagabondage and the crimes then arising is to provide against the occurrence of such an extremity of want as will leave no alternative between starvation and a breach of the law.

Then we hear to-day the voice of the man who would make work, not in the way of expediting necessary work, such as Mr. Long's Central Committee will do, but to make work for the sake of work. This is exactly what was tried under a statute of Elizabeth. With the object that the unemployed "may not have any excuse in saying they cannot get any service or work," and that "other poor and needy persons, being willing to work, may be set on work," it is enacted:—

> That in every city and town corporate, and likewise in every market town or other place which the justices of peace may in general sessions appoint and order, a competent stock of wool, hemp, flax, iron, or other stuff, shall be provided by taxation, of all the inhabitants within the several limits. The said stock is to be committed to the custody of such persons as the mayor, bailiff, or other head officers of the cities and corporate towns may appoint, and in other places to such persons as shall be appointed by the justices.

"Houses of correction" were provided for those who would not take advantage of this work, where they were "to be straightly kept as well in diet as in work, and also punished from time to time as the persons having the oversight and government of the said house of correction shall appoint."

In every age there have been the "won't works"—to use General Booth's nomenclature—as well as the "can't works." Another Act of Elizabeth directs that any of the poor who were not so diseased or impotent but that they could do some manner of work, and who refused, "are to be whipped and stocked for their first refusal, and for the second refusal to be punished as in case of vagabonds in the first degree." To suffer as vagabonds might mean to lose their ears or even their lives.

It is interesting to learn how the children were treated in these "dark days." An Act of Edward VI. provides that a young beggar, or child of a beggar, whether it be male or female, between the ages of five and fourteen:

> "Idly wandering about as a vagabond," may be taken by any manner of person from any such beggar, "being the mother, nurser, or keeper thereof, whether they be willing or not"; and upon the person's promising before a justice of the peace to bring the child up in some honest labour or occupation, the justice may adjudge the said child to be servant or apprentice to the person so promising, until it reach the age of 20 if a woman-child, and until 24 if a man-child; and if any child so adjudged shall run away from such master or mistress, the child may be taken again and punished in chains or otherwise, and be used in all points as a slave for the time above specified; and the master or mistress is then empowered "to let, set forth, sell, bequeath, or give the service and labour of such slave-child to any person or persons whomsoever he will."

The Acts of Elizabeth, on which our English Poor Law was founded, were not the result of a sudden thought or a single effort, but were gradually framed upon the sure ground of experience. It is curious to trace the successive steps by which its chief enactment, that of a compulsory assessment for the relief of the poor, came at length to be established.

First, the poor were restricted from begging, except within certain specified limits. Next, the several towns, parishes, and hamlets were required to support their poor by charitable alms, so that none of necessity might be compelled "to go openly in begging," and collections were made for them on Sundays, and the parson was "to stir up the people to be bountiful in giving." Then houses and materials for setting the poor on work were to be provided by the charitable devotion of good people, and the minister was every Sunday specially to exhort the parishioners to contribute liberally. Next, the collectors of the poor, on a certain Sunday after divine service, were to set down in writing what each householder was willing to give weekly for the ensuing year, and if he should prove obstinate and refuse to give, the minister was to gently exhort him. If this failed, the justices were to try first persuasion, and then to assess as they thought reasonable. This prepared the way for the more general assessment authorised by 14 and 39 Elizabeth, which again led to the complete and universal assessment of property.

To understand the whole of the vicissitudes in the treatment of the poor, the trials and failures of the law, the futility of legislation where economic law is concerned, up to the time of the great Reform Act of 1834, these first two vols. by Sir S. Nicholls must be studied. The great reformer, whose name stands so closely associated with the foundation of the Local Government Board, deals with the subject as only a master could. There is one conspicuous fault in the style, however, which arises from the writer's inability to restrain himself from wandering at times into the by-paths, interesting certainly, of general English history. The coronation of the Prince and Princess of Orange, for instance, though forming a thrilling chapter, must be considered a little extraneous from a study of the English Poor Law.

The note that runs through the books is one which we are a little in danger of forgetting to-day—that anything which tends to turn man from the persevering exercise of his own natural powers, or to divert him from a reliance upon his own honest efforts for obtaining the means of living, cannot fail to prove injurious both to the individual and to the community.

Every student of the Poor Law knows to what lengths the evils of pauperism extended before the year 1834, when half the labouring classes were in receipt of parish pay, and in several parishes the rates were as much as 60s. in the £. It is at this point that Mr. T. Mackay takes up the thread dropped by Sir George. The treatment of the subject from this point is somewhat more speculative. It sets forth the economic rather than the legal history of the subject, and supplies a review of principles and events from the standpoint of a later generation.

Its author, too, apparently, is of what has been called the "strict school of administration," and sees in out-relief, except when administered with the greatest rigidity, one of the speediest means of demoralising and degrading those whom it ought to raise.

* "History of the English Poor Law," by Sir George Nicholls and Mr. Thomas Mackay (Messrs. P. S. King and Son, Westminster.) Three vols., 15s.

"WHO'S WHO."*

"WHO'S WHO" for 1905 is, as usual, up to date. To make room for additional information, the tables which formed the first part of "Who's Who" have been deleted, the idea being to make the book more completely a biographical annual. These tables, with many interesting additions, are issued as a separate book, called "Who's Who Year-Book, 1905." This also includes a list of race meeting, tables of leading London specialists, and of great London preachers of all denominations, which appear for the first time. In view of the connection between the two works, both should find a place on the shelf of the office and the business man throughout the country.

ENGLISHWOMAN'S YEAR BOOK†.

THE ladies will welcome the 1905 publication of the "Englishwoman's Year Book and Directory," upon the preparation of which the editress is to be congratulated. As is stated in the preface, "the multiplication of philanthropic societies has kept pace with the opening of positions of usefulness to women, as Poor Law guardians, in professions, and in many other directions"; and many busy women have found that their labours are lightened by the possession of this admirable handy book of reference.

HUMANE SLAUGHTERING.

THE evils of butchery are well-known, but it would almost seem as if the race had not reached a standard high enough for it to see the necessity of sweeping those evils away. Much of the cruelty which disgraces our slaughterhouses is due, no doubt, to the retention of antiquated methods, and springs, let us hope, less from callousness than conservatism. A book that should do something to sweep away ignorance and prejudice is just to hand. "Humane Slaughtering" (Curtis and Beamish, Limited), by H. Heiss, Abattoir Director of Straubing, Bavaria, is really a prize essay, entitled "The Stunning of Cattle by Means of Appliances Acting with Instantaneous Effect," translated into English by Mr. C. Cash, B.A. The book is a lucid exposition of the principles on which methods of slaughtering by means of instantaneous stunning are founded, and the employment of those methods. Amongst the apparatus described and explained are the shooting-bolt, "Eagle Works," "Mors," "Flessa," Behr's "Flash Cattle-killer," Liebe's &c. The author truly remarks that:—

> The animal which is painlessly deprived of life owes gratitude to man in death for the mercy shown to it, though it may not have met with gratitude from man in life for the services it has rendered.

Every councillor ought to feel it his duty to see that bye-laws are framed to regulate private slaughterhouses, not only with regard to sanitary requirements, but with regard to the avoidance of cruelty in slaughtering.

It is interesting to notice that the author, Herr Heiss, was the personal friend of Dr. Oscar Schwarz, the well-known author of the standard work on abattoirs, "Schlacht und Vichhöfe" ("Abattoirs and Cattle Markets.") H Heiss assisted in this work, and when Dr. Schwarz died last year was appointed his literary executor. Herr Heiss's essay is at the present moment being translated into French.

NOTES AND COMMENTS.

Power Companies.

A PAPER called *Everyday Electricity* is very angry with the *Municipal Journal* because it has criticised the Yorkshire Electric Power Company. Apparently this interesting monopoly is considered by our contemporary to be beyond criticism. *Everyday Electricity* is especially wroth because we said that the Power Company had "proved exceedingly obnoxious to local authorities." It says that it does not "quite understand in what way the Yorkshire Power Company has rendered itself 'obnoxious' except that it has taken very human measures to protect itself against usurpation of privileges obtained at great expense and in the face of much petty and vexatious opposition." That is a very nice way of putting it. We say that the Yorkshire Electric Power Company is preventing public bodies from running a public service in the public interests, as witness its action in regard to the application of the Doncaster Corporation for an extension of its Provisional Order. Mr. A. J. Lupton, the chairman of the company, said at the last half-yearly meeting that the directors had opposed Bills promoted by local authorities "asking to supply electricity outside their own areas." Those Bills, as Mr. Lupton admitted, were not opposed on public grounds, but "to protect the interests of the shareholders who had invested the large amount of the capital of the company in laying down plant." *Everyday Electricity* looks at this question, as does Mr. Lupton, from the standpoint of the men who have invested money in plant. We regard it from the public point of view, anxious that a service, which by its nature is a monopoly service, shall be retained in the hands of those who, not seeking dividends, will prevent the monopoly becoming oppressive. Our critic says that:—

> the *Municipal Journal* must know perfectly well that in several instances the Bills promoted by the local authorities were calculated to cripple the Yorkshire Power Company, and to render non-effective the purpose for which it was formed.

Why not cripple the Yorkshire Power Company, if, as we contend, its existence is opposed to the public interests? The primary object of these Bills, however, was to extend the areas of certain local authorities for lighting purposes, in order that the benefits of cheap municipal electricity might be more widely distributed.

Boston and Electric Light.

BOSTON Town Council wants to borrow £20,000 for electric lighting purposes, and an inquiry into the application was made by the Local Government Board last week. Boston is badly overridden by companies, and this electricity scheme represents an attempt to shake off the shackles. Both the gas and water supplies belong to companies, and three gas directors are members of the Town Council, so that there was plenty of disinterested opposition at last week's inquiry. Until recently the price of gas at Bostou was 3s. 6d. per 1,000 cubic feet, which is equivalent to electricity at about 5d. per unit. When we remember that the average price of municipal electricity is not more than 4d. per unit, equivalent to gas at 2s. 8d. per 1,000 cubic feet, the reason for the concern of the gas directors becomes manifest. Latterly they have reduced their price to 3s. 2d.. which is still above the equivalent 2s. 8d. at which the Corporation should in the course of time be able to supply electricity. We do not wonder that under these circumstances the gas directors should have endeavoured to impose the "Bermondsey clause" upon the Boston scheme. As the inspector naively remarked, "We have often been asked to introduce it by persons who are interested in gas." At which there was "laughter." We are gratified to think that the Boston public, at any rate, has gauged the purport of the opposition of the Boston gas directors. The gas company, however, has had a good innings. A dividend of 8½ per cent., such as it has now been paying for some time, is not bad in these days, when most things have "gone" and everything else is "going."

Superannuation.

THE need of a general measure extending the provisions of the Poor Law Officers' Superanuuation Act of 1896 to all other local bodies is emphasised this year by the number of private Bills lodged for next session, in which the question is dealt with by authorities anxious to have the principle recognised so far as their own areas are concerned. The Staffordshire County Council and the Stepney Borough Council have deposited measures dealing exclusively with superannuation and provident funds. and the Southend-on-Sea and Bromley Corporations, the Southport, Birkdale and West Lancashire Water Board, and the Humber Conservancy Commission, have giveu notice of bills in which these subjects are treated iu company with other matters. For several years now a Local Officers' Superannuation Bill has been regularly introduced in the House of Commons at the instance of one of the municipal organisations by a number of private members, representative of nearly all sections of political opinion, but it has never had any chance of passing into law.

Trading and Rates.

IT has been reserved for a gentleman belonging to the Liberty and Property Defence League—which is nothing if not ingenious—to make the remarkable discovery that if profits from trading enterprises are set aside for the relief of the rates, the rates are thereby increased. The return compiled by Mr. James Carter, the borough treasurer of Preston, and published in our columns a fortnight ago, has been discreetly left alone by the Industrial Freedom League, which apparently recognises that, from the Trust standpoint ,the less said about it the better. Not so Mr. R. N. McDougall, of the Liberty and Property Defence League, 25, Victoria Street, Westminster. This gentleman has sent out to newspapers far and wide a letter in which he says that Mr. Carter's return "shows conclusively how profits from municipal trading are raising rates everywhere." The statement is rather startling, as it means that income is reduced proportionately as it is increased, and it is interesting to see how Mr. McDougall arrives at his conclusions:—

> Looking through the list of boroughs in Mr. Carter's annual return, we find that those where little or no profit is made have the lowest rates, while those where the profits are over 1s. in the £ have the highest. Thus Bolton, which earns 1s. 1 1-5d. in the £, has a rate of 7s.; Carlisle, which earns 1s. 8d. in the £, has a rate of 6s.; Dewsbury, which earns 1s. 1d. in the £, has a rate of 8s. 1d.; Leeds, which earns 1s. in the £, has a rate of 8s.; Preston, which earns 8d., has a rate of 8s. 10d.

And so on. Mr. McDougall, of course, ignores the damaging facts that the Bolton rates would have been more than a shilling in the £ higher than they are were it not for the profits; Carlisle rates, 1s. 8d. higher; Dewsbury, 1s. 1d. higher; Leeds, a shilling higher; and Preston, eightpeuce higher. Mr. McDougall goes on to develop the extraordinary theory that the best thing that could happen for the ratepayers would be that no profits were made on trading enterprises.

> If municipal trading goes on, Mr. James Carter's annual return, 10 or 15 years hence, will probably show some boroughs to be earning as much in the £ as the present level of their rates. They will earn, let us say, 7s. or 8s. in the £. But will there then be no rates or very low rates? On the contrary, the rates will continue to advance *pari passu* with the increase of profits.

This is excellent unconscious fooling, and emanates appropriately from the Liberty and Property Defence League. But we are afraid Mr. McDougall takes his theory very seriously.

The Real Position.

ACCEPTING Mr. McDougall's demonstratiou at the valuation he himself is evidently desirous of placing upon it, let us test it by a few facts. In respect of the undertakings specified in Mr. Carter's return, no charges are at present falling upou the rates except in one or two cases in which that burden is made clear. At Bacup there is a waterworks deficiency which goes on to the rates; at Manchester there is the Ship Canal rate, which is exceptional, but which Mr. McDougall is welcome to for the purposes of his "argument"; and at Rochdale

there are waterworks and tramways deficiencies which have to be made good out of the rates. Yet even with these burdens the rates of Bacup are still reduced two-fifths of a penny in the £ by profits from markets and other sources; the Manchester rates are reduced 9d. in the £ by profits from the markets, gasworks, and tramways; and the Rochdale rates are reduced by 10d. in the £ from water profits. So that in the very few cases where some trading enterprises add to the rates, the burden is more than relieved by the profits from other trading enterprises. Evidently, then, Mr. McDougall's theory is not supported by the "losses." The only other assumption upon which he can be relying is that the rates are first of all plundered of the profits which relieve them. This argument is, of course, entirely fallacious. The profits are profits shown after the liquidation of the annual capital and other charges, and not a penny is on the rates in respect of the undertakings which they represent. If Mr. McDougall will turn to that return of Mr. Carter's which analyses the rates, and shows of what charges they are composed, and will compare the present return with those that have preceded it, he will find the real explanation of rate increase, which, though not very ingenious, is at least honest and straightforward. He will find that rates are increased by Education, Poor Law, Sanitary, and Police charges, and not by municipal trading enterprises, which relieve them. The remedy for the rise in rates is not to kill the geese that lay the golden eggs, but to acquire as many more geese as it is possible to get hold of, and it is in this work that we inevitably come into conflict with the Liberty and Property Defence League and its agents.

Liverpool's Bill.

LIVERPOOL, which often produces novel proposals in connection with the administration of local government—witness that for the prohibition of street processions—has several noteworthy clauses in its new Parliamentary Bill. Among them is that restricting the occupation of cellar dwellings after December, 1912. The clause provides that "it shall not be lawful to occupy as a dwelling or sleeping room any room whereof the floor is more than 3ft. 6in. below the surface of the adjacent ground." We are all agreed that cellar dwellings ought to be abolished, and if Liverpool is successful in its proposal, many other municipalities will follow the example. The postponement of the operation of the clause for seven years will give plenty of time for the necessary arrangements to be made. Another clause enforces the cleanliness of all accessories and appliances used in hair-dressing saloons, Liverpool thereby attempting to do compulsorily what the City of London has almost achieved by voluntary arrangements. It is further asked that the medical officer or inspector of nuisances shall be able to inspect restaurants, and also to extend the powers of the Food and Drugs Act in the direction of taking samples of the food for analysis. Another important proposal will interest members of the London County Council and other bodies who have attempted—in the main unsuccessfully—to apply the principle of betterment to street improvement schemes. The Corporation asks for powers enabling it to take betterment into consideration in fixing compensation in connection with street or other public improvements; and to empower an arbitrator to refuse to award compensation in the case of a recently-altered building if he shall find the alteration was not reasonably necessary, and was made with a view to obtaining or increasing compensation. This clause touches a very important defect in existing arrangements, and municipal authorities generally will wish Liverpool every success in its efforts towards reform. The clause in the Bill relating to the holding of public meetings is now simply one seeking power to allocate sites in the parks and upon any lands which are the property of the Corporation, for the holding of public meetings, and to make bye-laws regulating such meetings. Other powers enable Liverpool to provide and maintain street newspaper-kiosks, tubs for plants, seats; to make payments out of the general rate for providing music in any public place; to increase the library rate from 1½d. to 2d., and to extend to 80 years the period for repayment of moneys borrowed for housing purposes.

"Payable to Bearer."

LIVERPOOL Corporation is also seeking powers enabling it to issue Corporation bills payable to bearer. This is a very important movement, and if Liverpool is successful, and its example generally followed, will alter the whole aspect of modern municipal borrowing. In the articles we published in these columns a month or two ago we pointed out that the only way to escape the inconveniences of a run of withdrawals in respect of loans on short notice was to adopt some such plan as Liverpool now proposes to follow. We notice that this week one of the elective auditors of West Hartlepool has been calling attention to the danger, which is the only real one in the movement to arrange schemes for small deposits on a sufficiently attractive foundation to divert the savings of the people from national to municipal banks. The West Hartlepool elective auditor says:—

> Should an unprecedented withdrawal take place, and you could not cover the same by reborrowing, it would cause a dreadful panic to levy an exceptionally heavy rate to meet the same, and if you did not do this I fear you would be in the position of mortgagees who are unable to meet their liabilities, for the loans, as per your advertisement, are secured upon the profits and property of the Corporation, and we might have the undesirable spectacle of the town's property and undertakings coming into the market under the hammer.

Municipal credit stands so high that there is no fear of towns being sold up, but there is the danger that reborrowing might have to be effected on onerous terms. By making the bills payable to bearer, as Liverpool proposes, their value would be equivalent to that of the current coin of the realm, and they could be used as such in any emergency.

How to Stop the Anti's.

A CORRESPONDENT writes suggesting that we should endeavour to persuade municipal officials to counteract the influence of the misleading articles regarding municipal enterprise that continually appear in provincial newspapers, by themselves acquainting the editors with the real position of affairs, and endeavouring to place that position before the public in its proper light. The suggestion is a good one, and we have no hesitation in making it public. Newspapers do not err on this municipal trading question because they are head over ears in love with company enterprise, but because the supporters of the latter policy are continually placing their side of the case before them. Local authorities, on the other hand, consistently neglect the newspapers, and as they possess no central organisation which is able to put matters right, the company case is often allowed to go by the board. If municipal officials, when an agitation is in progress in a town, were as careful to acquaint the local editors of the Corporation side of the case as the companies are of theirs, the position would be much better explained than it often is. It is curious to observe how largely this anti-municipal trading agitation is a newspaper agitation. Ask the average ratepayer to choose between a company and a municipality, and his voice is almost always in favour of the latter. The more he is a business man, the stronger he is a municipalist. It is only when you meet the business man who stands to gain from company enterprise that you get an opinion unfavourable to municipal ownership. What the companies do through their newspaper nobbling is to turn the waverers, who hear one side of the case only. If they heard the other they would give their vote to the other side. We hope all municipal officials who are able will take a part in this useful "spade work."

Municipal Theatres.

SIR HENRY IRVING, who was entertained by the Lord Mayor of Manchester this week, made an interesting speech—after luncheon. His imagination carried him forward to the time when the theatre will be a municipal institution, and the actor a municipal official:—

> Does not Manchester (he asked) pride itself, and with justice, on its interest in the arts? And if a theatre were organised as a branch of local government you could organise theatrical taste—not all, but the best of it, on a high plane.
>
> So vast has been the progress of the last 40 years, I will venture to say, that in a lesser time you will have in this great city a municipal theatre, built and endowed for the common good—for the enlightenment and cultivation of the people, for the formation and preserving of a standard of taste to encourage thought and respect for conscious and organised effort for the cultivation of imagination.
>
> You would maintain a body of actors who would have a real and continuous opportunity of learning their profession.

How do the Manchester councillors like the suggestion? Theatrical enterprise, with one or two notable exceptions, has been in a bad way lately, and whilst it is natural to turn to the municipality for a way out, the subject is one that requires very careful consideration. In one respect, at any rate, Sir Henry allowed his imagination to carry him away. He pictured the time, with the theatre a civic institution, when the principal actor will be "elected Lord Mayor by acclamation on account of his mastery of local affairs, and his real administrative gift." The actor, as Sir Henry said, would be an official of the municipality, and it is not the custom to elect officials lord mayors. It would be an interesting spectacle to see the town clerk, the borough surveyor, the medical officer, the tramways manager, the electrical engineer, the manager of the gas works, the manager of the waterworks, and other officials, chosen to the principal office in turn, but we are afraid it would not work. If we municipalised the theatre, Sir Henry, did he apply, would probably get the chief post in London, but he would not, whilst occupying that position, be able to aspire to the chairmanship of the County Council. That would have to be done another way.

POOR LAW OUTLOOK.

The Problem of the Feeble-Minded and a Possible "Way Out." Remarkable Suggestion by the "Times." London's Unemployed Central Committee at Work, and the Great Task Before It. A Union that Tramps Avoid. Christmas Ale in the Workhouse.

The Feeble-Minded.

THE problem of the treatment of the feeble-minded, thanks to the work of the Metropolitan Asylums Board and to the late School Board, can hardly be said to exist in London, but members at the annual conference from the South-Eastern and Metropolitan Poor Law Divisions found a good deal to say on this most important of subjects. The last report of the School Board for London stated that 3,295 mentally defective children were attending special schools, while the results of scheduling showed that the total number of such children in London was 5,549. Using these figures as a basis, Mr. R. A. Bray, L.C.C. (late guardian of the Camberwell Union) who read an opening paper on "The Poor Law and the Feeble-Minded," calculated that the number of feeble-minded juveniles in England and Wales must be at least 100,000.

❦ ❦ ❦

A Real Danger.

AND what are we doing for this enormous army? As we have pointed out over and over again, absolutely nothing. They are left in our workhouse buildings until they are old enough to propagate. The danger, especially in the case of the females, in their wandering over the country a prey to their own passions or of those of unscrupulous persons, is very real. Little can be hoped from the Royal Commission now sitting on the subject. Royal commissions on both the adult and juvenile feeble-minded have sat before. Practically nothing has been done, and this great social problem——perhaps the greatest of social problems, for it goes down to the very roots of the nation—is increasing in extent with the increase of lunacy.

❦ ❦ ❦

The Only Way Out.

THIS South-Eastern Conference, like so many others, was marked by a sterility of suggestions. There was one which met with some support, put forward by Mr. Bray, and, in different words, by Sir Wm. Chance—viz, that the county councils, and not the guardians, were the proper bodies to deal with these children. But if boards of guardians would join for the purpose something might be done at once. Guardians will have to make up their minds to the compulsory detention of this class, or it will grow out of hand. After proper methods of treatment in separate institutions, there will doubtless be a greater disposition towards permanent detention. The imprisonment may thus be robbed of half its terrors, but though a little hard on the class, such treatment is the best, and, in our opinion, the only, course to safeguard the community.

❦ ❦ ❦

The "Times" and the Feeble-Minded.

THE *Times* is very much exercised with this problem of the feeble-minded. It is itself a little feeble-minded in attempting to crack this hard nut, and, after anathematising, *inter alia*, apparently every present method of dealing with Poor Law children, including "defects in the systems of boarding-out and cottage homes," it proceeds in this strain, seemingly with tears in its eyes :—

> It is hard to believe that these anomalies are necessities. It is no less hard to be convinced that the old or, as it may be called, the parochial, way of dealing with the question is nowadays the best. Something more than industrious pottering with the problem is needed. We need constructive charity, a business-like application of means to ends.

The emotion may, perhaps, be excused. The admission that the old way may not be "nowadays the best" is a great admission for the *Times*.

"Communities Remote from Them."

AND what does Printing House Square offer us? Bemoaning the short supply of labour for merchant vessels, for recruits, &c., it lets drop this dazzling suggestion, after plowing the sands to the length of a column of leading article :—

> Guardians and others who are responsible must look around and abroad for divers outlets for their charges. They must consult and concert with communities remote from them.

The brilliancy of this suggestion is perhaps a little dimmed by its ambiguity. Which *are* the "communities remote from them" that the guardians must consult. We might have thought that the *Times* agreed with emigration for the defectives, but that it is expressly stated earlier in the article that such dumping does not meet with its approval.

❦ ❦ ❦

The New Departure in London.

SINCE we went to press with our last edition Mr. Long's Central Unemployed Committee has laid down its rules. We will say at once the rules are good—if they can be followed. The methods of employment and scales of remuneration should obviously vary with the different standards of work and living of the different classes of workmen. The committee has therefore decided to divide those it deals with as follows:—(a) High-class mechanics, (b) men usually in regular work, (c) men accustomed to casual work. The committee adopts Mr. Long's recommendations as to the selection of men, with one or two amendments. In his appeal as treasurer of the fund the Lord Mayor of London this week points out:—

> It is no case of indiscriminate charity, but of well-considered and well-earned assistance to genuine workers who have undeservedly come upon misfortune. Not only will the support given help forward a scheme of temporary assistance. A question of social and national importance is also at stake, for it is permissible to hope that the experience gained by a combined effort on the part of the committee this year may suggest the lines of a permanent solution of the problem of the unemployed.

Since long before the time of Elizabeth the nation has been seeking one.

❦ ❦ ❦

A Start Made.

The enormity of the work before the Central and the Borough Committees is shown by the fact that there are already upwards of 10,000 applicants, and as a beginning it has been decided to send 100 men at once to the Salvation Army colony at Hadleigh. They will go on the same conditions as last year, viz, that their wives and families stay behind and keep their homes together, whilst the men remain at Hadleigh. The families at home will be paid the men's wages, whilst the latter will receive board and lodging and a small sum for personal expenses. This first hundred will be selected from those who are usually in regular work, who have been personally visited by the joint committee, and at least one previous employer seen. Other useful work will be shortly provided. We regard this movement as an earnest search for light, for wisdom is learned by practice, and not by holding problems at arm's length.

❦ ❦ ❦

Discrepancies of Administration.

THE Newcastle-under-Lyme Board of Guardians has a grievance. Though it is much smaller than the neighbouring union of Stoke, it has four times as many vagrants. The Board had asked the Stoke Guardians to issue vagrant tickets for the tramp wards at or near the workhouse, instead of at the Stoke Police Station. The Stoke Board wrote declining the suggestion, and expressing the view that the real cause of the tramps shunning the Stoke workhouse was the adoption in 1901 of the separate cell system, and also the stricter carrying out of the Casuals Order, especially in regard to detention and task of work. The vice-chairman (Alderman Whittingham), of the Newcastle Board, at a meeting this week, denied that the separate cell system, or the detention or task of work, was the cause of the difficulty. His Board, he said,

> adopted the separate cell system long before Stoke, and, as far as its accommodation would permit, it detained regular tramps two nights. Though the task was to break 7cwt. of stone, compared with 10cwt. at Stoke, they had to break it much finer.

We have no special knowledge of the local conditions. The adoption of the separate-cell system, which is somewhat akin to solitary confinement, certainly has a tendency to reduce the number of vagrants by driving them to other unions. But the point of interest in the case is its illustration of the ridiculous inadequacy of our present piecemeal legislation. London is moving towards greater uniformity of administration; why not the country?

❦ ❦ ❦

Brick-Making for the Unemployed.

WITH a view to finding useful work for the unemployed, the Walsall Board of Guardians proposes to lay down brick-making plant in order to use up a large pit mound which covers an area of about three acres, and is situate on land belonging to the guardians adjoining the workhouse. The new scheme is regarded as particularly advantageous, inasmuch as it will set free for cultivation land at present lying idle.

❦ ❦ ❦

Improvement of Tender Forms.

THE forms of tenders put before boards of guardians are capable of very considerable improvement, and this week the Drapers' Chamber of Trade has had the matter before it. A committee reports that it has had several meetings, and fully considered the question of parochial contracts so far as drapery goods are concerned, and in order to assist it in its deliberations copies of tender forms now in use in the unions of the metropolis were obtained. These were carefully perused, and it was found that some were more up-to-date than others, but yet none were, in the opinion of the committee, adapted to the need of the present day contracting, and a form of tender has, therefore, been prepared which the committee recommends the council to offer to the various metropolitan boards of guardians for acceptation. Three of the many suggestions made by the committee are as follow:—(1) The present tender-forms be revised and classified so that each class of goods appears in separate sections, and under names known to the trade. (2) Where goods are required in large quantities, a separate tender-form be drawn up for each class of goods. (3) No contractor be allowed to make any addition, alterations, or amendments to the tender-form.

❦ ❦ ❦

Christmas Ale in the Workhouse.

ONCE more it is seasonable that we should raise our voice against the practice, still too prevalent on the part of boards of guardians, of supplying or increasing the supply of intoxicating liquors to inmates of workhouses. It should be remembered that drink has been the cause of the downfall of so many who are now on the rates, and that the offer is a refined form of cruelty to those who have made a strenuous effort to break themselves of a habit, admitted to be so binding. Ratepayers ought to petition the guardians, where necessary, against the practice. At Windsor a petition of quite another kind has been presented to the guardians from a certain section of the ratepayers, to be discussed at the next meeting, asking permission to give a supply of ale to the inmates, and setting forth that the—

> Petitioners regretted when others were having their favourite beverages that the inmates at Old Windsor were to be prevented from having ale, which they thought was a great hardship, and they did not see why water should be forced upon the inmates any more than beer upon teetotallers.

Those ratepayers who are not of this opinion ought to be up and doing.

WESTMINSTER C.C. OFFICERS' CLUB.

ANNUAL DINNER AND CUP PRESENTATION.

IN excellent spirits the members of the Westminster City Council Officers' Club assembled at the Trocadero on Tuesday evening, for their annual "night off."

The object of the gathering was kept a close secret, and it was annonnced in printed invitations: "You are hereby summoned to attend a general meeting of the above club at the time and place before mentioned."

The town clerk (Mr. John Hunt) took the chair, and there were also present:—

Major-General Lord Cheylesmore, the mayor of Westminster; Alderman Everett, Alderman Tallents: Councillors N. G. Thomas, Browne-Martin, Spicer, Coutts: Messrs. R. Morgan, A. A. Lambert, F. M. P. Townley, H. W. Parker, E. A. Budd, F. Lomas, G. T. Shirley, H. H. F. Butler, W. Wheeler, J. W. Kirk, Arthur Ventris, T. Hensman Munsey, E. J. Selway, A. F. Stallwood, H. S. Monson, R. T. Smith, W. Meaton, J. P. Chance, A. V. Townsend, K. J. S. Harris, W. S. Simpkin, J. Curtis, S. R. Cherrett, Patrick Morrissey,—Waring, F. E. Lawrence, T. S. Robertson, F. Dodman, C. Newman, C. McJerrow, J. G. Alexander, L. J. Veit, J. R. Thwaites, J. F. Graham, R. H. Wimpey, A. Brown, W. W. Williams, R. Blakeway-Phillips, H. Clement Oliver, Ernest Hadfield, F. W. White, T. Mason, J. W. Marsh, J. C. Harvey, R. Stokes, W. S. Sherwood, W. H. Brand, F. W. G. London, A. L. Ware, J. P. Folland, A. Taylor, T. G. Dee, J. Redding, J. H. Redding, F. Hayward, L. B. Gomme, C. A. Mudge, G. J. Stevens, F. Haigh, A. T. Atkins, C. W. Jemmett, Dr. Robinson, and Dr. F. J. Allan.

After grace, to which several of the guests exclaimed "Agreed," probably meaning "Amen," the Chairman said the first item on the agenda was "to consider and dispose of the following matters: ——" ("The following matters" was a menu—and a very good one too.)

The second item on the agenda was "Report of Wine Committee [see copy of report herewith]," and the third "To drink the following toasts: ——" The City Engineer (Mr. J. W. Bradley), in replying to one of several toasts, distinguished "A, B, C," &c., and including, of course, royal and patriotic toasts, proposed the formation of a rifle club, and at the same time offered a donation of five guineas towards the formation; and the idea was taken up by the mayor, who also offered a silver cup for competition as an annual trophy. Councillor Browne-Martin also offered five guineas.

During the evening the president made the presentation of the "Jessel" Cup (presented by Captain H. M. Jessel, M.P.), won in the rowing section, and the "Emden" Cup (presented by Alderman T. W. L. Emden), won in the swimming section, and several prizes.

Another item on the agenda was "to receive [at various stages of the proceedings] the report of the Entertainment Committee, as follows——." Some excellent songs were rendered by Messrs. Fred Curtis, G. Leamar, Patrick Morrissey, and S. R. Cherrett, the latter of whom is secretary of the club.

Since the last annual dinner the club has grown in many directions. In the social section there have been arranged several successful functions, such as a smoking concert, a dance, a whist tournament with the Southwark Borough Officers' Club, &c. The section is arranging for a second concert in January, and a dance in February. The swimming section has been very active, its principal event again this year being the winning of the Local Government (London) Swimming Competition, thus holding the cup, which was wrested from Kensington, for a second year. The "Emden" Silver Cup was allotted to the member who obtained the best aggregate of points for a series of races, and is held for the year by Mr. Atkins, on behalf of the Public Health Department. The cup given by Captain Jessel was allotted to the rowing section, and is held this year by a composite crew representing the Valuation, Public Health, and General Departments. Other races have been run. The cricket section has been exceptionally fortunate, as—although in the first season—it won 15 out of 20 matches, drawing three, and losing two. In tennis also the section has been a success. The club is in a very fair condition, although many members of the staff have not yet joined.

FOLKESTONE CORPORATION OFFICIALS.

ANNUAL DINNER.

THE second annual dinner of the Folkestone Corporation officials took place on Monday at the Hotel. Wampach. Folkestone, the mayor (Mr. Alderman J. Banks, J.P.) presiding over a company of over 50, including the ex-mayor and deputy mayor (Mr. Councillor G. Peden, J.P.), Mr. Councillor A. E. Pepper, Mr. Alderman J. J. Jeal, J.P. (Hythe), Mr. H. E. Stilgoe (A.M.I.C.E., borough engineer, Dover), Mr. Chris. Jones (borough surveyor, Hythe), the town clerk (Mr. A. F. Kidson), borough treasurer (Mr. A. Francis), borough engineer (Mr. A. E. Nichols, A.MI.C.E.), borough accountant (Mr. W. H. Routly), sanitary inspector (Mr. J. Pearson), &c. Apologies for absence were received from Mr. H. P. Maybury (county surveyor of Kent) and Mr. G. S. Wilks (town clerk, Hythe).

An excellent dinner having received justice, and the Royal toasts responded to, the borough treasurer proposed the toast of "The Mayor and Town Conncil," alluding to the fact that Alderman Banks, though 82 years of age, and having served 47 years on the Council (this being his fifth term of office as Mayor) was still one of the most active members of the Corporation.

The town clerk next gave the toast "Officials of neighbouring authorities," which was responded to, in the absence of the county surveyor, by the borough engineer of Dover, who laid stress on the need of a municipal officers' superannuation fund, which was also advocated by the mayor, in responding to the toast of "The Chairman," proposed by Mr. Councillor Peden.

His Worship also remarked that if he were offered the mayoralty in three years time (which would complete his jubilee as a member of the Council) he hoped he would be able to accept it, thereby creating a record in England. An enjoyable musical programme was given by various officers.

MODERN GAS LIGHTING AND COOKING.

ONE of the most interesting, and certainly the most up-to-date, exhibit at the International Gas Exhibition at Earl's Court is that of the Gas Light and Coke Company, of Horseferry Road, Westminster.

The completeness of this exhibit will be understood when we state that it consists of a parlour and kitchen fully furnished in the style of the respectable working-class.

The parlour is lighted by a pendant with incandescent burner and opal shade. Over the mantlepiece are neat brackets, designed to show the style for bedrooms, and a glowing gas fire burns in the pretty stove, the whole effect being most pleasing.

Passing into the kitchen we find the cooking stove, a model of neatness. It contains a 14-inch oven, two boiling burners, and a griller. The company bears the whole of the initial cost of these installations, the consumers paying a slightly increased price per cubic foot for gas used, instead of rent for the use of the company's fittings.

The working man has always a dread of quarterly bills, the exact amount of which he is unable to gauge definitely; so the Gas Light and Coke Company arrange to supply all these fittings with the gas passing through the "penny-in-the-slot" meter.

There are over 185,000 of these meters in use in the company's district, and we understand the number is rapidly growing.

The *Lancet's* Analytical Sanitary Commission demonstrated the many advantages of gas over coal fires, and we believe they are now used in many hospitals in the place of the latter.

Another section of this exhibit shows a shop window illuminated by incandescent gas.

The company is prepared to demonstrate the advantages of incandescent gas for public lamps and the illumination of churches, market places, and public buildings, and makes a feature of complete maintenance of their system as well as its installation.

THE "CENTURY" LIGHT.

THE "last word" in lighting matters will probably never be spoken. The inventive ingenuity of man in this direction seems to be limitless. The coming of the electric light was regarded by many as the funeral knell of gas. But althongh the newer light has displaced the old, to some extent, it has at the same time given an impetus to the spirit of invention in the domain of its rival. The innumerable improvements in gas lighting that follow each other in rapid succession bear witness to the stimulating effect of the formidable competition of electricity.

A system that is attracting considerable attention at the International Gas Lighting Exhibition is that introduced by the Air Light Company, Limited, of 53, Victoria Street, S.W. It is claimed for this light that it combines the important qualities of high-power, economy, and simplicity. By means of a ventilating fan—supplying air in volume but low in pressure, and worked by electric, gas, water, or any other convenient type of motor — an intensified light of any power and the highest efficiency is produced. The air is distributed by air ducts made np from wood or very light metal: there is no pressnre to sustain, and they are kept charged with air, which freely passes out at the burners whether ignited or not. Being under constant load, all compensating or adjusting or controlling automatic devices are dispensed with.

There is a distinct advantage in the fact that an accidental stoppage of the motor wonld not leave the lights useless, but only dimmed, and capable of being at once turned up to ordinary power.

What scientists call "intrinsic brilliancy" is the aim of the "Centnry" system. It is secured by the distribution of air as above described. The volume of air required is so small that the power may be derived from a small electric motor and fan such as is used for cooling rooms in summer. The distributing system, owing to the absence of pressure, may be made of wood, or a thin gauze of zinc, or even papier mache.

The system seems to us to well deserve the attention of members and officials of public bodies, and it is specially adapted to the illumination of public halls and institutions of all kinds.

The firm also exhibits a machine which it has named the "Permetor," which delivers air and gas in the proportion of two of the former to one of the latter.

The economy and advantages of such a mixture are well-known, but the method of production by this apparatus is claimed to reduce the process to the ntmost simplicity.

A SYSTEM OF MIXING GAS AND AIR.

THE Smethurst Furnace and Ore Treatment Syndicate, Limited, of 3, Great Winchester Street, London, is exhibiting at the Gas Exhibition a system of mixing combustible gas and air. An interesting practical demonstration of the method is on view in the form of a water burner in action, showing a flame continuously burning under water. The gas and air being already mixed, the flame is independent of any outside supply of air. In the result, it is claimed that 90 per cent. of the total heat of the gas is utilised in the heating of water or the melting of metals.

To anyone with even a superficial knowledge of the subject, it is evident that a great saving is thus possible. By making available nearly the whole of the heat of the gas, the work of melting metals is accomplished in a fraction of the time occupied by the process under other conditions.

This economy of time is, of course, accompanied by a great saving of gas by concentration of the heat in a small compass. This burner can be used in place of a boiler in cases where steam heating is reqnired, and any desired temperature may be secured. The exhibit comprises examples of the applications of the system for melting-furnaces, for evaporation, for forging-furnaces, and for hardening and annealing-furnaces, whilst specimens of materials treated are also shown.

ELECTRICITY SUPPLY.

Can the Position of an Undertaking be Improved by Selling Below Mean Cost of Production? A Reply from the Status Quo at West Bromwich. Matters Electrical at Maidstone, and the Promises of the Immediate Future. The Vagaries of Results as Brought Out by Comparisons.

THE results of last year's working of the electricity supply undertaking of the borough of Maidstone are probably the last in which a deficiency will be recorded, as the addition of a traction-load will augment the output without substantially increasing the capital charges which at present are the heaviest burden on the business. It will be seen from the figures we give below that the gross profit was £2,508, but this was insufficient to meet the capital charges of £3,783, and in consequence there was a nett loss of £1,275. The private output is sold at a very low rate for a small concern in a district where coal is an expensive item, and at 3·207d. per unit average it is not surprising that the income fell short of the expenditure, especially as the still lower charge for the public lighting units caused the average return on the whole output to be almost exactly 3d. per unit. In the miscellaneous receipts are included sale and repair of lamps, wiring done, the proportion of profit attributable to year from "free wiring account" (a sum of £9), and a similar item for profit on motor account (between £3 and £4). The revenue account as set out in the annual statement shows that:—

The revenue derived from sales of current, &c., amounted to	£6,288
And the working expenditure to	3,780
Leaving a gross profit of	£2,508
Out of this sum the following requirements should have been met:—	
Interest on loans	£1,619
Interest on overdraft	136
Repayments of loans	2,028
Total of capital charges	£3,783
Less gross profit as above	2,508
Deficiency for year	£1,275

❦ ❦ ❦

Maidstone's Growing Business.

THE low charges are having the desired effect of bringing customers to the department, and it is encouraging to find that 8,887 lamps were added during the year, making the total private connections equal to 27,327 lamps. The public lighting by arc lamps has not been increased, but 150 Nernst and 125 incandescent lamps have been added, making a total for this purpose of 46 arc lamps, 150 incandescent, and the Nernsts alluded to. The load has correspondingly risen from 223 to 351 kilowatts. In the revenue a sum of £31 for abatements on goods purchased is included. As this represents a deduction from the costs, it has been taken from the expenditure and eliminated on the income side when the receipts appear under their various heads as follows:—

MAIDSTONE.	Units.	Yielding.	Per unit.
Private consumers took	336,695	£4,499	= 3·207d.
Public lamps consumed	138,028	1,455	= 2·530d.
Interim total	474,723	£5,954	= 3·010d.
Meter rentals	—	132	= ·067d.
Sundry work done and goods supplied	—	171	= ·086d.
Total receipts	474,723	£6,257	= 3·163d.
Units used on works	19,971	(The maximum load was 351 kilowatts,	
Total accounted for	494,694	corresponding to a	
Utilised on distribution	83,473	load-factor of 15·44 per cent.)	
Total units generated	578,167		

❦ ❦ ❦

Capturing a Motor Load.

THE importance of the capital charges will be seen by comparing the first statement with the analysis of the allocation of the receipts. Practically half the total actual cost of each unit sold is due to capital charges, an item over which the management has no control whatever, and it ought not to be difficult to spread these over a larger output, so that they are brought down to the average elsewhere, in which case the deficiency should disappear. A load-factor of over 15 per cent. is indicative of strenuous efforts having been made to capture a motor-load, and we believe that at Maidstone long-hour motors are supplied at a penny, or slightly over, per unit, which will be a remunerative price under the circumstances. The receipts were allocated in the following manner:—

	Amount.	Per unit.	
Works cost	£2,591	= 1·310d.	
Rates, taxes, and management	769	= ·389d.	
Total cost, *less* rebates allowed	£3,360	= 1·699d.	
Public lamp maintenance	389	= ·196d.	
Gross cost	£3,749	= 1·895d.	
Interest charges	1,755	= ·887d.	1·913d.
Repayments of capital	2,028	= 1·026d.	
Total actual cost of units sold	£7,532	= 3·808d.	
Less deficiency for year	1,275	= ·645d.	
Nett receipts for year	£6,257	= 3·163d.	

❦ ❦ ❦

An Object Lesson from West Bromwich.

QUESTIONS which are often asked by members of electric committees are: How is it possible to sell at an average rate below the mean cost of production and do so remuneratively, so as to improve the position of an undertaking? And, if a department is making a loss on its working, should not the price be increased? It is not difficult to reply to these conundrums by an argument based on the separation of standing and running costs, but an example is oftentimes simpler to follow than abstract reasoning, and it so happens that the accounts for the past two years of the county borough of West Bromwich afford one of the most illustrative cases which could be desired to make this difficulty one which need not in the future stand in the way of engineers. Here is an undertaking now making nearly as large a profit per unit as it formerly made a loss. From a deficiency of £436 it now shows a surplus of £1,545, and at the same time the average receipts have *fallen* from 2·461d. to 2·015d. per unit.

To show the character of the changes which have brought about this satisfactory state of things we will tabulate the more important details of the accounts for the last two years, and also give their differences, thus:—

Year.	Revenue.	Expenditure.	Gross profit.	Capital charges, &c.
1904	£9,318	£4,760	£4,558	£3,013
1903	2,930	2,159	771	1,207
Increase	£6,388	£2,601	£3,787	£1,806

The output increased by 819,158 units, corresponding to an augmentation in revenue of £6,388, from which the extra expenditure, amounting to £2,601, has to be deducted, leaving the gross profit greater by £3,787. As capital charges, &c., required £1,806 more than before, there remained £1,981, which sufficed to turn the previous deficiency of £436 into a surplus of £1,545.

❦ ❦ ❦

Increased Output and Selling Price.

SO far, there is nothing extraordinary about the results. The surprising feature to the non-engineering mind is the fact that the main factor in producing the change was the increase in the output at 2d. per unit, whereas the total actual cost before was 2·827d. per unit. For it was not the rise in higher-priced units which made the difference.

	Private and public.			Traction.	
	Units.	Units.	Yielding	Units.	Yielding
1904	271,096	42,557	£2,772	791,353	£6,503
1903	178,308	1,593	1,873	105,947	883
Dif'r'nce	£92,788	40,964	£899	685,406	£5,620
		133,752			

The increased output was 819,158 units, and the extra revenue £6,388, so the addition was almost made up of 2d. units, upon which the lighting increase could have little influence. The revenue consequently fell from 2·461d. to 2·015d., or ·446d. per unit, the expenditure from 1·813d. to 1·034d., or ·779d. per unit, capital charges from 1·014d. to ·646d., or ·368d. per unit. The difference between the reductions in expenditure and revenue was ·333d. per unit, and this added to the smaller capital charges made ·701d. per unit, which is equal to the loss of ·366d. in 1903 and the surplus of ·335d. per unit in 1904. In fine, the effect of increasing the output by 819,158 units, of which the greater part was sold at a high load-factor, was to diminish the expenses by 1·147d. per unit against a reduced average selling price of ·446d. per unit, so that the undertaking directly gained ·701d. per unit. The *average* cost per unit is, therefore, no guide whatever, by itself, as to the rate at which motor power or traction units can be profitably sold. The advantages derived from an increased output (coupled in most cases with an enhanced load-factor) will enable these additional units to be generated so cheaply that the average *new* cost will be less than the selling price, which was less than the *old* cost rate.

❦ ❦ ❦

Surplus Under New Regime.

HAVING shown the effect of the change which has come over the fortunes of the West Bromwich undertaking, the results for last year can be set out in full:—

The revenue derived from sales of current, &c., amounted to	£9,318
And the working expenditure to	4,760
Leaving a gross profit of	£4,558
Out of this sum the following requirements were met:—	
Interest on loans	£1,474
Bank interest	300
Sinking fund instalments	1,199
Bad debts	40
Total of capital and special charges	3,013
Surplus on year's working	£1,545

Eliminating bad debts from the receipts, these were obtained in the proportions:—

WEST BROMWICH.	Units.	Yielding.	Per unit.
Private consumers took	271,096	£2,611	= 2·311d.
Public lamps consumed	42,557	161	= ·908d.
First interim total	313,653	£2,772	= 2·121d.
Traction sales amounted to	791,353	6,503	= 1·972d.
Second interim total	1,105,006	£9,275	= 2·014d.
Sundry receipts	—	3	= ·001d.
Total receipts	1,105,006	£9,278	= 2·015d.
Used on works	19,039	(The maximum load was 788 k.w.,	
Total accounted for	1,124,045	corresponding to a	
Utilised on distribution	129,143	load factor of 16·01 per cent.)	
Total units generated	1,253,188		

As the load-factor is by no means exceptionally high the improvement in the position has been brought about principally by increase in output, and our expectation (June 12th, 1903) that "the loss would disappear before another year is reported," has been fully realised.

❦ ❦ ❦

Total Receipts.

THE plant installed is now 1,150 kilowatts, so that there is still plenty of room for expansion. This is the third year of operation, the growth being shown by these figures:—

ELECTRICITY SALES.

	Traction.			Power.		
1902.	4½d.	3½d. 2d. & 1½d.		1½d.	1d.	Total.
Units	23,758	144	—	35,554	3,438	62,894
Yielding	£442	£2	—	£222	£14	£680
1903.						
Units	64,636	1,086	105,947	81,383	32,796	255,848
Yielding	£1,212	£16	£883	£509	£137	£2,757
1904.						
Units	87,590	1,227	791,353	112,459	69,820	1,062,449
Yielding	£1,643	£18	£6,503	£700	£291	£9,155

	1902.	1903.	1904.
Maximum supply demanded	122 k.w.	568 k.w.	788 k.w.
Maximum plant installed	250 k.w.	650 k.w.	1,150 k.w.
Gross profit	—	£771	£4,519
Gross deficiency	£468	—	—
Capital invested	£27,596	£40,058	£56,506
Capital per k.w. installed	£110	£62	£4

The receipts were taken up and appropriated thus:—

	Amount.	Per unit.	
Works cost	£3,797	= ·825d.	
Rates, taxes, and management	769	= ·166d.	
Total cost	£4,566	= 0·991d.	
Lamps sold and work done	19		
Rentals of motors	80	= ·043d.	
Free wiring costs	95		
Gross cost	£4,760	= 1·034d.	
Interest charges	1,774	= ·385d.	·646d.
Sinking fund charges ...	1,199	= ·261d.	
Total actual cost of units sold	£7,733	= 1·680d.	
Surplus for year	1,545	= ·335d.	
Receipts in all	£9,278	= 2·015d.	

The sum given for rental of motors is an amount credited in error in the previous year. Had this not been so included, the improvement in 1904 over 1903 would have been further emphasised.

A Comparison.

THE capital invested in the undertakings whose last published results we have presented in this issue was covered by the following classes of disbursements:—

	Maidstone.	West Bromwich.
Lands	£1,000	... £1,268
Buildings	8,709	... 7.578
Machinery	16,020	... 24,625
Accumulators	1,395	... 2,209
Mains	20,142	... 13,810
Meters and indicators	1,818	... 1,953
Electrical instruments	123	... 183
Public lamps	3,044	... 711
	1,828	... 4,169*
Total expended ...	£54,079	... 56,506

* Including free wiring £1,835, and motors £1,325.

The capital expenditure in these undertakings is so near in the totals that it affords an insight into the vagaries of results to set the salient points against one another.

	Maidstone.	West Bromwich.
Output	474,723	... 1,105,006
Surplus...	—	... £1,545
Deficiency	£1,275	... —
	Per unit.	Per unit.
Average selling price	3·163d.	... 2·015d.
Total cost	1·699d.	... ·991d.
Capital charges ...	1·913d.	... ·646d.
	Without traction load. At distance from coal-fields.	With traction load. Adjacent to coal-fields.

An exhaustive examination of accounts could not produce two undertakings with more dissimilar characteristics coupled with investments akin to one another. It is hardly necessary to dwell upon the fallacy of instituting comparisons between the attainments of stations which may be alike in size but unlike in nearly all of their other attributes.

LUDLOW AND ITS ELECTRICITY SUPPLY.

THE Ludlow Town Council has given its consent to a private individual (Mr. W. Norton Cowe) applying for a Provisional Order for supplying and storing electricity in the borough on the following conditions:—That the Corporation have the option of purchasing the undertaking in twenty years instead of twenty-five years; that the opening of the streets be done by the borough surveyor, at a fixed charge; that they consult the Corporation as to the position of the cables, feeding boxes, &c.; and not to construct any overhead wires without first obtaining permission of the Corporation; the price to the Corporation for public buildings, street lighting, &c., to be 4d. per Board of Trade unit; but should the price be reduced to 5d. for the general public, then the price to the Corporation to be reduced in proportion. How much more simple and satisfactory it would be for the Council to do the work itself. A Council which will not take the very slight risks of running such an enterprise cannot surely be composed of business men.

IN TOY LAND.

ECONOMY will have to be studied in many households this Christmas, and doubtless care will be taken to find the shop where the greatest value can be obtained for the smallest outlay.

A visit to Mr. John Piggott's Bazaar, 117 and 118, Cheapside, and Milk Street, E.C., will prove a source of delight not only to those with well-filled purses, but to those with whom a little must go a long way. The variety of clockwork toys at the low price of 10d. is very astounding, and includes the milkman with his barrow, the motor car whose "frightened" driver moves his head with every revolution of the wheels, and others too numerous to mention.

Foremost among the English-made toys is a big cannon, well mouthed on a wooden carriage, which fires a ping-pong ball sufficiently far to delight any boy and to become the terror of his father.

Continuous mountain railways, and cars that loop-the-loop are arranged in working order.

Among the newer goods may be mentioned the spinning plates. These tin plates are made to revolve apparently by the touch of a wand, but on examination it is found the wand contains ingenious mechanism which does the trick.

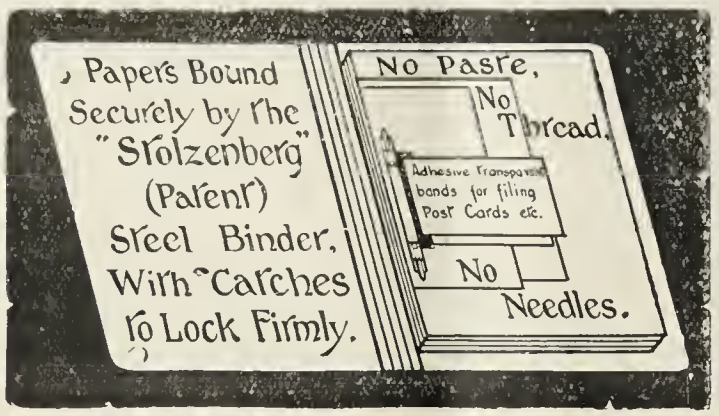
Working models of Sir Hiram Maxim's aerial roundabouts can be had from 10d. to £5.

Some good bargains are obtainable amongst a host of traveller's samples.

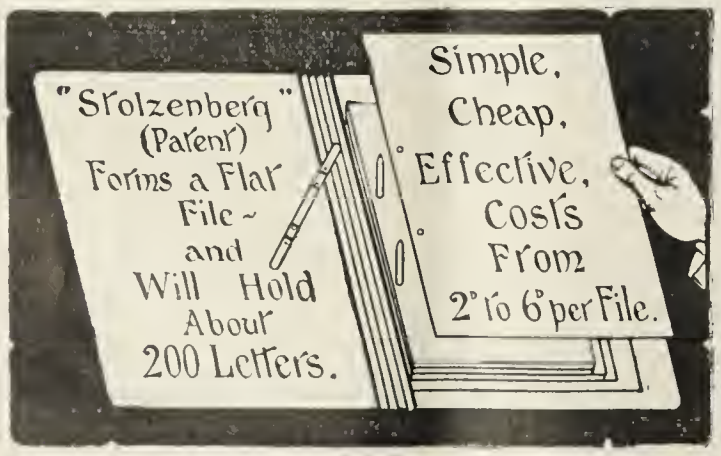
The bazaar is well and artistically arranged, and the courteous attendants spare no pains to satisfy the wants of customers.

THE Leeds Corporation intends making application to the Local Government Board for its sanction to the borrowing of £5,000 for the erection of offices and other buildings at the new Highways Depot in Kirkstall Road, in place of those authorised by resolution of the Council in October, 1903, to be erected at the Whitehall Road Depot.

THE STOLZENBERG SYSTEM OF FILING



Papers Bound Securely by the "Stolzenberg" (Patent) Steel Binder, With Catches to Lock Firmly.
No Paste.
No Thread.
Adhesive Transparent bands for filing Post Cards etc.
No Needles.



EXTENSIVELY USED BY

Government Departments, Borough Corporations,
County Councils, Boards of Guardians,
Education Authorities, Technical Instruction Committees,
and the Largest Private Business Houses.

The Stolzenberg Filing System stands alone. It is admitted by authorities on business method to be the best. You can start with one simple unit to-day, as shown in the illustration, and by orderly, logical expansion build it up to a filing system adequate for the work of a large government office.

Note the unique features.—One file for each client or subject. Every letter or paper filed in the order of its receipt. Less space, less time, less expense. At your finger ends there is a complete record of the memoranda on any one subject in one compact file—not in six or a dozen bulky volumes.

Sample Set of Six Files and Slit Perforator, 3s. post free.

Literature on Filing and Miniature Specimen free to readers of the MUNICIPAL JOURNAL from

The STOLZENBERG (Patent) FILE CO.,

50, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

TRAMWAY TOPICS.

The Controversy over Proposed Electric Tramways for Heywood, Bury, and Rochdale. Satisfactory Reports from Ayr, Newcastle, and West Ham. Yarmouth Accepts a Belgian Rails Contract. Penny Fares at Cardiff as Compared with other Large Cities.

AT last week's meeting of the Heywood Town Council, Mr. Thomas Popple, the chairman of the Electricity and Tramways Committee, explained the position with regard to the proposal that the Corporations of Bury and Rochdale should run electric tramcars within the Borough of Heywood. The Corporation of Bury, he said, had agreed to Heywood's suggestion that the amount per mile that Heywood should pay for working the cars should be referred to some independent person for settlement. As the electric cars would not be running for some time, the Committee had purchased a number of the old steam cars and engines, and the arrangements had been practically completed to enable it to begin running the cars in the Borough of Heywood. When he mentioned the matter to Mr. Dunning, the chairman of the Rochdale Tramway Committee, he stated—of course in his private capacity—that there would be no objection to the Heywood cars running to Sudden, the terminus of the Rochdale electric cars. The Rochdale Tramway Committee, however, had decided that that matter must stand over until Heywood and Rochdale had agreed upon terms for the running of the future electric trams. Mr. Alderman Hodgkinson urged that the best way out of the difficulty would be for Heywood to have its own trams and to have running powers into Rochdale and Bury, giviug those towns in return running powers into Heywood.

❦ ❦ ❦

Six Months at West Ham.

THE West Ham tramways accounts for the half-year ended September last show that the gross revenue amounted to £30,748 1s. 2d., the actual revenue from the Council's electric cars being £27,748 1s. 2d., and the estimated profit due from the North Metropolitan Tramways Company in respect of horse cars worked by it on behalf of the Council being £3,000. The total amount of working expenses was £17,350 9s. 8d., leaving a balance to be carried to the nett revenue of £13,397 11s. 6d. In arriving at this result the account has been debited under various headings with sums representing approximately the amount chargeable in respect of central administrative departments, including an estimated sum for printing, stationery, establishment charges, Town Hall office accommodation, &c., and an amount of £182 (as agreed between the electrical engineer and the tramways manager) in respect of management expenses in the electricity department properly chargeable to the tramways undertaking. A sum of £1,000 has also been written off in respect of temporary car shed and offices in West Ham Lane, leaving a further amount to be defrayed out of revenue during the next three half years of £3,244 15s. 1d.

❦ ❦ ❦

The Balance.

Following the form laid down by the Institute of Municipal Treasurers and Accountants (Incorporated), after conference with the Municipal Tramways Association, Mr. Patterson, the borough treasurer, has charged as expenditure only interest on capital, £4,510 5s. 9d., and bank interest, £38 10s. 11d., leaving a balance of £8,848 14s. 10d. The amount available, viz., £9,179 7s. 4d., is made up of the balance of £8,848 14s. 10d., and an unappropriated balance brought forward at the 31st March last of £330 12s. 6d. The first obligation to be met is the contribution to sinking fund, viz., £2,162 19s. 7d. This leaves a balance of £7,016 7s. 9d., which Mr. Patterson recommends be disposed of as follows:—Moiety of contribution to borough fund, in accordance with resolution under date the 27th September last, £4,000; contribution to reserve or renewals fund, £3,016 7s. 9d.—£7,016 7s. 9d. The total borrowings to the 30th September amonnted to £248,253 8s. 2d., the expenditure being £196 538 5s. 3d., leaving a balance unexpended of £51,715 2s. 11d.

❦ ❦ ❦

Tramway Workers' Benevolent Fund.

THE tram workers of West Ham are forming a benevolent fund in connection with the local branch of the Amalgamated Association of Tramway and Vehicle Workers, and on Monday they held a concert at the Stratford Town Hall with the object of obtaining a nucleus with which to start the fund. The concert was distinctly a success, the hall being fairly well filled, and it is hoped that a good ronnd sum will be realised as a result. Councillor W. Godbold, who is an honorary member of the branch, occupied the chair.

❦ ❦ ❦

Newcastle Tramways.

FOR a period from 25th March to 29th September last, the Newcastle City Tramways show a balance of income over expenditnre, after having dealt with the items applied to the period under consideration, of £3,413 5s. 5d. According to an interim report, this balance is subject to adjustments that will be necessary on the horse account consequent on the death of two horses which should be debited to revenue at the rate at which these particular horses were valued at March last. Rolling stock should be adjusted by the writing off to revenue of such expenditure under this head as cannot reasonably be considered to have increased the value of the asset, and it is also mentioned that beyond the depreciation represented by the repayment of loans no provision has been made under this head.

REVENUE ACCOUNT FOR HALF-YEAR ENDED SEPT. 29 1904.

❦ ❦ ❦

Successful Ayr Tramways.

IN two and a-half years the Corporation of Ayr, over and above paying working expenses on its tramways, maintaining the whole system in good working order, and paying interest on borrowed capital, shows a clear surplus of £10,579. The entire capital spent has been £77,259; set aside for depreciation, £5,484; repaid, £1,665; sinking fund, £497; and reserve fnnd, £2,931. The working expenses come out as low as 5·16d. per mile. The second annual report for the year ended 15th May, 1904, shows that there are now 17 donble-decked cars, 10 of the reversed staircase type seated for 57, and seven with the ordinary staircase seated for 59, and one combined water-car and snow-plough. One new car has been added, and ten cars repainted and rewheeled with tyred wheels. Those wheels are very quiet running, and do not develop "flats," but have not the life that was expected from them, the flanges, althongh never touched by the brake shoes, being worn off after running 20,000 to 30,000 miles. According to Board of Trade requirements, all the cars are now fitted with earth indicators.

Parcel-Carrying and Greater Speed.

THE Corporation has been hampered in its business by the great restriction on the speed of its trams. At its request, Colonel H. A. Yorke inspected the lines, and granted the Corporation two miles more per hour on nearly every section of the road, so that the maximum is now 12, instead of 10 as before, this being the highest the Board could grant on a tramway with so much single line. In his report to the Board of Trade he gives as his chief reason for granting the request that the tramways have been very carefully and successfully operated from the first. Another point for congratulation is that the parcels-carrying branch of the business is growing, and as people get to know it better even better results are expected. This year's earnings were £51 against £31 the year before.

❦ ❦ ❦

Belgian Rails Accepted.

YARMOUTH Town Council, on Tuesday, considered tenders for between 800 and 900 tons of steel rails and other material for new electric tramways. Of six complete tenders three were for Belgian manufactured materials. The lowest Belgian tender quoted the rails at £4 15s. per ton, and the lowest English rails were priced at £5 4s. 6d per ton. The borough surveyor said the previous rails laid were Belgian, and he found them perfectly satisfactory. Only seven members voted for an amendment that no foreign tenders be considered, and the lowest Belgian tender was accepted by a large majority. The borough surveyor estimates that this course will effect a total saving of £950.

❦ ❦ ❦

Higher Fares Proposed at Cardiff.

THE recommendation of the Cardiff Tramways Committee for a revision of fares on the electric tramways section as and from the 1st of January next, gave rise to a good deal of discussion at a meeting of the Council on Monday. The proposals of the committee were in favour of a general increase in the amounts charged at present, it being suggested that a penny fare shonld carry a passenger on an average 2,308 yards. In London a penny carries a person 4,400 yards; in Glasgow, 4,048 yards; in Liverpool, 4,100 yards; in Manchester, 3,696 yards; in Bradford, 2,992 yards; and in Leeds, 3,085 yards. Consideration of the matter was adjourned.

❦ ❦ ❦

Stalybridge Difficulty.

STALYBRIDGE is still in a difficulty about its tramways. At the monthly meeting of the Town Council on Tuesday, there was considerable discussion about the new joint tramways and the deadlock between Ashton and Stalybridge as to inter-running powers. "Could the chairman give the Council any idea as to how soon there was likely to be an agreement between Ashton and Stalybridge?" was asked. The chairman of the Joint Tramways Board (Mr. Alderman Ridyard) said he could not answer any of the questions; he wished he could. They had offered to Ashton similar terms to those which applied between Manchester and Ashton, but Ashton had not accepted their proposal. He had suggested that they should invite Mr. Boyle, the chairman of the Manchester Tramways Committee, to be chairman of their next meeting, and that he should bring his manager, Mr. M'Elroy, with him; but Ashton would not accept that.

Wigan	4	0	2	2	4	6	2
Southport ...	3	1	2	0	5	10	2

Results of matches played on 7th and 8th December, 1904:—Wigan 2, Sheffield 2; Liverpool 2, Southport 1. (As played up to 9th December, 1904.)

Claim Against the L.C.C.

THE Woolwich and South-Eastern Tramways Company. Limited. is claiming for compensation on the transfer of its system to the L.C.C. The company owns 4½ miles of line, with offices and depot and horse car equipment, and its total claim is for £85,813. Of this sum £25,000 is in respect of street widenings which have not been made. This week Major Cardew, sitting as arbitrator, resumed the hearing of evidence in the claim. Mr. Kincaid, C.E., valued the permanent way at £25,917. He considered the life of the line should be taken at 25 years, which meant that it would have to be relaid at the end of three years from this date. Mr. Hopkins, who acted as engineer to the Liverpool Corporation, gave it as his opinion that the constructional value of the line was £38,625. After making allowance for depreciation, he considered that the present value of the permanent way was £23,051.

Chesterfield's New Tramways.

THE Chesterfield public is waiting for the commencement of the running of the electric tramway. The Tramways Committee hoped that the Board of Trade would be able to send an inspector to-day (Friday), and that the cars would begin to run to-morrow—market day. The Committee has, however, received an intimation that the inspection will not take place till Tnesday next. Immediately the line is officially passed, the cars will begin earning money—week-day and Sunday. It is said that everybody likes the cars, which are of a most up-to-date kind, and there seems a general opinion that the committee and the contractors have suceeded in providing the community with a first-class tramway system in a very reasonable stretch of time. The question of fares to be charged will, it seems likely, cause some agitation, but in this matter the committee is following the advice of an expert.

South Shields Tramway Undertaking.

SOUTH SHIELDS Town Council, which has resolved to municipalise the tramway system of the town, decided this week to commence the laying of lines for an electric system at the earliest possible date, although the lease of the horse tramways does not expire for twelve months. It was agreed to advertise for tenders for the carrying out of the undertaking in the portions of the borough where the present system does not exist. These lines will run into districts which have sprung up within the past few years.

CRIPPLED TRAMCAR SERVICES.

APPEAL FOR GREATER SPEED.

THE following letter has been addressed to the President of the Board of Trade:—

Sir,—The Council of the Tramways and Light Railways Association has instructed me to communicate to you its strong opinion that the speed limits on tramways should not be more stringent than the limit for motor-cars, and especially for motor-omnibuses, on the same road.

It desires me respectfully to point out that under Sec 9 of the Motor-Car Act, 1903, the limit for motor-cars is 20 miles an hour, unless (a) on the petition of the local authority, (b) by the order of the Local Government Board, a lower limit is enforced, and this limit can never be less than 10 miles an hour. This enactment is a recognition by the Legislature of the obvious scientific fact that a higher speed is now practicable for road traffic, with due regard to the public safety, than was heretofore supposed to be desirable, and it affords a good reason for revising all previous bye-laws fixing the limit of speed on tramways.

The tramway owners are now in many cases, and at vast expense, furnishing a wider road and smoother track for the use of competitive motor-omnibuses, which are not subject to the same limitations of speed. There is no scientific reason why, except, perhaps, on very sharp gradients, tramcars should not safely be allowed to run as fast as motors. There are, indeed, many practical reasons to the contrary—the tramway owners are always ascertainable and always responsible in case of accidents; they only run on a defined track, and that generally at a good distance from the footway; the danger of the roads is much increased by the practical necessity for motor-cars to swerve aside in order to pass tramcars creeping along within the legal limits.

My Council respectfully suggests that the Board of Trade should notify that, as a general rule, it will adopt the limit of 20 miles prescribed by the legislature in the case of motor cars, and that it propose, subject to any exceptions that may be necessary in special cases, to modify its regulations in this sense. This would leave unaffected any bye-law of local authorities prescribing less speed, but when sanctioning fresh bye-laws the Board of Trade would, it is assumed, have regard to the said considerations. The Board of Trade is of course aware that, in the case of tramways, as in the case of motor-cars, the fact that the car is running within the legal limit is no answer to a claim in case of accident. The tramway owners would still have every reason for restraining their drivers from recklessness or carelessness.

My Council believes that this matter urgently demands the attention of the Board of Trade in the interests both of the travelling public and of the private or municipal capital embarked in tramways.—I have the honour to be, sir, your obedient servant,

ERNEST BENEDICT, Secretary, the Tramways and Light Railways Association.

HOUSING REFORM.

ANOTHER CONFERENCE.

A LARGE meeting of delegates from metropolitan and suburban borough councils, trade societies, labour committees, and trade unions was held last week at Essex Hall, Strand, London, to discuss a series of resolutions upon the housing question, Mr. W. Steadman, L.C.C., presiding. Among those taking part in the proceedings were Dr. Macnamara, M.P., Mr. Henry Tozer, chairman of the Housing Committee, Westminster City Council; Mr. Dew, L.C.C., and Mr. Knee, secretary of the conference.

The chairman said the object of the conference was to wake up the Government to a sense of the need of legislation for the workers of this country to protect them from the rapacity of landlords, high rents, and the crowding and insanitary surroundings resulting therefrom. The English workers were as much in need of a rent court as the Irish, and required legislation on the lines of the Irish Land Act.

The first and principal resolution, which was moved by Mr. Knee, called upon the Government to provide improved financial facilities for the carrying out of municipal housing schemes by any of four methods:—(1) By empowering local authorities to issue non-interest-bearing notes; (2) by grants from the Imperial Exchequer; (3) by levying direct rates for housing purposes; (4) by a tax on site values, a portion of the funds so raised to be set aside for housing purposes.

In support of the resolution Dr. Macnamara stated what had been done by the Workmen's National Council in promoting their Housing Bill, of which he had had charge for three years. Their chief objects were to obtain loans for housing and re-housing purposes at interest not exceeding 2 per cent. and for terms extending to 100 years for repayments, to provide for re-housing prior to demolition, and to tax land values so as to secure a revenue upon which a preferential claim should be given to schemes under the Housing Acts. Considerable progress had been made, in proof of which he referred to the majority by which Sir G. Trevelyan's Bill had passed its second reading, but there was no driving power behind the housing question in Parliament. Instead of being forced on by a powerful organisation, the subject seemed to be regarded by most of those friendly to housing schemes with a sort of amiable helplessness tinged by cynical indifference.

The hon. member quoted some remarkable figures from the report of the committee considering the question of the alleged physical deterioration of the nation. In Hampstead the expectation of life of a person aged 10 had an actuarial value of 53 years, but in Southwark the same life had only the value of 45 years. At the age of 40 the expectation of life was in Hampstead 27 years, in Southwark only 21 years. The reason was that in Hampstead the population was only 34 persons to the acre, but in Southwark 212. The respective annual death rates were 14·4 and 30·6 per 1,000. The recent revelation of the waste of public money during the war in South Africa proved that plenty of public money ought to be available for housing the working classes. The speaker suggested the withdrawal of the third of the methods mentioned in the resolution. To levy a direct rate for housing schemes would tend to make them unpopular.

Mr. Henry Tozer, as an amendment, proposed to omit Clause 3 from the resolution, and Mr. Ross (Woolwich) having seconded, a long discussion followed, in which the delegates were about equally divided for and against the proposal to levy a special rate. At length, on a division, the numbers were declared to be, for the omission of the clause, 162, against 160. Other resolutions were carried condemning the reckless and irresponsible demolition of houses occupied by workers, and urging the organisation of improved means of transit and locomotion for London, by the construction of new main roads and of light and other railways for the metropolitan and surrounding districts.

AN ALL-NIGHT SITTING.

BRADFORD CITY COUNCIL TIRED.

THE exact time occupied by the last meeting of the Bradford City Council was 11 hours and 35 minutes. The members met at three o'clock on Tuesday, and did not rise until 2.35 on Wednesday morning. The previous record sitting was created not long ago, but it was only of five hours and 40 minutes' duration, so that the meeting of Tuesday more than doubled the previous longest meeting.

Over an hour was taken up in discussing the proposal to remove the sludge from the dam at Frizinghall, and had the mayor not put his foot down in relation to the discussion of the report of the electrical engineer on a recent explosion in Forster Square, it would have been a case of more than "round the clock," instead of half an hour short of it.

At exceptional sittings such as this, one expects not a little excitement, but, as the Mayor stated at the close, there was good feeling for the most part, after the question of feeding the children had been got out of the way. When it got to be about 11 o'clock many of the members entered into the "sport of the thing," and thus it came about that the Mayor had to appeal for a more serious spirit.

MR. EDMUND PEARSE, inspector of the Local Government Board, held an inquiry at Dartmouth on Wednesday into an application of the Town Council for a Provisional Order under Sec. 303 of the Public Health Act, 1875, to enable the Corporation to provide a new Market House, Town Hall, and municipal offices; to borrow money for the purpose; and to employ Corporate funds in part payment of the cost of the works; to alter the tolls authorised by the existing local Act to be taken in respect of the market, and, if advisable, to levy other tolls.

No. 621.—Vol. XIII. DECEMBER 23, 1904.

STATE CHILDREN'S HOMES.

The New and Enlarged Bristol Union has just Completed a Very Thorough and Varied System of Dealing with Its Children. Combination of Boarding-Out, Cottage Groups, Scattered Homes, Service Homes, &c.

SUCH giant strides have the guardians for the city and county of Bristol made within the last few years in the treatment of Poor Law children that to-day it is second to no other union in England in the matter.

The erection, and the occupation within the last few weeks, of a group of homes marks the completion of a scheme for the treatment of children which was adopted by the guardians, after careful consideration, soon after the formation in 1898 of the enlarged union.

At that date Cimmerian darkness filled the minds of the guardians as to the treatment of the children, and they were left—over 500 of them of various ages—except a limited number in institutions and certified schools, in three gloomy workhouses, not even going outside to receive their education.

The guardians began to think, and at once realised that, apart from the undesirability and expense of retaining them in the three establishments, the policy, now happily everywhere gaining ground, of separating them from all connection with the workhouse ought to be followed. A committee was appointed to obtain fuller information, and make personal investigation into the various systems of scattered homes, grouped cottage homes, &c., established in a few large unions.

The principles urged upon the guardians for adoption were somewhat unique. It was argued that the number of children for whom the guardians were responsible was so large that it would not be desirable to adopt any one method, however good, or the whole, but that each child should, as far as practicable, be dealt with on the system or in the class of home or institution which appeared, after a reasonable period of observation in the Receiving or Probationary Home, to be likely to be most beneficial. The various Homes erected and now completed are as follows:—

Headquarters or receiving homes for	24 children
with homes attached for children temporarily chargeable, and "ins and outs," &c.	36 children
Scattered homes (16) in various districts of Bristol for about	200 children
Cottage homes group in country for about	150 children
A convalescent home, or homes for sickly and delicate and convalescent cases	50 children

GROUP OF COTTAGE HOMES.

Sick children were to be treated in infirmary wards wherever the latter were provided, and the making of special provision for imbecile and idiot children, children remanded by justices, &c., was deferred, but is now under further consideration.

The guardians favour the boarding-out system, and practically all children eligible have been boarded out, either in homes outside Bristol under the ten boarding-out committees which have entered into agreements with the guardians, or in homes within the union under the Clifton Boarding-out Committee. The total number now so boarded out is 118. In addition, a large number of children, viz., 16 boys and 75

THE HALL.

girls, needing, from physical or other causes, special treatment, have been placed in institutions not under the control of the guardians, or in industrial and other homes certified by the Local Government Board.

How keenly the guardians have the interests of the children at heart is shown by the fact that they have overcome the absurd prejudice against giving children a new start in life in a new country and away from the contaminating influence of undesirable relations and "friends." Annually they have availed themselves of the facilities afforded by emigration for placing out special cases of orphan and deserted children, and through the agency of the Bristol Emigration Society have sent 121 children—96 boys and 25 girls—to homes in Canada in the last six years.

The guardians have also very largely exercised the power of assuming control of children of worthless parents under the Poor Law Acts, 1889 and 1899, the number so adopted being no less than 394, many of whom are still chargeable, while others have been placed out in service or returned to their parents and relatives.

This record of six years' work for the children probably stands unique in the history of English Poor Law administration.

A brief description of the various homes should be of interest to guardians contemplating any new step for the treatment of their children. The group of headquarters (receiving and "ins and outs" homes) consists of three blocks :—

(1) A receiving home for 12 boys and 12 girls, to which every child over four years of age, on becoming chargeable, is sent direct, when the parent or parents (if any) are admitted to one of the workhouses. Each child is cleansed and clothed here, and remains under medical and other observation for a period of probation, 10 to 14 days, or longer if necessary. A store is provided for each child's own clothing.

(2) A block for 36 children (18 boys and 18 girls) temporarily chargeable ("ins and outs"), and children requiring continual observation and special supervision, and not suitable for the permanent homes.

(3) A block, containing the residence of the superintendent and matron of all the homes for children, with offices, stores, laundry (not yet completed), &c

The 16 scattered homes, which accommodate 198 children, have been established in four groups, each group consisting of two blocks of semi-detached houses in different streets or roads, this plan being regarded as preferable, because it enables the guardians to provide a means of fire-escape, regarded by the Local Government Board as essential, in the form of an iron communicating door between each two houses on the upper floors, which door can also be utilised in case of sudden illness of a foster-mother or other emergency, the mother in the adjoining home being thus enabled to give some oversight pending proper supervision being provided. The children in each of these homes attend the public elementary schools and churches near their respective homes, and join in all other organisations (Bands of Hope, &c.) available. They are, as a whole, extremely well-spoken of by day and Sunday School teachers and others, and associate freely with all in the neighbourhood of the homes, and in games, &c.

The houses are in all cases held by the guardians under leases or annual tenancies, at rents ranging from £23 to £28 per annum, and are used by two classes of children—those (1) likely to remain permanently chargeable, and (2) with no relations or friends likely to influence them injuriously, or improperly interfere with them.

If we might venture one word of criticism of so excellent a system, it would be that two of the homes, at least, each containing fifteen girls, are somewhat large. Sheffield, the pioneer of the scattered Homes system, made this very mistake, and has had since to go back upon its work. The other homes, however, each contain twelve children, which number must be considered quite large enough.

The cottage homes group opened the other day by Mr. Walter Long as a completion of the entire scheme, comprises a lodge at the entrance, seven blocks of semi-detached (14) houses, a convalescent home for sickly and delicate children, and a small hall for general purposes, school when necessary, &c. Each of the semi-detached houses accommodates 12 children, and the total accommodation (not including 36 beds in the convalescent home) is for 168 children, principally younger ones and those needing closer supervision than can be given in the scattered homes.

THE CONVALESCENT HOMES.

The economic soundness of the *raison d'être* of what are called the Service Boys' Homes, attached to these homes, will very probably be questioned. They are available for boys sent to first situations, where the wages are insufficient to enable them to provide board and lodging. A proportion of the lads' wages is applied to their maintenance, and the remainder expended on clothing or banked.

The Local Government Board in sanctioning this arrangement required that its use should be restricted to lads under the control of the guardians by virtue of the Poor Law Acts 1889 and 1899.

"MERSEY CITY."

A Conference is to Take Place Between the Liverpool, Birkenhead, Bootle, and Other Authorities Concerning the Proposed Federation Scheme. A Memorandum from the Town Clerk of Liverpool Demonstrates the Desirability of Federation, and Indicates Methods by Which it May be Effected.

THE Parliamentary Committee of the Liverpool City Council on Tuesday considered the proposal for the federation of the Mersey boroughs and adjoining districts.

On the motion of the chairman (Alderman Burgess), seconded by the deputy-chairman (Alderman Williams), the following resolution was passed:—

> This Committee, being of opinion that it might be to the mutual advantage of the city of Liverpool and the boroughs of Bootle and Birkenhead and the adjacent districts if they could be federated for local government purposes, recommend the Council to authorise this Committee to confer with the councils of such boroughs and districts with the view of ascertaining whether they would be willing to co-operate in formulating a scheme for the purpose, and report the result to the Council.

Thus the first practical step towards the new "Mersey city" has been taken. How desirable federation is, and how beneficial the effects of such a scheme would be to the districts concerned, is explained iu a memorandum which has been prepared on the subject by the town clerk of Liverpool (Mr. Edward R. Pickmere), which we are able to publish this week. It must be distinctly understood, however, that the scheme contained in the memorandum has not yet been endorsed bv the Liverpool Parliamentary Committee. The memorandum is as follows :—

The city of Liverpool and the adjoining boroughs and urban districts now contain a population of nearly 1,000,000 persons, located as follows:—

Liverpool, with Fazakerley	...726,930 (1904 estimate)
Birkenhead	...113,000 (1903 estimate)
Wallasey	... 53,579 (1901 census)
Bootle	... 60.800 (1903 estimate)
Waterloo, Seaforth, Litherland, Orrell, Great Crosby, and Little Crosby	... *45.312 (1901 census)
Total	... 999,621

* Except Orrell, which is estimated.

A Community of Interest.

This large population is so knit together by a common interest that it practically forms one community.

Wallasey and the suburbs of Birkenhead are largely inhabited by people who obtain their livelihood in Liverpool, and if the means of communication were increased between Liverpool and the Cheshire shore, and if Bootle were connected by ferry or tunnel with the same shore, there would no doubt be a much greater number of Liverpool and Bootle business people living on the Cheshire side of the water than there is even at the present time. Again. in the case of Waterloo, Seaforth, Great Crosby and Little Crosby, a very large number of Liverpool business people reside in these districts, and they have now become residentia l parts of Liverpool. The migration of Liverpool people to the districts outside the city will increase in proportion as the erection of a small class of house proceeds on land at present largely occupied by, or adjacent to. better-class houses. This exodus of the wealthier classes from Liverpool may have, in the future, a detrimental effect npon the city, and such institutions as hospitals and charitable institutions generally, will in time undoubtedly suffer because the interests of the people will be where they live rather than where they work. The boundaries of a town are often extended to inclose within its jurisdiction such of the population as spreads into an adjoining district, but, except on the east and south sides, this is now practically impossible in the case of Liverpool, shut in as it is on the west by the river and on the north by Bootle.

For "Mutual Advantage."

Having regard to the great difficulties which are nearly always met with in attempting to extend the boundaries of a town, so as to include an adjoining local authority, it seems desirable to consider whether some arrangement could not be made whereby local government areas could be joined together for their mutnal advantage, and formed into one governing body, without entirely extinguishing the identity of each area. If such an arrangement could be carried out, the smaller outlying districts might form part of the larger areas adjoining, and the various larger areas might be federated, so that important questions affecting equally the whole community could be dealt with by one governing body, leaving to each individual district so federated the right to manage its own purely local affairs.

The Local Government Act, 1888 (Sec. 54), provides for the union of boroughs by means of a Provisional Order made by the Local Government Board, as well as for the extension of boundaries, and there would, therefore, be no diffiulty in carrying out such a scheme in connection with Liverpool and the surrounding boroughs and districts if it were done by mutual consent.

The Basis of a Scheme.

The question now arises on what basis could such a scheme be carried out.

The government of the metropolis by the London County Council and the London borough councils may be cited as an attempt in the direction indicated, but on a carefnl examination into the mode of government of the administrative County of London, and the London Borough Councils, it will be found that there is overlapping of jurisdiction in certain cases, and a good deal of friction caused thereby.

The principal matters over which the County Council has jurisdiction are as follows:—(1) Maintenance of main sewers land disposal of sewage, (2) superintendence of new buildings and laying-out of new streets, (3) schemes under Housing Acts (except Part III. transferred to Borough Councils), (4) extinguishing of fires. The Borough Councils have the maintenance of main roads existing in 1899, the enforcement of bye-laws and regulations with respect to dairies and milkshops, slaughter-houses and offensive businesses, also certain minor powers and duties in respect of such matters as the removal of obstructions in streets, unauthorised sky-signs, demolition of unsafe buildings, and power to make bye-laws under Sec. 23 of the Municipal Corporations Act, 1882.

Liverpool and Others.

The position of Liverpool with regard to the adjoining local authorities is not in any way analogous to that of the old Metropolitan Board of Works and the London Vestries, because the Board's authority extended over the combined areas of the vestries, whereas the areas of Liverpool and the adjoining local authorities are quite distinct and self-contained. There might be great difficulty in obtaining the sanction of Parliament to a large county council area being created containing a city and a number of boroughs and other districts. There does not, however, appear to be any difficulty in carrying out the same principle in another way, viz., by uniting the various bodies for government in respect to matters which affect all alike, giving the various constituent districts a certain amount of local autonomy.

Liverpool, Bootle, and Birkenhead form part of the Port of Liverpool, and the Mersey Docks and Harbour Board has large valuable docks in the areas of each authority.

The three towns are mainly dependent upon the trade at the docks, and at the present time the users of the docks in Liverpool and Bootle are paying a considerable snm per annum towards the interest on the debt upon the docks in Birkenhead. Any concession made to Birkenhead by the Dock Board in the matter of rates is considered by Liverpool as prejudicial to its interests, and it is well known that Birkenhead has been endeavouring to induce the Dock Board for some time to improve its estate in Birkenhead.

One Rating Authority.

If Liverpool, Bootle, and Birkenhead were virtually one rating authority generally dependent upon each other within certain limits, then these questions of preferential treatment would not be raised, and dock improvements carried out in one district would indirectly, if not directly, benefit the other, becanse they would be beneficial to the port generally.

The question, therefore, to be considered is how such a union of government can be best carried into effect.

The following is a broad outline of a scheme for this purpose:—

It would, in the first place, be necessary to define the areas of thecontributing authorities, and these might be constituted as follows:—

1. Liverpool with Fazakerley.
2. Bootle with Orrell, Litherland, Seaforth, and Waterloo, Great Crosby and Little Crosby.
3. Birkenhead with Wallasey.

The areas included in Nos. 2 and 3 might be sub-divided, if found desirable.

Each of these could be governed by its own council.

A central authority could then be formed from these three district councils by the nomination of representatives by each according to population or rateable value.

The central authority would govern and regulate all matters and undertakings which equally affected each separate community, such as water supply, police, electric supply, tramways and education, and probably the construction and improvement of main thoroughfares.

The central council should be given power to delegate to each district council certain matters of a purely local character, and vote the necessary moneys to enable the district councils to carry out their duties upon estimates submitted annually by the councils to the central council for the purpose, and the district councils should have the power to appoint such committees as might be necessary for the administration of the districts.

The raising of loans and levying of rates should be under the jurisdiction of the central council.

With regard to the rates to be levied in the various districts, it would be impossible to have one uniform general rate either for sanitary or borough fund purposes, because, so far as these rates represent the interest and sinking fund contributions of the debts existing in each district when federated, it would not be fair to charge the ratepayers of one district

Name of district.	Population of each area.	Total population of combined areas.	Total rateable value of each area.	Total rateable value of combined areas.	Rateable value per head of population of each area. Approx.	Total rateable value per head in each of the combined areas.
					£	£
Liverpool (including Fazakerley) ...	726,930*	726,930	4,475,855	4,475,855	6 1/4	6 1/4
Birkenhead	113,000*	—	593,000	—	5 1/4	—
Wallasey	53,579†	166,579	341,000	934,000	6 1/4	5 5/8
Bootle	60,800*	—	515,787	—	8 1/2	—
Waterloo	23,102†	—	120,000	—	5 1/4	—
Litherland	10,592†	—	50,866	—	4 3/4	—
Great Crosby	7,555†	—	50,111	—	6 1/2	—
Little Crosby	563†	—	5,304	—	9 1/2	—
Orrell	3,500*	106,112	11,516	753,584	3 3/4	7 1/4
	999,621	999,621	6,163,439	6,163,439		

* Estimated. † 1901 Census.

with the rates levied for these purposes in any other district. Each district should provide for the repayment of its existing debt.

Subject, however, to the outstanding debt of each district being ascertained on a given day, and provision being made for the necessary rates being raised in each district to meet the charges for sinking fund and interest, there is no reason why one uniform rate should not, thereafter, be levied over the whole local government area to meet ordinary expenditure, and also the charges for interest and sinking fund on future capital expenditure.

If Liverpool, Bootle, and Birkenhead were united in the manner suggested, the following advantages would accrue:—

(1) There would be a common interest in promoting the commercial prosperity of the port.

(2) United action could be taken in any question affecting the health and welfare of the inhabitants, such as schemes for drainage, increased communication between the various districts, and a better water supply, &c.

(3) The beneficial enactments obtained by one borough, or district, could be extended to the other boroughs and districts.

(4) The social life of each borough, which has its centre at the respective town halls, could be maintained.

(5) Most of the existing officers could be maintained in their positions, thus saving the heavy cost consequent upon having to pay compensation for abolition of office.

This is merely an outline of the scheme, the details of which would have to be carefully considered and worked out; and among other questions for consideration would be the adjustments which would have to be made between the boroughs, or districts, to meet the loss caused by the payment to the general rate of the future profits from undertakings such as tramways, electric lighting undertakings, ferries, gas, &c.

The differential rating now existing in Liverpool and Birkenhead would have to be provided for unless the districts affected would agree to come into the general scheme for equal rating after the union.

BRADFORD MARKET EXTENSION SCHEME.

BIG WORK NECESSARY.

TO encourage the trade of the town, the Bradford Corporation is seeking powers to spend £45,000 for the extension of two of its markets and for the covering of a portion of a third. The present demand for the stalls is so great that in one market (St. James's) people are erecting wooden structures on the ground let to them by the Market Committee. Other large towns in the north of England are covering their markets, and unless Bradford does the same trade will go elsewhere. This week a Local Government Board inquiry into the application to borrow the money has been held.

STRATFORD AND ITS ELECTRIC LIGHT.

THE Stratford-on-Avon Town Council decided on Tuesday night to apply to the Board of Trade for a Provisional Order to extend the time limited by the Electric Lighting Order of 1901 for laying the mains in the compulsory area, and to allow the transfer of powers to the Birmingham Installation Company. The agreement with the company was sealed. The company agrees that the charge for lighting streets and other public places shall not exceed 2½d. per Board of Trade unit, for motor and power purposes 3d., and for lighting private premises 5d. The Corporation has the right to purchase, at the expiration of 11 years, at a figure equal to the previous five years' profits, plus the valuation of the works.

MR. H. D. BLAKE, managing director of the Limmer Asphalte Paving Co., Limited, has been elected a member of the Royal Sanitary Institute.

EDUCATIONAL NOTES.

Extra-District Children — Whitehall Circular. The Police as School Attendance Officers. Clay Pipes for Soap Bubbles. Inspection of Secondary Schools in the Metropolis. The Right of Entry at Walthamstow. Warrington and Married Women. Babies' Galleries a Liability of the Managers. Teachers' Houses in Wiltshire.

Bedfordshire. — The Education Committee decided, in cases where teachers were temporarily disengaged owing to closure of their schools through epidemics or otherwise, they be required to teach in other schools within the county. Extra payments are to be made for such time as the teachers are so engaged.

Boston.—The Education Committee refused an application from the trustees of the Bluecoat Voluntary Schools asking to be allowed to repay, out of the income of the charities belonging to the schools, the interest and instalment of principal on a loan of £580 which it was proposed to borrow to purchase property adjoining the school. The income derived by the Education Committee from the charities was £119.

Burton-on-Trent.—The Board of Education has intimated to the Education Committee that it would not be to the interests of the Borough for the committee to establish and maintain a secondary school of its own, and has forwarded suggestions for the formation of a suitable governing body of such a school.

Combination of Authorities.—Many difficulties have lately arisen in cases where children, residing in the area of one local authority, attend schools situated in the area of another. In Circular No. 516, just issued, the Board of Education points out that, in such circumstances, it is open to the authorities concerned to make arrangements for the joint administration of a school common to both districts, and attention is directed to the following points:—(1) Any agreement embodying these arrangements should be expressed to be between the councils concerned and not the education committees. (2) Some of the managers should be appointed by each authority concerned, but the duty of maintaining the school will remain with, and the managers will be solely responsible to, the authority in whose area the school is situate. (3) To this authority the other party to the agreement should pay a contribution, either fixed, or dependent upon the average attendance of children from the two areas. (4) The agreement should provide means by which either authority may withdraw from the combination, and should be expressed to be subject to the approval of the Board of Education.

Darwen.—The Board of Education has sent to the Education Committee the general conclusions of his Majesty's inspector as to the provision of adequate public elementary school accommodation in the borough. The report of the inspector recommends the supply of four additional schools.

Devonport.—It was reported to the Education Committee that the police had given the names of 160 children found in the streets, and that the attendance officers had visited the homes of the children in each case.

Devonshire.—The Education Committee declined the payment of a small sum to a person who would mind the children in one of the infant schools during the dinner hour. The question of admitting children under three years of age was raised, and it was reported that in one instance an account was submitted for 6s. for clay pipes which were used by the children to blow bubbles. It was ultimately decided not to admit children under three years of age in future.

Essex.—The Education Committee wishes to purchase about 100 pianos, and has applied to the Local Government Board as to the granting of a loan for this purpose.

Glamorganshire.—The Education Committee has started classes for teachers in the subject of school hygiene at the University College, Cardiff.

Hereford.—The Education Committee has recommended the Town Council to provide in the city and neighbourhood a secondary school, to accommodate 150 boys between 15 and 16 years of age.

Kent.—The County Education Committee has authorised school managers to arrange locally for the purchase of cleaning materials, firewood, &c. The managers may also order urgent repairs to furniture up to £3 in cases where the committee is liable for such repair.

London.—The Education Committee has recommended the Council to hand over the duties of management of the ordinary evening schools to the Council's managers of the day schools in which buildings evening schools are held.

Manchester.—The report of the Corporation's Employees' Thrift Fund just issued states that the fund stood at £136,416 on 30th September, 1904, and that out of 3,226 employees of the Education Committee eligible, only 1,414 have contributed.

Norwich.—The Education Committee has considered a scheme for the award of prizes, varying in amount per scholar in average attendance from 4/5 of a penny for infants to 1s. for senior scholars. Prizes are to be awarded for punctual attendance.

Walthamstow.—The Education Committee inquired recently into the case of a teacher in a non-provided school, and subsequently a sub-committee visited the school to hold an inquiry. During the proceedings a manager of the school challenged the right of the education authority to hold an inquiry at the school. The matter has been referred to the Board of Education.

Warrington.—The Education Committee has received the following reply from the Board of Education on the employment of married women as teachers. The Board of Education "is of opinion that the local education authority is entitled to lay down a general rule that no married women shall become or remain teachers in the schools maintained by the authority. The Board would regard such a general ground of objection as an educational one under Sec. 7 (1) (*c*) of the Education Act, 1902. I am to point out, however, that, though the Board acquiesce in your council's rule, if made of general application throughout the area of the local education authority, there are some reasons—*e.g.*, the dearth of teachers, the greater experience of married women in dealing with children, and the greater probability of their continuing in the profession, which, as it seems to this Board, would incline your council to make the rule an experimental one for a short term of years only."

Waterloo (Lancs.).—The Education Committee has been informed by the Board of Education that the Board is of opinion that alteration in infants' galleries is such an improvement of the buildings as may be reasonably required by the local education authority, and therefore one for which the managers are liable under Sec. 7 (1) (*d*) of the Education Act, 1902.

Wiltshire.—The Education Committee has been informed by the Board of Education, in reply to an inquiry, that there is nothing in the Education Act of 1902 to compel a local education authority to rent a teachers' house attached to a voluntary school unless it desires to do so.

THE Fishmongers' Company has sent a further gift of twenty-five guineas, and the Salters' Company five guineas, to the funds of the Bethnal Green Free Library, E.

ENGLISH TELEPHONY.

The Position To-day Compared with the Rest of Europe. British Manufacturers and Traders Permanently at a Disadvantage. Low Rates Proved by Municipal Action to be Practical. Wherever there is Competition, the National Telephone Company Reorganises and Modernises Its System. An Impressive Warning as to the Dangers of Government Purchase Without First Ensuring Low Rates.

[By Mr. ALFRED R. BENNETT, M.I.E.E.]

THE following is a statement, compiled from published rate lists and advertisements, of the National Telephone Company's tariffs in towns where competition exists or has existed. The most noteworthy points are the £5 per annum exclusive line, with unlimited number of calls, for private houses at Hull, and the suppression of the £10 and £8 10s. unlimited rates at Portsmouth and Swansea. Where Corporation competing exchanges exist their tariffs are also given.

Many of the tariffs have been in operation for years—that at Sheffield for about 12 years, and those at Glasgow, Tunbridge Wells, and Portsmouth for from two to three years, and they are still vigorously pushed. They cannot, therefore, be taken as experimental rates, but rather as representing what are remunerative rates to the company, and what British cities and towns can be telephoned for. There is danger that the Post Office, in carrying out the contemplated purchase of the telephones, may pay such a price as to make any cheapening of telephony in the United Kingdom impracticable, thereby placing British manufacturers and traders permanently at a disadvantage as compared with their competitors in foreign countries, where cheap telephone rates prevail. They are already so in respect to telephone trunk line rates, as those charged by the British Post Office have no parallel elsewhere in Europe. Foreigners are also free from the terminal charges which the National Telephone Company is permitted to impose on trunk messages exchanged between its subscribers and those of the Post Office and Corporations.

Exorbitant Price for Old Plant.

At different times the Corporations of Hull and Eastbourne have negotiated for the purchase of the company's system in their respective areas, but both found that the price demanded for the old plant was about three times the cost of an entirely new exchange. Purchase on such terms was out of the question, as it would have precluded the possibility of giving their burgesses lower rates. It is unlikely that the company will sell to the Post Office except on some such favourable terms; it can scarcely ask its shareholders to write off a proportion of their holdings, and as many have bought into the company at 106·8 for the purpose of making a profit out of the anticipated sale, it is improbable that they would agree even if asked. Consequently, there is a likelihood of the Post Office recommending Parliament to buy at a price that would burden the public with high rates in perpetuity. It is true that a Select Committee has been promised, but no terms of reference have been mentioned, and it is by no means certain that it is intended that the Committee shall take evidence and sift matters to the bottom.

It therefore behoves local authorities, chambers of commerce, trade associations, and kindred bodies throughout the kingdom to take concerted action to impress upon the Government that any purchase of the telephones would be useless unless it could be arranged beforehand to ensure that the low rates proved to be practical by the corporations and by the company itself, as demonstrated by its published tariffs, can be made universally applicable. It would be suicidal to agree to a price without ascertaining definitely what scale of rates that price would render practicable. The Post Office makes a recurring loss on the telephone business which it at present conducts. The Treasury, after a purchase, would certainly insist on rates that would produce a profit on the purchase price, and so, unless foresight be exercised, telephone users may have their rates raised instead of reduced. Further, if no purchase takes place, it should be made a condition of any prolongation of the company's licence which may be granted in any part of the kingdom, that the reduced rates now in force at Glasgow, Hull, &c., be brought into immediate use universally and permanently.

The Fruits of Competition.

A secondary point for consideration and investigation is why the company's telephone charges differ so materially in different places. Why should it charge so much lower in Glasgow than in Huddersfield, in Hull than in Edinburgh, in Portsmouth and Brighton than in Southampton and Ramsgate, and in Swansea than in Cardiff?

It is remarkable that no distance limit is imposed on any of the rates, low as they are, except at Sheffield and Tunbridge Wells. This is another inequality between competitive and non-competitive towns which calls for redress.

Wherever there is competition, too, the company reorganises its system, modernises its apparatus, and spares no expense to meet its subscribers' wishes. It opens public telephone call offices everywhere. In Glasgow it now has over 1,000 such offices, whereas before the competition there were only some dozen or so.

It should be understood that the corporation tariffs are remunerative. In no cases are corporation exchanges being run at a loss, while they continue to grow in spite of all opposition.

GLASGOW TELEPHONE AREA.

Population 1,000,000.

National Telephone Company.

1. EXCLUSIVE LINE.—Unlimited use, £10 a year first connection. Second connection, £8 10s. a year.
2. TWO PARTY LINE.—Unlimited use, £6 a year.
3. EXCLUSIVE LINE.—Measured service, £5 a year, 600 calls. Excess calls 1d. each, or £300 for £1.
4. FOUR PARTY LINE.—Unlimited use, £4 a year.
5. TEN PARTY LINE.—No installation charge, subscriber to guarantee 2d. a day (payment for two calls). Extra calls, 1d. each.
6. OMNIBUS LINE.—25s. a year for 600 outward calls. Excess calls, ½d. each.
7. SPECIAL EXCLUSIVE LINE for private houses, £5 for 1,500 calls. Excess calls, 1d. each.
8. EXTENSION STATION in the same building as the main station. On a message rate liue, 15s. a year. Ou a flat rate liue, £1 a year.

Special terms to large users. All inward calls aro freo.

Corporation.

EXCLUSIVE LINE.—Unlimited use, £5 5s. per annum.
TOLL SERVICE.—Exclusive line, £3 10s. per annum, and 1d. for each outward call.
TWO PARTY LINE.—Unlimited use, £4 4s. per annum.
FOUR PARTY LINE.—Unlimited use, £3 3s. per anuum.
All inward calls are free.

HULL TELEPHONE AREA.

Populatiou, 300,000.

National Telephone Company.

EXCLUSIVE LINE.—Unlimited service, first connection, £10 per annum. Secoud connectiou, £8 10s. per annum.
Private Houses, £5 per annum. Exclusive line, unlimited service.
Rates for Large Users:—
10 or more exchange lines, £7 per line per annum.
15 or more exchauge liues, £5 10s. per line per annum.
LINE TO BE USED FOR TRUNK LINE CONNECTIONS ONLY, £5 per anuum.
EXCLUSIVE LINE.—Measured Service:—

600	messages,	£5 per aunum.

Additional calls, ½d. each.
TWO PARTY LINE.—£3 per annum, with unlimited service.
TEN PARTY LINE.—No installation charge. Subscriber to guarantee 1d. per day (payment for one local call).
OMNIBUS LINE.—25s. per annum for 600 calls. Extra calls, ½d. each.
All inward calls are free.

Corporation.

EXCLUSIVE LINE.—Unlimited use, £5 10s. per anuum.
EXCLUSIVE LINE. Toll service, £3 10s. per annum, with 1d. for each outward call.
PARTY LINES:—
Two Party, unlimited use, £4 4s. per annum.
Four Party ,, ,, £3 ,,
All iuward calls are free.

SWANSEA TELEPHONE AREA.

Population, 150,000.

National Telephone Company.

No mention is made of any £10 or £8 10s. unlimited rate.
EXCLUSIVE LINE.—Measured service:—

1,800	messages ...	...	£5 0 0	a year.
2,500	,, ...	...	5 10 0	,,
3,000	,, ...	...	6 0 0	,,
3,500	,, ...	...	7 0 0	,,

½d. for each additional outward message.
EXCLUSIVE LINE.—Message rate, £3 10s. a year, and ½d. per message.
TWO PARTY LINE. Unlimited use, £3 a year.
TEN PARTY LINE. Subscriber to guarantee 1d. per day (payment for one message). Extra messages, 1d. each.
OMNIBUS LINE. 600 messages, £1 5s. a year. Extra messages, ½d. each.
All inward calls are free.

Corporation.

EXCLUSIVE LINE. Unlimited use, £5 per annum.
EXCLUSIVE LINE. Toll tariff, £3 per annum, with 1d. for each outward call.
All inward calls are free.

TUNBRIDGE WELLS TELEPHONE AREA.

Population, 70,000.

National Telephone Company.

EXCLUSIVE LINE. Unlimited service, £6 per annum.
MESSAGE RATE.—£3 10s. per anuum, and 1d. per outward call. Subscribers to guarantee a miuimum payment of 30s. per annum, and to deposit that amouut as security.
TEN PARTY LINE. No annual payment. Outward

calls, 1d. each. Subscriber to guarantee a minimum of 2d. per day. Money collected in slot machine.

TWO PARTY LINE.—Same as Ten Party Line, but subscriber must guarantee a minimum of 4d. per day.

All inward calls are free.

Foregoing rates for exclusive lines apply to one mile from the Exchange only, and in the case of Party Lines to 220 yards from a main circuit.

The low rates in the Tunbridge Wells area were brought about by the establishment of a Municipal Telephone Exchange, which, after being in successful operation and paying its way for a few months, was sold to the National Telephone Company. While the Corporation obtained several thousand pounds more than their Exchange had cost and secured permanent and substantial reductions on the tariffs which had prevailed prior to competition, it is obvious from an inspection of the present National Telephone Company charges that the Tunbridge Wells people are far worse off, both as regards tariffs and restrictions, than those of Glasgow, Portsmouth, Brighton, and the other places which have kept their own Exchanges.

SHEFFIELD, CITY AND SUBURBS.

Population, 427,000.

National Telephone Company.

BUSINESS PREMISES within 1½ miles of an Exchange, £8 per annum.

BUSINESS PREMISES within 2 miles of an Exchange, £10 per annum.

PRIVATE HOUSES not exceeding 2 miles from an Exchange, £7 per annum.

The low charges in Sheffield were brought about by the threatened competition of the New Telephone Company in 1892. A committee of Sheffield citizens was formed to arrange for such competition, to avoid which the National Telephone Company agreed to introduce and permanently maintain the tariff as noted.

GUERNSEY.

Population, 40,300.

National Telephone Company.

The Company has no Exchanges in Guernsey. In order to start one it asked £10 per line per annum, with extras for distances beyond one mile; when the Local Authority threatened to undertake the telephoning of the Island themselves the £10 was reduced to £8. When it became apparent that the Local Authority were in earnest this £8 was further reduced to £6, with other concessions thrown in; but the States declined to be turned from their purpose, although the last offer would probably have been accepted had it been made in the first instance.

States (Local Authority).

The States established their Exchange in 1898, and it is now accordingly in its seventh year of working. The following are the tariffs, which yield a satisfactory profit. All lines are direct to the Exchange and exclusive.

1. £5 per annum to cover 4,000 outward calls; additional calls, five for 1d.
2. £2 10s. per annum and ½d. for each outward call up to 1,520; additional calls, five for 1d.
3. £1 10s. per annum and 1d. for each outward call up to 1,000; additional calls, five for 1d.

All inward calls are free.

MUNICIPAL OFFICERS' C.C.

FIRST ANNUAL SMOKER.

THE Borough of Lewisham Municipal Officers' Cricket Club held their first annual smoking concert the other evening at Obelisk Hall, Lewisham, when a large and enthusiastic audience was present. The Mayor (Thomas White, Esq., J.P.) occupied the chair, and was supported by Councillors C. W. Dawson and C. H. Dodd. There were also present, amongst others, E. H. Oxenham, E. van Putten, H. P. Hall, John Carline, J. W. Shuter, F. J. Read, W. T. McDougald, E. C. Baker, T. Graham, F. E. Barrett, H. R. Gooding, A. H. Mann, E. F. Elliott, Thomas Faldo, and "Walter."

A capital programme, under the direction of Mr. Alex. J. Frogley, was contributed by the Chairman and Messrs. W. G. Allen, J. A. K. Cooper, J. Crowther, Leslie T. Pidwell, F. Seckerson, A. W. Thorne, Flaxman, Cooper, Hyde, W. J. Ebbetts, Alex. J. Frogley, Charles L. Gray, Harry Swindale, Walton F. Wood, Robert White, and Prof. Stanley Collins.

Messrs. J. A. K. Cooper, H. King, H. C. Moore, W. F. Owsley, E. J. Swindale, and A. W. Thorne acted as stewards, and Mr. Horace Chambers as accompanist.

Votes of thanks to the Mayor and to the artistes were passed.

A complimentary banquet was given to the ex-Mayor of Bideford at Tanton's Hotel, Bideford, on Monday evening. Alderman J. Cock (Mayor) occupied the chair, and was supported by the Mayors of Barnstaple and Torrington, and others.

DARTMOUTH TOWN CLERK.

MR. SYDNEY J. POPE.

MR. SYDNEY J. POPE, who has lately been appointed town clerk of Dartmouth, is 27 years of age, and started in life as an office boy to a firm of solicitors at Paignton 13 years ago. Seven years after he was promoted to the position of managing clerk to the same firm of solicitors (one of whom was then the town clerk of Dartmouth) at their Dartmouth branch, and took up his residence at Dartmouth.

Mr. Pope remained in this position up to June, 1903, when his employer was compelled to give up the office of town clerk. The Council having advertised for a new town clerk (and having in the meantime appointed Mr. Pope to act as town clerk *pro tem.*) then appointed Mr. H. Roberts, a solicitor of Dudley, to the position, who engaged Mr. Pope as his assistant. This gentleman resigned his office on the 9th ult., and Mr. Pope was then unanimously elected in his place. In July of last year Mr. Pope was appointed clerk to the Dartmouth and Totnes port sanitary authority in preference to several local solicitors, who also applied for the post, and this position he now holds.

MR. SYDNEY J. POPE
(Dartmouth New Town Clerk).

GLASGOW TOWN CLERKSHIP.

THE QUESTION OF SALARY.

A SPECIAL committee of the Corporation of Glasgow appointed to consider the arrangements to be made in connection with the office of town clerk of the city held a meeting on Wednesday, and after deliberation agreed to recommend that the salary to be given to the new town clerk should be not less than £1,500 per annum. The committee further recommended that the salary to be paid to Mr. J. G. Monro, as town clerk, should be £1,000 a year, to continue at the same rate until a permanent appointment be made. Both recommendations had the unanimous support of the committee.

PRESENTATIONS TO THE EX-MAYOR AND MAYORESS OF KENSINGTON.

ALDERMAN MAJOR H. ISAACS, Mayor of Kensington for the years 1902-3 and 1903-4, was the recipient of a very handsome presentation on Tuesday from members of the borough council and others. With the amount subscribed, some 200 guineas, several articles of silver had been purchased by an executive committee, the wishes of the ex-mayor having first been consulted in the matter. The presentation took place in the Kensington Town Hall. The proceedings also included the presentation to Miss Estelle Isaacs of a diamond necklet from the members of the borough council as a small souvenir of the two years that she occupied the position of mayoress of the borough.

MUNICIPAL GASWORKS

DUNDEE'S GREAT ENTERPRISE.

THE reconstruction of Dundee Gasworks has now been completed, and they were this week inspected by the members of the Town Council. The undertaking has involved a capital expenditure of £120,000, while recently a carburetted water gas plant has been laid down at a cost of from £8,000 to £10,000, this apparatus being intended as a stand-by at exceptional seasons. Between the two plants the works are capable of producing 5½ million cubic feet of gas every 24 hours.

Amongst the first objects of interest at the inspection was the retort house, which was seen in full operation. There accommodation is provided for 12,000 tons of coal, and it was explained that the consumption was about 400 tons per day. The retorts in the new house, 576 in number, are operated upon by hydraulic stoking and drawing machines, the old system of hand labour having been entirely discarded, and here there is an equipment of coal breaking and elevating machinery. The condensers are on a scale equal to dealing with over five million feet of gas per 24 hours, while the tarwell underneath can store 120,000 gallons, and the ammoniacal liquor is eventually pumped to an overhead tank for treatment at the chemical works. The appointments of the purifiers and meters are very complete, and it was pointed out that the six gas-holders could hold nearly three million feet of gas.

The main object which the Town Council had in view in introducing the new carburetted water plant was to avoid a large additional expenditure on a new gasometer, and to provide a quick extra supply of gas at a cheap rate. This plant has been in operation for about two months, and since then it has been going steadily. It is claimed for it that it has entirely fulfilled expectations in the case of abnormal demand in dull weather. With its assistance the officials are able to keep the retorts at the same heat over the week-ends, thus avoiding expansion and contraction, and it has been ascertained that the carbonising results are in consequence better and cheaper.

PROPOSED EXTENSION AT WIDNES.

The Widnes Town Council is applying to the Local Government Board for sanction to amend or repeal certain local Acts in order to allow it to extend its gasworks. On Wednesday an inquiry was held by Mr. F. C. Tullock, Local Government Board inspector. The town clerk explained that it was proposed to increase the retorts, in order to enable them to produce 2,000,000 instead of 1,500,000 cubic feet of gas, to a total holding capacity of 2,100,000. The land the council proposed to purchase from the United Alkali Company was 9,650 yards. The present estimate for the works is £49,362, and for the retorts £5,000, making a total of £54,362. The authority's unexhausted borrowing power is £24,700, and it will require additional borrowing powers for £29,662.

MONIFIETH GAS.

In connection with a proposal on the part of the Town Council of Monifieth to enter into negotiations for acquiring the local Gasworks, several of those interested in the purchase have been instituting inquiries with the view to obtaining information on the capability of the works in the way of extension, and also as to their general suitability. For some time the management of the private company has been troubled with leakages in certain quarters.

In view of this fact, some anxiety has been created in the community, and a desire has been expressed that all these points ought to be placed before an expert before any definite offer is made for the works on behalf of the municipality. It is further stated that, even although the gasworks are purchased by the municipality, there is no possibility of extension on account of the construction of the buildings. This further point, it is also held, ought to receive the attention of any expert who may be called in to advise the Council.

WOOLWICH NEW LIBRARY.

The Inception of the Library Movement in this Democratic Borough and the Battle at the Polls. The Plumstead Library, Opened on Saturday by Mr. John Morley, M.P., is the Second Erected Within the Borough, and the Construction of a Third is Shortly to be Commenced. A Description of the New Building. Mr. Morley on the Use of Libraries.

"WOT do we want wi' libraries? Up to nah we've done wi'art 'em." This is what Mr. Will Crooks, M.P., was told by many of the parishoners of Plumstead, Woolwich, so recently as 1890, when a poll was taken and for a third time resulted in an adverse majority against the adoption of the Public Libraries Acts.

But the democracy was on the eve of awakening to the great advantages of education, and when on the 9th February, 1898, a renewed effort was made, this, the fourth poll, resulted in a favourable majority of 1,029. And since that day the construction of three public libraries in different parts of the borough has been commenced. One was opened at Woolwich in 1901, another was opened on Saturday by Mr. John Morley, M.P., at Plumstead, and a third is to be erected at Eltham.

The New Building.

The building which was opened on Saturday is worthy of the Borough Council. Mr. John Morley is pleased with it, for he said so twice—at the opening ceremony and in the subsequent speech he delivered at the Woolwich Polytechnic, and he added: "If there is one thing I know in this world it is a library." The library is erected on a portion of land purchased for municipal purposes on the south side of High Street, Plumstead, the site being situated where the population is very dense and rapidly increasing. It is entered from the street, to which it has a frontage, faced with red brick, of 60ft., and a depth of 131ft., by a vestibule, leading to a spacious corridor. On the right is the news room, 56ft. by 24ft., furnished with newspaper stands for 56 papers, and, in addition, two tables to accommodate 14 readers. On the left is the magazine room, 29ft. by 24ft., with tables to accommodate 42 readers, and with special furniture for magazines, directories, and time-tables. At the rear of the news room is the lending library, which, with the borrowers' space, covers an area of 64ft. by 32ft., and has at present shelving accommodation for 20,000 volumes. Here, and in the reference library, the shelves are provided with Cotgreave adjustable fittings. The ladies' room, 21ft. by 18ft., with accommodation for 28 readers, and the librarian's room, 21ft. by 12ft., are entered from the borrowers' space. The juvenile library, 34ft. by 21ft., has a separate entrance and vestibule, from the private road on the east side of the building. It has sitting accommodation for 48 readers, and also contains the lending counter for the juvenile department. The juvenile library does not communicate, except privately, with the other parts of the library. The first floor of the public portion of the building is approached from the end of the corridor by a stone staircase, 7ft. wide, and comprises reference library, 65ft. by 24ft., and "spare room," 65ft. by 30ft. The reference library is lighted by three large ceiling lights, and has shelving accommodation round two sides and one end of the room for 6,500 volumes. A wrought iron rail and oak handrail form a barrier between the public portion of the room and the books.

Internal Arrangements.

The large "spare room," more properly called a hall, in which Mr. John Morley performed the opening ceremony, has an elliptical ceiling, is lighted solely from above, and has been designed with the object of being used as a museum, or for library lectures. In the basement, under the front half of the building, spacious repairing and store rooms are provided, and are furnished with shelving available for the storage of about 5,000 volumes. A lift communicates with the lending and reference libraries. A residence for the librarian in charge is provided on the first floor, facing the High Street, and consists of sitting room, kitchen, four bed rooms, scullery, and usual offices. Messrs. H. Lovatt, Limited, of London and Wolverhampton, are the builders. The ventilation was carried out by Messrs. R. Boyle and Sons, Limited, the heating by Messrs. J. Jones and Sons, Limited, and the electric lighting by the borough electrical engineer. The whole of the floors are fire-proof. The fittings have been carried out by the Educational Supply Association, Limited, at a cost of about £1,125, and are of polished oak throughout, and include general furniture, indicators, counters, &c. The fittings were designed by the borough engineer, and the borough librarian has been in close consultation with the borough engineer in connection with the preliminary planning of the building, and the designing of the furniture.

The total cost of the building, including furniture, heating, lighting, &c., is about £14,000. Of this amount £9,000 has been defrayed by Mr. Andrew Carnegie, from whom was secured, in July, 1902, an offer to provide £14,000 to erect public libraries at Plumstead and Eltham. As the Woolwich library was erected before the formation of the metropolitan boroughs, and while Woolwich was still a parish, the desirability of erecting a larger library in the borough was soon realised by the first Library Committee of the Council. Mr. Carnegie's gift made this possible, and the larger building was thus proceeded with earlier than could otherwise have been the case. The additional cost has been defrayed from accumulated library rates; £2,704 being transferred to the borough Council by the Plumstead Commissioners for library purposes.

The lending department, which was available for the public forthwith, opened with a stock of 10,289 volumes. These have been carefully selected during the last 18 months, and purchased at a cost of about £1,700. It should be mentioned that Mr. Charles Beasley, Mr. George Whale, and other donors, have kindly presented valuable books to the lending and reference departments, the latter of which is not yet fully stocked.

Mr. Morley on Libraries.

Mr. Morley, in the course of a speech which lasted three-quarters of an hour, had much that was fresh to say to the general reader. Though one of the first bookmen of his day, he admitted that reading books is only a part of education. He went further, and rejected the theory that free libraries are useless because two-thirds of the books borrowed are novels.

He had some special words to librarians:—

> If I were the librarian at Plumstead or Woolwich, and I were asked what poet I would recommend a reader to begin with, I think I should say—and this may seem surprising to some—Byron. He is not the greatest of poets, but he has energy, an historic sense, a loathing for cant in all its shapes, whether it is the cant of the upper ten thousand or the cant of the million. And remember that he was the great centre and inspiring force of democracy in the Continent of Europe. I venture to think that when our democracy seeks inspiration in poetry, Byron will once more have his day.

In another part of his speech he submitted that some day a census might be taken of three or four typical streets in Woolwich, and an estimate made of the books and the kind of books that were to be found in each one of the houses. It would be of enormous interest, he said, and Mr. Crooks, if anyone, could do it without impertinence.

He declared himself constantly appalled at the "shocking trumpery" he finds on the shelves of those—he supposed he must call them middle-class people, though he hated to speak of classes—who entertained him when he travelled about the country.

Mr. Morley closed with an eloquent description of all that a good library embodied and represented.

The mayor of the borough (Councillor Rev. L. Jenkins Jones, J.P.) presided over Saturday's proceedings, and amongst the speakers were Mr. W. Crooks, M.P., and Councillor Chambers, L.C.C.

COUNCIL OR COMPANY?

THE ELECTRIC LIGHTING QUESTION AT NEW BARNET.

THERE is a very interesting position existing just now in regard to electric lighting at New Barnet. The council obtained a Provisional Order, after some opposition, from the North Metropolitan Company, in 1899. In 1901 Mr. W. P. Adams was appointed consulting engineer, and drew up a report for the guidance of the council. The district is a residential one, and suitable for electric lighting, and, after a very large amount of study given the subject, the committee recommended the council to adopt a scheme of combined electricity works and refuse destructor, involving a capital expenditure of about £12,000. This scheme was adopted by the council, and application made to the Local Government Board for borrowing powers.

As soon as the council arrived at some definite plan of action trouble began to arise; meetings were called, and a committee constituted to oppose. All sorts of fairy tales were spread abroad, and after the opposition had carefully sown the ground a petition was sent up to the Local Government Board signed by 700 or 800 ratepayers. At the Local Government Board Inquiry much opposition was offered to the Council's scheme. The local interest was very small until the Council had adopted the scheme, and Mr. George Offor, on behalf of the North Metropolitan Company—an offshoot of the B.E.T. Co.—was present at the inquiry, and was permitted to oppose, which he did vigorously, although the company had no *locus standi*.

After a delay of a month or two the Local Government Board wrote to the Council, saying that it would defer its decision on the matter until after an election which was to take place shortly, the result being that the election was run on the electric lighting question, and three supporters of the Council's scheme were defeated. The newly-constituted Council, after some delay, then entered into negotiation with the Sir Hiram Maxim Company, which offered to undertake the installation and working of the undertaking for a period of years. The Sir Hiram Maxim Company subsequently withdrew, and negotiations were then entered with the National Electric Construction Company, and a month or two ago the Council passed a resolution approving of this company's offer. No sooner had this resolution been passed than Mr. J. B. Braithwaite, Jun., took up the matter with very great vigour. His association with the group of companies to which the North Metropolitan Company is allied is, of course, notorious. Public meetings were again called, and the Council's scheme vigorously denounced through the Press and meetings.

Although since the Council obtained a Provisional Order it has several times approached the North Metropolitan Company with a view to obtaining workable terms, no reasonable offer has ever been made which the council could accept. Whenever the company has been approached every possible difficulty has been put in the way so as to cause delay in the negotiations. The Council has had the time for putting the Order into operation extended twice since the time of the granting of the Order, and there is no doubt that the North Metropolitan Company is now doing its best to delay matters until the Board of Trade shall revoke the Order.

It does not matter what scheme the council may tabulate, opposition will certainly arise from the North Metropolitan Company, which has a small station at Barnet, and, pending the bringing of its power mains into the neighbourhood, it is anxious to secure rights over such areas as possible, and New Barnet is a natural stepping-stone to the districts beyond. The members of the council even now do not realise where the opposition to their efforts comes from.

The present position of affairs is extremely vexatious, and there is no doubt that if left to itself the council would carry through what is right and proper in the case, namely, a municipal scheme, and there is no doubt, also, that the district is suitable for such a scheme.

NOTES AND ANSWERS.

Hints to Councillors on the Provision of Public Abattoirs. Compulsory Purchase of Land Authorised Where Voluntary Purchase Cannot be Effected. Public Expenditure for Band in Public Park of an Urban District Council. Municipal Corporations May Incur Reasonable Expenditure in Printing Its Records. Raising Large Sums of Money in Rural Districts.

581.—URBAN DISTRICT COUNCILS—Provision of Abattoir.—A councillor of our urbau district council has given notice of motion, "That we provide a public abattoir." I should be very glad of your information on this matter, viz.:—

(1) As to the general powers we possess.

(2) As to the power to purchase land.

(3) As to estimated cost of buildings. (Population 17,000.)

(4) Are we compelled to pay compeusation to present holders of slaughterhouses if we adopt a public abattoir?—"READER."

(1) The provision of abattoirs or public slaughterhouses by a local authority is regulated by Sec. 169 of the Public Health Act, 1875. It is there enacted that any urban authority may, if it think fit, provide slaughterhouses, and it shall make bye-laws with respect to the management and charges for the use of any slaughterhouse so provided. The urban district council is not under any obligation to pay compensation (nor can it legally do so) to the present holders or owners of slaughterhouses. Under Secs. 125 to 131 of the Towns Improvement Act, 1847 (which are incorporated with the above-mentioned section of the Public Health Act, for the purpose of enabling urban authorities to regulate slaughterhouses within their districts) the urban district council has the following powers:—

It may license slaughterhouses within the district.

New slaughterhouses may not be erected without its licence.

All existing places must be registered.

It may make bye-laws for the regulation of slaughterhouses owned by private persons in the district.

The sanitary officers of the council may enter and inspect such places, and seize and destroy carcases, &c., unfit for food.

Where Part III. of the Public Health Acts Amendmont Act, 1890, has been adopted, the duration of a licence may be fixed; otherwise, such duration is unlimited. The same Act provides that one conviction for having in possession, for sale, or selling meat unfit for food warrants revocation of tho licence.

The above are the chief powers of the urban district council respecting abattoirs and slaughterhouses.

(2) Sec. 175 of the Act of 1875 authorises the urban district council to purchase, or take on lease, land for the purposes of the Act. This will include the power to purchase of land for an abattoir. Sec. 176 sets out the conditions under which the council may apply to the Local Government Board for a Provisional Order authorising the compulsory purchase of land where a voluntary purchase cannot be effected. Such an Order is hardly likely to be issued unless a pressing need is shown, and in any case it requires confirmation by Parliament.

(3) Our correspondent will find much information as to abattoirs on pages 411, 412, 417, and 418 of the "Municipal Year Book" for 1904 (published at the offices of this journal, 3s. 6d. nett); and we would refer him to that publication. We have no information as to the cost of the necessary buildings required for a town of about 17,000 people, but inquiry might be made of the town clerks of some of the towns mentioned in the "Year Book" as having provided public abattoirs.

582.—CAN AN U.D.C. PROVIDE AND PAY FOR A BAND IN PUBLIC PARK?—On the agenda for our next meeting is a proposal that the urbau district council should provide and pay for a band to play in the public park (owned by the council) during the next summer season. The town is a growing one, and situate on the seaside. I should add that it is mainly depeudent upon visitors for its money. The questiou I should like answered is, Uuder what power such a proposal can be carried out?—"COUNCILLOR."

There does not appear to be any statutory or other authority under which an urban district council could provide and pay for the cost of a band to play in its public park. If the expenditure were incurred, it would be liable to be disallowed in the accounts of the council by the district auditor, and the members of the council responsible therefor would probably be surcharged with the amount involved. Apparently a local Act would be required to authorise the proposed expenditure. We can only suggest that the council should start a public subscription for the purpose, if the band is considered to be necessary in the interests of the town, and that all ratepayers should be invited to join it. Probably by this means the necessary funds would be raised.

583.—MUNICIPAL OFFICERS' SUPERANNUATION SCHEME.—I have been a reader of the *Municipal Journal* for about six years, and should feel greatly obliged if you could let me know whether there is a superannuation scheme or anything else under the Manchester Corporation for their officers in their old age? A reply through your paper would greatly oblige. "BRUMMEY."

The Corporation of Manchester administers a superannuation scheme for the benefit of its municipal employees, under the powers vested in the Corporation by a local Act. This, we understand, is a very successful scheme, and is based on sound economic principles. Various other towns have similar schemes under local Acts (e.g., Halifax, under the Halifax Corporation Act, 1902). A regular set of provisions is now inserted in draft Bills promoted by town councils where it is desired to establish a pension scheme. These have been approved by the Home Office, and require, *inter alia*, that any such scheme shall be certified by an actuary approved by the Secretary of State for Home Affairs as being economically solvent. They also authorise a contribution by the council in aid of the scheme, which will mainly depend for its resources on percentage deductions from the salaries of officers concerned.

584.—IS A MUNICIPAL CORPORATION EMPOWERED TO PRINT ITS RECORDS? Can a muuicipal corporation expend money out of the rates for the purpose of compiling aud publishing the Records of the borough. This borough obtained its Charter in 1284, and it has been ascertained that there is a large uumber of interestiug documents in the Record Office and British Museum in Loudon, and also in my custody as town clerk, relating to the borough, and it is feared that, unless they are compiled, they may become lost: and an opportunity has now presented itself to have them edited aud published by a gentleman well versed in the MSS. relating to the North Wales municipal towns.—"TOWN CLERK."

There is no statutory provision, so far as we are aware, which would empower a municipal corporation to compile and publish its records and charge the cost of so doing to the Borough Fund. On the other hand, large common law powers exist under which these bodies may spend money for many purposes not specified in Acts of Parliament. The question is, therefore, can the council of a city or town incur such expenditure under its common law powers. We understand that, as a fact, several boroughs have published their records from time to time. Many more have compiled and printed calendars thereof. In 1899 a Committee was appointed by the First Lord of the Treasury "To inquire and report as to any arrangements now in operation for the collection, custody, indexing, and calendaring of local records, and as to any further measures which it may be advisable to take for this purpose." The Committee reported in 1902, and its report was laid before Parliament. It was altogether in favour of the preservation of local records and the extension of the powers of local authorities in dealing with their records. "The county boroughs" (the Committee reports) "appear to be fairly well provided with indexes and calendars of of their collections." In most cases these are in MS., but in a few they have been, or are being, printed. We may mention, for instance, the catalogues of Coventry and Leicester. Cardiff and Norwich are mentioned as places where special archivists have been employed, and in Exeter, Gloucester, Leicester, and Norwich the records have been classified and arranged by experts, "while numerous extracts from the more interesting of the records have been printed and published." Reference is made in a footnote to Miss Bateson's edition of the "Leicester Records" and Mr. W. H. Stevenson's edition of the "Gloucester and Nottingham Records" as being of great value. Presumably these records and calendars were published at the expense of the borough concerned in each case. We have referred to the report to show the view taken of the matter by the central authorities, and the inference strongly suggested that the expenditure involved may fairly be charged to the rates. In our opinion, a town council may properly incur expenditure (and charge it to the borough fund) in arranging, compiling, and calendaring its records. It may also, we submit, incur a reasonable expenditure in printing its records, or such of them as are of public and local interest. We doubt whether the council could justify any very heavy expenditure in the matter. In any case, the difficulty of effectively objecting to any items of expenditure authorised by the council, and the expense involved in the necessary process of application in the High Court for a writ of *certiorari* to test the legality of the expenditure, seem to us to render it highly improbable that objection would be made to the proposal to charge the cost of calendaring, compiling, &c., of local records on the borough fund.

585.—Can R.D.C. Raise a Loan by Borrowing in Small Sums Locally?—Has a rural district council, governing a population of 45,000, power to raise money (say, £100,000) for sewerage works by means of small loans from local aud other persons, on the lines adopted at Middletou and elsewhere?—"S."

Generally speaking, the borrowing powers of local authorities, including rural district councils, are subject to the sanctioning authority of the Local Government Board. In this case the authority of the L. G. B. would in the first instance be required, under Sec. 233 of the Public Health Act, 1875, to empower the R. D. C. to raise tho sum of £100,000, unless the council is "possessed of land, works, or other property, for the purposes of the disposal of sewage," in which case, in pursuance of Sec. 235 of the same Act, the council may borrow money without further authorisation on the credit of its sewage land and plant. Once the necessary authority or power has been obtained, it is competent to the council to raise the money required from private persons, ratepayers, and others in the district, in small sums. It seems to us, however, that such a method of raising a large sum of money would not be found to be so practically convenient in a rural district as it may prove, and, we believe, has proved in the case of boroughs.

586.—PETROLEUM ACTS Qualification of Inspectors. Would you kiudly state what special qualification is required for inspector of Petroleum and Explosives Act? I am a shipwright by trade.—"H. E. A."

We presume our correspondent refers to the Petroleum Acts of 1871 and 1879. The authorities which deal with the administration of these Acts are—in London, the City Corporation and the London County Council; in boroughs and towns outside the metropolis, the borough councils or district councils; and in harbours, the harbour authorities. These bodies may assign duties under the Acts to officers appointed by them, and the qualification of such officers and inspectors would in every case be a question for the determination of the local authority appointing to a particular vacancy. Perhaps an application to the London County Council might obtain in response definite information as to any appointments likely to be vacant, and the conditions under which such appointments are made in the metropolis, exclusive of the City.

RECENT DECISION OF THE HIGH COURT.

Diversion of Highway Notices to be Affixed at each End of Highway "Rex v. Kent Justices."

In this case the question arose as to whether the 28 days' notice required by Sec. 85 of the Highways Act, 1835, in connection with proceedings before justices for the diversion of a highway, applied so as to require that the notices that must be fixed up at each end of the highway should be fixed 28 days before the issue of the justices' certificate under which the highway may be closed. The Court of Appeal now held (overruling the decision of the Court below), that although the other requirements of Sec. 85 of the Act would be satisfied only by notices being affixed on the church doors of the proposed diversion of the highway on four successive Sundays, and by inserting the notice in a weekly newspaper for four successive weeks, the notices posted at each end of the highway need not necessarily be posted up 28 clear days before the issue of the justices' certificate.

PAVING WORKS.

SHOULD THEY BE PAID FOR OUT OF LOANS OR RATES?

HAVING regard to the large aggregate charge for interest incurred by those London borough councils whose practice it is to borrow money to defray the cost of paving works having a short life, the County Council's Finance Committee has sent letters to the authorities concerned asking them to consider whether paving works, having a life of less than ten years, should not be paid for out of the rates of the year in which they are undertaken, rather than by the creation of short term loans, and pointing out that the equalisation of the charge on the rates for such works could be accomplished, without any payment in respect of interest, if arrangements were made for the expenditure of approximately the same amount each year on such works.

The following borough councils concur in the proposal:—

BETHNAL GREEN.—It is its practice to act in the manner suggested.

HAMMERSMITH. — Is in favour of the principle.

HAMPSTEAD.—Will adopt the suggestion as far as possible.

HOLBORN.—Has never borrowed for these purposes, and is in cordial agreement with the suggestion.

ST. MARYLEBONE.—Has never borrowed for these purposes.

ST. PANCRAS.—All paving in the last year or two has been paid for out of rates, and the borough council proposes, as far as possible, to continue this practice.

The following councils concur, to some extent, in the suggestion:—

CHELSEA.—During the past half-year the course suggested has been adopted.

GREENWICH.—Considers it desirable to avoid borrowing for paving works having a life of less than 10 years. Before incurring a loan, it thinks that the borough council should be satisfied that the saving in repairs of the road during the life of the paving will be, at least, equal to the burden of the loan.

ISLINGTON.—Considers that the proposal can only be applied in districts where large paving works, principally renewals, are continuously in progress, and states that all the paving loans raised by the borough have been for conversion of macadam into permanent pavement, and not for renewals.

KENSINGTON.—Charges renewals of wood paving to rate, but borrows for changing macadam to wood.

LAMBETH.—Has decided that the amount included in the annual estimates for paving works to be defrayed out of loans shall not, during the next three years, exceed the amount falling due to be repaid in each of those years, and, further, shall not be in excess of the amount allocated to repairs of roads and paths under revenue estimates for each of those years. Paving work of the nature of renewals will, as far as practicable, be paid for out of rates.

SOUTHWARK.— Provides an approximate amount every year in estimates for paving—this year £8,000 has been provided. Requirements beyond this amount are raised by loans.

STEPNEY—Considers the suggestion has been adopted by the inclusion of a sum in the annual estimates equivalent to 1d. rate.

WANDSWORTH—Is inclined to charge to rates the cost of temporary improvements of the value of £4,000 and under, whilst borrowing, as hitherto, for more costly ones.

WOOLWICH—Proposes that any future expenditure on paving where the amount does not exceed £1,000 shall not be made the subject of a loan, and that when a paving loan is taken up the period applied for shall be reduced to—granite, ten years; wood, five years.

These borough councils appear to be in sympathy with the suggestion, but do not see their way to adopt it:—

BATTERSEA. — Has borrowed nothing for paving with a life of less than ten years.

BERMONDSEY.—Will have the matter before it again shortly.

PADDINGTON.—Considers it carries out its work as economically to the ratepayers as possible; points out that its loans are repaid in shorter terms than those usually allowed, and that the outstanding debt of Paddington compared with its rateable value is the lowest of any borough in the west end of the metropolis.

STOKE NEWINGTON.—Present charges in respect of loans are too high to allow its adoption of course proposed, but approves the principle.

The Camberwell Borough Council expresses no opinion.

The following boroughs have postponed consideration of the matter, but will bear it in mind in future:—

FINSBURY AND FULHAM. — Do not see their way to take any action at present.

HACKNEY.

LEWISHAM.

POPLAR. — Considers it has not unduly borrowed for paving, but has deferred consideration of the suggestion until the next loan for paving works is required.

The borough councils which do not see their way to adopt the proposal are:—

DEPTFORD —Does not consider that the course suggested is of practical application, as a long street might have to be paved in sections, and the street closed each time. The borough council thinks that it should have a free hand in the matter.

SHOREDITCH.—Considers that the suggestion would place a double burden on present ratepayers, owing to outstanding loans.

No reply has yet been received from the Westminster City Council.

On the whole, the Finance Committee thinks that the Council may be satisfied with the evident desire of the majority of borough councils to refrain, as far as possible, from increasing their indebtedness in respect of these short-lived paving works.

LABOUR AND COUNCILS' CONTRACTS.

THE Metropolitan Borough Council of Bermondsey has set an example to other boroughs by passing a resolution at its last meeting which is substantially a copy of the L.C.C. Trade Union Clause. It will be a substitute for the present unsatisfactory clause, inserted in the Council's contracts, as follows:—"I undertake and agree to pay trade union rate of wages to workmen, and to labourers a minimum rate of wages of sixpence per hour."

The newly adopted clause lays down, with very great clearness and detail, rates of wages and overtime wages—those "recognised by associations of employers and trade unions in the district"—hours of labour, sub-contracting, &c. In case of any breach by the contractor of any of the stipulations, it "shall be lawful for the Council to determine this contract, and the contractor shall be liable for any extra expense involved in completing the work."

SUNDAY OPENING OF LIBRARIES.

THE Westminster City Council on Tuesday decided against the opening of the public libraries within its jurisdiction on Sunday. As a reason for this refusal, it is stated that no evidence of any general desire for such opening has been given, and, having regard to the expense likely to be entailed, and the little success attending Sunday opening in other metropolitan boroughs, the Council does not feel justified in making such a change. The first two reasons are legitimate, but the third is inadequate and misleading. Of the 20 London boroughs having public libraries, 14 sanction Sunday opening; and, though the success is doubtful in some of these, it is no sense so in the majority, where the privilege of using the libraries is fully made use of by the people.

ABOUT BOOKS.

SANITARY LAW.*

THIS little book consists mainly of a summary of the chief statutory enactments and regulations of the Local Government Board affecting sanitary matters and the public health, particularly those which concern medical officers of health. Amongst other subjects dealt with, are sewers and drains, disinfection, slaughterhouses, mortuaries, and factories and workshops. The relevant provisions from the Public Health Acts, the Canal Boats Acts, the Sale of Food and Drugs Acts, and other Acts affecting sanitary law, are summarised. We note, however, that the author, in dealing with the Housing of the Working Classes Act, 1890, omits any reference to the important later Housing Acts of 1900 and 1903 respectively. A defect in the work is involved in the omission of any allusion to the Factory and Workshops Act of 1901, while particulars are given of the Acts of 1878 to 1895, as if such Acts were in force, whereas they have all been repealed (with the exception of a very few sections) by the seventh schedule to the Act of 1901. The Infant Life Protection Act, 1872, is also summarised, and dealt with as though still in force, whereas it has been repealed by Sec. 18 of the Infant Life Protection Act, 1897.

REPORTS OF LEGAL DECISIONS ON THE CONSTRUCTION AND MAINTENANCE OF BUILDINGS.†

WE have received for review the first number of a new series of law reports of cases decided in the Superior Courts bearing on the construction and maintenance of buildings. The series is intended largely for the use of architects and surveyors, and is compiled by a Fellow of the Royal Institute of British Architects, aided by a legal editor. This part includes cases on the London Building Acts, the Public Health, and the Factory and Workshops Acts, all of which concern local authorities, as well as cases more directly affecting private persons, such as those on light and other easements, landlord and tenant, and building contracts. Comparing this work with other law reports, we note the introduction of certain new and original features. The most striking and useful of these is the insertion of plans and photographs illustrating points raised before the court. A preface of "Legal Notes," the text of the proposed new bills affecting the easement of light and the London Building Acts, and a double index—one part based on the chronological and the other on the alphabetical system—make up the other new features of these Reports. The letterpress, paper, and general arrangement are admirable, and it may safely be said that "The Architects' Law Reports" can challenge comparision with any other set of Law Reports published.

PROFIT FROM WASTE.

AT the Clitheroe Town Council meeting last week a letter was submitted from a man offering 20s. a year for the privilege of getting what he can from the local refuse tip, with the exception of rags. The Council decided not to entertain the offer. The man was recently summoned for removing iron, bottles, and other waste from the tip, and he then said that it was surprising what a good living could be made in this way.

THE Dublin Corporation, on Monday, refused, by a majority of forty-nine votes to fourteen, to rescind a resolution adopted some time ago reducing the salary of the Lord Mayor from £3 687 to £1,687.

*Aids to the study of "Sanitary Law." By Harry Critchley, M.D., D.P.H. (Baillière, Tindall and Cox, 8, Henrietta Street, Covent Garden. 2s.)

BOROUGH OF WANDSWORTH.

TO CONTRACTORS AND OTHERS.

THE Council of the Metropolitan Borough of Wandsworth is prepared to receive TENDERS for the EXECUTION of WORKS and the SUPPLY of MATERIALS from the 31st March next, for one, two, or three years, as per forms of tender, at the option of the Council (with the exception of tenders for the supply of provender, which are to be for six months only), viz.:—

1 Blue Bricks.
2 Cement.
3 Coal and Coke.
4 Disinfectants.
5 Granite or other Stone.
6 Gravel and Flints.
7 Harness and Stable Requisites (Eastern District).
8 Norway Granite Kerb.
9 Printing.
10 Provender.
11 Scavengers' Brooms and Tar Brushes.
12 Sewermen's Clothing.
13 Sharpening Tools.
14 Signwriting.
15 Stationery.
16 Stable Requisites (Western District).
17 Stoneware Pipes, &c.
18 Street Lamp Columns, Lanterns, &c.
19 Thames Ballast and Sand.
20 Tools, &c.
21 York Paving.

Samples (not more than 20 lbs. in weight) of the granite or other stone proposed to be supplied are to be delivered here on or before Monday, the 9th January next, at the cost of the persons tendering.

Persons tendering must in the case of all workmen employed by them pay wages at not less, and observe hours of labour not greater, than the rates and hours recognised by the associations of employers and employees, and in practice obtained in the district where the work is to be executed. The specifications and forms of tender may be obtained at these offices, between the hours of 10 a.m. and 4 p.m. (Saturdays 10 till 1).

Tenders (each enclosed in a separate envelope) are to be delivered, under seal, at the Council House, endorsed "Tender for ———," on or before Monday, the 9th January next, and must contain the names and addresses of two responsible persons who are willing to join the contractor in a contract for the due execution thereof.

No tender will be received unless it is made upon one of the printed forms provided for the purpose.

The Council does not bind itself to accept the lowest or any tender.

HENRY GEORGE HILLS,
Town Clerk.

Council House, Wandsworth, S.W.
13th December, 1904.

BRENTFORD URBAN DISTRICT COUNCIL.

APPOINTMENT OF CLERK OF WORKS.

THE Council are prepared to receive Applications for the Appointment of a CLERK OF WORKS for the Brentford Market Extension and Underground Convenience Works at Kew Bridge. The salary will be £4 4s. per week, and the person appointed will be required to enter upon his duties immediately the works are begun.

Applicants must be thoroughly experienced and practical men, able to put in levels, set out, and measure up work. The person appointed will act under the direction of the Surveyor to the Council. Applicants (who must be between the ages of 35 and 50) are to send in their applications in writing, with full particulars, and copies of testimonials not to exceed three in number (which will not be returned), sealed, at the Office of the Clerk to the Council, 209, High Street, New Brentford, on or before Tuesday, the 3rd proximo, not later than 12 o'clock, marked "Application for Clerk of Works," but applicants will not be required to attend the Council personally unless and until they receive notice so to do; and canvassing, either directly or indirectly, will disqualify any applicant.

By order.
STEPHEN WOODBRIDGE,
Clerk.

Brentford.
21st December, 1904.

SOLICITOR (30), experienced as manager in conveyancing and Common Law, &c., desires Post in municipal office. Expert shorthand writer. Three years in town clerk's office. Excellent references. "Trois," MUNICIPAL JOURNAL, 12, Salisbury Square, Fleet Street, E.C.

COUNTY BOROUGH OF GREAT YARMOUTH.

JARRAH OR KARRI PAVING BLOCKS.

THE Council of the above-named Borough are prepared to receive TENDERS for the SUPPLY of 1,250,000 Jarrah or Karri Paving Blocks.

Specifications and form of tender can be obtained at my Office as under.

Tenders, on the form and in the envelope supplied therewith, are to be delivered at the office of W. Edgar Stephens, Esq., Town Clerk, Town Hall, Great Yarmouth, not later than noon of Wednesday, January 4th, 1905.

No guarantee is given that the lowest or any tender will be accepted.

By Order,
J. WM. COCKRILL, M.Inst.C.E.,
Borough Surveyor.

Town Hall,
Great Yarmouth.
December 21st, 1904.

METROPOLITAN BOROUGH OF FULHAM.

TO CHIMNEY CONTRACTORS.

THE Council of the Borough of Fulham is prepared to receive TENDERS for the CONSTRUCTION of a Brick CHIMNEY SHAFT, 180ft. high, with 10ft. flue, on a prepared concrete foundation, at the Council's Wharf, Townmead Road, Fulham.

On receipt of a deposit of three guineas (which will be returned when a bona-fide tender is sent in) quantities can be obtained, and the specification and drawings seen, at the Office of Mr. Francis Wood, A.M.I.C.E., F.G.S., Borough Engineer and Surveyor, Fulham Town Hall.

The Council does not bind itself to accept the lowest or any tender, and the contractor will be required to observe the trade union conditions as to wages and hours of labour in the London district, and give securities in the amount of £500.

Tenders to be deposited with the Town Clerk before 4 p.m. on January 18th, 1905.

By Order,
R. M. PRESCOTT,
Town Clerk.

Town Hall,
Fulham, S.W.

COUNTY BOROUGH OF BURNLEY.

TOWN CLERKSHIP.

THE Town Council of Burnley invite Applications from Solicitors for the office of TOWN CLERK.

The salary will be £700 per annum, to be increased, if the services rendered be satisfactory, to £750 at the end of two years, and afterwards by yearly increments of £50 to £900 per annum. The Corporation provides offices, clerks, stationery, and other requisites.

The gentleman appointed will be required to devote his whole time to the duties of the office, and must not engage in private practice; he may, however, hold the office of Clerk to the Burnley Joint Hospital Board, if appointed thereto by that authority.

Canvassing is strictly prohibited.

Particulars of the conditions of appointment, and forms of application, may be obtained from the undersigned.

Last day for sending in applications—Saturday, 7th January, 1905.

A. STEELE SHELDON,
Town Clerk.

Town Hall, Burnley,
20th December, 1904.

THE WARD OF CRIPPLEGATE WITHIN.

AT a Court of Wardmote holden in and for the said Ward, at Brewers' Hall, Addle Street, within the said Ward, on Wednesday, December 21st, before the Right Worshipful Sir Henry Edmund Knight, Alderman of the Ward, the following gentlemen were returned at a precinct meeting to represent the Ward in the Court of Common Council:—

Sir Robert Hargreaves Rogers.
Richard Stapley, Esq.
George Briggs, Esq.
William Oatley, Esq.
Alexander Tillie, Esq.
Thomas Henry Wye, Esq.
Alfred Edward Palmer, Esq.
Thomas Francis Rider, Esq.

No other person being nominated, the foregoing were declared to be duly elected.

It was moved by Mr. HICKS, duly seconded, and carried unanimously—

"That the hearty thanks of this Wardmote be given to its representatives on the Court of Common Council for the admirable manner in which they have during the past year discharged their important duties, and for their unremitting attention to all matters affecting the Ward and Corporation."

Mr. WYE returned thanks.

Sir ROBERT ROGERS moved, Mr. RIDER seconded, and it was duly carried—

"That the Bill promoted by the Corporation for the purpose of providing satisfactory means of escape for those employed or residing in buildings in case of fire is approved by this Wardmote, and should be pressed forward by the Corporation for confirmation by Parliament.

Mr. TILLIE moved, Mr. RIDER seconded, and it was duly carried—

"That the proceedings of the Wardmote be advertised in the *Times*, *City Press*, *Citizen*, *Local Government Journal*, and *Municipal Journal*."

Mr. BRIGGS moved, Mr. HICKS seconded, and and it was duly carried—

"That the best thanks of this Wardmote be given to its Alderman, Sir Henry Edmund Knight, for his admirable and dignified direction of these proceedings; and further, this Wardmote renews the expression of their Alderman's long and eminent services to the Ward and to the Corporation."

It was moved by Mr. PALMER, seconded by Sir ROBERT ROGERS, and carried unanimously

"That this Wardmote warmly thanks the Master Wardens and Court of Assistants of the Worshipful Company of Brewers for again granting the use of their Hall for the purposes of this Wardmote, and directs the Ward Clerk to forward a Copy of this resolution to the Clerk of the Company."

CHARLES WALTON SAWBRIDGE,
Ward Clerk.

NOTES AND COMMENTS.

Liverpool Federation.

IN spite of semi-official denials given at the last meeting of the Liverpool City Council, it will be seen from our issue this week that the proposed scheme for the federation of Liverpool, Birkenhead, Bootle, and adjacent districts, is something more than the misty dream several councillors described it. The town clerk has prepared a memorandum on the subject, which we publish, pointing out the advantages that are to be derived from federation, and indicating means by which the desired object may be achieved. The Liverpool Parliamentary Committee is already proposing to confer with the authorities concerned, and we hope the committee's action will be approved, and that the result will be a scheme acceptable to all the parties. It is hardly necessary for us to point out that any federation plan must be a voluntary and not a compulsory one. Parliament has already laid down this principle in unmistakable terms, and it would be folly, from the public standpoint, as well as the worst of tactics, for one of the boroughs to attempt to force any particular scheme upon the others. The town clerk's memorandum, therefore, must not be construed as the official scheme of the Liverpool Corporation, but it shows unmistakably that federation can be effected on equitable terms, and without the loss of dignity or authority to the parties concerned. We hope for the success of this federation scheme on the broad, general ground that the development of the local government system has reached a stage at which it is absolutely essential, for the sake of efficiency, economy, and self-protection, that the administrative area shall be made as wide as possible. If Liverpool sets an example in this matter, as it has done in others, we may see the real commencement of a new municipal movement whose good effect upon our system of local government will be incalculable. We sincerely trust that the representatives of the various districts affected by the Liverpool scheme will bear in mind during their deliberations the big ideal that is at the base of this federation scheme, and not regard it merely from a parochial standpoint.

Trams and Trading.

ALDERMAN Sir W. TRELOAR, of the Corporation of the City of London, has evidently been taking lessons from the secretary of the Industrial Freedom League. He said at a City wardmote on Wednesday that—

> One of the chief reasons why the trade of the country had been so bad was the fact that so many municipalities were spending the money of the ratepayers recklessly, and were borrowing extravagantly for the purpose of embarking upon schemes and enterprises which had no certainty or even chance of future success.

This is a curious argument. It is generally understood that trade is created by new enterprises, and if this be so, it evidently does not matter, from the trade standpoint, whether the enterprises are carried out by municipal bodies or by private companies. Trade is trade, whether it be "municipal" trade or company trade. What Sir William objects to, however, is the municipality, not the trade. His point of view is clear at once when we remember that he made the observations we have quoted during a speech whose principal object was to protest against the London County Council running a tramway across Blackfriars Bridge. Now, the only people who gain from the absence of this tramway are the omnibus companies. The general body of the public suffer. Sir William, therefore, is merely supporting the omnibus companies against the public interests, which is a curious thing for a public representative to do under any circumstances.

Spade Work for Officials.

MR. A. ASPINALL, of Leeds, writes commending the suggestion made in our last week's issue, that officials should endeavour to make clear to editors and representatives of local newspapers the facts concerning municipal enterprise, thereby counteracting to an extent the influence of the Industrial Freedom League and allied agencies. Mr. Aspinall goes on to say that work such as is proposed is specially necessary in cities like Leeds:—

> Where the whole municipal machinery is controlled with a view to securing votes at the November elections and the votes are given to the nominees of the political party irrespective of the merits or demerits of the opposing candidates.
>
> From the rigid silence kept by officials here, I assume that they are under strict orders not to write to the Press, and of course all challenges or criticisms are allowed to go by default.

One of the greatest drawbacks of the party system applied to municipal affairs is that reforms are not prosecuted by reason of their intrinsic merit so much as for motives of party expediency. It is not the fault of the men, but of the system, and the latter should be changed

so that principles and not parties should be the supreme issues at municipal elections. We expect our correspondent is right in thinking that the Leeds officials are under strict orders not to write for the Press. The rule is one which obtains all over the country, with a few exceptions; but we think it might be modified, at least in the direction of allowing officials to place information before the public. To take up the cudgels on behalf of a particular party is quite another matter, which we should not for a moment advocate. The misunderstanding of the municipal position in almost every case is due to the absence of information. No harm could be done by allowing officials to acquaint the editors of local newspapers of the real facts of the case, and then the public would be in a position to judge for themselves.

Another Scheme.

OUR correspondent outlines another scheme for stimulating interest in municipal life. which we think is also worthy of sympathetic consideration. His suggestion is that each municipality should provide a special room for lectures, essays, and discussions on any subjects relating to municipal administration, all ratepayers being entitled to attend free, or with a nominal subscription of about a shilling per annum. This would form a common meeting place for men of all shades of opinion, but at the same time free from ties of politics and creeds. A small reference library of works bearing on municipal affairs generally (including Poor Law administration), such as the "Municipal Year Book," "Gas World Year Book," "Waterworks Year Book," and others dealing with tramways, electric lighting, &c., along with copies of the annual abstracts of accounts for about a dozen of the largest cities in the kingdom, would be a valuable acquisition to diligent students, and place within the reach of all ratepayers sound, useful information. The room could be used at any time for discussion. but once a week, say, a set debate could be arranged on some topic of interest to come before the next council meeting, which could be fully thrashed out in five-minute specches, with a chairman, preferably a member of the council committee, which has the subject-matter in hand. By this means much useful information could be diffused, many false ideas dissipated, and, taken altogether, would be a much better training-ground for future councillors or guardians than any agency now in existence. The suggestion appears to us an admirable one, and there should be no difficulty in carrying it out. There should be at least half-a-dozen men on every council in the kingdom who would give their energies towards making such a scheme a success. We invite our readers to forward us their views on the subject.

Should Surveyors Design?

THE Royal Institute of British Architects is circularising local authorities on a subject which is often being discussed in professional circles. The Institute objects to engineers and surveyors being employed on works of an architectural character, and urges upon municipal authorities:—

(*a*) That architectural work be not placed in the hands of engineers or surveyors.

(*b*) That where it is deemed desirable for architectural work to be carried out by a municipal official, such official shall be required to have passed the qualifying examinations of the Royal Institute of British Architects.

(*c*) That the work of an official architect be restricted to structures of secondary importance, and that all buildings of a monumental character be entrusted to independent architects, to be selected in such a way as may seem best to the local authority.

The Royal Institute of British Architects is a very honourable and useful professional body, but it primarily exists to advance the interests of its members. So far as we have been able to discover, it does not in its circular produce any cases where work has suffered, either on the ground of architectural pretensions or of economy, by being designed by the municipal surveyor and engineer instead of being given to an outside architect with a large fee. It is already the practice of local authorities to entrust most buildings of a "monumental character" to outside architects, although we see no roason why even this course should be observed in those cases where local authorities possess surveyors of sufficient imagination and capacity to perform the task. There are many reasons, apart from purely architectural considerations, why municipal surveyors should design their own buildings. They appreciate the local requirements more than any outside architect could ever do, and should consequently be able to produce a more useful building. We do not think that, on the whole, municipal architecture compares unfavourably with other architecture. Municipal buildings of all descriptions, as a general rule, have good architectural reputations wherever they are found.

The Clyde Trust.

GLASGOW is up in arms at the new proposals of the Clyde Trust. The Provisional Order which has been published this week empowers the Trust to remodel its constitution on the lines of the Mersey Dock Board, and virtually deprives the Corporation of any control whatever of harbour management. Instead of the Trust being composed of ten members nominated by the Corporation, two each by the Chamber of Commerce, the Merchants' House, and the Trades' House, and nine elected by the shipowners and "ratepayers," these last would under the new scheme elect 21 members, leaving only four (who need not be councillors) to be nominated by the Town Council. The qualification to vote would be the payment of £10 or upwards per year of dues, and any person paying £25 yearly would be eligible to become a trustee. In a word, the independence and communal character of the Trust are to be abolished, and the interests of the community as a whole sacrificed to those of a section. The shipowners and payers of dues are to have full control of an enterprise that has been established by the whole body of Glasgow's citizens. For years the traders have been working up to the reactionary proposals that are now brought forward. Prior to 1840 the harbour of Glasgow was directly controlled by the Town Council, although by the Act of 1825 five additional persons interested in the trade of the river, and nominated by the Council, had been associated with them in the management of the Trust. The development of the navigation of the river down to this period was entirely carried out by the Town Council, and a large expenditure was made, chiefly out of the Common Good, and from taxes levied on the inhabitants. By the Act of 1840 the constitution of the Trust was again changed, and the number of trustees increased to 33, of whom 23 had seats in the Town Council, the remaining 10 being representatives of the Chamber of Commerce, the Merchants' House, the Trades' House, the Barony of Gorbals, and the Burghs of Calton and Anderston. This continued till 1858, when a new Act was obtained, and the Trust was re-constructed. By this Act the number of trustees was reduced from 33 to 25. The burghs having been absorbed by the city, their separate representation disappeared, but the representation of the Three Houses was continued, with this variation, that one of the three representatives of the Merchants' House was withdrawn, and given to the Chamber of Commerce, which formerly had only one. These Houses were, along with the Town Council, supposed to represent the trade and commerce and general interests of the city, as distinguished from the sectional interest of the shipowners and payers of harbour dues. They and the Town Council together were given a representation of 16 out of the 25 members, and a preponderating voting power in the Trust.

What Other Places Do.

IN view of the proposals of the Clyde Trust, the practice of similar bodies in other parts of the Kingdom is interesting. Of the 38 members of the Thames Conservancy only seven are elected by the shipowners and traders. Under the Bill now being promoted by the London County Council, the Council retains 24 members out of a total of 40, and the Bill will be dropped at once if this vital provision is defeated. The Mersey Dock Board consists of 28 members, and all but four are elected by the harbour ratepayers. On the Tyne the shipowners and traders elect 15 out of a total of 33, and on the Tees they return 8 out of 21. In Ireland the constitution of the Harbour Trusts is rather different, traders being defined as occupiers of property rated at £20 for the poor. Keeping that explanation in view, the Dublin Board consists of 28 members — the Lord Mayor, six town councillors, and 21 shipowners and traders; and the Belfast Board of 22 members is—with the single exception of the Mayor—entirely elected by the shipowners and the owners of property. Coming to Scotland another difference of constitution is met with. In Dundee the 32 harbour trustees are made up of the Lord Provost, seven Corporation members, and 24 elected members. Leith has a most extensive constituency, its 15 Commissioners being returned—three each by the Edinburgh and Leith Corporations, one each by the Edinburgh Merchant Company, Edinburgh Chamber of Commerce, and Leith Chamber, two by the shipowners, and four by the ratepayers. In Aberdeen the Town Council has 19 representatives, while the remaining 12 are shipowners and payers of dues elected by burgesses and guilds. The modern tendency in the constitution of these harbour authorities is to make the representation as wide as possible, recognising that a Port is not established by the shippers and traders, but by the whole of the community which it serves. There is always the possibility, not now imminent on the Clyde, but certain in London, that the rates may be called upon to contribute towards the enterprise, and this is a fact that should always be borne in mind. A harbour in which trade is carried on is as much a public service as a tramway, and it is in accordance with the progressive tendency in regard to these matters that the public shall have a larger, and not a decreasing, share in the control. We hope the Glasgow Corporation will strenuously resist this attempted trade encroachment, and that it will be vigorously supported by ratepayers in its action.

POOR LAW OUTLOOK.

Lord Crewe, Chairman of the State Children's Association, Passes Strictures on the New Emigration Scheme for the Emigration to Canada of Poor Law Children. A Reply. Poor Law Children are Not Less Poor Law Children Because of their Being Drafted Out by a Religious Agency. Scattered Farms Compared with Scattered Homes, and the Reception of the Latter in England. Red Tape at Hampstead. A Year's Progress at Hackney.

THE scheme of emigration to Canada of Poor Law children, put forward by Mrs. Close, and outlined in the *Municipal Journal* of the 9th inst., has roused widespread attention. The London Chamber of Commerce has formally discussed the matter, and the State Children's Association is taking it up. This week we have received from Lord Crewe, chairman of that association, a letter which, though welcoming any efforts to draw public attention to the emigration to Canada of suitable rate-supported children, points ont that nothing could be more detrimental to the success of emigration than the sending of Poor Law children, as such, to the Dominion, and dealing with them there in large groups separated from the normal population.

Objections to the New Emigration Scheme.

❦ ❦ ❦

THE great virtue of emigration, his lordship points out, as now adopted lies in the merging of Poor Law children in the ordinary Canadian population. Thus before they reach maturity their origin is forgotten, and they take that place in the Commonwealth which their characters and talents enable them to win:—

"Widespread Objection."

> Canadians have a widespread objection to receiving children from workhouses. Everything must be avoided, therefore, which could stamp them in Canadian eyes with the Poor Law connection it is the desire of all emigration experts that the children should leave on this side the Atlantic.

Let us grant at once that the Canadian attaches an undue—some would say snobbish—importance to the fact that a child has been supported by the rates, instead of being reared by its parents or private guardians. Well, if he do, will he be a whit more likely to take a State child because it comes under the influence of a religious agency for a few weeks, or at most, a few months? A child is not taken into the home of a Canadian farmer without some inquiry into its antecedents. In a word, it is not possible, with adherence to truth, to leave all so-called Poor Law taint at this side of the Atlantic.

❦ ❦ ❦

THIS is granting Lord Crewe's estimate of the disposition of the average Canadian to be correct. For our own part, we should be somewhat disinclined to think that the Canadian, whose broad democratic instincts and disregard of social distinctions are well known, would be capable of such nicety. But it will be noticed that Lord Crewe says the objection is to receiving children from "workhouses." Surely he does not designate isolated farms of 15 to 20 children, suggested by Mrs. Close, as "workhouses." If we understand the new scheme aright, it is that the Poor Law farms will adjoin or be in the neighbonrhood of ordinary farms, and not in aggregations as groups of cottage homes. It is said, we know, that to these Poor Law farms, whether they be isolated or stand amongst the ordinary Canadian farms, the finger of scorn will be raised. Granting for a moment that that be so, in like manner the finger of scorn may be said to be raised against an individual child in a Canadian farmer's home. But will the finger of scorn be raised against these Poor Law scattered farms? Is the finger of scorn raised against the Poor Law scattered homes in our English towns? Certainly not. When Sheffield essayed to start the scattered home movement in England precisely the same objection was made. But experience showed that when the homes had once been fairly started, and the prejudice of ignorance had been dispelled by experience, the neighbours not only did not taboo the children, but in many cases began to take a positive interest in them. And the English think far more about class distinction than do the Canadians.

"Workhouse Taint."

❦ ❦ ❦

LORD CREWE, as we know from his attitude in times past, believes that only private agencies are serviceable for the emigration of Poor Law children, though at the same time admitting the need for emigration. But judged by results, it would almost seem that the present methods have failed, for we find a tendency towards diminution in the number of children emigrated. Guardians are not enthusiastic on the advisability of sending the children to the Dominion. It is difficult to gauge the reasons for this hesitancy, but one certainly is the difficulty of supervision. This, indeed, is the *pons asinorum* of the emigration problem. It is generally admitted boards of guardians have difficulty in ensuring the welfare of their boarded-out children in England, even with a local committee of supervision and all the facilities supplied by accessibility and cheap locomotion, and they are very properly chary of sending small children thousands of miles away to a thinly-populated country. All who have studied deeply and on the spot the Canadian emigration question are of this opinion. Mrs. Virginia M. Crawford, of the St. Marylebone Board of Guardians, who recently visited Canada for the purpose of studying the matter first hand, told a representative of the *Municipal Journal*, on her return, that this question of adequate supervision was the "real crux of the problem," and added that in the far-off thinly-populated parts of the country, "constant supervision is, with the best intentions, a sheer impossibility."

Difficulty of Inspection.

❦ ❦ ❦

BUT if the movement towards emigration quicken, as we hope it ultimately will quicken, children will perforce be pushed further and further out into these remote regions, by the fact that the nearer suitable Canadian homes will be taken up. We must look to the future in a matter of this kind. There may be objections to the scattered farms of Mrs. Close's scheme, but there are very real dangers under present conditions. We do not regard her scheme as perfect, indeed it shows considerable signs of immaturity, particularly on the financial side, but we regard it as overcoming several difficulties. As the proposal is that boards of guardians should purchase or rent small farms of about 200 acres in "selected parts of Canada," it can be taken for granted that these selected parts will be well situated for purposes of inspection, and we give the word of warning that the inspection will have to be really thorough. In these scattered farms the children will be enabled to adapt themselves to the climate and customs of the new world, and grow up to supply the undoubted demand there is for older children in Canadian farms. If there be any doubt as to whether these children would be welcome, the reception already given to the project in Canada should effectually dispose of it.

What of the Future?

❦ ❦ ❦

WE have dealt at length with these objections to the new scheme, because we are convinced that they are mistaken and may thwart an effort, by no means perfect, but put forward as an honest and promising attempt for the extension of the undoubted benefits of emigration for Poor Law children. Any words of ours as to the great services Lord Crewe, as head of the State Children's Association, has rendered to Poor Law children, would be feeble and unnecessary: but we are convinced that his Lordship and the Association are mistaken in this opposition. In addition to the objections already referred to—and met, we trust, to some extent—Lord Crewe, in his letter to us, after pointing out that emigration, as at present carried out, is the least costly method by which Poor Law children may be individually cared for, proceeds:

The Question of Expense.

> But if, as Mrs. Close proposes, farms are to be rented or bought, even simple buildings erected, machinery, stock, and furniture purchased, officials secured at the high salaries given in Canada, and the children's maintenance and the up-keep of the farms paid for by English guardians out of English rates, the expenditure must be very greatly increased, and would probably approach that of the most expensive English system—the village community.

❦ ❦ ❦

WE will not attempt to deny that this may be so, but in this connection the following estimate of capital expenditure recently put forward is interesting:—

Another View.

CAPITAL EXPENDITURE (NEW BRUNSWICK).

Land, say 160 acres at £2	£320
House, 40ft. by 30ft., two storeys high, with kitchen 20 by 20 attached	600
Site	10
Two horses	60
Ten cows	100
Five pigs	20
Twenty sheep	20
Implements	160
Barns and all buildings	700
Total	£1,990

We must not be understood to pin our faith to the accuracy of these figures, but if they are to be relied upon at all, the expense of this proposed system of emigration is less than half as costly as the English cottage homes system, for the expense of thus providing for 20 children in England works out at about £5,000. This question of expense, however, though important, is not the most important aspect of the case, as Lord Crewe, we take it, would be the first to admit. The scheme is apparently within reasonable financial limits, and less than at least one system of treatment already established, and that is sufficient.

❦ ❦ ❦

THE Visiting Committee at the meeting of the Hampstead Board of Guardians has called attention to the "terrible waste" caused in the workhouse owing to the fact that most of the food had to be served out in regulation quantities to each inmate, irrespective of whether he or she could eat it or not. Especially was this the case with the potatoes, and the committee suggested that instead of carrying out the Local Government Board's regulation literally the potatoes should in future be served in dishes placed on the tables, so that the inmates might help themselves. The master of the workhouse was requested to report to the board on the practicability of adopting the suggestion. The clerk reminded the guardians that they were chiefly instrumental with the Chorlton Guardians in getting a similar alteration made in the regulations respecting the serving out of bread, in consequence of which an enormous saving was effected in every workhouse in the country.

Waste in Workhouses.

❦ ❦ ❦

IT is a common practice at the meetings of public bodies in the Hayfield district for the members to smoke during the transaction of business. At the meeting of the Board of Guardians this week a strong protest was made against it. Half a dozen members were enjoying their cigars when one of the guardians called the attention of the chairman to the growing practice of smoking, and he asked that it should be discontinued. He objected to the already vitiated atmosphere of the small room being made worse by smoke, and said it was very wrong. The complaint caused laughter, but the chairman said that no doubt the members would have respect for the feelings of the member, who had been seriously ill. The cigars were then extinguished.

Guardians' Meeting as "Smoker."

THE indiscriminate nature of much of the Scottish poor relief is becoming more widely known. We had recently to take Mr. Theodore Dodd, M.A., to task for holding the Scottish system up as an example to England. The matter has now come under the purview of the Local Government Board, at least so far as it concerns Glasgow, and the Board is reported as being

Example of Scotch Indiscriminate Relief.

> Convinced that the methods of the Parish Council have tended to increase rather than decrease pauperism in the city.

On Wednesday an official of the Board, with four supervisors who have the overlooking of various Scottish poor districts, visited the offices of the Parish Council, and made an exhaustive survey of the books of the relief department. They are, it is understood, to draw up a report, which will be laid before the governing authorities at headquarters. The indiscriminate giving of poor relief in Glasgow has led to much public discontent in the city, and there have recently been loud demands for stringent inquiry into the matter. The local supervisor has drawn up a list of sixty-two cases in which, in his opinion, relief should never have been granted. We trust that the investigation will not be confined to Glasgow.

A YEAR AT HACKNEY.

HOW THE POOR FARE IN THIS TYPICAL UNION.

THE Hackney Union, with its total population of 270,519, is doing good work for its numerous poor. The guardians firmly believe in the policy of making the inmates of their establishments comfortable, particularly at this time of the year. Comfortable quarters are provided for the deserving aged married couples, entertainments are given fortnightly in the workhouse during the winter months, and during the summer the aged inmates are taken, through the kindness of the Christian Community, by brakes to Epping Forest for a day's outing.

The Brabazon Employment Society provides interesting occupation for the inmates of the infirm wards of the workhouse who from old age or ill-health are unable to take part in the work of the house. The employments taught under the direction of the Society are:—knitting, crochet, embroidery, basket making, netting, straw work, and various kinds of employment. The learning aptitude is first tested, and then such work assigned as seems best fitted for each individual capacity.

Every provision is made for the efficient medical treatment and nursing of the sick, for whom a separate infirmary is provided, and upon special recommendation of the medical officer, and approval by the guardians, convalescent patients are sent to seaside convalescent homes, to benefit by the change of air.

The present accommodation for casuals proving inadequate, new casual wards, arranged on the cellular system, have been erected on a site a little distance from the workhouse, and will accommodate about 100 persons of this class.

The out-relief policy of the guardians is to grant adequate relief to deserving cases, and to strictly investigate each case for the detection of imposture; but, notwithstanding this, the certified number of the accommodation of the workhouse has been during the present winter exceeded by a daily average of about 100 persons, and the number of able-bodied males receiving relief at the present time is as under, viz.:—

Indoor 146, Outdoor 200,

being an increase of 46 indoor and 91 outdoor in the corresponding period of last year.

Special attention is given to the interests of the children chargeable to the guardians, and with a view to obviating the necessity for the admission of children who become chargeable to the workhouse, they are immediately admitted to the children's homes, and if likely to remain chargeable, transferred as soon as possible to the guardians' schools at Brentwood, Essex, or some other school or home best suited to their requirements, and where they will be properly educated and well cared for.

At the present time there are about 1,500 children chargeable to the guardians and maintained in institutions, as under, viz :—

(a) The nursery		76
(b) The infirmary		124
(c) The Brentwood Schools		444
(d) The Children's Homes, Sidney Road, Homerton		149
(e) The Strand Union Schools, Edmonton		122
(f) Special institutions of the Metropolitan Asylums Board for children suffering from ringworm	58	
Children suffering from ophthalmia	33	
Feeble-minded children	5	
Convalescent children	33	
Training boys for the navy	16	—145
(g) Special schools for blind, deaf and dumb, feeble-minded, epileptics, &c.		21
(h) Boarded-out		80
(i) Roman Catholic schools		49
(j) Imbecile asylums		56
(k) Fever hospitals		248
(l) Miscellaneous institutions		10
Total		1,524

At the Brentwood Schools many of the boys are taught to play brass and reed instruments, forming an efficient band. The school possesses a gymnasium, swimming bath, museum, and dairy farm. Technical instruction is given to the boys in carpentering, baking, painting, plumbing, tailoring, shoemaking, farming, gardening, and to the girls in cookery, dressmaking, needlework, housework, &c.

During the year, the guardians, under the provisions of the Poor Law Act, 1899, have assumed control of 48 orphans and deserted children; all rights and powers of the parents thereby become vested in the guardians until the children attain the age of 18 years. Ten boys have been emigrated to Canada, and 18 children boarded out under the care of the country boarding-out committees.

Owing to the inadequate accommodation of the guardians' establishments for children, new homes are in course of erection at Ongar, Essex, and when completed will accommodate about 300 children.

Parties of the senior children make periodical visits to the museums, picture galleries, and public and historical buildings in the metropolis.

OFFENSIVE TRADES IN LONDON.

PROPOSED AMENDED BYE-LAWS.

THE London County Council is considering the desirability of amending the existing bye-laws made by the County Council, *re* offensive trades, and has sent round to the borough councils drafts of such amendments, asking for the borough councils' observations. The most important amendment is to require, in future, that, in the case of every business, all offensive processes shall be conducted in a closed chamber, provision being moreover made for the adequate ventilation of such chamber and the destruction of offensive vapours. In all cases where a closed chamber is to be provided, the cleansing of the floor of every such chamber and such part of the walls thereof as is covered with hard, smooth, and impervious material, is required at the close of each working day; and all vessels, receptacles, &c., are to be kept clean so as to prevent any offensive smell.

Yesterday (Thursday) the Health Committee of the Lambeth Borough Council reported that "the suggested amendments are improvements, and deserve the support of the Borough Council."

LAMBETH AND LABOUR COLONIES.

A COMMITTEE of the Lambeth Board of Guardians appointed to consider the question of the establishment of a farm colony as suggested by Mr. Fels, reports: "Having carefully considered this question in connection with the offer of Mr. J. Fels of about 100 acres of land to the guardians at a peppercorn rent for a period of three years, with the option of purchase at the expiration of such term, we recommend that such offer be accepted, and that a small committee be appointed to meet Mr. Fels to consider and view such farms or pieces of land which he and the committee may think most suitable, and to report thereon to the board." At the last meeting of the boarn this was carried, and a small committee was accordingly appointed.

RAILWAY FARES FOR SCHOOL CHILDREN.

THERE is not an elementary school at Barton Moss, and of the 44 children living there 25 are attending schools outside the Barton Education Committee's area. The committee does not think it wise to build a school for so small a number of children, and this week it resolved to pay out of the rates the railway fares of the 22 children attending the schools at Patricroft.

THE St. Helens Watch Committee on Wednesday appointed Mr. A. R. Ellerington, chief constable of Margate, to the position of chief constable of St. Helens in succession to Mr. James Wood, who retires at the end of the year.

HEATING OF BUILDINGS & HOT WATER SUPPLY

FROM LIVE OR EXHAUST STEAM.

The Latest and Best Appliance is

ROW'S PATENT CALORIFIER

Combined with AUTOMATIC STEAM CONTROL (Royles' Patent)

Adopted by the Metropolitan Asylums Board, London County Council, Manchester, Liverpool, Glasgow, Edinburgh Corporations, and others, for Bath Supply.

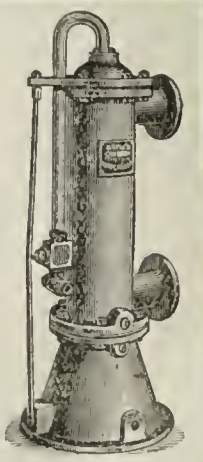
Storage Calorifier for Baths.



Vertical Calorifier for Hot Water Circulation.

ELECTRICITY SUPPLY.

Satisfactory Budgets from Crewe and Paisley. Analysing the Sources of Improvement, and a Prophesy as to the Future. What Careful Comparison may Teach. Debt Redemption Charges, and a Reply to a Correspondent.

THE Borough of Crewe electricity accounts for the year ended March 31st last show a surplus of £1,116 on the year's working, which is an excellent return on a total revenue of £6,065. It is more than half as much again as that for the previous year, and it has been earned on a sale of 170,398 units to private consumers, with a maximum load of but 313 kilowatts. The private consumption has increased more rapidly than the output for public lighting, but the latter is still considerably the higher. The changes are, an increase in revenue of £683, and in expenditure of £220, making the gross profit greater by £463. Extra capital charges amounting to £69 left the surplus increased by £394.

The revenue derived from sales of current, &c., amounted to	£6,030
And the working expenditure to	2,483
Leaving a gross profit of	£3,547
To this sum certain special receipts were added:—	
Interest received	21
Interest on special cable laid	14
And an amount retained from income-tax ...	13
Making a total of	£3,595
Out of this sum the following requirements were met:—	
Interest on mortgage debt	£1,236
Sinking fund payments	1,243
Total of capital charges	£2,479
Surplus for year 1903-4	£1,116
Add surplus balance brought forward	1,671
Total surplus	£2,787

In appropriating the nett receipts the income-tax retained has been eliminated from the revenue, and also deducted from the expenditure.

❦ ❦ ❦

Increased Business at Crewe.

THE expenditure has fallen ·056d. per unit, and the revenue by ·039d., leaving the gross profit better by ·017d. This, added to the reduced capital charges ·158d., gives the improvement in the surplus ·175d. per unit. It will be seen how much has been due to the reduction in capital charges by the larger output. This has increased as regards private supply by 38,373 units, bringing in £468 extra, at a reduced average by ·221d. per unit. Public lighting is greater by £172 and 10,707 units, the average being less by ·094d. per unit. Taking the whole output, the increase is 49,080 units and £640 for current only, at a reduction in selling price of ·057d. per unit. Thus a small station has materially improved its position all round, and is selling its larger output at a lower price, and still making a larger surplus by the better use made of its invested capital and by economies in production. The total cost is under 1¼d. per unit against a little over a 1½d. in the previous year, which should be an encouragement to those who dread the bogey of bulk supply—

CREWE.	Units.	Yielding.	Per unit.
Private consumers took ...	170,398	£2,619	= 3·689d.
Public lamps consumed ...	231,910	3,311	= 3·427d.
Interim total	402,308	£5,930	= 3·538d.
Meter rentals...	—	69	= ·041d.
Sales and receipts	—	31	= ·039d.
Bank interest received ...	—	35	
Total receipts	402,308	£6,065	= 3·618d.
Units used on works... ...	38,315	(The maximum load was 313 k.w., equal to a load-factor of 14·67 per cent.)	
Total accounted for... ...	440,623		
Utilised on distribution ...	14,603		
Total units generated ...	455 226		

❦ ❦ ❦

The Better Policy.

THE public lighting at Crewe is paid for at a uniform rate of 3d. per unit, and the disbursements are refunded. These last year amounted to £238 for attendance and £174 for repairs and renewals on the eight arc lamps and 712 incandescents comprised in the scheme. The receipts were appropriated over the different items of expenditure thus:—

	Amount.	Per unit.
Works cost	£1,455	= ·868d.
Rates, taxes, and management	603	= ·360d.
Total cost...	£2,058	= 1·228d.
Public lamp maintenance	412	= ·245d.
Gross cost	£2,470	= 1·473d.
Interest charges	1,236	= ·737d. } 1·479d.
Sinking fund	1,243	= ·742d. }
Total actual cost of units sold	£4,949	= 2·952d.
Surplus for year	1,116	= ·666d.
Total receipts	£6,065	= 3·618d.

As the capital charges are in excess of the total cost per unit, the public lighting is paying a fair proportion of the surplus profit, owing to the greater use being made of the proportion of plant required for this class of consumption. By so doing the private consumer is enabled to have his supply at a rate which competes with rival illuminants, instead of being called upon, as in so many other cases, to pay not only for his own expenditure, but to cover a large proportion of the loss on public lighting taken at an unremunerative figure. It is much better policy to let the ratepayers at large pay a fair and reasonable rate for the lighting which is provided for the benefit of all than to lay the burden on the few who are private consumers ("few" only too often through a restricted area covered by the mains), and profess to be fulfilling a public service at a phenomenally low rate.

❦ ❦ ❦

Paisley's Position Electrically.

THE accounts of the Corporation of Paisley are made up to the 15th of May annually, and those discussed below bring the history of the undertaking to the date mentioned this year. This is one of the systems still showing a deficiency, but as it is only half, or less than half, of what it was previously another twelve months should see a balance between annual expenditure and income—

The revenue derived from sales of current, &c., amounted to	£10,853
And the working expenditure to	6,208
Leaving a total gross of	£4,645
Out of this sum the following requirements should have been met:—	
Interest on mortgage debt	£142
Interest on Corporation loans fund ...	2,945
Interest on temporary loans...	658
Bank interest	50
Sinking fund payments	1,957
Total of capital charges	£5,752
Less gross profit as above	4,645
Gross deficiency	£1,107
Less income tax retained	22
Nett deficiency for year	£1,085

In the revenue a small sum is included which appears as an item for bad debts in the expenditure. This has been deducted from the revenue, and eliminated from the costs. To follow the changes which have taken place we give particulars of the output for the past six years:—

Year ended Dec. 31st,	1899.	1900.
Units sold..	108,166	370,521
Maximum load	314k.w.	302k.w.
No. of public lamps ...	63	64
Prices charged	7d. & 3d.	6d. & 2d., or 5d.

To May 15th,	1901.	1902.	1903.	1904.
Units sold	152,020	436,953	531,737	847,871
Maximum load ...	302k.w.	382k.w.	527k.w.	703k.w.
No. of public lamps	64	64	64	79
Prices charged ...	6d. & 2d. or 5d.	4d.	4d.	4d.

In addition to these rates there was a special tariff of 2½d. per unit for power and heating, and during the last three years power above 50 h.p. has been the subject of arrangement.

Large Increase in Revenue.

THE improvement, as in so many other instances we have quoted, is due to a large increase in revenue, accompanied by only a small increase in the expenditure. The private sales increased by 285,555 units, and the public by 30,579, making a total of 316,134 units, yielding £2,298 more than before. The cost of this greatly enhanced output was only £321, leaving £1,977 more as gross profit, of which £509 was required for added capital charges, so that £1,468 remained towards a reduction in the deficiency, which has accordingly fallen from £2,553 to £1,085. As the average selling price has been reduced from 3·861d. to 3·072d. per unit, which reduction of ·789d. was exceeded by the lessened expenditure—economies bringing about a saving of ·896d. in this item—and as the capital charges are less by ·738d. per unit, the deficiency has been reduced by ·845d. per unit. These changes are very marked improvements, and particularly so in the case of the costs and capital charges, which at 2·646d. and 2·367d. were both abnormally high. When these outlays have been brought to something like the amounts which are found elsewhere, the Paisley accounts should show a surplus, and as the 4d. rate already yields £6,654, the only alteration which seems probable is an encouragement in the direction of motive power. Twopence-halfpenny is too high to cause the manufacturer to favour a change in this direction, and Paisley ought to yield a rich harvest if the price were one competing with existing modes of factory driving.

❦ ❦ ❦

A Comparison.

THE receipts were obtained from the following sources:—

PAISLEY.	Units.	Yielding.	Per unit.
Private consumers took ...	671,372	£8,523	= 3·074d.
Public lamps consumed...	176,499	1,959	= 2·664d.

Common Basis a Failure.

A CORRESPONDENT has raised an interesting question. He writes, "On looking at your interesting analysis in a recent issue of the Eastbourne and Poplar electricity accounts of 1903-4, I have been struck by the disparity in the debt redemption charges."

	EASTBOURNE.	POPLAR.
Capital	£145,989	£194,301
Sinking fund	4,744	1,463
Interest...	4,327	6,331
Total capital charges ...	9,071	7,794

The sinking fund contribution in one case is about 3½ per cent. and in the other about ¾ per cent. The first thing one notices on turning up the printed accounts is that the outlay during the year was respectively £7,541 and £13,703. This partly explains the difference, but only very partially. Of course, if the outlay had just been incurred the sinking fund charges might not have accrued, or at least not have been met. In London the loans are sometimes deferred for three years as regards repayment. Again, the period granted by the London County Council is an equated term of 42 years for all electricity expenditure on capital account, against 25 years in the provinces. The difference is probably explained by these varying conditions, but it is certainly inexplicable why the amounts repaid, the sum charged for rates, and the allowances for use of town hall and general office expenses in different towns should vary as they do. It is largely owing to these variables that any attempt to reduce the results of different undertakings to a common basis must end in failure, or, at least, in confusion; and we have been led to confine ourselves to the facts as set forth in the statutory form of accounts rather than, as some would have us do, apply indeterminate corrections and adjustments to such figures.

♣ ♣ ♣

Low Capital Cost.

IN this connection it may be mentioned that we have been criticised for suggesting that plant of 1,200 kilowatts capacity at Eastbourne could meet a larger demand than 743 kilowatts of the winter of 1903. It is estimated that this winter the maximum will be 840 kilowatts, leaving 360 kilowatts of reserve or spare, and that beyond this it is not safe to go until further plant is available. Of course all depends upon the size and number of the units comprising the plant, but it is so obvious that the overload capacity should be a reasonable amount that if the plant be properly rated the margin to be held as reserve may be materially reduced, and the capital charges per unit sold diminished. To quote an Institution of Electrical Engineers' paper (April, 1904):—"With ordinary load-factors the question of overload capacity has more influence upon the reduction of capital costs—which are at least half the total cost of production—than any other feature. Low capital cost has an overpowering importance: reliability and reasonable economy having been secured, this more than anything else is the criterion of success in power station design. A very great saving can be made by relying upon the overload capacity of the plant, not only for dealing with sudden emergencies, but also depending upon it for the ordinary peak-load of the station, or when other plant is being overhauled." The usual figure for reserve is one-quarter or 25 per cent. of the installed capacity, and if this is exceeded it is clear that the financial charges must be a burden upon an undertaking whose units of machinery are so arranged that they involve the largest set being retained as stand-by.

CORRESPONDENCE.

RATING OF LAND VALUES.

To the Editor.

SIR,—A frequent objection to the rating of vacant land is, that when the land is built over the owner will make the occupier pay the rates just the same by raising the rent by the amount of the land value rate. Another objection is, that in crowded districts like Finsbury, Clerkenwell, &c., a land value rate will raise very little new revenue if you are not going to tax ground landlords, and we certainly do not propose to do that. One is always glad to find points of agreement with those with whom one differs, and I readily agree that the occupier will pay the full value of his premises whoever pays the rates. Nor is there going to be much less rates in the pound in crowded districts by unoccupied land being added to the assessment roll. If you do put the legal charge of the rates upon him, the landlord can be trusted to get what he can, and the tenant to pay what he must, and in districts like Clerkenwell a penny or so in the pound will be all the "relief" the ratepayers are likely to get.

There is, however, another side to the shield, admirably brought out by Lord Balfour of Burleigh, Lord Blair Balfour, Sir George Murray, K.C.B., Sir Ed. Hamilton, K.C.B., and Mr. Stuart, in the "Separate Report" on "Urban Rating and Land Values," forming part of the Report of the Royal Commission on Local Taxation. These gentlemen aptly remark (page 165 of the Report, last paragraph):—

"The mistake made hitherto has been to regard the taxation of site value as primarily a question between the parties interested in any one hereditament, or as essentially depending on the rights or wrongs of the dispute between the ground landlord and the string of lessees as to the fairness of their contracts.

"The real question as to the taxation of site value is the question whether there ought not to be a tax on site value, *where it exists*, and in proportion to the amount of it which exists in each place. In other words, site value is in essence *local*, and the effect of taxing site value would be primarily a *local* redistribution of burden, not primarily a redistribution of burden as between the parties interested in each single hereditament, but as between different districts and different hereditaments."

Let us take an ordinary case that often goes on for years. One side of a street is built upon, and the other is a vacant site. Mr. Jones, the owner of this site, reaps an equal advantage with the owners and occupiers of the buildings opposite in the beneficial and costly public improvements continually going on. But rates and taxes amounting to a quarter of the total annual yield from site and structure are drawn from the covered land, and from these Mr. Jones is entirely exempt until such time as he allows work to be found for the unemployed by parting with his land to a builder. It is often more profitable to the owner for his land to remain unbuilt upon until growth of population and material progress lends a higher value to the site. It is a well-known fact that land around London grows in value at least two per cent. every year, and sometimes very much more. But these circumstances retard improvements, and are adverse to the true interests of all those who desire to find a vent either for their labour or for their capital.

That there is a profound and intimate connection between the unemployed and vacant land is proved by the demand that has arisen for labour colonies.

Yours truly,

F. BATTY.

20, Grand Parade, Highgate, N.

"HOW MUNICIPAL TRADING RAISES RATES."

To the Editor.

SIR,—Mr. R. M'Dougall, of the Liberty and Property Defence League, seeks to prove from the return compiled by Mr. Jas. Carter, borough treasurer of Preston, that municipal trading tends to raise the rates. Mr. M'Dougall does not venture to show the how or why of the process, but relies on the familiar method of selection—picking out such figures as suit his purpose, and suppressing those that don't—to frighten people. He takes a few towns which from the profits of municipal trading relieve the rates to the extent of 1s. and upwards, and happen to have high rates, often due to the heavy municipal burdens cast upon them by the misdeeds of private proprietors abusing their liberty. He then takes a few towns which give little or no relief, acting on the principle with which we are familiar in Scotland, of making price just cover the total expenses, and happen to have low rates. Such conjunctions, he suggests, are the general truth conveyed by Mr. Carter's return.

What does an unsophisticated examination of the return show? Ten towns are given in it which relieve rates to the extent of 1s. or more. The average rates in these towns are almost exactly 7s. 2d. Fifteen towns act on the Scottish principle, and derive no profits from municipal trading. In these towns the average rates slightly exceed 7s. 2½d. I leave your readers to judge of the trustworthiness of Mr. M'Dougall's conclusions as to the dangers of municipal trading, or the scientific accuracy of the methods by which he reaches these conclusions by this sample of his wares.

I am, &c.,

Glasgow. F. A. B.

ABERDEEN'S INTERIM CITY CHAMBERLAIN.

AT Aberdeen Town Council, on Tuesday, Mr. Alex. M. Munro, at present assistant city chamberlain, was appointed to act *ad interim* as successor to the late Mr. P. M. Cran, city chamberlain, and it was remitted to the Finance Committee to report as to the filling of the vacancy permanently.

NEW YORK RAPID TRANSIT.

SOME LESSONS FOR LONDON.

[By Mr. J. ALLEN BAKER, Chairman L.C.C. Highways Committee.]

THE statesmanlike and able way in which the New York Rapid Transit Board has sought a solution of the street traffic problem in its city, is, I think, suggestive of what should be undertaken for London, if the same problem which is equally pressing here is to be solved.

No doubt the circumstances in New York are in some measure different from those of London, inasmuch as the business portion of the city on Manhattan Island cannot further expand, and hence the "skyscraper" type of building must increase to meet the vast growing need of the city. Concurrent with this, rapid transit facilities, both surface and subsurface, must also increase. The New York City authorities, as well as the operating companies, have fully realised this, and as a result they have to-day:—

(1) The most extensive elevated street railway system in the world, recently converted from steam to electric traction;

(2) The most up-to-date and perfect system of surface street railways, comprising 210 miles of electric conduit lines; and

(3) The present Rapid Transit Subway Electric lines, with their extensions in both city and suburbs, will, I believe, be far in advance of any other scheme of city transit in the world.

London's Problem.

London may expand, is yearly expanding, in every direction to accommodate her ever-increasing population, but with the growth outwards there is also a corresponding congestion in the central and business districts, and large business blocks are constantly being erected in and near the City as the old leases fall in. We have detached systems of tramways, suburban train systems, deep level railways, and omnibuses, but no co-ordinated and harmonious plan that meets the needs of the county as a whole. Omnibuses in other cities have had to succumb to the more comfortable and speedy electric street car. Deep level tubes are admittedly less comfortable, less convenient and more costly to construct and operate than the shallow subway, and I do not think that they are likely to be largely extended in London. The electrification of the District and Metropolitan Underground Railways, and the lines in connection therewith, constitutes, however, an important step in the co-ordination of London locomotion.

The Solution.

The real solution, I am persuaded, is to be found in the further electrification and extension of the London County Council tramways and in the construction of further subways under some of the streets in the more central parts, to make east and west, as well as north and south, connections. The authorised tramway over Putney Bridge will soon be constructed, while lines from the south to Victoria will be constructed when the new Vauxhall Bridge is opened. It is hoped that powers to construct lines over Westminster and Blackfriars Bridges may be obtained in the next session of Parliament. The Council's new subway under Kingsway, which will bring the Northern tramways as far as the Strand, is now under construction. If the connections with the proposed lines along the Embankment and across Westminster and Blackfriars Bridges are sanctioned by Parliament, north and south through connection will for the first time be attained by the tramways, which will be of the greatest value to the Council's system, and of immense benefit to the travelling public.

Powers were obtained in the last session of Parliament for the construction of a line from the Council's conduit lines in Greenwich to the southern end of the Blackwall Tunnel. The lines along East India Road pass the northern end of the tunnel, and it only remains to obtain authority for a line through the tunnel to make a further and most valuable north and south connection in the East End.

An east and west shallow subway from Hammersmith to the Bank, with connections with the present subway at the Strand, and with radiating lines under the City to the tramway termini on the north and east boundaries of that area, would be a most valuable, and probably profitable, scheme. Another subway from the tramways terminus at Victoria Station to the Marble Arch, under Grosvenor Place and Park Lane, connecting with a surface tramway from there, from along Edgware Road to join the Middlesex lines at Cricklewood, should be carried through. Another valuable line would be along Tottenham Court Road, Charing Cross Road and *viâ* Trafalgar Square and Parliament Street to Westminster Bridge. The extension of surface lines, wherever possible, in the west and north-western parts of London, having connections with the present systems and affording access by subway to the City, should be carried out at no distant date, and then the reproach that now attaches to London as being one of the most badly served cities in the world, so far as transit facilities are concerned, would to a large extent be removed.

New York has shown us an example of what enlightened civic enterprise can accomplish. London has the opportunity, with its existing tramway systems, and its first tramway subway under construction, to extend, connect, and build up a complete and uniform system for the whole of the county that will be a credit to the Capital of the Empire.

TRAMWAY TOPICS.

Long Distances and Low Fares.

THE tramways manager of West Ham (Mr. H. E. Blain) has compiled a very interesting statement showing the distances given for each rate of fare by all the tramway undertakings in the kingdom on which half-penny stages are provided. The following table is interesting as showing the carrying power of various tram fares in different towns:—

System.	Length of Stage. Halfpenny. Average	Halfpenny. Max.	Penny. Average.	Penny. Maximum.	Three halfpence. Average.	Three halfpence. Maximum.	Twopence. Average.	Twopence. Maximum.	Aver'ge fare chr'ged per mile.
	Yds.	Yds.	Mls. Yds.	Mls. Yds.	Mls. Yds.	Mls. Yds.	Mls. Yds.	Mls. Yds.	d.
Aberdeen ...	1,000	—	1 440	1 860	1 1,320	1 1,480	2 880	2 1,280	·82
Ayr	1,100	1,600	1 880	—	—	—	3 0	—	·68
Barking	880	—	—	—	—	—	—	—	—
Birkenhead ...	1,005	1,188	1 704	1 1,496	1 1,465	1 1,507	3 1,043	5 880	·67
Dundee	968	1,710	1 1,302	2 484	2 0	2 758	—	—	·69
East Ham ...	1,464	2,160	1 1,194	2 145	2 624	2 1,330	3 280	3 495	·62
Glasgow	1,020	1,478	2 563	2 1,337	3 845	3 1,742	4 1,126	5 550	·45
Halifax	627	638	1 945	1 1,166	—	—	—	—	·79
Ilford	1,150	1,560	1 540	1 880	1 1,640	2 380	2 1,320	3 0	·75
Kirkcaldy ...	1,153	1,343	1 752	1 1,105	1 1,707	2 259	2 624	2 700	·78
Lancaster ...	818	1,000	—	—	—	—	—	—	—
Leeds	950	1,425	1 1,337	2 246	2 281	2 686	3 193	3 1,619	·66
London County Council ...	1,155	1,600	1 314	2 880	2 257	3 880	4 129	4 1,320	·62
Nelson	922	1,200	—	—	—	—	—	—	—
Rotherham ...	1,144	1,408	1 1,038	1 1,531	—	—	3 298	3 440	·64
Sheffield	880	1,383	2 880	3 413	—	—	—	—	·50
West Ham ...	1,209	2,070	1 1,351	2 135	2 1,190	2 1,635	3 1,258	4 120	·56

West Ham's Position.

IT will be seen that West Ham occupies a third position in regard to the average fare per mile, the first being Glasgow, which, with its huge undertaking and long distances, charges ·45d. on an average for each mile; the second Sheffield, which, by reason of its universal penny stage, brings its average down to ·50d. per mile; West Ham's being ·56d. This is highly creditable to the Council of this extra-metropolitan borough. Last week we showed that its tramway finances are in a sound and progressive condition, this notwithstanding that it is the only undertaking in the United Kingdom whose minimum wages for either traffic or shed staff is 35s. a week.

North London Arbitration.

SIR COLIN MONCRIEFF sat in the Westminster Guildhall on Monday as arbitrator for the purpose of determining a claim brought by the Hornsey Borough Council against the Middlesex County Council for the recovery of £2,000. In connection with the construction of the electric tramways in North London, the County Council required the Borough Council to carry out certain alterations. The plan proposed by the County Council was regarded by the Borough Council as dangerous, and accordingly the latter carried out the work itself, and sought repayment of the cost from the Council. After hearing expert evidence the arbitrator reserved his award.

The South London Railway.

LAST Friday afternoon a party of members of the Tramways and Light Railways Association paid a visit, arranged through the courtesy of Mr. Brousson, the engineer and traffic manager of the Great Northern and City Railway, and Mr. T. C. Jenkin, the general manager of the City and South London Railway, to the power stations of those electrically-operated undertakings. The equipment of the two lines presents many interesting points of difference, as might be expected when it is borne in mind that the City and South London was the first tube railway constructed in the metropolis, and, indeed, was the first example in any part of the world of the application of electricity to the propulsion of heavy railway rolling stock, while the Great Northern and City line is the latest tube railway opened to traffic in the capital. The South London tube, which passes beneath the bed of the Thames near London Bridge, is of smaller diameter than any other deep-level railway here; while the Great Northern and City tube is the largest yet constructed, and, with its diameter of 16 feet, can accommodate ordinary railway carriages or the most spacious English Pullman cars. A novel feature recently introduced by Mr. Brousson into the working of the last-mentioned railway is an automatic system of track signalling, used with a treadle control. A train entering upon a section of the line puts the signal controlling that length to "danger," and locks it in that position until the train passes out of that section, when the controlling relay is energised, and the last coach, which is fitted with a brush, makes contact on the treadle and releases the signal. Safety in operation appears to be secured by reason of the fact that the signal in advance must have gone to "danger" before the treadle can operate the signal in the rear.

Chesterfield's New Tramways.

THE new municipal electric tramway system at Chesterfield was this week inspected by Major Pringle, one of the Board of Trade's inspectors. He was accompanied by Mr. A. P. Trotter, electrical adviser to the Board of Trade. Among the members of the Corporation who rode in it over the track was the Mayor (Councillor Hopkins). The cost of the four-mile scheme is about £60,000, and the contractor is the British Insulated and Helsby Cables Company, Limited. The whole of the work has been carried out under the supervision of the borough electrical engineer (Mr. R. L. Acland).

Tramway Experiment at Bradford.

THE Bradford Tramways Committee is at present making another attempt to solve the "dry-seat" problem. The seat in this particular case consists of an endless chain of

leather and wooden laths, supported by two rollers. If the exposed portion should be wet, a turn of a wheel fixed to the side carries it underneath, and a dry portion takes its place. The seat is similar in appearance to the ordinary single seat in use on the top portion of cars. The idea seems to be quite as good as the many inventions to provide a dry seat on uncovered cars which have already been given a trial. The patentees of the seat are Messrs. Heaton and Wood.

"Tramcar as Hackney Carriage."

ON May 10th last, the town clerk of Dewsbury (Mr. H. Ellis) laid an information against the Yorkshire (Woollen District) Electric Tramways Company, Limited, alleging that, being the proprietors of a tramway car, it permitted the same to be used as a hackney carriage plying for hire within the borough without having obtained a licence, as required by Sec. 37 of the Town (Police) Clauses Act, 1847. It was proved before the justices that the car in question was worked by electric energy through the public streets of Dewsbury and the adjoining districts, and that it ran through the streets carrying passengers at separate fares, and that the car had not been licensed. The justices were of opinion that the car in question was an omnibus within the meaning of the Act, and that the appellants had been guilty of an offence in plying for hire with their car without a licence, and they convicted them, inflicting a nominal fine of 2s. 6d.

The Justices' Decision Reversed.

THIS week the case came before the Lord Chief Justice and Justices Kennedy and Ridley in the King's Bench Division. The respondents contended that the car was an omnibus within the meaning of the Town (Police) Clauses Act, and that it must, therefore, be deemed to be included within the term "hackney carriage" in those Acts. The appellants, on the other hand, contended that the carriage was not an omnibus or hackney carriage; that by reason of the Light Railways Act and the Spen Valley Railway Act, the Town (Police) Clauses Act did not apply to such car, and that no licence was required. The appeal was allowed, with costs. The Lord Chief Justice, in delivering the judgment of the Court, said that the ingenious contention on behalf of the local authorities, if enforced, would lead to many absurdities, and the Court had come to the conclusion that the whole course of legislation showed that these light railways were railways, and in no sense of the word hackney carriages.

London, Deptford, and Greenwich Arbitration.

MR. JUSTICE BRAY on Wednesday decided a special case submitted by an arbitrator arising out of the purchase by the County Council of the London, Deptford, and Greenwich tramways. The company contended that the value of its undertaking was enhanced by reason of its being freed from liability to contribute to the widening of certain streets. The arbitrator had assessed the additional compensation under this head at £22,773 in the event of the Court finding that the company was entitled to it at all. His lordship decided that the company's contention was unfounded, and that the company was not entitled to the sum. Judgment accordingly, with costs.

Santa Claus by Tram.

THE Liverpool Tramways Committee is this year again making special arrangement for the running of an illuminated electric car to-morrow evening (Christmas Eve). The authorities have specially decorated the car for the occasion with a figure at each end, almost full size, of Santa Claus with a bag of toys, suitably illuminated, which, no doubt, will be found pleasing from the point of view of the youngsters of the city, who always await the arrival of the car in large numbers.

Welsh Tramway Scheme.

THE South Wales Electrical Power Distribution Company and the Carmarthenshire Electric Power Company have deposited a joint Bill for introduction into Parliament next session, under the title of "A Bill to transfer to and vest in the South Wales Electrical Power Distribution Company the undertaking of the Carmarthenshire Electric Power Company, and for other purposes." The preamble states that the South Wales Electrical Power Company has raised a large amount of capital and has constructed stations for generating electricity within the area prescribed by the Act of 1900, and is actually carrying out the powers conferred upon it by Parliament, and as the area of the Carmarthenshire Company adjoins that of the company, it would tend to economical working in the future if the Carmarthenshire Company's undertaking were transferred to the company.

Municipal Tramways Football League.

	Plyd.	Won.	Lost.	Drn.	Goals For.	Goals Agst.	Pts.

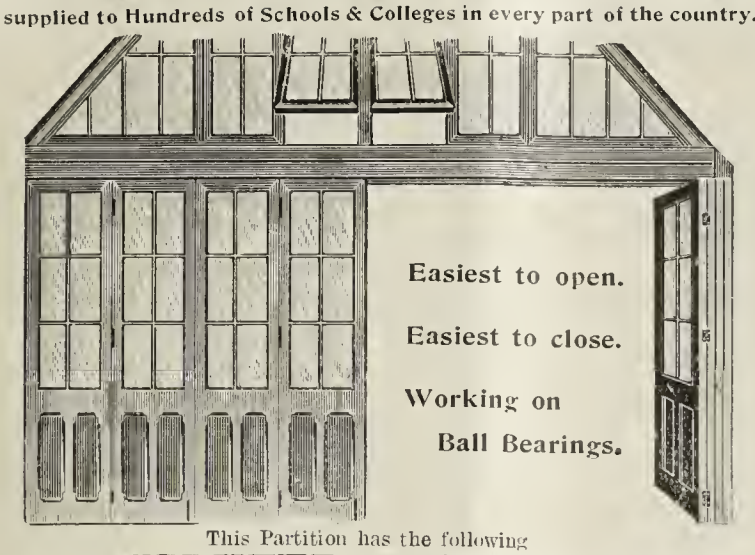
The Educational Supply Association have
ALL WORK DONE IN ENGLAND
at the Association's Factory at Stevenage.

PATENT FOLDING PARTITIONS,

As supplied to Hundreds of Schools & Colleges in every part of the country.



Easiest to open.
Easiest to close.
Working on Ball Bearings.

This Partition has the following
UNDISPUTED ADVANTAGES
Over every other design in the market:

A child can extend or fold it.
Extended it is an absolutely effective divider.
Folded it occupies the minimum space.
It has no intricate works to get out of order.

Model Partitions forwarded to any part of the kingdom recommend themselves by their superiority. The workmanship and durability are guaranteed.
Estimates for the erection of a partition (including fixing) in any part of the country, sent post free.

PUBLIC LIBRARIES, TECHNICAL INSTITUTES, POLYTECHNICS, CHURCHES, &c., &c., FITTED THROUGHOUT.
PLANS submitted FREE OF CHARGE, showing suggested arrangements of fittings. Estimates prepared either for Stock Patterns or Architect's Special Design for Fittings. Large Stocks of Oak, Pitchpine, and other woods always kept at the Factory at Stevenage. The Seasoning Sheds cover many acres.
For further particulars concerning any of the above apply to the
EDUCATIONAL SUPPLY ASSOCIATION, Ltd.,

METROPOLITAN BOROUGH OF FINSBURY.

TEMPORARY SANITARY INSPECTOR

THE Council of the Metropolitan Borough of Finsbury invite Applications for the position of TEMPORARY SANITARY INSPECTOR. Salary £3 per week. Candidates must possess a certificate from an examining body approved by the Local Government Board. The appointment (subject to certain conditions) may be made a permanent one at a salary commencing at £130, and rising by £10 yearly on approved service to £180 per annum, with uniform, if the service of the person engaged prove satisfactory.

Applications, in candidates' own handwriting, must be made on the official form, which, with a list of the duties, may be obtained either personally or on sending a stamped addressed envelope. The covering envelope of the application form, when sent in, must be endorsed, "Sanitary Inspector," and such form, accompanied by copies of not more than three recent testimonials, should reach me not later than Thursday, 5th January, 1905.

Selected candidates will be required to attend at the Town Hall, but the only expenses which will be recognised will be third-class railway fares.

By order.
G. W. PRESTON,
Town Clerk.

Town Hall,
Rosebery Avenue, E.C.
22nd December, 1904.

COUNTY BOROUGH OF WEST BROMWICH.

TREASURER'S DEPARTMENT.

THE Finance Committee of the Corporation invite Applications for the position of DEPUTY TREASURER.

Candidates must be thoroughly experienced in municipal accounts and finances, including the accounts of a gas undertaking, or other trading departments of a coporation, and must be skilled accountants. They must also have had experience in the control of clerks, and be competent to take charge of the office when required.

Preference will be given to candidates who have passed the examination of the Incorporated Treasurers' and Accountants' Institute, or other equivalent examinations.

Salary £200 per annum.

Further particulars may be obtained on application.

Applications, stating age and setting out the candidates' experience and qualifications, and to be accompanied with copies of three recent testimonials, to be sent to me, suitably endorsed, not later than 10th January next.

THOMAS HUDSON,
Borough Treasurer and Registrar of Stock.

Town Hall,
West Bromwich,
21st December, 1904.

Kilburn, N.W.
23rd December, 1904.

PARISH OF WILLESDEN.

FEMALE ATTENDANT FOR INFIRMARY.

THE Guardians of Willesden Parish invite Applications for the Appointment of a FEMALE ATTENDANT on the old and infirm inmates at the Workhouse Infirmary, Acton Lane, Willesden.

Applicants, who must have had experience in similar work, must be single, or widows without encumbrance, and between the ages of 30 and 40 years.

Salary £26 per annum, with rations, washing, uniform, and apartments.

No beer will be allowed, nor any amount in lieu thereof.

The appointment will be subject to the provisions of the Poor Law Officers' Superannuation Act.

Forms of application may be obtained by sending a stamped addressed foolscap envelope to my offices as below, and must be returned to me not later than Tuesday, the 3rd day of January, 1905.

By order.
J. HUTTON HAYLOR,
Clerk to the Guardians.

CROYDON RURAL DISTRICT COUNCIL

TO BUILDERS AND CONTRACTORS.

THE Croydon Rural District Council invite TENDERS for:—

(A) Erection of Cottage, Cart, Tool and Steam Roller Sheds at Stores Depot, Bute Road, Wallington, Surrey.

(B) Erection of Office, Cart, Tool and Steam Roller Sheds in rear of the Parish Offices, Kingston Road, Merton.

Plans and specifications, prepared by Mr. Robert Masters Chart, F.S.I., can be seen, and bills of quantities (for Wallington Depot) and forms of tender obtained at his Office, Union Bank Chambers, Croydon, between the hours of 10 a.m. and 4 p.m., on and after Monday, January 2nd, 1905, on depositing the sum of £2, which amount will be returned on receipt of a bona fide tender; but no application for bills of quantities will be received later than Tuesday, January 10th.

Sealed tenders must be on the forms supplied, and delivered at the Town Hall, Croydon, not later than Wednesday, January 18th, 1905.

Security will be required for the due performance of the contract.

The Council do not bind themselves to accept the lowest or any tender.

E. J. GOWEN,
Clerk of the Council.

Town Hall,
Croydon,
28th December, 1904.

£25 (TWENTY-FIVE POUNDS) BONUS.

GENTLEMAN (27) desires permanent Berth in a Municipal or Urban District Council Office (seaside or country preferred), having many years' experience in all matters relating to Finance. Able to arrange loans. Undeniable testimonials. Willing to submit bona-fides. Reply, in strict confidence, to A. B. C., care of Municipal Journal, 12, Salisbury Square, Fleet Street, London, E.C.

PROMOTION impossible without good Penmanship. Rapid tuition. Particulars for stamp. N. Broadbent (Prizeman and Medallist), Alston's College, Burnley.

SELF-EMPLOYMENT.

How Many American Cities are Attempting to Solve the Problem of the Unemployed. Opportunity to Work, Better than Free Soup or Shelter. How Small City Farms and Gardens were Started. Extent of the Movement To-Day. How a Helpless Paralytic Won Health and a Certain Amount of Wealth.

[*By Mr. R. F. POWELL, Superintendent Philadelphia Vacant Lots Cultivation Association.*]

TEN years have elapsed since the late Hazen S. Pingree of Detroit boldly announced that "if we will give the members of Coxey's Army the privilege to cultivate the vacant lots in our cities and have what they produce as a reward for their labour, we can stop this tramping instantly."

The assertion was received by the general public with a good deal of doubt and some derision, perhaps, because they did not see how such results could be achieved. Although no general or systematic effort has been made to try the plan throughout the country, it has been tried most thoroughly in a few cities, especially in Philadelphia, and through it results have been achieved that prove beyond question that Mayor Pingree was right in the main.

First, it need scarcely be said that farming is a great industry—so great that more than half the working people of America are engaged in it. It is the most primary and most essential of all the industries. The demand for farm produce is almost unlimited in extent. It is the one and only industry in which men could all engage and not starve. It is the only industry not already apparently overcrowded. It furnishes more than one-half of all exports shipped beyond our ports. These facts, standing out boldly and undisputed, were, perhaps, the basis of Mayor Pingree's belief. At any rate, the success of the work in Philadelphia and the phenomenal results obtained go to prove that what the great majority of men out of work want is—*opportunity*. In the Philadelphia work, the board of managers have endeavoured at all times to impress this idea, not only upon the general public, but upon the "out-of-work" class as well. This year about 800 families have availed themselves of the opportunity to cultivate gardens. The aim of the board of managers has ever been to bring the work as quickly as possible to a self-supporting basis so as to free it from every possible pauperizing influence, and there have been interesting developments showing that that end is rapidly approaching.

A GERMAN WOMAN, ITALIAN MEN, AND YOUNG AMERICANS WORKING SIDE BY SIDE ON A "VACANT LOT."

From year to year the cost of each quarter-acre garden has been reduced to the contributors, until this year it is believed that not over five dollars per garden will be necessary to complete the year's work, whereas the first year each garden cost the association 18.25 dols. But it is not this reduction in cost per garden alone that causes the board to think that the work

can be brought to a self-supporting basis. Every year since the work began the more efficient gardeners have been encouraged to undertake some kind of self-employment on their own account. Small farms near the city have been encouraged, and many families have not only tried the plan, but have succeeded in many cases far better than when they had regular employment in the shops or factories. It was not, however, until this year that a decided effect upon the gardeners resulted.

Early in the season a group of fifteen families, who had cultivated gardens from three to five years under the association, formed themselves into a club and jointly rented nine acres of land. They subdivided it among the members of the group. Some families adhered to the quarter-acre garden, others took half and some three-quarters of an acre, and still others worked for the president of the club for wages, and he in turn undertook the cultivation of all the land that had not been parcelled out. They have paid every expense in connection with the work, including the rent (15 dols. per acre), and the season is now so far advanced that success of the enterprise is fully assured. Those who worked for wages have received at the rate of from 9 dols. to 12 dols. per week, according to their skill.

Better than Current Wages.

The gross return from the nine acres will not fall far short of 3,000 dols. in value, or 200 dols. per family. When it is considered that the men engaged in this enterprise are largely men who could not find other steady employment at scarcely any price, and that they are here engaged but about half their time, and then for only about seven months in the year (April 1 to November 1), and that even thus only partially employed, they are able to make more than half the average wage of the able-bodied younger men engaged in other pursuits, it is clear that if sufficient land had been placed at their disposal to fully employ their whole time, they would earn a far better subsistence than the ordinary labourer can at current wages.

D. F. Rowe, who is manager of this graduate's farm, was a helpless paralytic when he came five years ago to the association to ask if his two little grandchildren might cultivate a plot. He helped them by pulling the weeds from among the little plants, showing the children (one seven years old and the other eleven) how the work should be done. He immediately began to improve in health, and at this writing is the manager of this nine-acre farm and is cultivating more than five acres of land on his own account. The proceeds of his last year's work on the vacant lot gardens was about 400 dols. This year it is perfectly safe to say that he will do much better. But the family look upon the improvement in his health (for he now walks without even a cane and does much of the work on his five-acre plot) as being of far more importance to them and to him than the proceeds from his garden. Mr. Rowe fully expects that next year four or five of the ex-gardeners of the association will join his group.

Digging Without Permission.

In another section of the city the demand for gardens was so great, that more than 75 families were left on the waiting list for want of sufficient gardens, notwithstanding the fact that there were more than 200 in that immediate section. Adjoining the association's gardens was a tract of 18 acres not in use, but its owner was unwilling to loan it to the association. Many of the families begged for gardens on this plot, saying they would not in any way injure it, &c., but not having authority to use it, the board declined to touch it. Then one of the applicants on the waiting list decided not to wait longer, boldly staked off a little plot on this 18 acres, and began digging it up, saying that if the owner drove him off, well and good, but he was going to take his chances. He had scarcely begun work when others began digging and then others, each staking off what he wanted. In two weeks the whole 18 acres were taken up, and more than 60 families were at work. The owner was notified, became interested, and allowed them to proceed. No finer gardens could be found in the city, and every expense connected with them has been paid by the cultivators. The results will amount to at least 20 cents. per hour for every hour devoted to the work.

The association gives no alms, but it stands ready to give all out of work employment on demand, at a wage of 1.25 dols. per day. The produce cultivated by this class of labour is sold and the proceeds are turned into the treasury. The first year there was some doubt as to whether sufficient returns could be secured from the crops to pay such a rate of wages, considering that most of the men knew nothing about farm work, and that they were, as a rule, otherwise deficient on account of age, ill-health, &c.: but when a balance was struck at the end of the first year, it was discovered that had a wage of 28 cents. per hour been paid, there would have been no loss.

Not Charity but Opportunity.

At the end of the second year it was shown on a somewhat larger operation that a wage of 40 cents. per hour might have been paid without causing a deficit in the association's account. This is the fourth season that this feature of the work has been in operation, and at this writing there is every prospect that the experience of the previous years will be repeated.

As an educational force, vacant-lot gardens and school gardens have no superiors. The keynote of the Portland Conference of Charities, if any one phase of helpful endeavour was emphasised more than another, was that of "settlement work"—"the opening of opportunities to men for both work and play, and kindly advice or instruction as to how to put these opportunities to the best use." The injunction, "by the sweat of thy brow shalt thou eat bread," is being interpreted more and more to mean that to eat thy bread by the sweat of other people's brows is wrong and sinful in the eyes of both God and man. Every charity worker and teacher seems to have become fully imbued with the idea that a life of usefulness is the only honourable life that one can lead—an idea which has permeated educational work as well—in the kindergarten, manual training, domestic science and agricultural schools. But men cannot do if no opportunity is open to them.

It is this idea, that it is better to give men an opportunity to work where they can make good wages, than it is to give them soup or shelter, that brought forth vacant-lot gardens in Philadelphia and has made of it a growing success.

BOURNEMOUTH AND B.E.T. CO.

POOLE ARBITRATION AWARD.

THE Bournemouth Corporation has received the award in the tramway arbitration case to determine the amount to be paid by the Corporation for the tramway undertaking of the Poole and District Electric Traction Company, Limited. The amount claimed by the company was £427,619; the valuations put forward on behalf of the Corporation varied from £55,000 to £68,000. The amount awarded by the umpire (Mr. Justice Lawrence) is £112,000, the Corporation to pay the costs of the proceedings. Though the claim was regarded as exorbitant, and its announcement received with something like sensation, the award is considered satisfactory, the amount being below even the most sanguine expectations on the part of members of the Corporation.

The tram line of the Poole Company (a company in which the British Electric Traction Company holds a considerable proportion of the capital) is 3¾ miles in length, of which 1¾ miles is in Poole and the remainder in the urban district of Branksome. The cost of construction was about £64,000. The line was opened on April 6, 1901, and carried during the remainder of that year 1,558 passengers. In 1902 it carried 2,118,686, and in 1903 the passengers carried numbered 2,428,230. The line was originally provided with 11 cars, but 17 were in stock at the time of the arbitration proceedings this year. From April 6, 1901, to the end of that year the receipts were £10,642. In 1902 the amount was £11,409 and in 1903 £15,540. In addition to this existing tramway system the Corporation had to acquire from the company certain authorised extensions, and the company also claimed the value of certain running powers granted to it in connection with the Bournemouth Corporation Tramways. In its claim the company placed the value of the existing line at £224,800.

In addition to the acquirement of this undertaking, the Corporation is extricated from difficult positions in which it found itself, owing to rights acquired by the company regarding tramways in the district. The company had a claim on the first and most profitable section of the Bournemouth Corporation Tramway system. The company opposed the Corporation's Bill, and was given power to construct this particular section if the Corporation did not "substantially commence" the work by a certain date. The company was also given running powers. The company contended that the Corporation had not complied within the time specified, and that its powers lapsed. Legal proceedings followed in the Court of Chancery and the Court of Appeal, the Corporation in the first case being held to have complied, but eventually the company obtained an injunction to prevent the Corporation from proceeding with the work of construction. This injunction was suspended for a time, and while an appeal to the House of Lords was being talked of an agreement was arrived at for the purchase of the company's undertaking at its fair market value as a going concern, the basis being the balance-sheet for 1901. Widely different interpretations were put upon the agreement, and it was contended for the Corporation that some of the authorised extensions for which the company claimed large sums were quite worthless. The reduction of the company's claim to about one quarter, is regarded as a victory for the Corporation. It is expected that the entire cost will be covered in a total sum of £120,000.

THE Shipley Wesleyan local preachers have forwarded a letter to the Shipley District Council, protesting against the continuance of the licence of the Canal Tavern—a beerhouse forming part of an estate recently acquired by the Council for sewage works extensions. It was reported this week that the letter had been before the Sanitary Committee, which had decided to recommend the Council to maintain the licence.

UTILISING WASTE.*

The Economic Advantages of Combining Dust Destructors and Electricity Works. Wise Words on the Construction of Destructors. Not a Few Combined Works Show Poor Results Through Careless Handling of the Refuse. Electricity Generated Credited to Destructor on Basis of Actual Cost. Undoubted Gain Affected by Combination, but Every Case should be Considered on its Own Merits.

IT is fairly obvious that in an undertaking of moderate size the combination of electricity works and destructor on the same site should resnlt in several economies. These are embraced under site, building, chimney, and plant.

SITE.—In most cases the actnal ground covered by the joint undertaking is less in area than that covered by two entirely separate undertakings; and beyond this, some boundary space, approach road, and yard space would be considered indispensable in each undertaking. It is not easy to say exactly what land space is saved in any particular combined works, but, as a rough approximation, it will generally be found that one-third of the land space reqnired for the separate undertakings is saved by combination.

BUILDINGS. — An entire boiler-honse is sometimes saved; on the other hand, the destructor with boilers will cover more space than one without. Sundry offices, mess-room, lavatories, weigh-house, and weigh-bridge would all reqnire to be duplicate in separate works, and often no inconsiderable saving is effected in bonndary wall and street paving.

CHIMNEY. — In separate works separate chimneys would be erected, and a saving of a complete stack is therefore effected by combination. If a distinction is to be made, as would be right in large works, it is the destructor chimney that is saved, as this wonld generally be less costly than one to serve for the electricity works

PLANT. — Some boilers are saved to the electricity works, together with steam and feed piping, pumps, &c. In large works a generator to supply motors, and perhaps fans and lighting, are saved to the destructor; on the other hand, an unnsual length of steam main may be necessary.

Apportioning Capital Outlay.

So many different methods of apportioning capital outlay are in vogue, that I would venture to suggest the following as a basis of arrangement in new works. Opinions will probably differ on this point, but I will give my suggestions for what they are worth, in the hope that the already heavy labours of electricity and sanitary committees may in one or two cases be somewhat lightened when the burning question of apportionment of capital expenditure arises.

SITE.—Actual value of ground space covered by the joint nndertaking to be equally divided; spare land available for extensions to be debited to each undertaking in accordance with probable future requirements.

BUILDINGS AND CHIMNEY.—An estimate of the cost of buildings for each undertaking erected separately should be got out, the difference between these two added together, and the actnal cost to be divided in the proportion of the estimnte. The preparation of these estimates would involve far less labour than several protracted discussions of a large number of overworked town councillors.

PLANT.—All boilers save one should be debited to the electricity works, together with steam and feed piping, pumps, &c. The entire saving in piping and pumps to the destructor would be a fair set-off against additional flues required by the additional boilers. The saving of an electric generator and the cost of its up-keep and attendance can best be dealt with by the electricity works making a small charge to the destructor for electricity supplied.

Adjustment of Cost.

The cost of maintaining the buildings and chimney would be apportioned on the basis of the original estimate until extensions took place, and then the additional outlay wonld be debited to the department extended, and the cost of up-keep apportioned accordingly. I do not pretend that this is by any means a perfect adjustment, but there must of necessity be a certain amount of give and take in partnership of any description.

I therefore put forward a strong plea for the careful analysis and publication of the costs and returns of both concerns separately, and this in the clearest possible manner. I say this feelingly, for many a long hour have I spent in unearthing information from annual reports which might easily have been set out clearly and simply in the first instance.

Difficulties and Points in Common.

Some of the difficulties to be met with in the ntilisation of refuse-raised steam for electrical purposes are: uncertain delivery of the refuse, the varying valne of the refuse from day to day and hour to hour, and the varying percentage of moisture contained; also in winter snow may prevent collection for many days; fog sometimes greatly hampers collection; and holidays occasionally prevent collection for days. By careful management and forethought some of these difficulties may be largely neutralised, but it is merely sufficient to call attention to them to demonstrate that only under favourable conditions may a combined plant be expected to run for any length of time on refnse alone.

The points in common with all modern high-temperature destructors are, forced draught preferably heated, means of drying the refuse in part before placing on the grate, and a combustion chamber in which all gases are mixed and brought to a state of high incandescence, and their temperature equalised so far as possible.

Steam Blast.

Steam blast for producing forced draught is claimed to have advantages over simple air blast in that it produces water-gas in passing through the incandescent fuel, which materially aids combustion; it also tends to keep the fire bars cool, thus giving them an appreciably longer life, and clinkering is rendered easier. These claims have been sufficiently verified, but it is to be doubted whether the larger percentage of steam used in practice secures an adequate return. The Horsfall Company claims that its system of hot steam blast requires 5 to 10 per cent. of the total steam raised, but no figures, test or otherwise, have come into my hands showing anything approaching such results. Messrs. Meldrum Bros. will guarantee that the percentage of steam with hot air blast provided through a regenerator shall not exceed 15 per cent. of the total steam generated, and they claim that it is often as low as 12 per cent. It is an extremely difficult matter to measure the steam blast except on specially arranged tests, but it is a very simple matter to measure the power used by electrically driven fans. However, it is a question that does not turn entirely on the relative consumption of power, as the improved combustion with fuel of high calorific value may outweigh the extra percentage of steam used with steam blast. This is one of the interesting points upon which additional information would be of value, but I venture to think that it will be a hard matter to justify the application in the blast of 20-40 per cent. of the total steam generated.

Economy in the blast is of considerable importance, as the absorption of power is continuous, and, if a wasteful form be used a large percentage of the power available is wholly lost.

Air Leakage.

The prevention of air leakage is another important matter. The clinkering, charging, and access doors of the furnaces and necessary openings in the boilers are all potential sources of leakage, and not a few recently-erected destructors have their efficiency much impaired by faulty design or construction in this respect. Serions air leakages and consequent loss of efficiency sometimes result by the development of cracks in the brickwork of seatings and flues, and it is often a most difficnlt matter to localise and stop such leaks.

Long and badly-arranged flues are another prolific source of lost power. A principle never to be lost sight of in the construction of destructors is that after the perfect cremation of the refuse has been secured, the heated gases should be applied directly to the boiler without having to pass through long flues. Besides being a possible source of air leakage, long and badly-placed flues sometimes become very damp, and a large part of the steam-raising value of the refuse is absorbed by the evaporation of water outside the boilers. Again, the charging arrangements are sometimes crude, and not designed or constructed with a fnll appreciation of the problem involved; the furnaces of the boilers are often a source of trouble through air leakage and unsatisfactory combustion effects, and not a few combined works show poor results through careless and indifferent handling of the refuse and management of the burning.

Crediting Electricity to Destructor.

Very varied are the methods in vogue for crediting the destructor for electricity generated. In every undertaking the average coal consumption can be ascertained from time to time when the destructor is out of use, or is purposely shut down, and then such average figure could be taken as a basis for ascertaining the units generated by each undertaking. In the larger works there really onght to be no excuse for not ascertaining what electricity should be credited, as the feed of the destructor boilers can with small cost be measured, and the average pounds of water per unit generated would form the basis of the adjustment; this method is less simple, perhaps, where steam blast is used in the furnaces, but a fair percentage of this could be agreed upon and deducted.

The cash credit to the destrutor for electricity generated should be on the basis of the actual coal cost; personally I can see no reason why the full ascertained coal value should not be credited as is the case at Hackney. It is often suggested that, owing to variations in steam pressure and other causes, refuse-raised steam is of less value than coal-raised steam, but on a large output surely this cannot be a matter of moment. Then, again, it is suggested that the dust and general nuisance from the destructor causes extra work and increased repairs; judging from my own observations this would appear to need demonstrating.

Where Improvements may be Effected.

The sale of steam for other purposes is a most difficult item to adjust in the absence—to the present time—of any means of measuring the quantity delivered to baths, laundries, disinfectors, etc. Here again I think the Bamber steam meter may be of great value.

Great advances have been made in the problem of utilising waste heat from burning refuse in destructors since the pioneer works were started. These results still leave room for substantial improvement—(a) by closer attention to the details of construction of furnaces and flues, and the general arrangement of the plant; (b) by improving the methods of handling and burning the refuse; (c) by careful utilisation of the steam generated, and the adoption of an economical form of blast.

Given snitable conditions, there is without doubt a substantial gain to be effected by the combination of electricity and destructor works; but owing to the variation in the calorific value of refnse in different localities, and to other special local considerations, every proposed case of combination needs to be considered on its merits by persons qualified to make an independent and intelligent inqniry. The various and in some cases crude methods in vogue of adjusting accounts between the two works need to be systematised, and it is highly desirable that the results obtained be separated and recorded with accuracy, so as to give, so far as possible, a true record of the financial position of both works.

* From a paper read by Mr. W. P. Adams before the Institution of Electrical Engineers.

EDUCATIONAL NOTES.

Devonshire and the Press—Bonuses for the Clerks. Enfield Encourages Temperance. No More School Fees in the Metropolis. Saving Bank Profits at Manchester. Stockport's Differential Rating Bill. Whitehall Presses Torquay. Yarmouth and Juvenile Smoking.

Bradford.—After a long debate, the resolution in favour of the rates being used for feeding school children was rescinded.

Bristol.—The Education Committee is considering the desirability of opening school banks in the public elementary schools of the city.

Cardiganshire.—The County Education Committee has drawn up and approved a list of duties which are to be entrusted to the school managers under the education authority.

Cheshire.—A body of voluntary school managers refused to increase the staff. The Education Committee has now decided to appoint two additional teachers in order to avoid losing the grant, which had been threatened by His Majesty's Inspector.

Devonshire.—The chairman of the Education Committee reported that he had inquired with reference to the premature publication of reports by the Press, and had found that there was often an intelligent anticipation by the Press. He had made it a practice to send the reports out to the Press by the same post as that by which they were sent to the members of the Council. The County Council has decided that the clerks in the Education Office should receive a bonus of 10 per cent. upon their salaries for the past year in consideration of the extra services rendered by them in administering the Education Acts.

Enfield.—The Education Committee has sanctioned lectures on Temperance being given by a Band of Hope Union lecturer in the Council schools, subject to the times being arranged with the head teachers. The privilege is to be extended to Voluntary schools if asked for.

Ilford.—The County Education Committee has authorised the Ilford Advisory Committee to prepare plans for an extension of the existing secondary school. The cost of the new buildings and fittings not to exceed £5,000.

London.—The County Council has decided, by a large majority, to abolish all fees in Voluntary schools from 31st March, 1905. An appointment of principal assistant to the executive officer of the Education Committee is to be advertised. The salary ranges from £400 to £600.

Manchester.—The deposits in the school savings' banks reached the large sum of £23,000 last year. From the interest the sum of £500 had been spent in providing free meals and spectacles for poor children. In addition, the fund had also lent £2,500 to the Corporation.

Newcastle.—The Education Committee has informed the Voluntary school managers that, in consequence of the decision of the Local Government Board, the arrangement made with them for the discharge of the committee's liability for "wear and tear" repairs, must end as from 30th September, 1904, and that in future the managers must carry out their own repairs and send in the claims.

Plymouth.—From a return presented by the secretary to the Education Committee, there would appear to be 1,800 pupils who are attending the proprietary and private schools in the town.

Somersetshire.—The Education Committee has agreed to relieve the school correspondents of the duty of filling up the salaries sheets of the teachers, who are to do this themselves in future.

Southampton.—The Education Committee has decided to form a Dinner Committee to consist of six members, whose duty it would be to arrange for the provision of breakfasts and dinners to necessitons children, subscriptions being invited for that object. A resolution declaring in favour of State maintenance of children in public elementary schools was defeated by a narrow majority.

Stockport.—The Corporation has decided to promote a Parliamentary Bill to include provisions for levying the education rate on the adjacent areas on a differential basis.

Swansea.—The Education Committee has agreed to the appointment of an inspector of schools at a salary of £350, rising to £450 per annum.

Torquay.—The Education Committee has been informed by the Board of Education that if it persisted in advising the education authority not to recognise the Cockington schools in the manner proposed (see "Notes" in issue of 9th December), the Board would 'proceed to declare the Council in default under the Education (Default) Act, 1904.

Yarmouth.—The Education Sub-Committee has decided to ask the parents of the scholars to co-operate in checking the evils of juvenile smoking. It has also requested its teachers to discourage the habit of cigarette smoking amongst the boys, and to refrain themselves from smoking in the vicinity of the schools.

Yorkshire (North Riding).—The Education Committee has decided to report to the County Council: "That, for the purposes of supplying or aiding the supply of education, other than elementary, during the financial year, 1905-6, the Education Committee deems it necessary, in addition to the funds available under Sec. 1 of the Local Taxation (Customs and Excise) Act, 1890, to raise by rate such further sums as will be produced by a rate not exceeding ½d. in the pound."

EXTENDING A HANDSOME STREET.

BIRMINGHAM'S finest street is at length open for traffic from end to end. Until quite recently Corporation Street did not extend beyond 851 yards. Every plot of land is built upon, and the thoroughfare, 66ft. in width, is one of the handsomest to be found in the centre of a large town. The original intention was to make a longer street, but the Corporation postponed the enterprise from time to time mainly on the grounds of economy. The Local Government Board, however, some eighteen months ago, intimated that it would be desirable to complete the work as soon as practicable, on the ground that land had been purchased for the express purpose. The City Council, after some protest, gave the necessary instructions for the undertaking to be carried out in its entirety in the summer of last year. The estimated cost of the extension is £22,000.

SIR GEORGE WHITE, of tramway fame, who has recently been elected president of the Bristol Infirmary, has devised a scheme of tramway collecting-boxes, which, it is believed, will clear off a deficit of £5,000.

AN amusing instance of the Government's anxiety to keep down municipal indebtedness cropped up last week at a Local Government Board inquiry into an application by the Blackburn Corporation for permission to borrow nearly £9,000 for the erection of new baths. Colonel Coke, the inspector, asked the cost of the electric lights for the baths, and was told a shilling each. He explained, amid laughter, that in accordance with the special instructions of his Board, the amount of the loan would have to be decreased by £15, the cost of the 300 lights, because they could not possibly last as long as the building.

TAX LAND VALUES.

THE CASE OF FULHAM.

(FROM A CORRESPONDENT.)

IN 1886 the rateable value of the metropolitan borough of Fulham was £336,624 per annum. Eighteen years have sufficed to raise these figures to £850,920. An increase in the rateable value of 155 per cent. in 18 years is a remarkable, nay, an astounding development.

The land already built over in 1886 was worth at that time £1,000,000 sterling, yielding an annual income of £40,000 out of a total of £336,624 for land and building together, as assessed in the rate books. Another £1,500,000 worth of land value had accrued in Fulham up to 1886 from the uncovered land. That is to say, the land not then built over was worth one and a-half times as much as that already covered and already rated. The table, giving population and number of houses in 1886 and 1904 respectively, will help us to a good idea of the true state of the case.

Year.	Number of houses.	Population.
1886	9,000	65,000
1904	22,000	150,000
Added in 18 years	13,000	85,000
Percentage increase	145 %	130 %

The capital value of the land in Fulham in 1886 was £2,500,000 (£1,000,000 of which was producing income from the usufruct). To-day it is £5,235,000, of which £4,660,000 is yielding an income from the usufruct, and £575,000 is represented by uncovered land. Here we have a total capital increment of £2,735,000 of land value in eighteen years; what Professor Alfred Marshall so aptly terms "public value."

Dividing the total capital increase of £2,735,000 by the number of years (18) we arrive at the average annual capital increase of £152,000—a startling figure. Over and above the actual yield from the land of Fulham as it was in 1886 an average capital increase of £152,000 per annum has evolved.

The metropolitan borough of Fulham requires £850,920 for the year 1904 to carry on the public service (so profitable to the owners of land values), and the local loans now amount to £407,471, of which £363,000 has been borrowed during the eighteen years. The interest and sinking fund charges amount to £32,540 per annum. In 1886 they were £6,392 per annum.

If, eighteen years ago, public policy had diverted the rising tide of land values into the local exchequer, a great part of the present rates upon buildings and improvements need not have been levied, and industry and enterprise proportionally encouraged. The rates upon improvements would have been transformed into rates upon land value. In other words, an average annual capital increment of £152,000 from growing land values would have been intercepted to flow into the local exchequer for eighteen years from Fulham land. It would not then have been necessary to draw such large sums from rates on buildings. The rateable value of buildings and improvements (irrespective of sites) was £296,624 per annum in 1886. This is allowing £40,000 per annum for sites. To-day the rateable value of buildings and improvements (irrespective of sites) is £710,920 per annum. The rateable value of sites is £140,000 per annum. These sums make up the total assessments in 1886 and 1904 respectively. The rates were 5s. 11d. in the £ in 1886, the following year they were 5s. 6d. in the £, to-day they are 7s. 4d. in the £.

The borough of Fulham need not have been indebted £407,471 for local loans.

It is a startling and momentous fact that £2,735,000 worth of land values in Fulham (heaven sent revenue) might have been turned into the municipal purse instead of being given away.

The explanation of unemployed labour is to be found in the power that exemption of unoccupied land from rating gives to land proprietors to successfully oppose the necessary healthy expansion over unoccupied land until the value rises high enough to return an immense dividend to the speculator in sites or acres. Meanwhile there is want of employment, poverty, and trade depression. Rating land values is the true remedy for these evils.

HOUSING PROGRESS.

Official Monthly Record of the National Housing Reform Council. A Review of the Year's Work. The Government and the Amendment of the Public Health Laws. The Bye Laws Question and its Relation to Housing. What the Council has set itself to do.

THE detail work of a reform organisation is, as a rule, of interest only to the supporters of it, and, for this reason, no attempt has been made to fill the space, so kindly placed at the disposal of the National Housing Reform Council by the Editor, with a record of the ordinary routine work of the council. With the closing of the year a brief review of the work accomplished during the past twelve months may, however, be of interest, not only to the members of the council, but to many other readers of the *Municipal Journal*.

Parliamentary Work.

In the King's speech, delivered at the opening of the last session of Parliament, reference was made to the introduction of a new Public Health Bill, to further amend the Public Health Act of 1875.

Towards the end of the session a deputation, consisting of Sir John Gorst, Hon. Claude Hay, M.P., and Henry R. Aldridge, waited upon the President of the Local Government Board on the subject, and, after learning that the Bill would be deferred until the 1905 session of Parliament, asked him to receive a deputation for the purpose of submitting to him a series of suggested amendments.

Mr. Long very readily consented to do this, and the suggestions have been forwarded to him. These have been carefully prepared by the advisory committee (appointed at a House of Commons' meeting last year) which consists of the following members:—Sir John Gorst, M.P., Hon. Claude Hay, M.P., Dr. T. J. Macnamara, M.P., Right Hon. J. G. Talbot, M.P., John T. Middlemore, M.P., William Thompson (Richmond), B. Seebohm Rowntree (York), John H. Barlow (Bournville Village Trust), T. C. Horsfall (Manchester Citizens' Committee), Constance Cochrane (Rural Housing Association), W. F. Craies (Mansion House Council on Dwellings of the Poor), Robert Donald, Albert Wyles (Derby Housing Association), and Henry R. Aldridge, secretary, National Housing Reform Council.

The committee has had the valuable advice of several eminent medical officers of health, including Dr. Cameron (Leeds), Dr. Scurfield (Sheffield), Dr. Eustace Hill (Durham County Council), Dr. Williams (Plymouth), and Dr. E. M. Smith (York). Alderman Gray (York), Mr. J. P. Brown (Plymouth), and many others have also given willing help. Mr. Long will, early in the New Year, receive a deputation to discuss the details of these suggestions, and immediately thereafter it is hoped that they will be published.

Conferences.

During the year three large district conferences have been arranged by the council, viz.:—At Plymouth (for Devon and Cornwall), at Nottingham (for the North Midlands), and at Bournville (for the West Midlands). The council also took a share in the organisation of the conference held in connection with the Trade Union Congress at Leeds.

All these conferences were thoroughly successful. The response to the invitation sent to municipal authorities to be represented at the Bournville Conference was specially gratifying, the following municipalities being represented: Birmingham, Manchester, Salford, Leeds, Bradford, Halifax, Sheffield, York, Hull, Newcastle-on-Tyne, Bristol, Wolverhampton, Northampton, Brighton, Wrexham, Reading, Rugby, Swindon, Coventry, Wigan, and Burnley. Several district councils were also represented. Among the housing and other reform organisations sending representatives may be mentioned Liverpool Housing Associations, Sheffield Health Association, Sheffield Association for Sanitary Reform, Citizens' Association (Manchester), York Health and Housing Association, Allotments and Small Holdings Associations, and the Local Government Reform League.

The following resolution was passed at this Bournville Conference:—

> That this conference respectfully desires to draw the attention of the President of the Local Government Board to the pressing need for:—
> (1) Such measures as will effectually enable local authorities to secure that all new housing areas shall be planned to ensure an ample provision of light and air space, gardens, &c., thus rendering impossible the development of new slums.
> (2) Increased and more effective powers for dealing with the housing question in rural districts.

The deputation above named, headed by Sir John Gorst, placed this resolution before Mr. Long, who expressed his sympathy with it, and his recognition of the evil resulting from the crowding of new houses on insufficient areas.

At the Leeds conference over 500 workmen's representatives showed by their presence that the need for better housing conditions is adequately recognised by leading members of the great trade unions.

Many smaller conferences and meetings have been held, with uniform success.

Literature.

Apart from the publication of a second edition of "The Housing Handbook," by Councillor Thompson, no new literature has been published by the council during the year. The character of the demand for "The Housing Handbook," however, proves that it has taken a leading place amongst the practical handbooks on the subject. It is specially mentioned in the report of the Committee on Physical Deterioration. Two of the most valuable reform books of the year have been published by the Citizens' Association, Manchester, which is affiliated to the National Council. These books, "Housing Conditions in Manchester and Salford" and "The Example of Germany," have exercised a valuable influence on public opinion, not only in Manchester, but in other parts of the country, and Messrs. Horsfall and T. R. Marr have rendered a valuable service to the movement in compiling them.

Progress of the Movement.

Owing largely to the high rate of interest charged for municipal housing loans the actual constructive work performed by local authorities has not been so great during the past year. The depression in trade has also perceptibly checked the demand for new houses.

The check is, however, only a temporary one, and will pass away with the return of better trade. Meanwhile, the council has been devoting special attention to the subject of the better planning of all new housing areas and to the needs of the rural labourer.

At all the conferences held this year the principal resolution has been devoted to the first of these points. Its vital importance is beyond question. To allow new slums to be developed whilst struggling to get rid of the burden of existing slums is the height of municipal folly. Foolish as this action is, it is, however, quite true that the bye-laws of many local authorities are so badly framed that streets of workmen's dwellings are being erected with such inadequate air and sunshine space around them that they must inevitably become slums. The great development of public opinion on this point is therefore very welcome. It is a most significant and striking proof that real progress is being made in public opinion. The work of giving effect to this public opinion, and securing the complete remodelling of the codes of bye-laws of local authorities, is a very great one, and will keep housing reformers busy for many year, but a good start has been made. The subject of rural housing needs has also received a good deal of attention. Special stress has been laid on the great economic difficulty experienced by housing reformers in rural villages. The wage standard of the labourer is so low that he cannot afford to pay the rent for a decent cottage. It is true that in some country districts the rural bye-laws are unnecessarily stringent in regard to the choice of materials, safety against fire, &c. More than two years ago, Councillor Thompson, speaking on behalf of a deputation appointed by the council, brought this need for modification clearly before Mr. Long.

The modification of bye-laws will not, however, remove the chief difficulty. The only way in which the housing problem of the agricultural labourer can be adequately dealt with is by the betterment of his wage condition. For this reason the need for small holdings under local authorities has been strongly urged by the council, and at the Nottingham Conference Mr. R. Winfrey was specially invited to give an account of the successful work achieved in this respect in South Lincolnshire.

Membership of the Council.

The progress of the council during the year has not been as great as was hoped in regard to membership and finance. This is mainly due to the fact that more attention has been given to the organisation of conferences, meetings, and deputations than to the equally necessary work of building up a strong membership and an income adequate to the work. The former work has, however, won the goodwill of so many leading men that the accomplishment of the latter is only a question of organisation and time.

Mr. George Cadbury has during the year given generous help, and the council has now members and friends in most of the large cities in the kingdom. Affiliated councils and societies are doing good work in Liverpool, Manchester, Rochdale, York, Derby, Plymouth, Watford, &c. The Durham and Northumberland miners have handsomely helped the affiliated committees working for housing reform in these two counties by making grants of £100 each during the past year. Other trade unions have given valuable help to the national work.

The Programme of the Council.

In conclusion, it may be of value to again state the objects of the council. These were drawn up in 1900, and are as follows:—

To advocate and work, on non-party lines, for

(1) The usage and extension of the powers already possessed by local authorities (under the Housing of the Working Classes Act, 1890, and other Acts).

(2) The extension of co-operative enterprise in regard to the provision of house accommodation.

(3) The conferring on local authorities of power to compulsorily acquire (and hold) land, both within and beyond their borders, at a price based on the assessment of such land to local and imperial taxation; such land to be then used for building purposes or let with security of tenure, under conditions which shall render impossible either the overcrowding of people in houses or the overcrowding of houses on land.

(4) The taxation of land values.

(5) The granting of increased powers to local authorities to acquire land to be re-let as small holdings or co-operative holdings at reasonable rents to working-men.

(6) The increase, cheapening, and quickening of the means of transit by tram and rail, through the exercise of either public ownership or public regulation.

The council has since its establishment at least justified its existence. It has carried on a valuable work of public education which has won recognition and support from many friends. It enters on a new year with a great task to do, a great mission to fulfil, and will very heartily welcome the support of any who agree that in the building up of a great national life it is of supreme importance that the homes of the people should be well built, well planned, well supplied with sunshine and pure air, have around them enough of our "Mother Earth" to enable the children to play happily, and be in every way capable of providing a fit "temple" for that family life without which no lasting strength of individual character can be secured.

HENRY R. ALDRIDGE, Secretary.

NOTES AND ANSWERS.

"Interested" Councillors and Their Illegal Vote. When no Building Bye-Laws are in Force in a Parish and Urban District. Disqualifications of the Enrolment of Burgesses and Parochial Electors. Municipal Banking and the Regulations on the General Borrowing Powers of Local Authorities.

*** Queries intended for this column should be addressed to the "Legal Correspondent," MUNICIPAL JOURNAL, 12, Salisbury Square, E.C. They should be written on one side of the paper only, and be signed by a nom de plume or initials, the real name and address of the correspondent being written on the back of the paper.*

587. **COUNCILLORS PECUNIARILY INTERESTED IN QUESTION BEFORE THE COUNCIL Legal Consequences.**—(1) In a certain town the local authority owns the electric light works, but not the gas works. A resolution was moved in the council that the whole of the public buildings should be installed with electric light. On the vote being taken, was it legal for members of the council who were interested in the gas company to vote? If not, has a member any power, other than taking legal proceedings, to question such votes?

(2) Also, a local authority, in promoting a Bill, inserted a clause for power to supply electrical fittings. A member of the council, who carries on the business of an ironmonger, and is interested in supplying gas and electrical fittings, moved its deletion. Was he acting legally in doing so?

"E. C."

(1) Sec. 22 (3) of the Municipal Corporations Act, 1882, provides that "a member of the (town) council shall not vote or take part in the discussion of any matter before the council or a committee in which he has, directly or indirectly, by himself or by his partner any pecuniary interest." The councillors interested in the gas company were certainly acting illegally in voting on the resolution as to supplying the public buildings with an electric installation, or in taking part even in the discussion thereon. No summary remedy is provided by the Act of 1882 in case of infringement of the regulation quoted. The proper procedure would seem to be to appeal to the mayor or chairman at the council meeting at which the resolution is being moved, discussed, or voted on, to rule against the interested councillors taking part in the proceedings.

(2) The above remarks apply to the case of the ironmonger moving the deletion of the clause in the proposed Bill which seems to affect his interests. The mayor or chairman should, we think, decline to allow the councillor so interested to move this resolution, though, if he does move it, and vote thereon, and no objection is made at the time, it does not appear that any legal remedy or penalty has been provided to invalidate the vote or proceedings, or punish the councillor concerned for infringing the statute.

588.—**MAY THE LIGHTING AND WATCHING ACT BE ADOPTED FOR PART ONLY OF A PARISH?**—I am instructed by the local Ratepayers' Association to ask you the following question: We called a parish meeting to adopt the Lighting and Watching Act in November last. A poll was demanded, but the Act was not adopted. The scheme was to light the whole of the parish. Can we define an area, and call another meeting to adopt the above Act for part of the parish?—"HON. SECRETARY."

By virtue of Sec. 73 of the Lighting and Watching Act, 1833, that Act may be adopted for a part only of a parish. Where there is power to adopt any of the adoptive Acts, such as the Act of 1833, for a part only of a rural parish, such Act may be adopted by a parish meeting, held for that part (Sec. 7 (4) of the Local Government Act, 1894).

Where the parish council or a parish meeting has decided not to adopt the provisions of the Act, the proposal cannot again be renewed for the space of a year from such decision (Sec. 16 of the Lighting and Watching Act, 1833).

589. **BUILDING BYE-LAWS—Effect of Formation of New Urban District Council on Bye-Laws.**—I should be much obliged if through the *Municipal Journal* you would give your opinion on the following question, viz.: In April, 1903, a parish was created an urban district, and it was at the same time provided that the building bye-laws of the rural district council, which till then had jurisdiction over the parish, should remain in force in the urban district for twelve months. The new urban council has submitted building bye-laws to the Local Government Board, but these bye-laws have not yet been approved by the Board. Which building bye-laws are in force—if none, what law applies?—"WOT."

Between the termination of the period of 12 months during which the building bye-laws of the R.D.C. applied to the parish, and the date of formal sanction by the Local Government Board to the new bye-laws submitted by the new U.D.C., no building bye-laws are in force in the parish and urban district. It will, therefore, be open to any person building to erect such buildings, and in such a manner as to structure of walls, foundations, roofs, chimneys, the space to be left around, and the various other details, which may be regulated by bye-laws, as may seem best to the builder or person ordering the erection. Provided always that buildings are not erected in such a way as to create a nuisance, or so as to interfere with a neighbour's ancient lights, or in any other way infringe the general law bearing on the matter.

590.—**BURGESSES AND PAROCHIAL ELECTORS—Qualification.**—Will you be good enough to inform me through your columns as to the persons entitled to be enrolled as (a) burgesses, (b) parochial electors, (c) parliamentary electors, in a county borough.—"H. R."

The qualifications for enrolment on the burgess list are set out in Sec. 9 of the Municipal Corporations Act, 1882, and include the following:—

1. A person to be entitled to enrolment must be of full age.
2. On the 15th July in any year he must, during the preceding twelve months, have been in occupation, joint or several, of a house, warehouse, shop, building, &c., in the borough.
3. He must also, during the whole of these twelve months, have resided in the borough or within seven miles thereof.
4. He must be rated to the Poor Rates in respect of the qualifying property during those twelve months.
5. He must have paid, by the 20th July, all poor rates, including borough rates, due up to the 5th of January preceding.
6. He must not be an alien.
7. Nor have received poor relief within the twelve months mentioned.

The above are known as the "old burgess qualification." An alternative qualification, called "the ten pounds occupation burgess qualification," has been introduced by Sec. 3 of the County Electors Act, 1888. Under that provision, every person who is entitled to be registered as a voter in respect of a £10 occupation qualification within the meaning of the Registration Act, 1885, shall be entitled to be registered as a county elector, and to be enrolled as a burgess in respect of such qualification.

The expression, "parochial elector," when used in reference to a parish in an urban district (including a county borough), means any person who would be a parochial elector of the parish if it were a rural parish.

The parochial electors of a rural parish are the persons registered in such portion either of the local government register of electors (i.e., the burgess roll in boroughs) or of the parliamentary register of electors as relates to the parish. The parliamentary register consists of those who are qualified either as ownership electors or as occupation electors. The local government register consists of those who are qualified as occupiers only, and will include women, who would not, of course, be included in the parliamentary register. (See Secs. 2, 44, and 75 of the Local Government Act, 1894.) We cannot set out in our limited space the qualifications required for the parliamentary franchise. They include, in the case of boroughs, three main classes—the household qualification, the £10 occupation qualification, and the lodger qualification.

591.—**MUNICIPAL BANKING—Powers of Urban District Council.**—Can you supply me with the following information as to "Municipal Banking"? Have urban district councils the same powers as town councils to accept small sums as deposit loans on the security of the rates, without it entailing any cost such as stamp duty, but by merely giving an official receipt; and, if so, under what Act, if any, have they such power? Do you know of any U.D. councils which have started "Municipal Banking"?—"A MEMBER OF A U.D.C."

Urban district councils are not, so far as we are aware, empowered to accept small sums as deposit loans without paying the usual stamp duty charges. Stamp duty may be payable in two connections here. It may be paid on the receipt given to a depositor as an acknowledgement of the sum deposited. (The exception to the rule requiring payment of stamp duty in these cases would be where a banker gives receipts for moneys deposited and to be accounted for to the depositor.) Stamp duty would also be payable ordinarily on the debentures or mortgage deeds charging loan moneys on the rates or property of council, where such a charge is intended to be effected. In neither case is there power in a local authority to exempt documents connected with the raising of a loan charged on the rates with stamp duty. Sec. 233 of the Public Health Act, 1875, which regulates the general borrowing powers of local authorities under the Public Health Acts, contemplates the raising of loans by such authorities (with the sanction of the Local Government Board) for definite terms of years "on the credit of any fund or all or any rates or rate out of which they are authorised to defray expenses incurred by them in the execution of this Act, and, for the purpose of securing the repayment of any sums so borrowed, with interest thereon, they may mortgage to the persons by, or on behalf of, whom such sums are advanced, any such fund or rates or rate." It is, therefore, doubtful whether money can be borrowed by an urban district council under these Acts, except on mortgage of the rates or other public fund, and for the period prescribed by the sanctioning authority.

A MUNICIPAL CEMETERY FOR YORK.

THE York Cemetery Committee reports that it has formed the opinion that the provision of a new cemetery for the south side of the city under corporate control is desirable. There is a large and increasing population on that side of the city, now estimated to exceed 27,000, and the distance from the present public cemetery is considerable. With regard to cost, the committee considers that to provide a suitable cemetery to meet all reasonable requirements would entail a capital expenditure of about £18,000. The annual payments for interest and sinking fund and for maintenance and management would undoubtedly exceed the estimated revenue for some years, and necessitate a rate, perhaps, to the extent of 1d. in the £. The committee, on Monday next, will submit to the Council a resolution that it is expedient to provide a cemetery on the south side of the city under their own control.

WE understand that Mr. William Gibson Lewis, barrister-at-law (Gray's Inn), assistant secretary of the Central Committee of Poor Law conferences, has relinquished the idea of becoming a candidate for the secretaryship of the Poor Law Unions' Association.

POOR LAW OUTLOOK.

A Year's Retrospect of Work and Policy. The "Times" Lugubrious Tale of Our too Comfortable Workhouses and the Peoples' Changed Attitude Towards the "House." Is this Evolution to be Bemoaned? The Real Danger of Indiscriminate Out-door Relief. Striking Comparisons among London Unions. The Treatment of the Children and the New Scheme of Emigration.

WHAT is the trend of our English policy of poor relief? Does it make for independence, thrift, and self-help? To the extent of a page the *Times* thunders a "No." In its annual retrospect of the Poor Law outlook the organ waxes more indignant than ever against the methods of English Guardians. It has fierce anathema for both indoor and out-door relief as it is to-day being administered in England. "Great dangers ahead," it cries, pointing to the facts that there are 13,350 more paupers than there were last Christmas; a larger volume of pauperism than there has been since 1870; that the ratio of paupers to population has not been so high since 1873; and that there are now for every 1,000 of the population in London 28 persons in receipt of relief.

The Trend of English Poor Law.

MUCH of this "dismal story"—to use its own phraseology—this dark pessimism, this tendency to have shaken "faith in the good effects of our modern civilisation," may be a little over-coloured, but it constitutes a warning Poor Law guardians cannot take too seriously to heart. But the attack on the comforts of the modern workhouse is to a great extent unjustifiable. Many of our workhouses are undoubtedly crowded, and some of them are accommodating even more than their certified number. To-day there are 77,000 indoor paupers, as against 73,572 last Christmas, and 67,193 ten years ago. Nor can it be denied that—

Modern Workhouse "Too Comfortable."

> The material conditions under which the aged inmates now live are very appreciably better in all respects than any they could hope to enjoy outside. Nobody desires to prevent the aged destitute poor from enjoying all the comfort they can get. But if the public agree that life in the workhouse should be made attractive to the aged poor, they must be prepared to pay for it.

All this cannot be disputed, but is it a cause for sorrow? None of us desire a return to the type of workhouse described in "Oliver Twist."

ONE of the most remarkable features of the modern Poor Law movement, the article proceeds to show, is the changed attitude of the poor towards the workhouse:—

People's Changed Attitude.

> The suggestion that a generous measure of out-door relief will induce people to keep outside is now of no avail, for where this policy is adopted, there the workhouses are generally the most crowded. Never in the history of the Poor Law have these institutions been favoured so much by the poorer classes as now, when as many as 77,021 are enjoying the hospitality of the ratepayers as inmates. One of the fundamental principles of the Poor Law is that in the administration of relief the good of the community must be considered as of greater importance than that of the individual: and that the condition of those who become dependent should not be made better than that of the independent labourer.

This "fundamental principle" of the Poor Law is repeated several times in the article. But the writer apparently does not reflect upon its real meaning. It cannot be denied, on a little reflection, that the independent labourer, especially the unskilled labourer, to-day often lives under conditions which make for physical inefficiency. Until we have abolished death-lurking slums, and opened avenues whereby every labourer can earn a living wage, it is idle to talk of our disregard of "natural laws."

BUT the whole case against our present comfortable workhouses is given away, in our opinion, by the admission that "the main body of the numbers seeking indoor relief is made up of old people." Why should the old people be sacrificed to this "principle." Out-relief for the aged who need it is a right, and not a privilege. Apart altogether from the unfortunate, it can be proved arithmetically that many of the labouring classes cannot save, even by the greatest economy throughout life, a sum of money that will bring them 5s. a week at the age of 60. Why should a man spend his days in labour, and then be compelled at a time when he most needs tender treatment to fare as the most ill-paid? Even granting that our social system is sound, and that each gets his deserts, this philosophy of the *Times* savours rather of the middle ages than of the twentieth century. Last year we felt compelled to criticise the writer on this point, and we do so again in the strongest manner, despite his remark this year that "these views have been criticised in some quarters, and especially by certain Poor Law journals which support the interests of union officials."

Hard on the Old Folks.

MUCH sounder are the opinions expressed in regard to the policy of out-door relief. We must never grow tired of urging the necessity in dealing with applicants for relief outside the workhouse that all possible information relating to cases should be obtained and laid before the guardians. Why we have strenuously urged the claims of the case-paper system is because it makes for clearer and quicker investigation. We have several times warned our readers of the danger just now of legislating in panic, and this is how the *Times* regards the danger:—

Words in Season on Out-Relief.

> Then again the severity of the distress has been exaggerated. This has led to undue alarm on the part of pessimistic guardians and other persons in some unions, with the result that an enormous amount of *out-door relief* has been given out of proportion to the apparent necessities of the case. Nobody doubts that there is a considerable increase in the number of the unemployed, particularly in the north, south, and east of London: but it is not, we are assured, an increase that would justify any one in believing that a great crisis of a supreme character has overtaken us. Nevertheless, Poor Law relief has been granted in some quarters to an extent which could be defended only in such circumstances.

This is adding fuel to the fire.

AND the *Times* makes out a very good case that shows that policy more than poverty is responsible for the increase of pauperism. In Whitechapel, which has a population of 78,768, there is no indication from the in-door and out-door relief lists of any prevailing distress beyond that which is normal at this time of the year; the workhouse is 150 below the certified number; there are very few able-bodied men chargeable who are capable of doing a full day's work, and out-door relief is given to only six adults and 31 children. In Bethnal Green, a very poor union, with a population of 129,680, there is an increase of only three able-bodied men and three able-bodied women chargeable at the workhouse over the number of this class for last year. At Woolwich, where there is a population of 131,086, a large part of which is poor, notwithstanding the fact that the dock-yard supplies a great many with labour, the year has been the lightest in Poor Law matters for the last 20 years; there was not in the first week of the month a single able-bodied male on the books, and although there was a greater preponderance of able-bodied in the workhouse than was the case some years ago, it very largely consisted of the class who would not work unless they were compelled to do so. It is certainly a very hopeful feature that increased pauperism is not widespread throughout the metropolis.

What Comparison Teaches.

THE union which comes in for the greatest castigation, on the other hand, is Poplar, where "large masses of the population are becoming familiarised with Poor Law relief. The situation in the district is very serious, more on this account, perhaps, than because there is any greater distress in the union than in others adjacent to it. With its 11,686 paupers, of whom 7,916 are receiving out-door relief, it is the most highly-pauperised union in London. And what is the reason? A comparison may supply an answer." Then follow figures comparing Poplar with other riverside unions, to its detriment. Poplar "dispenses a lavish system of out-door relief, and it would appear that the first offer made to a person asking for assistance is Poor Law relief." As a result of this policy it is shown that the union is overburdened with Poor Law establishments. Certainly the Poor Law is nowhere kinder to the poor than in Poplar.

Poplar's Unenvied Notoriety.

IN the course of this article in the *Times* the President of the Local Government Board comes in for some twitting. Alluding to the vanishing fear of the workhouse popularly displayed, the article proceeds:—

Mr. Long Fails to Disapprove.

> Mr. Long does not regard this change with disapproval or regret. As a matter of fact, the guardians of London have, with his sanction, helped to remove that "repugnance to the institution of the workhouse," and to destroy that "honourable feeling of independence" which once existed, by making the workhouses really attractive.

This is a great deal for the Government organ to say, and it shows how deeply it regrets that the modern workhouse is so comfortable.

SOME very sound advice is given to guardians in regard to the treatment of the children, advice which we have ventured to offer on more than one occasion. Notwithstanding the strength of opinion against the continued association of children with the workhouse establishment, and against the large district school system, it is unfortunately a fact that there has not been during the past year any further movement in the desired direction. Last year, 1903 4, there were still 3,219 children in the London workhouses and infirmaries, only 62 fewer than in 1902 3, certified under the Poor Law (Certified Schools) Act, 1862, and over 400 Poor Law children in hospitals. district sick asylums, institutions for the blind, deaf and dumb, &c. An effort should be made to remove the children who can be taken away into separate institutions. Much good work, however, has been achieved by transferring rather more than four-fifths of the 20,000 children chargeable to London unions to institutions other than workhouses and infirmaries. In various ways steps are being taken to rescue children from harmful conditions, and to place them amidst surroundings which will give them a good chance in life. There is here no dark pessimism, such as exhibited in the *Times* a few weeks ago, as to the failure of the various systems of treating State children in England.

Treatment of the Children.

EMIGRATION for State children, alluded to at length in our last issue, is also discussed. Mrs. Close's scheme for emigrating children to Poor Law farms in Canada is thus referred to:—

Emigration.

> The scheme has been so recently discussed in the *Times* that it is not necessary to deal with it here. But it may be said that there is a strong body of opinion against allowing the Poor Law "stigma" to pursue the child to a country where he is to make an effort to achieve independence. It is pointed out that there is no evidence that the voluntary emigration societies have not been successful in placing the children in situations in Canada and looking after their welfare; and a third objection is that the scheme involves the establishment of further Poor Law institutions at a considerable cost.

The main expectation, however, from this proposed new system is that it may stimulate emigration for suitable children, than which, under proper supervision and inspection, there is no better method of dealing with them.

Official Advertisements.

COUNTY BOROUGH OF BURNLEY.

TOWN CLERKSHIP.

THE Town Council of Burnley invite Applications from Solicitors for the office of TOWN CLERK.

The salary will be £700 per annum, to be increased, if the services rendered be satisfactory, to £750 at the end of two years, and afterwards by yearly increments of £50 to £900 per annum. The Corporation provides offices, clerks, stationery, and other requisites.

The gentleman appointed will be required to devote his whole time to the duties of the office, and must not engage in private practice; he may, however, hold the office of Clerk to the Burnley Joint Hospital Board, if appointed thereto by that authority.

Canvassing is strictly prohibited.

Particulars of the conditions of appointment, and forms of application, may be obtained from the undersigned.

Last day for sending in applications—Saturday, 7th January, 1905.

A. STEELE SHELDON,
Town Clerk.

Town Hall, Burnley,
20th December, 1904.

INSTITUTE of MUNICIPAL TREASURERS and Accountants' Examinations, June, 1905. Gentlemen coached in class or by correspondence in Law Section. For terms address "Coach," MUNICIPAL JOURNAL Offices, 12, Salisbury Square, Fleet Street, E.C.

JUNIOR CLERK, 20, seeks Re-engagement. One year's experience. Good references. Write "Dinn," Summerhill, Margate Road, Ramsgate.

WANTED, for a period of two months CLERK to post Gas and Water Consumers' Ledger, and assist in Preparation of Quarterly Accounts. Write, on or before 10th January, stating age, experience, and salary required, to "Clerk," Town Hall, Cleckheaton, Yorkshire.

CITY OF LONDON COLLEGE,
ACTING IN CONJUNCTION WITH
THE LONDON CHAMBER OF COMMERCE,
WHITE STREET AND ROPEMAKER STREET, MOORFIELDS, E.C.

MUNICIPAL JOURNAL
FRIDAY, DEC. 30, 1904.

NOTES AND COMMENTS.

1904.

MUNICIPALLY, there is every reason to feel satisfied with the progress made during the year just closing. For all practical purposes, the agitation which was to result in the imposition of "limits" upon civic enterprise has collapsed. The Government did not re-appoint the Joint Select Committee, whose preliminary recommendations have not been acted upon, but have incurred the unexpected but none the less indignant opposition of the Local Government Board. It is not now Parliament, but the municipalities themselves, that demand the application of an audit system which shall enable the presentation to the public of accounts transparently straightforward and free from suspicion. And it is not the municipalities, but Parliament itself, which is responsible for the delay in applying that system. Thus the only weapon of attack with which the company interests behind the anti-municipal trading movement were furnished by the Joint Select Committee has been rendered useless, first by the unanimity of the municipalities in favour of a drastic change, and secondly by the inactivity of the Government itself. The Industrial Freedom League, recognising the futility of attacking the municipalities for the absence of reforms which the latter are willing to accept, but which Parliament, as represented by its official departments, is unwilling to concede, has confined its onslaughts to generalities, and the amount of "free

Zone System of Railway Travel 259

copy" contributed by that generous organisation to needy newspapers has this year considerably diminished in volume. It is becoming increasingly recognised that the remedy for the large rating burdens that oppress our cities and large towns is not less municipal enterprise but rather more of it, concurrently with a broadening of the basis of taxation in a direction such as that of taxing land values. With that recognition has naturally come an impetus to the movement which seeks to attain the latter object, and the prospect of a Land Values Taxation Bill being placed upon the Statute-book was never greater than at the present time. The movement has traversed the three stages which Lord Macaulay pointed out almost invariably precede legislation, and although the attitude of the present Government concerning it is vague, there is not the possibility of doubt as to the intentions of the next.

Municipal Banks.

Land values is one of the weapons that is going to defeat the anti-municipal traders; municipal savings banks, as they are popularly called, is another; and extended local government areas is a third. The advance that has been made towards the municipal savings bank this year has drawn from the discomfited supporters of vested interests a terrible shriek. Appropriately enough, the advance has been assisted by the bankers themselves, who threatened to cut off supplies if local authorities did not desist from engaging in enterprises that came into conflict with undertakings with which the said bankers were associated as directors. Worse tactics could never have been adopted, for in the end these monopolists will lose their monopolies as well as some of the best customers their banking concerns have ever had. The municipalities, threatened in a vital part, discovered a new source of revenue in the savings of their citizens, and many have been the schemes devised during the twelve months with the object of diverting from the Post Office to the municipal exchequer the millions of money that stand to the credit of the thrift of the English workman. The difficulties that always arise in the initial stages of a great forward movement have been in this case, we think, most effectively solved by Liverpool, which has adopted the suggestion put forward many times in these columns that municipal bills, or bonds, shall be made payable to bearer, thus sweeping away the inconveniences that might arise at any time from an unexpected run of withdrawals consequent on, say, a period of trade depression. Parliament cannot consistently withhold its approval to Liverpool's proposal, as it is continually adding fresh duties to the already large obligations of local authorities. Money must be found at reasonable rates in order to carry out these duties, and the opposition of the bankers makes it essential that municipal progress shall be rendered independent of the prejudices of private traders. The municipal savings bank will provide the money that is needed with unquestionable security to the citizen-depositor, and will induce the latter to take a more intelligent personal interest in his civic development and administration.

Larger Areas.

In addition to the developments we have mentioned, the year 1904 has witnessed the growth of several tendencies, totally dissimilar in their individual operations, but all moving towards the common goal of the larger local government area. There have been numerous proposals for the extension of cities and towns by amalgamation and absorption, culminating in the significant scheme to which we have recently called attention, for the federation of Liverpool, Birkenhead, Bootle, and adjacent districts. There has been a move at Durham towards a scheme of electricity supply that shall embrace the whole county area, and several corporations have applied—whether successfully or unsuccessfully does not matter for our present purpose—for an enlargement of their powers so as to enable them to extend the advantages of their lighting schemes to outside districts. The company interests have replied to this development by Lord Wolverton's Supply of Electricity Bill, which seeks to dispense with local consents in large electricity schemes, and which contains other clauses that will have to be vigorously fought if the public interests are to be protected. Bodies like the Yorkshire Power Company, too, are strenuously opposing any endeavour that is made by a local authority to extend its area for electricity supply purposes—opposition that shows how rightly the monopolists interpret the meaning of this tendency. Lastly, there has arisen a demand for the construction and operation of light railways by county councils, and it has been shown how the agricultural industry could be enormously benefited by systems of light transport linking up the cities and towns with the country districts. All these movements represent an unconscious protest against the limitations of the present municipal areas for general public services, and indicate that the time is rapidly approaching when boundaries will have to be revised in order to meet new requirements, and to enable local authorities to efficiently discharge their duties, which are being increased in number and in importance every year.

Education.

To the task of co-ordinating and developing our educational system, municipal bodies have put forward their best energies during the last twelve months. By the 26th March, 1904, the Education Act of 1902 had been in operation for one year. The municipalisation of education has upon the whole met with good results. There has been noticeable an honest attempt upon the part of the new local education authorities to carry out the provisions of the Act as they stood. Here and there in England, difficulties have been raised in connection with administrative details, but with the exception of Wales, there has been little real friction upon religious grounds. The chief feature common to the administration of the Education Act of 1902 and 1903 has been the great efforts made to attract scholars by means of extensive schemes of bursaries and scholarships. Foremost has been the scheme of the metropolitan authority—estimated yearly cost over a quarter of a million—but still in the air. Next we have Manchester—£12,000 a year—Lancashire, Gloucestershire, Staffordshire, &c. The urgent needs of secondary education have received attention, but spade work only has been accomplished so far. The dearth of teachers has been in the front rank of the debates of all the authorities, and various attempts have been made for coping with this serious evil. The new regulations issued by Whitehall for the training of teachers have opened up the way by the one year's training facility and the separation of hostels from the residential colleges. A noteworthy feature of the year has been the munificent gifts to education. The influence of educational methods abroad, especially in America, has been spread by the issue in April of the Mosely Commission Report. A demand has arisen amongst some of the new education authorities for association and the benefits of combination. As a result, the year has seen the formation of an association of education committees. The report of the Inter-Departmental Committee on Physical Deterioration which was issued in July has been rightly regarded as the most illuminating and valuable educational Blue Book of recent years. An item of importance was the transfer in April of the Poor Law school inspectors to the Board of Education. Our Scottish friends have pursued their way on the old well-known lines, with the passing exception of the Education Bill, which was introduced into Parliament in April; but, though well received, was not destined to survive. The event of importance in London was the abolition on May 1 of the School Board and the Technical Education Board, and the appearance of the London County Council as schoolmaster.

General.

The year has seen the accession to county borough dignity of Blackpool and Tynemouth, and East Ham has become a borough. Wimbledon, too, has obtained its charter, and the election for the first Town Council will take place next November. Most of the large districts around London are attempting to fortify themselves against the supposed designs of the County Council, by incorporation. The municipal telephone movement has made as much progress as was to be expected in view of the uncertainty regarding the Government's proposed action concerning this important public service. The opinion is now almost unanimous among the municipalities that it would be sheer folly to buy out the National Company instead of waiting until the expiration of the lease seven years hence. Purchase now would make cheap telephones an impossibility, and would throw away the admirable pioneer work that has been accomplished by a few municipalities. Glasgow, Hull, Portsmouth, Brighton, and Swansea are showing that an efficient telephone service can be provided at about half the fee usually charged by the monopoly. The principal occurrence in the tramway world this year has been the attempt of a private company to secure compulsory running powers over the lines of a corporation system—that at Newcastle-on-Tyne. The move was opposed by the whole weight of municipal influence, and was defeated. The municipal insurance scheme is rapidly gaining supporters, and is now on an unimpeachable financial basis. Particular attention has been directed towards the necessity for a purer and more adequate milk supply, and eminent experts in the medical profession have asserted that thorough municipalisation is the only remedy. The purchase of the London water companies' undertakings has been effected by the Metropolitan Water Board, and Birmingham has inaugurated its new supply from the Welsh mountains. Liverpool, too, is making good progress with its extensive new works, and the Derwent Valley scheme is pushing onwards. Viewing the municipal movement as a whole, there is every justification for the assertion that its hold upon the thoughtful and ambitious citizen was never greater than now, and that its prospects were never brighter.

ELECTRICITY SUPPLY.

Notable Points in the Year's Work, and Some Marked Changes in Plant. Results at Hampstead, Exeter, Derby, and West Hartlepool. The Growth of Electrical Supply and its Keen Competitor—Gas. The True Comparison between Gas and Electric Lighting Largely a Matter of Conjecture. Results of Up-to-Date Tests and Their Publication.

FOR many undertakings the year's work is over by the time these remarks appear in print, and the first of the accounts for the year now closing should be available for comparisou with previous records very shortly. Owing, however, to the fact that corporations prefer, wherever possible, to make their electricity accounts coincide with the general accounts of the municipality, it will be some months before it will be possible to say what changes have recorded themselves iu the financial year 1904. In the meantime, there are several returns which delay in publication or want of space have prevented their being commented upon, and these will occupy the interval preceding the appearance of the current year's figures. It is probable that we shall find a tendency towards less rapid increase in the output for lighting during this year owing to the bad state of trade, which has rendered it necessary in many businesses to defer large outlays in avoidable alterations and extensions, and to the increased energy with which gas companies have pnshed forward the various forms of mantle lighting. Public electric lighting has not been extensively adopted during the year for the same reason, and the increase in this section will most likely be found to be due to new stations having started rather than to any general extension on the part of those which have been at work for some time. Motive power has been a department in which great progress has been made, and the growth in output in many cases should be phenomenal, with an all-round improvement in the load factor. That class of motive power derived from the additiou of a traction load should have a very marked effect, as in the provinces most of the medium sized undertakings are of the joint character, now dealing with both lighting and tramways.

❦ ❦ ❦

Marked Changes During the Year.

AT the close of the year it would be difficult to state any particular direction in which remarkable improvements have been effected. Few striking novelties have been introduced in the past twelve months, and fewer still have been left with us to be taken over to a New Year as a legacy from the past. The most marked change is in the class of prime-mover to be found in central stations, the larger units called for having displaced the vertical engine, and brought about a disposition to adopt extra high speeds and their concomitant, the steam-turbine. This has caused the cost of plant per kilowatt to be rapidly reduced, until it is now about a half of what it was only a year or two ago. The favour with which three-phase working is regarded has reacted upon the turbine, as the difficulties which accompanied its use were principally of an electrical character, and connected with commutation of continuous currency. Oil-immersed switch-gear, set in non-combustible chambers with auxiliary control from a distance, has become standardized for high pressure and extra high pressure supply. Cables have not altered; the fashion which was set a year or two ago of laying them solid in molten bitumen or pitch has to some extent run itself out, and the conduit—in one of its multifarious forms—is again coming to the front. The simplicity of the uniform tariff, as opposed to the sliding scale of charge for electrical energy, has led to its adoption more generally, special cases being met by a differential tariff of high charge during peak hours, and low rate during the remainder of the day and night. As meters are now on the market comprising one set of motor and brake gear, and two counting trains with a mechanical change-over action controlled by a clock requiring winding only once a month, the coming year will very likely see extensions of this very useful principle.

❦ ❦ ❦

Exeter and Derby.

THE City of Exeter electricity undertaking sold 441,879 units in the year ended March 31 last. Of these 366 452 were taken by private consumers and 75,427 by the public lighting, which comprised 45 arc lamps and 10 incandescent lamps. The maximum supply demanded was 452 kilowatts. The receipts from current sold were £10,336; and, including sundry amounts:—

The revenue derived from sales of current, &c., amounted to		£10,399
And the working expenditure to		6,252
Leaving a gross profit of		£4,147
Out of this sum the following requirements were met:—		
Interest on mortgage debt	£1,832	
Sinking fund instalments	1,120	
Bad debts	76	
Total of capital and special charges		3,028
Surplus for year		£1,119

Another undertaking which has made a profit of an amount between £1,000 and £2,000 is the electricity department of the Derby Corporation, also an alternating system; but the total receipts in this case are double those of Exeter.

The revenue derived from sales of current, &c., amounted to		£22,250
And the working expenditure to		10,782
Leaving a profit of		£11,468
To which was added interest received		53
Making a gross profit of		£11.521
Out of this sum the following requirements were met:—		
Interest on mortgage debt	£4,838	
Repayment of principal	4,867	
Stamp duty	38	
Bank charges	60	
Total of capital and special charges	£9.803	
Surplus for year	£1,718	

This is a material improvement upon the preceding year's results, when the surplus was £597. The greater surplus comes from the increase in revenue of £3,269, against which there was only an addition of £1,816 in expenditure, leaving the gross profit more by £1,453. Out of this sum the extra capital and special charges amounted to £332, leaving the balance of £1,121 to swell the surplus, and bringing it up to the figure given.

❦ ❦ ❦

Larger Profits at Hampstead.

WITH the exception of Hampstead, we have summarised the results attained by the boroughs in the metropolis. The Hampstead figures to March 31st, 1904, show that:—

The revenue derived from sales of current, &c., amounted to		£58,051
And the working expenditure to		29,131
Leaving a gross profit of		£28,920
Out of this sum the following requirements were met:—		
Interest on mortgage debt	£10,157	
Sinking fund and repayments	12,378	
Interest on bank overdraft	589	
Total of capital charges		£23,124
Surplus for year		£5,796

There has been a large increase in the capital charges, which has absorbed half the extra revenue. The receipts exceeded the previous year by £10,506, and expenditure was greater by £3,797, leaving the gross profit augmented by the sum of £6,909. The capital charges required au extra sum of £5,553, which left the surplus higher by £1,356. As the previous surplus was £4,440, with even the considerable extra burden thrown on the undertaking by the extensions, the snrplus is the good all-round sum of £5,796.

West Hartlepool.

ALTHOUGH West Hartlepool last year had to record a deficiency upon the year's working the loss has been reduced to about a third, and the current year's accounts should show that the income has met all the expenditure for the twelve months. This, again, is a case where the increase in output is remedying matters, for the extra income amounted to £1,896, and the expenditnre being greater by only £649 left the gross profit more by £1,247. Of this £203 was taken up by additional capital charges, leaving £1,044 to bring the deficiency down from £1,604 to its present figure of £560. The accounts show that—

The revenue derived from sales of current, &c., amounted to		£8,076
And the working expenditure to		4,514
Leaving a gross profit of		£3,562
Out of this sum the following requirements should have been met:—		
Interest on mortgage debt	£1,638	
Instalments of principal repaid	2,484	
Total of capital charges	£4,122	
Less gross profit as above	3,562	
Balance, being deficiency for year	£560	

❦ ❦ ❦

The Buoyancy of the Gas Industry.

IF imitation be, as the proverb asserts, the sincerest form of flattery, those of our readers who have cause to be well wishers to the electrical industry must have found many good reasons to be satisfied with what was shown at the Gas Exhibition recently held at Earl's Court. The feature which seemed to be predominant was the outcome of the gas engineer's wish to copy the style of electrical fittings. Inverted mantles, gas "arc" lamps, lamp clusters, and a host of other details bearing in one or more points a meretricious resemblance to electrical apparatus, showed how keenly alive the gas industry is to the inroads which have been made upon its preserves by the growth of electrical supply. On the other hand, the oppressive atmosphere and high temperature of the exhibition galleries made an excellent object-lesson which must have been taken to heart by the many visitors. The old lady whose objection to electricity is confined to its coldness and want of comfortable warmth may have learned that this is purchased at the expense of an atmosphere vitiated by the gaseous products of what is too often incomplete combnstion. We are, however, the last to decry the achievements of a competitor, even where the industry represented by this section of the *Journal* is hit hard, and there can be no gainsaying the economical changes which have taken place in the utilisation of gas in the last decade. To be able to provide 40-candle power with a cubic foot of gas per hour—as is attained by some of the high-pressure gas systems on the market—leaves the electrical engineer with plenty of leeway to make up. While there is nothing to touch incandescent electric lighting for domestic purposes, and for large business premises the arc lamp is hard to beat, there is an intermediate region wherein the incandescent gas mantle to-day is more than holding its own, and the electrical engineer awaits some new development of science to assist him.

❦ ❦ ❦

Rival Illuminants.

IN an age of specialisation, it is of great advantage to the consumer of electricity to be able to call in disinterested experts who can impartially advise as to the quality of lamps and other devices. The testing of the light-giving efficiency of electric lamps seems a simple matter enough, but if reliable results are sought, it is the cheapest in the long run to apply to those who have made this work a matter of detailed study. More especially is this the case when the comparison between gas and electricity is the question at issue. In many of the large bnsiness premises which have so generally adopted electric lighting, the cost of the lamps used is a fraction of the expense entailed by lighting. A lamp dnring its life dissipates an amount of electrical energy which has a value greatly in excess of the lamp itself. Again, although many figures have been published, the true comparison between gas and electric lighting on a modern

basis is still largely a matter for conjecture. The two subjects should now be brought up to date if the results of some tests, which have been shown to engineers and other interested, taken up jointly by the Westminster Electrical Laboratories, Limited, and Messrs. A. Wright and Co., of Westminster, are published. These firms, considering that the data available are not sufficiently conclusive, have made special arrangements for photometrically examining modern methods of illumination, and as they are experts in measurement and have no direct interest in the manufacture of gas or the generation of electricity, their results should be valuable to the councillor who has so often to meet the conflicting claims of the rival illuminants. As time goes on we may look for the advent of the electrical testing expert who should hold as good a position and do as useful work as the analyst at present does in the matter of pure water and unadulterated food stuffs.

THE ENCYCLOPÆDIA OF ACCOUNTING.*

THE sixth and last volume of the "Encyclopædia of Accounting" has now been published. It covers the headings "Sale of Goods" to "Wine Merchants' Accounts." The whole consists of articles written by many contributors, including some of the most eminent living authorities on the different branches of accounting, and has been compiled under the editorship of Mr. George Lisle, C.A., F.F.A. The final volume contains a complete index to the work, and includes (as was the case with the earlier volumes) not only articles directly dealing with accounting subjects, but also contributions on the several connected legal subjects, a knowledge of which may be useful to accountants in the performance of their duties.

The most important article in this volume, so far as local authorities and their officers are concerned, is that on "Tramway Accounts," by Mr. James Dalrymple, C.A., accountant and deputy general manager of the Glasgow Corporation Tramways. Mr. Dalrymple deals very thoroughly with the subject, and sets out forms found by experience to be suitable for adoption by local authorities for their tramway undertakings. Reference is also made to the accounting system adopted in the United States and on the Continent. The controversial subject of depreciation is very lightly touched on, and the article concludes with some useful observations on the valuation of tramway undertakings for purposes of income tax assessment and local rate assessment.

The "Encyclopædia" has been in course of production for several years. It deals with every subject which will ordinarily come within the scope of an accountant's duties, whether in connection with public or private accounts or auditing, and the work will, no doubt, form for a long time to come a standard authority on accounting in all its branches.

GLASGOW OCTROI.

THE question of the levying of an octroi tax not only on clothing and fruit, but also on horses within the city boundaries, again engaged the attention of the Glasgow Town Council this week. It was stated that the dues were already in force, and that inspectors were going round stables inquiring how many horses had been sold. The preferential nature of the movement was pointed out, and a motion sending back the minutes for amendment was carried.

THE funeral took place on Tuesday at Bradford of the late superintendent of the Salford Fire Brigade (Mr. A. Bentley). Mr. Bentley joined the Fire Brigade in 1878, and was ultimately appointed second officer. He resigned upon receiving the appointment as chief of the Salford Brigade, which post he had held for thirteen years at the time of his death. He was forty-four years of age.

* "Encyclopædia of Accounting," edited by George Lisle, C.A., F.F.A. Vol. VI., "Sale of Goods" to "Wine Merchants' Accounts." (Green and Sons, Edinburgh and London. 20s.)

CORRESPONDENCE.

"MUNICIPAL TRADING RELIEVES RATES."

To the Editor.

SIR,—It often happens that two opposing disputants, by picking out figures that suit them and suppressing those that don't, manage each to make out his case from the same official return.

As I am accused of having treated in this way Mr. James Carter's return on rates, by "F. A. B.," who claims to have made "an unsophisticated examination," I beg to refer to "F. A. B.'s" own letter, in which he unwittingly shows that profits from municipal trading do not reduce rates. Here are his own words:—"Ten towns are given in it which relieve rates to the extent of 1s. or more. The average rates in these towns are almost exactly 7s. 2d. Fifteen towns derive no profits from municipal trading. In these towns the average rates slightly exceed 7s. 2½d."

So that on "F. A. B.'s" own showing the rates in ten towns which make 1s. or more profit are substantially no lower than in fifteen, which make no profit.

It would be uncharitable to suppose that if "F. A. B." could have picked out figures showing that municipal trading reduces rates he would have done so.—Yours, &c.,

R. N. McDOUGALL.

Liberty and Property Defence League,
25, Victoria Street, Westminster.

PAYMENTS FOR BANDS.

To the Editor.

SIR,—I notice in your issue of the 22nd inst., under the heading of "Notes and Answers," No. 582, a question has been raised as to the payment of a band of music by an urban district council.

Some time since, as a ratepayer, I appealed to the district auditor against the payment of the sum of £10 for a band to play at the regatta. The local Act of Parliament sanctioned the payment of one band of music, whereas two bands have for a series of years been contributed to out of the rates; I also appealed to him against the payment of the sum of £180 18s. 7d. paid by the Council for advertising the pier.

The auditor allowed the payments to remain in the accounts. Upon appeal to the Local Government Board it was held that the payments were unlawful, and surcharged accordingly.

I am, &c.,

EDWIN SAVERY.

Beaulah Lodge,
Harcourt Avenue,
Southend-on-Sea.
26th December, 1904.

BRADFORD DEPUTY TOWN CLERKSHIP.

FOR the post of deputy town clerk of Bradford, vacant by the appointment of Mr. Wardle to the town clerkship of Bath, there are 38 applicants, which carries with it a salary of £500 a year, rising to £750. The following six candidates were this week selected to come before the Finance Subcommittee:—

Mr. H. Craven, assistant solicitor to the Sheffield Corporation.

Mr. Arthur Holt, deputy town clerk of Blackburn.

Mr. William Hudson, deputy town clerk of Huddersfield.

Mr. Hugh L. Parry, senior assistant solicitor to the West Riding County Council.

Mr. Percy Saunders, assistant solicitor to the Leeds Corporation.

Mr. Charles Sydney Watson, clerk and solicitor to the Walthamstow District Council.

SCHOOL LIBRARIES.

NEW MOVEMENTS IN STEPNEY AND SHOREDITCH.

RECENTLY the Stepney Borough Council placed school-desks in the four free libraries under its control, with the object of providing school children with a comfortable place in which to do their home lessons. The Council had already been running for a couple of years a children's lending department in connection with the free libraries, and on conceiving this fresh idea it placed the reference library also at the disposal of the youthful scholars to assist them in their essay work.

Except during holiday time, on an average twenty East End children may be seen nightly industriously at work in the reference room of the Whitechapel library. They are mostly from the foundation schools in the borough. When it is remembered how over-crowded and unwholesome are the homes of many of these juveniles the practical philanthropy of the council's enterprise is easily apparent. The children are allowed access to the lending library by ticket, on the recommendation of the school heads, and at the end of last month the Whitechapel library had over 2,300 such tickets out. The volumes are, of course, chiefly of the juvenile story-book class, and go out at an average rate of 200 a day. Quite two-thirds of the total borrowers are girls.

An excellent scheme, that has for its object the promotion of a closer relationship between the public libraries and the Council schools of the borough of Shoreditch, was a few days since put before a conference of members of the Library Committee and of school managers and teachers appointed by the Borough Council.

The scheme, which was laid before the conference by Mr. C. W. Plant, the borough librarian, who, however, modestly disclaims any originality for the idea, is a simple one of book distribution among the senior scholars attending day schools. At present there remain in the schools of the borough a species of legacy from the old School Board, consisting of some 4,000 books of fiction especially adapted for elementary readers. At present the children are supplied with these books as required, no trouble being taken to find out the style of book best suited to the child's bent or taste in literature.

M. Plant now suggests that a joint committee should be appointed, composed of school managers and members of the Public Libraries Committees, each school to become a sort of circulating library for the senior scholars attending that school. The present permanent collection of books located in the various schools of the borough would be transferred under the scheme to the Library authority, and housed permanently at the public library. The books would be distributed once each week by some responsible teacher, who would, of course, act as local librarian. The cost of administration would have to be borne by the library authority.

SUNDAY OPENING OF LIBRARIES.

THE Westminster City Council has decided to open one of its public libraries—St. Martin's-lane Library—on Sunday evenings for the next three months as an experiment. This decision was arrived at this week, notwithstanding that at the Council meeting the Libraries Committee submitted a recommendation against the project of Sunday opening, declaring that there had been no demand for it on the part of the public, and that Sunday opening had met with little success in other boroughs. Last week we showed that the experience of other metropolitan boroughs disproved the statement.

THE Local Government Board has just issued a translation by Dr. Theodore Thomson, one of the medical inspectors of the Board, of the complete text of the International Sanitary Convention of Paris, 1903.

TRAMWAY TOPICS.

Rochester New System.

ROCHESTER last week opened the first section of what, when completed, will be a very important link in the rapidly extending Kentish tramways. In an illustrated article on the work of the Maidstone Town Council in our issne of 16th September last, we showed how that ancient city will soon be joined by a huge network of tramways, only a few short links being needed to join it with Chatham, Rochester, Strood, Higham, Gravesend, and even Dartford and Bexley. Eventually it will, no donbt, be possible to get from London all over the country by tramway. Unfortunately for the ratepayers' pockets, the Chatham and District Light Railways Company has got a firm hold of this district, but though its tentacles encircle Rochester, it has not been quite strong enough to squeeze out of the people and of the City Council all pride in civic tramways.

A Compromise.

THE Rochester City Council and this company simultaneonsly applied to Parliament for a Provisional Order a year or two ago. The feeling in favour of municipal trams rnn by the municipality was very strong, but it was felt that the city of Rochester, with its 30,000 inhabitants all told, was not strong enough to stand entirely aloof, and run a system completely independent of the one which ran to its boundary, and it came to terms with the Light Railway Company. Thus one town may be said to suffer for the municipal sins of another. Had the adjacent town of Chatham not allowed itself to be drawn into the toils of the company, all would have been well.

The Company's Position.

THE action of Rochester resulted in the company withdrawing its Bill, but only on the understanding that the tramways were leased to it for 42 years. The entire system when completed will be 4 miles 5 furlongs 3·24 chains of double line, and 3 furlongs 3·16 chains of single line, being the equivalent of 9 miles 5 furlongs 9·64 chains of single track. The total sum authorised for the construction is £67,000, of which the company will pay 6½ per cent., and a similar percentage of the cost of obtaining the Act of Parliament. In addition to this, it will pay £600 a year towards keeping up the superficial paving. It should also be mentioned that the Council is spending £125,000 in making a new street and street widening, the latter being necessitated by the construction of the new tramways.

Tied to the Trust.

TIPTON, Dudley, and Wednesbury are still without their trams, and the South Staffordshire Tramways Company, Limited, which is an off-shoot of the British Electric Traction Company, is threatened with legal proceedings to compel it to carry out its obligations. A conference between the solicitor to the Tipton District Council (Mr. Foster) and Mr. Garcke and Mr. Lycett has been held, and the Tramways Committee this week reports that the company's representatives stated that their difficulties with Dudley and Wednesbury would shortly be settled, and then the work of electrifying the line from Dudley to Wednesbury through Prince's End would be proceeded with. Mr. Foster asked that this statement might be pnt in writing to submit to the Council, but, owing to the illness of Mr. Garcke, this had not yet been done, althongh he had pressed for it by letter. The committeee had written to the Board of Trade requesting it not to grant any further extension of time for the use of steam power on the tramway from Dudley to Wednesbury through Prince's End, and a reply had been received stating that the Tramway Company had no intention of again working the line in question by steam traction.

The Council's Only Course.

OUR readers will remember that an Act was obtained by the company in 1903 authorising it to construct and work additional tramways in the Tipton nrban district. The District Conncil really tied its own hands by entering into an agreement not to exercise its power of compnlsory purchase for a period of 30 years, from 3rd April, 1902. It is to be trusted that the Council will not swerve from its determination to enforce the company to carry out its part of the agreement. A betrayal of the people's interest in such a way should and could have only one result.

Died at His Post.

A BENEFIT smoking-concert, in aid of the fnnd promoted for the widow and children of a Newcastle tramway employe who died recently while on duty, was held on Tuesday night. The smoker was arranged under the auspices of the Newcastle and District Tramway Workers' Union. The Mayor (Alderman J. Baxter Ellis) and other members of the Corporation were present. A substantial amount was added to the £40 already raised.

"No Obstructions."

"'EATING powers' seemed the main thing, 'running powers' completely knocked out," writes a correspondent, on the first annual Christmas dinner of the motormen, conductors, and department men employed by the Tyneside Tramways and Tramways and Tramroads Company. The gathering took place on two nights—one lot of men on Monday and the remainder on Tuesday. "There were no obstructions," he writes, "and, after splendid dinners, the evenings were spent in song."

EDMONTON URBAN DISTRICT COUNCIL.

FEMALE ASSISTANT INSPECTOR OF NUISANCES.

THE Edmonton Urban District Council invite Applications for the Appointment of a FEMALE ASSISTANT INSPECTOR of NUISANCES and LADY HEALTH VISITOR for their District. The duties will consist of house-to-house visitation, advising mothers as to the care of and feeding of infants, visiting premises where females are employed, making inquiries into infectious cases, accompanying patients to Isolation Hospitals, and such other duties as the Medical Officer and Inspector of Nuisances may require.

Candidates must have had practical experience in the above-mentioned duties, and hold the certificate of the Sanitary Institute of Great Britain.

The salary will be £80 per annum, payable monthly.

Sealed applications, marked on the cover "Lady Inspectorship," enclosing copies of not more than three testimonials of recent date, to be delivered to me, the undersigned, at the Town Hall, Lower Edmonton, not later than 12 o'clock noon on Monday, the 9th day of January, 1905.

By order.
WM. FRANCIS PAYNE,
Clerk of the Council.

Town Hall, Edmonton,
21st December, 1904.

URBAN DISTRICT OF CLECKHEATON.

LEDGER CLERK.

THE Council for the above District invites applications for the appointment of LEDGER CLERK in the Clerk's department, at a salary of £80 per annum, rising by increments of £5 to a maximum of £100.

Candidates should have had experience in a similar capacity in connection with Urban District Council, or borough accounts (either in the office of Clerk to the Council, or that of an Accountant), including those relating to gas, water, and electricity undertakings, and preference will be given to those possessed of the latter qualifications.

Applications on forms to be obtained at my office (accompanied by copies of three recent testimonials, and endorsed "Ledger Clerk"), must reach me not later than 4 o'clock on Saturday, the 14th January, 1905.

JOHN H. LINFIELD,
Clerk to the Council.

Town Hall,
Cleckheaton.
22nd December, 1904.

METROPOLITAN BOROUGH OF DEPTFORD.

APPOINTMENT OF CHIEF LIBRARIAN.

THE Council of the above Borough invite Applications for the appointment of CHIEF LIBRARIAN for the Borough.

The person appointed will be required to devote the whole of his time to the duties of his office, and will not be allowed to undertake or be directly or indirectly concerned in any other business than that of the Council.

The appointment will be terminable by three months' notice on either side, and the salary will be at the rate of £200 per annum.

Preference will be given to applicants having had experience in municipal or other libraries.

Applications, with copies of not more than three recent testimonials, must be made in the handwriting of the candidate on forms to be obtained from the Town Clerk, and must be delivered to him at the Municipal Offices, 20, Tanners Hill, Deptford, not later than 4 o'clock on Tuesday, January 17, 1905; the envelope to be endorsed outside "Chief Librarian."

Canvassing any member of the Council, either directly or indirectly, will disqualify candidates.

(Signed) VIVIAN ORCHARD,
Town Clerk.

Municipal Offices,
20, Tanners Hill.
Deptford, S.E.
29th December, 1904.

MUNICIPAL OFFICES.

A GENTLEMAN wishes to strongly recommend an ex-Articled Clerk (admitted), with exceptional qualifications, for an ASSISTANT CLERKSHIP. Write to Mr. MONTAGUE BROWNE, Northampton.

METROPOLITAN BOROUGH OF FINSBURY.

JARRAH WOOD PAVING.

THE Finsbury Borough Council are prepared to receive TENDERS for PAVING the CARRIAGE-WAY of Richard Street with 3 by 4 by 9 JARRAH WOOD BLOCKS.

The specification can be seen and form of tender obtained at the Borough Surveyor's Office, Finsbury Town Hall, Rosebery Avenue, any day (except Saturday), between 10 a.m. and 4 p.m., on deposit of One Guinea, which will be returned on receipt of a bona-fide tender.

Tenders, endorsed "Wood Paving," to be delivered to me at this office not later than 4 p.m. on Monday, January 9th.

Only those tenders made upon the official form and properly filled up and signed will be entertained.

GEORGE WHITEHEAD PRESTON,
Finsbury Town Hall, Town Clerk.
Rosebery Avenue, E.C.
29th December, 1904.

WALTHAMSTOW URBAN DISTRICT COUNCIL.

ASSISTANT IN ENGINEER'S DEPARTMENT.

THE Council invite Applications for the position of THIRD ASSISTANT in their Engineer's Department, at a salary of £80 per annum. Candidates must have had previous practical experience in engineering work, building construction, and sewer work.

Applications, marked "Engineer's Assistant," in the handwriting of applicants, stating age, experience, and present occupation, accompanied by copies of two recent testimonials, to reach the undersigned not later than 5 p.m. on Friday, the 6th day of January, 1905.

Canvassing will disqualify.

C. SYDNEY WATSON,
Clerk to the Council.

Town Hall, Walthamstow.
28th December, 1904.

SOLICITOR (30), experienced as manager in conveyancing and Common Law, &c., desires Post in municipal office. Expert shorthand writer. Three years in town clerk's office. Excellent references. "Trois," MUNICIPAL JOURNAL, 12, Salisbury Square, Fleet Street, E.C.

CITY OF NOTTINGHAM WATER DEPARTMENT.

NEW RESERVOIR.

THE Water Committee are desirous of receiving TENDERS for the CONSTRUCTION of a RESERVOIR at Wilford Hill.

The drawings and specification may be seen at the Water Offices, St. Peter's Square, Nottingham, on application to Mr. F. W. Davies, the Water Engineer.

Copies of the quantities and forms of tender can be obtained on payment of £5 for each copy, which will be returned on receipt of a bona-fide tender.

Tenders, endorsed "Tender for Reservoir," to be addressed to me at the Guildhall, Nottingham, and delivered not later than noon on Monday, the 13th day of February next.

The Committee do not bind themselves to accept the lowest or any tender.

By Order.
SAMUEL G. JOHNSON,
Town Clerk.

Guildhall, Nottingham.
30th December, 1904.

RHONDDA URBAN DISTRICT COUNCIL.

TENDERS FOR LOANS.

THE above Council invite TENDERS for LOANS (under the sanctions of the Local Government Board), amounting to £22,338 for 30 years, for the erection of two Elementary Schools, on the security of the fund out of which the expenses of the said Council under the Education Act, 1902, are payable, the whole to be repaid by equal half-yearly instalments of principal with interest on the balance.

Tenders (endorsed "Tenders for Loans)," stating rate of interest and an inclusive sum to defray all legal and other costs, charges, and expenses, to be sent in not later than the 12th instant.

The Council do not bind themselves to accept the lowest or any tender.

By order.
WALTER P. NICHOLAS,
Clerk and Solicitor to the Council.

Public Offices,
Pentre, Rhondda.
2nd January, 1905.

COUNTY BOROUGH OF SUNDERLAND

THE Corporation are prepared to receive LOANS of £50 and upwards on security of the Rates of the Borough, at six months' notice or for a fixed period.

For further particulars apply to Haswell Brown, Borough Accountant, Town Hall.

Sunderland.
13th December, 1904.

PROMOTION impossible without good Penmanship. Rapid tuition. Particulars for stamp. N. Broadbent (Prizeman and Medallist), Alston's College, Burnley.

Official Advertisements.

BOROUGH OF SWINDON.

ELECTRICITY AND TRAMWAYS DEPARTMENT.

LANCASHIRE BOILER, &c.

THE Corporation of Swindon invite TENDERS for the SUPPLY and ERECTION of one 30ft. 0in. by 8ft. 0in. LANCASHIRE BOILER with down take superheater, steam, exhaust, and feed piping, &c.

Copies of the general conditions, specification, and forms of tender may be obtained on application to the Engineer and Manager, Mr. J. G. Griffin, A.M.I.E.E., Electricity Works, Swindon, on payment of a deposit of one guinea for each copy, which will be returned on receipt of a bona-fide tender.

Extra copies may be obtained at 5s. each.

The firm whose tender is accepted will be required to find two responsible sureties, and to enter into a contract to be prepared by, and to contain such clauses as the Town Clerk may deem necessary.

Tenders on the prescribed form, and accompanied by the specification and general conditions intact, and endorsed "Tender for Lancashire Boiler," to be delivered to the undersigned before 10 a.m. on Tuesday, January 24th next.

The Corporation do not bind themselves to accept the lowest or any tender.

By order.
ROBT. HILTON,
Town Clerk.

Town Hall, Swindon.
23rd December, 1904.

METROPOLITAN WATER BOARD.

TO CLOTHIERS AND OTHERS.

THE Metropolitan Water Board are desirous of receiving TENDERS for about 98 OVERCOATS. Particulars may be obtained at the Chief Engineer's Office, Savoy Court, Strand, W.C.

Sealed tenders, endorsed "Overcoats," and addressed to the undersigned, must be delivered at the Office of the Board, Savoy Court, Strand, W.C., not later than 10 a.m. on Monday, 16th January, 1905.

The Board do not bind themselves to accept the lowest or any tender.

A. B. PILLING,
Clerk of the Board,

Savoy Court, W.C.
2nd January, 1905.

£25 (TWENTY-FIVE POUNDS) BONUS.

GENTLEMAN (27) desires permanent Berth in a Municipal or Urban District Council Office (seaside or country preferred), having many years' experience in all matters relating to Finance. Able to arrange loans. Undeniable testimonials. Willing to submit bona-fides. Reply, in strict confidence, to A. B. C., care of Municipal Journal, 12, Salisbury Square, Fleet Street, London, E.C.

Official Advertisements.

COUNTY BOROUGH OF WEST BROMWICH.

TREASURER'S DEPARTMENT.

THE Finance Committee of the Corporation invite Applications for the position of DEPUTY TREASURER.

Candidates must be thoroughly experienced in municipal accounts and finances, including the accounts of a gas undertaking, or other trading departments of a coporation, and must be skilled accountants. They must also have had experience in the control of clerks, and be competent to take charge of the office when required.

Preference will be given to candidates who have passed the examination of the Incorporated Treasurers' and Accountants' Institute, or other equivalent examinations.

Salary £200 per annum.

Further particulars may be obtained on application.

Applications, stating age and setting out the candidates' experience and qualifications, and to be accompanied with copies of three recent testimonials, to be sent to me, suitably endorsed, not later than 10th January next.

THOMAS HUDSON,
Borough Treasurer and Registrar of Stock.

Town Hall,
West Bromwich,
21st December, 1904.

THE CORPORATION OF THE CITY OF CAPETOWN.

GRANITE SETTS.

TENDERS (to be accompanied by samples) are invited for the SUPPLY, C.I.F., Capetown Docks, of about 6,000 Tons of GRANITE SETTS. The specification and form of tender can be obtained at the offices of the undersigned. The Council do not bind themselves to accept the lowest or any tender, and no tender will be entertained unless submitted on the official form.

DAVIS & SOPER,
Agents of the Corporation of the City of Capetown.

54, St. Mary Axe,
London, E.C.
3rd January, 1905.

TENDERS FOR CONTRACTS, &c.—Official advertisements respecting works, supplies, &c., should always be sent for insertion in the MUNICIPAL JOURNAL, as its columns are constantly referred to by Contractors to Public Bodies, and the paper is generally recognised as the best medium for the purpose, its extensive circulation amongst those interested in public tenders ensuring the widespread publicity desired by County Councils, Corporations, District Councils, Boards of Guardians, &c. when inviting tenders for contracts of any kind.

In replying to Official Advertisements, please mention the "Municipal Journal.

WILL JENKINS

No. 623—Vol. XIV. JANUARY 6, 1905.

ECONOMIC BRICK-MAKING.

An Interesting Scheme of Combined Electricity Works, Destructor Works, and Brick-Making House Has Been Carried Out by the Woolwich Borough Council, and Is Now Being Extended. How the Bricks Are Made and Used. Novel Points in the Construction of the Works.

THE Woolwich Borough Council possesses a unique building at Plumstead, consisting of combined generating station, dust destructor, and brick and flag house.

The initial stages of the undertaking date back to 1899, when the late Plumstead Vestry was granted a Provisional Order for the supply of electricity in the district. Some years previously about 50 acres of land on the Plumstead Marsh, adjoining the South-Eastern Railway, had been purchased for the use of a dust shoot, but owing to the rapid erection of dwelling-houses in the neighbourhood, it had only been possible to utilise the northern portion of the ground for this purpose. The remaining portion of the land makes an admirable site for a building of this kind, being conveniently situated both as to the council's private road and also as to the railway.

VIEW SHOWING THE DESTRUCTOR AND ELECTRICITY STATION.

ANOTHER VIEW.

The buildings were designed by the engineer and surveyor (Mr. Frank Sumner, M.Inst.C.E.), and the tender of Messrs. James Smith and Sons, Limited, of Norwood, was accepted for their erection at a sum of £40,570. The works were commenced in June, 1901, and were not completed until the end of 1902, owing to various unavoidable causes, among which the most serious was the amount of water met with in the foundations, which necessitated pumping night and day. The site is a low-lying one, the walls being carried on concrete.

The whole of the exterior of the buildings is faced with Ibstock bricks—with the exception of the administrative block, for which red rubbers were used—and is relieved with Portland stone dressings. Bangor and Broseley tiles are used for the roofing.

A visit to the works is well worth making. Attention is first drawn to the brick and flag house, which when it was started some eighteen months ago was the first in the country. The clinker from the destructor furnaces, which constitutes about 30 per cent. of the refuse burnt, is utilised for the manufacture of bricks, tiles, and paving slabs. The machinery for this purpose comprises a grinding mill 9ft. diameter, with perforated bottom, in which the clinker, after the iron and other metal has been taken out, is ground dry. It is then conveyed to a mixing machine, where lime or cement is added according to whether the material is for bricks or paving slabs; the proportion of lime or cement is regulated by a pair of friction cones. After this operation the dry mixture passes to another mixing machine, where a regulated quantity of water is added, and the material converted into a semi-plastic state, after which it is again ground in a pan 7ft. diameter, and passed either to the brick press or the slab press. All the carrying is done by elevators; the material after being shovelled into the 9ft. pan is not handled again until it comes from the press as a finished brick or from the elevator ready to be placed in the moulds and pressed into paving slabs. Each brick is subjected to a pressure of 100 to 120 tons. From the press the bricks are taken on trolleys into the hardening chambers, where they remain under a pressure of steam varying from 50 to 100lb. per square inch for a period of twelve hours, after which they are ready for use. The clinker material for slab making is placed in moulds with a layer of granite chippings laid on one surface. It is then placed in a hydraulic press which applies a force of 500 tons to each slab. The machinery is driven by a 70 horse power motor, totally enclosed. Part of the space under the roadway leading to the tipping platform has been utilised for a disinfecting station. This is divided into two rooms, with provision for three disinfecting chambers.

This brick-making is a source of considerable economy to the Borough Council. The bricks are being used in all manner of

work, except face work. Several hundred thousand have been made and stored in preparation for the erection of public baths and wash-houses, which the Council contemplated. A two-inch brick can also be made, and a great number of this size has been used by the borough electrical engineer (Mr. J. B. Mitchell, M.Inst.E.E.) for covering several miles of trough in which light cables are laid. Other kinds of bricks, including the round-ended bricks, can be turned out. A representative of the *Municipal Journal* was much pleased with the appearance and evident hardness of these bricks, and learnt that they can be made much cheaper than ordinary stocks. The Electricity Department sells the Brickmaking Department current, and also buys tiles, &c., as a set-off.

The Refuse Destructor.

The main building, the destructor house, shown in our illustration, is 132ft. long, 81ft. in width, and 32ft. in height from floor to wall plates. The roof is divided into two spans, supported in the centre of the building by four 12-inch by 6-inch stanchions carrying a lattice girder. In each span, running the whole length of the building, is a louvred lantern 10ft. 6in. wide. The type of destructor installed is Meldrum's "Simplex." The building is designed for four units. Each unit is fitted with a Babcock and Wilcox water-tube boiler and patent steam superheaters, each boiler having 81 tubes, 4in. external diameter and 18ft. long, built up in nine sections. Each destructor unit has four grates, the furnaces being 22ft. long by 6ft. wide, lined with 9in. of firebrick, commencing two courses below the grate level: the front walls are of firebrick 14in. thick, with an air space of 3in. between them and the outer lining, which is of salt-glazed bricks. The firebar level is 3ft. above the floor level, the crown of the arches of the furnaces being 4½ft. above the firebars. In the back wall of the furnace of each unit are four openings 2ft. 9in. long by 1ft. 9in. high, through which the hot gases pass into the combustion chamber. The ashpit of each unit is divided into four compartments, fitted with patent steam jet blowers connected with the boilers. From the combustion chambers the gases pass into the generating chambers containing the boiler tubes. Each unit is also fitted with two extra grates at the rear of the combustion chambers for coal consumption only, in case, from any cause, the supply of refuse should be insufficient. At the rear of the generating chambers are the regenerators, consisting in each unit of 195 tubes, each 5ft. long, 3in. external diameter, around which the incoming air circulates, and after being heated by the hot gases in the tubes passes along a conduit to the furnaces through the uptakes in the ashpits. The pressure of the blowers in the latter can be regulated up to an equivalent of 3in. of water. From the regenerators the hot gases pass into one or other of the main flues, which are each 6ft. 6in. high by 5ft. 4½in. wide, the passage of the gases being controlled by vertical dampers. These flues converge into a larger one, 10ft. high and 8ft. wide, leading to the shaft. All parts of the destructors and flues to which access is necessary are fitted with manholes.

Judging by Results.

Some tests, interesting to students of modern refuse disposal methods and their relative efficiency, have been carried out at these works. The following is the result of a 25 hours' efficiency test. Three grates only were in use, and the total grate area was 75 square feet. The quantity of refuse received was 67·75 tons (151,760lb.), the weight of the refuse consumed was 66·8 tons (149,787lb.), and the weight of refuse burned per hour per square foot of grate was 79lb. The weight of the clinker resulting therefrom was 43,500, the weight of the ash 4,200, and the weight of tins 1,973 lb. The total units generated were 3,330, but this figure is no criterion of the amount which could have been generated had there been a sufficient load. The maximum temperature of the forced draught air conduit was 500 degrees Fahr. The actual weight of water evaporated was 220,187lb., while the actual weight evaporated per lb. of refuse burned equalled 1·47lb. The equivalent weight of water evaporated from and at 212 degrees Fahr. per lb. of refuse burned was 1·64 lb. The total equivalent evaporative duty on the economiser from and at 212 degrees Fahr. was 20,173lb., or 798·9lb. per hour, while the total equivalent evaporative duty on the superheater from and at 212 degrees Fahr. was 8,107 3lb., or 321lb. per hour. The total equivalent evaporative duty on the boiler from and at 212 degrees Fahr. was 221,440·6lb., or 8,770lb. per hour; and the total duty on the boiler, economiser, and superheater from and at 212 degrees Fahr. equalled 249,718lb., or 9,889·8lb. per hour. The ecouomiser duty was 8·07 per cent. of the total, the boiler 88·67 per cent., and the superheater 3·26 per cent. A more recent test has shown an evaporation of water from and at 212 degrees Fahr. of over 1·9lb. per lb. of refuse.

Another Novel Feature.

It will be seen from our illustration that the chimney shaft is remarkably low for a building of this kind. This reduction of height was necessitated not only by the nature of the ground carrying the foundations, but also by the fact that very considerable concussion takes place over the area, produced by the testing of heavy guns on the Government ground in the immediate vicinity. So low a shaft is a novel feature in conjunction with refuse destructors, and the result is a matter of importance to local authorities, because the cost of a shaft, as usually constructed, is an expensive item in the capital outlay of similar undertakings. The height is 80ft. instead of the usual 150ft.

The boiler-house provides accommodation for four boilers. The engines are of Willans and Robinson's central valve high-speed triple-expansion type, all direct coupled to British Westinghouse compound-wound generators. The switchboard was fitted by Kelvin and Jas. White, of Glasgow. In the basement under are placed the coudensers, grease separators, air and circulating pumps, and also the pumps for drawing water from the well. All the steam pipe work was carried out by Messrs. Aiton and Co. Messrs. Pilkington Bros., Ltd., St. Helens, Lancs., have supplied their patent wired rolled glass for roofs, &c.

Enlarging the Plant.

There are now being installed, under the supervision of the electrical engineer, two 500-kilowatt high-tension alternating generators, made by the General Electric Company, with two 735-brake horse-power triple-expansion engines, and condensing plant complete by Messrs. Willans and Robson, Limited. This additional machinery is to provide the high-tension three-phase alternating current required for a scheme of extensions of considerable magnitude, now in course of construction. The switchboard required for the high-tension system will be supplied by Messrs. Kelvin and James White, Limited. The foundations and other works in connection with the new machinery and switchboard are now being executed under the direction of the borough engineer.

The administrative block immediately adjoins the engine-house, and contains a handsome suite of offices, comprising, on the ground floor, inquiry office, two clerks' offices, assistant engineer's room (the latter commanding a view of the engine-house), and lavatories. On the floor above is the chief engineer's room and a commodious drawing office. In the basement is a strong room, distributing engineer's office, meter and testing room, and store room. The caretaker's quarters are in the upper part of the building, separated from the offices by an iron door. Amongst other buildings are separate messrooms, bathrooms, &c., for the workmen in the destructor house and engine-house.

The electrical portion of the undertaking was designed by the Borough Electrical Engineer (Mr. J. B. Mitchell, M.I.E.E.)

CREWE'S TEMPTATION.

CREWE is just now in the critical position of having to decide its future in regard to tramways. Of course the companies are struggling to insert their feet, and one of them had even obtained an Order from the Light Railway Commissioners to construct a tramway in the borough, but on account of certain restrictions the Order was allowed to lapse. The last municipal scheme was defeated by a poll of the ratepayers. The Corporation has since been inquiring as to the practicability of motor-'buses. A report from the Hastings Omnibus Company shows that the working cost of a motor-'bus was 11½d. per mile, the earning capacity 1s. 2d. per mile, and that two 'buses ran 55,000 miles in twelve months. This week the Council resolved by twelve votes to four to inform Dr. Rhodes, of Manchester, who asked the authority to support a private electric tramway company, and Mr. S. Jackson, who offered to promote a service of steam motor omnibuses, that the Council could not support their schemes for the borough.

MUNICIPAL ADVERTISING.

AMERICAN methods of municipal advertising, outlined in these pages a week or two ago, may stimulate the zeal of English municipalities. This week the Corporation of Scarborough has been asked by the town advertising committee and traders' association to increase the mayor's salary from £500 to £750, so that more money might be available for advertising the town. It was pointed out that advertising last year resulted in a greater number of ordinary passengers visiting Scarborough than in any previous year, and in a gratifying expansion of traffic from London. It was also shown that the increase would not involve a charge upon the rates, as the receipts from the stalls and stands on the sands last year amounted to £800.

DEATH OF THE TOWN CLERK OF BOLTON.

THE Town Clerk of Bolton (Mr. Robert Gudgeon Hinnell), who filled the post for 40 years, died on Wednesday morning, at his residence at Rivington, near Bolton, a moorland house adjoining the much-discussed Lever Park. Mr. Hinnell was about 77 years of age, and was said to be the oldest town clerk in the country. His salary was £1,200 per annum. He was a native of Bury St. Edmunds.

MUNICIPAL LOANS IN 1904.

In Spite of the Extraordinary Attempts of Interested Financiers to Cripple Municipal Borrowing, an Increase of Over 26 per cent. is Shown on the Preceding Year. The Financial Barometer Indicates that Municipal Activity is Increasing not Only in this Country, but Also Abroad, Particularly in the United States. The Position of Municipal Credit Compared with "the Funds."

THE anomalous conditions that prevailed in the Money Market in the first half of the year so far as municipalities and public loans are concerned were continned in the second half that has just been brought to a close. There was a revival of the clamour against expenditure by local bodies even on remunerative trading enterprises, and investors generally being unfavourably disposed to public loans of any description, authorities found it too expensive a process to raise large sums by stock issues. The general public have as much faith as ever in corporations as investment agencies, and though they, too, showed little disposition to subscribe freely to issues out of which they suspected the underwriters were making too much profit, they have shown the utmost willingness to support the short-time mortgage principle. A very large number of local authorities from county councils to school boards now regularly advertise themselves as open to accept loans of almost any amount on these terms, and a great deal of money finds investment in this way without the publicity of the open market. Trustees of savings banks have complained lately that a very considerable proportion of their deposits has been withdrawn for the purpose of being loaned to corporations in this way, and even bucket shops have announced their willingness to finance municipalities on more or less easy conditions. The banks and insurance offices have extended a great deal of accommodation to local authorities during the past six months, and many of the big private loans have been placed with them. The total number of loans during the latter half of 1904, so far as we have been able to ascertain it, was 145 by 141 authorities, as against 116 loans by 108 authorities for the corresponding period of 1903. A summary of these issues, classified for the last six months of each year, is appended :—

	1904. £	1903. £	+Inc. or −Dec. £
British Government ...	Nil.	Nil.	—
County Councils ...	216,206	37,620	+ 178,586
Corporations	2,680.105	4,326,719	− 1,646,614
Urban District Councils	707,657	599,822	+ 107,835
Rural District Councils	32,366	101,941	− 69,575
Boards of Guardians...	129,770	44,470	+ 85,300
Miscellaneous Bodies...	28,192,154	258,007	+27,934,147
Foreign and Colonial authorities	6,837,830	3,221,000	+ 3,616,830
Total	38,796,088	8,589,579	+30,206,509

The 1904 aggregate includes the large amount of stock issued by the Metropolitan Water Board in exchange for securities in the old companies and a flotation by Rome for conversion purposes. These involve no placing of fresh funds, and should be deducted in comparing results with 1903. Allowing for this, the six months' issues show a decline of about £2,181,400, or 25 per cent. The greater part of the money raised as short-time loans is not, of course, comprised in the total, nor are the issues of bills included. Three authorities—the London County Council, the Sheffield Corporation, and the Derwent Valley Water Board—asked between them for £1,863,000 on twelve months paper, and secured fairly good rates of discount, making the total subscribed for in this way for the whole year £3,663,000, as compared with £2,500,000 in 1903. The full details of the last six months' ordinary loans follow:—

f fixed, m minimum.

There is not much field for comment in this table. The remarkable feature of the period dealt with is that not a single corporation made a stock issue in the open market, whereas in the latter half of 1903 Bournemouth, Brighton, Bristol, Hastings, and Liverpool all appealed to the public investor. Leeds obtained its £1,000,000 in small sums, and refused another £500,000. A notable experience was that of the Worcester Town Council, which required £75,000 in 4 per cent. bonds, and had £400,000 offered. The steadily increasing amounts raised by urban district councils are a further proof of their enterprise and vigour, and show they are following briskly in the footsteps of the municipalities, especially in the direction of trading enterprises. The issue of 3¾ per cent. stock by the Irish council of Kingstown was a great success, and was subscribed for nearly twice over at nearly a point and a half above the minimum price. The increasingly large loans raised by boards of guardians are chiefly evidence of the expansion of infirmary accommodation in our unions. The Metropolitan Water Board's public issue just surged through at about ⅛ above the minimum price, whilst the large amount of stock emitted in exchange for the securities of the former proprietary companies was handed over at 109½ for every 100 old scrip. The Southampton Harbour Board's Loan was easily placed, the lists being closed on the day of opening, or four days before the advertised limit. In the Foreign and Colonial section, South Africa was again the most insistent borrower, Cape Town and Woodstock appealing between them for nearly half a million. This makes the total for South African municipalities for the year £3,381,550, and raises the aggregate since the close of the war to over £7,300,000. The Rome issue was for the conversion of the Four per Cent. Bonds placed here between 1882 and 1891.

Turning now to the loans for the whole of 1904, our customary abstract of them gives the following results, the figures for 1903 being added for the sake of comparison :—

	1904 £	1903 £	+Inc. or −Dec. £
British Government	6,000,000	2,000,000	+ 4,000,00
County Councils	6,075,445	5,915,320	+ 160,125
Corporations ...	5,320,847	8,571,671	− 3,250,824
Urban District Councils ...	1.048,496	867,385	+ 181,111
Rural District Councils ...	82,172	167,566	− 85,394
Boards of Guardians	227,173	51,640	+ 175,533
Miscellaneous bodies.. ...	23,280,501	1,505,407	+ 26,775,094
Foreign and Colonial Authorities ...	17,580,763	6,385,114	+ 11,195,654
Total ...	£64,615,402	25,464,103	+ 39,151,299

Allowing for the Metropolitan Water Board exchange and the Rome conversion, the total records an increase of £6,763,410, or over 26 per cent., a sufficiently striking answer to the attempts of company promoters and financiers to discourage the independent raising of money by municipalities. The total number of issues was 269 by 243 authorities, as against 197 issues by 168 authorities in 1903. This activity finds reflection abroad, especially in the United States, where the cities have raised an exceptionally large sum during the past twelve months. The total is somewhere about £51,000,000, as compared with £31,500,000 in 1903. Paris floated a 2½ per cent. loan for £6,800,000 at an issue price of 88, the same being subscribed for nearly 90 times over; and Rio de Janeiro raised locally £4,000,000 in

5 per cent. bonds, which only escaped being placed here by a breakdown in the negotiations.

In the security market corporation stocks have felt the general depreciation in values that has impartially affected all classes of investments, even the most solid, during 1904. Latterly there has been an upward tendency manifested, but the following table shows that that tendency by the close of the year had not had time to make any pronounced nett improvement.

Tyne Improvement 3½	95½	94	− 1½	96½	93½

The amount of home issues now listed in London is about £201,227,000, of which £35,248,347 was added during the year. The total of foreign and colonial municipal stocks listed is about £53,832,000, of which 1904 contributed £5,777,254. When once the market begins to advance, corporation stocks will appreciate as quickly as the Funds, if not more quickly, for however external circumstances may temporarily affect current prices their intrinsic value can never be impaired.

BRADFORD BREAKDOWN.

OFFICIAL ASKED TO RESIGN.

AS a result of the serious disolosures following the recent breakdown in the electricity supply at Bradford, one of the officials has been requested to tender his resignation.

Mr. Blackman, the city electrical engineer, in a report to the Electricity Committee, stated that the maps which should locate the exact situation of the cables were found to be incorrect. In some cases cables shown on the plans to be on one side of the street were found on the opposite side, and in other instances they were found in the roadway when marked under the pavement.

The Engineer pointed out that this necessitated great caution, as there was always the chance of cutting into a live cable when following up dead cables. In sinking a trial hole in Kirkgate, two cables were found in a stoneware drain-pipe.

The official who has been asked to resign has had charge of outside affairs, and he is held by the committee to be responsible for absence of working plans.

THE Local Government Board has informed the Scarborough Corporation that it will be necessary to call a public meeting or take a poll of the town before the Council will be empowered to borrow additional money—abont £20,000—for the completion of the new Marine Drive and south approach road. The total cost of the undertaking will be something like £100,000.

EDUCATIONAL NOTES.

Anglesey Short of Funds. Half-Time Certificates at Bolton. Scholarships at Cheshire, Lancashire, and Wrexham. Moral Instruction at Coventry. Attendance Bye-laws at Lincoln and Reading. Courts of Justice for Scholars. Conference on Fees at Tottenham.

Anglesey.—At a meeting of the Education Committee complaints were made that the salaries of the teachers had not been paid for some months. It was stated that there was no money in hand at present to meet the salaries for the latter end of last year, and the question was left in abeyance.

Birkenhead.—A committee has been formed to consider and report as to the steps that should be taken to provide meals for under-fed children attending the public elementary schools.

Birmingham.—The Education Committee has agreed to hire an omnibus, horses, and driver for the conveyance of children attending the school for physically defective children, to and from their homes.

Blackpool.—The Education Committee has received peremptory orders from the Board of Education to proceed at once with the erection of two new schools—one at North Shore, and the other to replace a temporary school in Waterloo Road.

Bolton.—The Board of Education has intimated to the education authority that certificates entitling a child to half-time exemption may be cancelled or withdrawn if the child to whom it was issued is not shown to be beneficially employed, or if in the opinion of the local education anthority it is desirable to do so.

Brighton.—The Education Committee has informed the voluntary school managers in the county borough that if it is desired that the children should attend church on any day during the hours of religious instruction, the parents of such children must notify in writing to the managers their intention to withdraw their children from the religious instruction given in school from 9 to 9.45 a.m., in accordance with the bye-law regulating attendance at school within the borough.

Cheshire.—The County Education Committee has approved an important scholarship scheme. Among others to be offered, are 150 county junior scholarships for boys and girls not over 14 years of age. Each scholarship will be awarded in the first instance for a year, renewable for a second and third on a satisfactory report. Various other scholarships, including 20 county junior, 6 university and 14 agricultural, are included in the scheme.

Coventry.—The Education Committee has recently considered the question of moral teaching in its schools, and after having heard a deputation of teachers, has declined to adopt the Leicester scheme of moral instruction for schools.

Glamorganshire.—The County Education authority has been summoned by a rural district council for a breach of the bye-laws, in not having furnished the latter body with a copy of the plans of a proposed new school. It was contended on behalf of the education authority that as the plans had been approved by the Board of Education, and a loan granted before the county council took over the responsibilities of the old school authority, no offence had been committed. The case was dismissed with a judicial expression of opinion that the district council had a right to have the plans.

Halifax.—The Education Committee has been informed by the Board of Education that it sees no reason at present to alter its decision to refuse sanction for the erection of a three-department school at Salterhebble, in which district there is a Voluntary school, though the Board would allow the building of an infants' school. The Board also states that it will not receive a deputation from the committee on the question, but offers to hold an inquiry at Halifax, at the expense of the Education Committee.

Lancashire.—The County Education Scholarship Scheme provides scholarships costing about £27,000, which will include 120 junior exhibitions, annual value £12; 600 exhibitions for intending pupil teachers; 40 senior exhibitions, valne £20 annually; and 15 scholarships, annual value £60, and tenable for three years.

Leyton.—The Education Committee has decided, as an experiment for six months, to open several of its school playgrounds for the use of the children after school hours, as there have been a number of accidents to children caused through playing in the streets.

Lincoln.—New bye-laws for regulating school attendance have been drawn up and approved. Provision is made, amongst other things, that a child of the age of 12 years may leave school if it is shown to be beneficially employed, and has made 350 attendances after five years of age in not more than two schools during each year for five years, whether consecutive or not. Half-time is abolished.

London.—The education authority arranged a conference of teachers to be held at the Medical Hall, Victoria Embankment, on 5th, 6th, and 7th January, when papers of educational interest were read and discussed. The chair was taken on the opening session by Mr. J. W. Benn, M.P., chairman of the County Council.

Norfolk.—The Education Committee decided that, instead of the cheques for all teachers' salaries in the same school being sent to the correspondent or chairman of managers for distribution, they be sent to the head teacher of each school.

Nottingham.—The Education Committee has decided that in future all orders for school repairs should go through the architect's department.

Reading.—The education authority is to be recommended to amend the school attendance bye-law by omitting Clause 5 (b). The alteration will make the bye-law read as follows:—A child between 12 and 14 years of age shall not be required to attend school if such child has received a certificate from one of his Majesty's inspectors of schools that it has reached the seventh standard prescribed by the Code for the time being.

Smethwick.—The Education Committee has decided to ask the Town Council to urge upon the borough bench the desirability of taking steps to remove cases of prosecution for irregular attendance at school from the ordinary police-courts, and to establish separate courts for children.

Southampton.—The Education Committee has called for a return giving (a) the number of meetings held by school managers since the appointed day, and (b) the number of possible and actual attendances of each manager.

Tottenham.—The Education Committee has asked the voluntary school managers of the various fee-charging schools to attend a conference with the committee upon the question of school fees.

Wrexham.—The Education Committee will offer a number of scholarships annually to candidates under 14 who will enter into an agreement to become pupil teachers, after three years' tuition. After two years spent in the county school, accepted candidates will be paid salaries as pupil teachers for two years, as follows:—Men, first year £17 10s., second year £20; women, first year £15, second year £17 10s.

York.—The Education Committee has decided to instruct the secretary to report upon the question of the need for providing for the education of defective children of the public elementary school class.

WE have received from the Limmer Asphalte Paving Company, Limited, 2, Moorgate Street, E.C., one of their perpetnal date calendars. The calendar is well produced, and is worthy of a place upon the wall of any office.

LARGER AREAS MOVEMENT.

How it is Spreading in England. The Liverpool Scheme, and Action at Accrington, the Matlocks, and Chesterfield. The Movement in Australia and New Zealand. Federation versus Unification: The Opinion of the Town Clerk of Sydney.

THERE are evidences on every hand that the movement for the extension of local government areas is taking hold of the public bodies concerned

LIVERPOOL SCHEME.

The Special Parliamentary Committee of the Liverpool City Council has formally recorded its opinion that it might be to the mutual advantage of the City of Liverpool and the Boronghs of Bootle and Birkenhead and the adjacent districts if they could be federated for local government purposes, and recommends the council to authorise the committee to confer with the councils of such boroughs and districts with the view of ascertaining whether they would be willing to co-operate in formulating a scheme for the purpose, and report the result to the council.

BOOTLE AND ORRELL.

THE "Bill to extend the Borough of Bootle and for other purposes" proposes to absorb within the borough the detached portion of the township of Orrell and Ford called Orrell, the added area to form a new ward represented by three councillors and an alderman.

The Bootle Town Conncil would thus be increased from 40 members to 44. The first election of councillors for Orrell Ward will take place on November 1st next, the election of the alderman following on the 9th. Any county police officers affected by the absorption would be added to the Bootle borough constabulary.

Ford is to be constituted a separate parish.

The costs of obtaining the Act are to be charged to the Bootle Corporation.

SUGGESTED NEW COUNTY BOROUGH.

An Accrington correspondent says the desirability or otherwise of amalgamating with Accrington for the formation of a county borough is still being discussed by the Clayton-le-Moors District Council. Mr. Fullalove, ex-town clerk of Barnley, who was called in as expert to investigate and report, is stated to have declared in favour of amalgation.

THE MATLOCKS AND AMALGAMATION.

An agitation is in progress in Matlock for an amalgamation of the two Urban Council areas, viz., Matlock and Matlock Bath.

On Friday a petition, signed by upwards of 100 owners and ratepayers in the Matlock Bath Council district, was presented to Mr. Myles A. Sleigh, the clerk to the Matlock Council, praying for amalgamation with Matlock.

The points advanced in favour of the scheme are that the forthcoming sewerage works would be more effective if carried out jointly; that if the two districts united there would be a saving of about £10,000 in the removal of the gasworks at Matlock Bath; and that there would also be a saving in having only one set of officials instead of two.

CHESTERFIELD.

Proposed Extension Scheme.

An attempt is about to be made to extend the municipal boundaries of Chesterfield, and there is a probability that before very long the old Derbyshire town will be elevated to the ranks of the county boroughs. Chesterfield is hedged in on the north and the west with crowded suburbs, which are nevertheless outside the area of the borough.

The semi-circular ring of urban districts, composed of Brimington, Whittington, Newbold, and Brampton, is practically a portion of Greater Chesterfield. The inhabitants of these places have interests that are almost identical with those of the burgesses, they derive their water and their gas from Chesterfield, and they look to the "town of the crooked church steeple" as their common centre.

Their streets and those of Chesterfield are in some cases continuous thoroughfares, and, in the case of Brampton, the Corporation actually lights one side of the street and the District Council lights (or fails to light) the other side. These outer districts have just been brought into closer connection with the borough by the reorganisation and extension of the municipal tramways system.

The electric cars of the Corporation made their first journey last week from Brampton Moor into Chesterfield, and thence along the Sheffield Road northwards as far as Sheepbridge. This latter part of the line serves Newbold, Brimington, and Whittington equally well. It approaches within two miles of Dronfield, towards which place the Sheffield Corporation electric tramways are rapidly being pushed forward. The time is probably not far distant, therefore, when Chesterfield will be connected by road railways with Sheffield.

The growth of Chesterfield in recent years has been rapid. At the time of the passing of the Municipal Reform Act in 1835 the borough contained only 6,000 people. Even when the census of 1861 was taken this number had only increased to 9,886, and 20 years later the population was 12,221. Between 1891 and 1901, however, there was a leap from 13,242 to 27,185, the boundaries having in the intervening period been considerably widened. Now the population is estimated at about 30,000.

Of the four districts which have been alluded to above the largest, in point of population, is Whittington, which had 9,416 inhabitants at the time of the last census. Then come Newbold with 5,986, and Brimington with 4,569. Brampton, which is partly rural and partly urban in character, had a population of 2,185 in 1901. It is not proposed to bring the rural part of the district within the borough, and the portion which is affected—New Brampton—contained about 1,500 people.

In the three years since the census was taken the population has grown to a greater or less extent in all these places, so that if the proposed scheme of amalgamation is carried out Chesterfield will have considerably more than the 50,000 inhabitants who will cause it to qualify for county borough rank.

ACTION ABROAD.

The movement is by no means confined to home municipalities. The Town Clerk of Adelaide (Mr. T. Geo. Ellery) has got together much information on the subject of the greater city movement abroad, with which he has favoured us.

Melbourne.

The city of Melbourne has twice extended its boundaries. Bourke Ward, with an area of 1,885 acres and a population of 12,630, was annexed in 1894; while in 1900 Albert Ward —area 1,135½ acres, population 7,680—threw in its lot with the larger body. Melbourne now has seven wards, and covers an area of 5,740 acres. Further movements are afoot for a unification scheme, to embrace a larger portion of its metropolitan area, and a Royal Commission is still at work in the matter. In Sydney nothing so far has eventuated except talk about a "Greater Sydney," and the Town Clerk (Mr. Nesbit) writes:—

Unification v. Federation.

"After two years' experience of local circumstances, I confirm my previously expressed opinion in favour of unification, as against what I believe the untenable principle of federation, the adoption of federation being merely the adoption of a system having a direct tendency to perpetuate existing evils, and consequent extravagance. I favour and advocate the principle of unification after nearly 30 years' close and intimate study of every phase of municipal politics, municipal institutions, and municipal functions of every character, and the administration of municipal law coming within the cognisance or purview of an executive officer of a municipality. It is true that I cannot lay claim, like some of those who hold contrary opinions, to possessing what has been euphemistically termed an intimate knowledge of the temperament of the people; and, whilst one distinguished apostle of federation, in a sudden excess of zeal, has declared it gratuitous on my part to infer that suburban aldermen are more tenacious of the little honour that titles give them than they are willing to embrace the unification theory which I propounded, I not only admit the inference, but still adhere to the view expressed, and which experience has clearly demonstrated to be correct in every particular, because suburban aldermen are not likely to consent to be relegated to obscurity, and hide their light under a bushel. Others, possessing a more intimate knowledge of the temperament of the people, and better qualified than myself to judge, have generously confirmed my opinion, and have borne unsolicited testimony to its accuracy and to the utility of unification as compared with federation."

Other Proposals.

The question is receiving much attention in Greater Auckland, 7,000 or 8,000 acres being proposed to be added to the city.

Greater Wellington, New Zealand, has become an accomplished fact. Mr. Palmer (town clerk) states that—

"The amalgamation of the late Wellington and Melrose Boroughs eventuated by *Gazette* notice on April 1st, 1903. For one month—*i.e.*, until the election on April 29th, the late Melrose borough councillors sat with the representatives of the late Wellington City Council. The amalgamation provided that for the first biennial period the respective areas of the late boroughs should be the two wards of the 'Greater' Wellington City, and be designated Wellington and Melrose respectively, the former having 12 and the latter three representatives. The next election will take place in April, 1905, when it is probable that the undivided borough system will be again adopted.

"The experience of the past year has been that increased interest has been manifested in regard to the Melrose Ward and its requirements, where, while not a great deal has been as yet actually accomplished, preparation has been made for improvements which will bring the district more into line with the advantages of the city.

Dunedin.

The matter of extension is before Dunedin, and the Greater Dunedin Committee recommends, *inter alia*:—(1) Complete fusion of all assets and liabilities of the city and various boroughs; (2) the constitution at the outset of the city and several boroughs each as a separate ward for rating purposes; (3) the maintenance of differential rating in the several wards so constituted, until it is found that a uniform general rate has become feasible; (4) in the meantime, a general rate of (say) 1s. to 1s. 3d. in the £ to be levied, special and separate rates being continued; (5) a council of 21 members; (6) the eventual division of the united area into wards for electoral purposes, each ward representing an equal proportion of municipal electors, boundaries being changeable by the council as population varies; (7) the supply to the suburbs of water and gas on the same terms as the city; (8) the cutting off from the united borough of the rural portions of Roslyn, Maori Hill, North East Valley, and West Harbour, which could be re-absorbed as the city extended; (9) the eventual absorption of the functions of the Drainage Board; (10) the retention as far as possible of the services of the officials of the suburban boroughs; (11) amending legislation to give effect to the proposals.

It is proposed that Perth, Western Australia, amalgamate with five outlying suburbs, so adding 9,984 to its present area of 2,300 acres.

The district of Booroodabin was annexed to Brisbane in 1902, enlarging its area from 1,537½ acres to 3,457½ acres, or more than double.

The three contiguous boroughs of Linwood, Sydenham, and St. Albans were in 1902 joined with Christchurch, increasing the area by 3,349 acres, and the population by 26,712.

OFFICIAL & PERSONAL.

BRADFORD DEPUTY TOWN CLERKSHIP.

Leeds Candidate Appointed.

THE Finance and General Purposes Committee of the Bradford Corporation met last week to make a final appointment from the six candidates previously selected for the post of deputy town clerk, vacant by the appointment of Mr. F. D. Wardle to the town clerkship of Bath. There were originally 38 applicants for the post, but those in the final selection were—

Mr. H. Craven, assistant solicitor to the Sheffield Corporation.
Mr. Arthur Holt, deputy town clerk of Blackburn.
Mr. William Hudson, deputy town clerk of Huddersfield.
Mr. Hugh L. Parry, senior assistant solicitor to the West Riding County Council.
Mr. Percy Saunders, assistant solicitor to the Leeds Corporation; and
Mr. Charles Sydney Watson, clerk and solicitor to the Walthamstow District Council.

The salary offered was £500 a year, rising in instalments of £50 to £750 a year, but it was decided that the salary should be £500 per year, with no stipulation as to increases. Each of the six candidates was interviewed, the final choice ultimately falling upon Mr. Percy Saunders, assistant solicitor to the Leeds Corporation.

Mr. Saunders, who is 29 years of age, is a solicitor of six years standing, and he is at present in charge of departments of the Leeds Corporation which include the Sewerage, Highways, Sanitary, and Insanitary Areas Committees. He has from time to time prosecuted on behalf of the police, and attended local inquiries held by inspectors of the Local Government Board. Previous to his Leeds appointment he was for four years managing clerk to Messrs. Sharp, Parker and Co., solicitors to the Association of Municipal Corporations, London. He was also for some time in private practice in the firm of Messrs. Kite, Broomhead, and Kite, of Taunton and North Kerry, and he served his articles with the town clerk of Taunton.

MAIDSTONE TOWN CLERK RESIGNS.

MR. HERBERT MONCKTON on Monday resigned the town clerkship of the borough of Maidstone, which office he had held for exactly 30 years. He is a brother of the late Sir John Monckton, for many years town clerk of the City of London.

GLASGOW TOWN CLERKSHIP.

THE Glasgow Town Council has approved the recommendation of the special committee on the town clerkship, that applicants for the post be advertised for at a salary of not less than £1,500 a year.

The letter from Mr. Monro, senior deputy town clerk, asking to be relieved of duty as soon as possible, and stating that he considered the offer to him of a salary at the rate of £1,000 a year while acting as interim town clerk as a slur on the office, was remitted for consideration by the special committee.

LEIGH ELECTRICAL ENGINEER.

MR. A. T SMITH, of Bury, has been recommended by the Electricity Committee of the Leigh Corporation for appointment to the post of electrical engineer, in the place of Mr. D. M. Kinghorn, who has been appointed electrical engineer of Southwark, at a salary of £350 per annum. Mr. Smith is to receive £250 per annum, rising to £350 by yearly increments of £25. There were 147 applicants for the post.

ELECTRICAL ENGINEER TO WORCESTER.

AT a meeting of Worcester City Council on Tuesday, Mr. Cyril M. Shaw, of Wakefield, was elected electrical engineer to the Corporation, receiving 29 votes to 7 given for the second selected candidate. There were 95 applications. The salary is £400, rising by annual increments to £500.

FINANCES OF LONDON BOROUGHS.

MR. THOS. E. CHARLES, F.S.S., the Borough Accountant of Deptford, has just prepared his annual statement showing the Rateable Value, Nett Indebtedness (incurred by the Local Authority), Rates in the £, and population of the various Metropolitan Boroughs, together with the percentages of such Debt to the Rateable Value and the Debt per head of the population at 31st March, 1904. The object the compiler had in view in classifying the indebtedness as it appears was not so much to show which are actually marketable assets, as to distinguish that part of the debt which is, from a monetary point of view, wholly unremunerative from that which at some time or another is profit-making, such as Electricity, Housing of the Working Classes, or Cemetery undertakings, or that which bears a certain market value, such as Freehold Land or Buildings. Column (*a*) simply shews the indebtedness against which the Councils have assets, and not the value of the assets in respect of the Indebtedness.

Name of borough.	Rateable value.	Net indebtedness. Against which Council has marketable assets. (*a*)	Net indebtedness. Against which Council has no marketable assets. (*b*)	Net indebtedness. Total. (*c*)	% of indebtedness. (*b*) to R. V.	% of indebtedness. (*c*) to R. V.	Population (1901)	Debt. (*b*) Per head of population. £. s. d.	Debt. (*c*) Per head of population. £. s. d.	Total rate in £ s. d.

MOTOR REGULATIONS.

HOW THEY AFFECT LOCAL AUTHORITIES.

THE new regulations of the Local Government Board with respect to heavy motor vehicles have a considerable interest for local authorities. The registering authority for heavy motor-cars is the same as is specified in the Motor Car Act, 1903, and the regulations and enactments applicable to motor-cars under the Acts of 1896 and 1903 apply to heavy motor-cars, with slight modifications, while additional stipulations and obligations are imposed by the new regulations.

The maximum weight of motor-cars as defined by the Act of 1896 is increased from three to five tons, and with a trailer from four to six and a half tons. By this alteration motor-cars over three tons and under five tons in weight have been withdrawn from the control of the Locomotives Act of 1898 as "locomotives," and, instead, placed under the Acts of 1896 and 1903 as "heavy motor-cars," and as such may now be "registered" by any local authority (including county and county borough councils) defined by the Act of 1903, instead of being "licensed," as previously, by the county or county borough in which the locomotive is principally used under the Act of 1898.

The regulations apply to heavy motor-cars only—*i.e.*, cars over two tons weight and not exceeding five tons. The registering authority is to provide a separate register of heavy motor-cars, to comprise the same head lines as the present register, with the addition of the following:—(a) The weight of the heavy motor-car unladen; (b) the axle weight of each axle; (c) the diameter of each wheel; (d) the width and material of the tire of each wheel; and (e) the highest rate of speed at which, in conformity with the regulations, the heavy motor-car may be driven without a trailer, and a separate application form, similar to the one at present in use, with the addition of the following heads:—(a) The weight of the heavy motor-car unladen; (b) the axle weight of each axle; and (c) the diameter of the wheel.

All motor-cars weighing over two tons which have been registered under the existing regulations are to be re-registered by the local authority free of charge; and within six months of the passing of the new regulations this must be effected, and such motor-cars will thereafter be subject to all the new obligations imposed by the regulations.

In addition to the obligations of the registering authority to supply a copy of the entry to the owner of motor-cars under Article III. of the 1903 regulations, the owner of motor-cars over two tons in weight (which have been previously registered) shall also be furnished with a certificate to the effect that the procedure prescribed by Article IV. has been followed, and that the heavy motor car may be used on a highway without further registration.

The registering authority is empowered to verify, through its officer, the weight of the heavy motor-car and the axle weight of each axle, and such officer shall certify the weight or weights ascertained by him, and make any necessary correction in the statement of weights declared by the owner in his application. The officer shall also satisfy himself that the tyres of the wheels of the car, if metallic, are of the dimensions required by the regulations. Power is further granted to the road authorities to compel drivers to take motor-cars when loaded to a weighing machine for the purpose of ascertaining if the load is within the weight specified in the register.

OUT in the North-West of Canada, in the town of Maple Creek, Assiniboia, 600 miles beyond Winnipeg, Mr. William Richard Abbott, brother of Mr. George and Mr. Thomas Abbott, well-known in Sheffield, was on a popular vote on the 12th day of December, 1904, duly elected mayor of that town, by a majority of three to one over his opponent. Mr. Abbott has been 33 years in Canada, and is well-known in the region between Winnipeg and Calgary as one of the pioneers of the North-West.

NOTES AND ANSWERS.

No Authoritative Definition of the Term "Statutory Committee." Some Committees to which the Designation Applies: Their Duties and Obligations. When is a Drain a Sewer? More Light on this Troublesome Conundrum. No Legal Power under the Education Acts to Take a Poll. When a Poll may be Taken.

*** *Queries intended for this column should be addressed to the "Legal Correspondent,"* MUNICIPAL JOURNAL, *12, Salisbury Square, E.C. They should be written on one side of the paper only, and be signed by a nom de plume or initials, the real name and address of the correspondent being written on the back of the paper.*

592.—SEWERS AND DRAINS—Combined Drains Liability to Repair.—I enclose a rough plan of eight houses, respecting which the Corporation of this town has served notice on us to re-drain and also put in new main drain or sewer. Nos. 1 and 2 belong to S., Nos. 3 to 8 to J., who has a life interest only, and upon his death the houses become the property of S., the owner of Nos. 1 and 2. Who is answerable to put in this new sewer—the Corporation or S. and J.? In the event of J. having to do his part, he has no money. What steps can be taken in this matter, as S. is virtually the freeholder of the whole lot? Are we also liable from A to B, as well as from C to D? This combined drainage system seems some what of a puzzle, and seems very pliable in certain cases.—"SUBSCRIBER."

The provisions of Sec. 19 of the Public Health Acts Amendment Act, 1890, as set out above, will apply here, if, as we assume and as is generally the case, Part III. of that Act has been adopted. The joint effect of that section and of Sec. 41 of the Public Health Act, 1875, will empower the local authority, on a nuisance arising from the condition of the combined drain, to cause such drain to be examined, and, if it appear to be in a bad condition, the local authority may cause notice in writing to be given to the owner or occupier requiring him forthwith, or within a reasonable time as specified in the notice, to do the necessary works. On default, the authority may execute the required works and recover the expenditure involved from the owner in a summary manner, or may by order declare the same to be private improvement expenses, recoverable by yearly instalments. The owner, as defined by Sec. 4 of the Public Health Act, 1875, means the person for the time being receiving the rack rent of the premises in connection with which the word is used, and would thus include a person having only a life interest in the property affected. Whether the above enactments would cover the requisition on the part of the corporation to re-drain and put down a new main drain, would be a question of fact depending on the extent of the nuisance complained of in this case. The owners are liable under these circumstances in respect not only of the combined drain from C to D (i.e., the drain running behind and parallel to the frontage of the houses), but also in respect of the part from A to B (i.e., the drain or sewer connecting the end of the combined drain with the public sewer under the street in front of the houses). If J. cannot pay his share, the money claimed by the Corporation will be a charge on his property. We should add that this combined drain is a sewer within the meaning of Sec. 4 of the Public Health Act, 1875, and, as such, is vested in the corporation. And where no proceedings are taken under Sec. 41 of the Public Health Act, 1875, above referred to, in respect of a nuisance arising, the corporation is liable to keep the combined drain in repair. (See Sec. 15, Public Health Act, 1875.)

593.—POLL OF THE RATEPAYERS—When may it be taken on Public Questions?—Will you kindly state in your columns what powers are possessed by Corporations with regard to taking a referendum of its citizens. Also what mode of procedure would be necessary for a body of citizens to follow to have this done? The question for which the information is desired, is the rescinding of the resolution of the Education Committee to feed starving children.—"G. O. M."

There is no legal power under the Education Acts to take a poll of the citizens or burgesses or ratepayers of a town on the matter referred to by our correspondent, or on any other question which may arise under the Acts. It is, however, provided by Sec. 8 (1) of the Education Act, 1902, that where the local education authority or any other persons propose to provide a new public elementary school, they shall give public notice of their intention, and any ten ratepayers of the area for which it is proposed to provide the school may, within three months after the notice is given, appeal to the Board of Education on the ground that the proposed school is not required, or that some other school is better suited to meet the wants of the district, and any school built in contravention of the decision of the Board of Education on such appeal shall be treated as unnecessary.

The ratepayers at large have certainly no right to interfere with the decision of the corporation in this case to rescind a resolution of the education committee to feed starving children. Moreover, there would appear to be no legal authority for charging the education rate with expenditure for the purpose indicated in the resolution. It is of course open to any person or persons, at their own expense, to take steps to ascertain the opinion of the burgesses or ratepayers on any subject of public interest, but the expenditure involved cannot be thrown on the rates, and the effect of thus ascertaining the opinion of the public will be merely moral, and will carry no legal consequences with it.

Under the Borough Funds Act, 1903, provision is made in certain cases for taking a poll of the electorate of a borough or urban district in reference to the promotion of a Bill in Parliament by the Council. Schedule III. to the Public Health Act, 1875, sets out the rules to be observed where a resolution of "owners and ratepayers" under that Act is required for any purpose. The meeting must be summoned on the requisition of 20 ratepayers or owners. Such resolution is required where the local authority proposes to provide a market place, and in connection with various other schemes or proposals under Secs. 166, 216, and 272 of that Act.

594.—PARISH COUNCIL — Chairman and Casting Vote.—At our last parish council meeting here on December the 29th, 1904, a report of a committee of eight men, three to form a quorum, was given, but the clerk said two councillors only were present at committee meeting. I sat till the clerk had read the report, and then I inquired if what I thought he said was true, namely, that two councillors only were present; he answered, "Yes." I then protested against the time of the council being wasted by having to sit and listen to an illegal report.

I was told by the chairman, and also by an ex-county councillor, that if the parish council adopted the report that such adoption would make it legal. Is that so? Is there no possibility or means of punishing councillors for thus arrogating to themselves powers not theirs? Further, does the mere fact of a chairman of the parish council-meeting not voting in a first division, for or against, disqualify him for giving a casting vote when the votes are equal in number, for and against?—"CHESTER-LE-STREET."

In our opinion, the adoption and ratification by the parish council of the report of its committee, even though such committee has at one or more of its meetings not had a quorum present, is good and valid, especially having regard to the fact that the council adopted the report with knowledge of the irregularity of the proceedings of its committee. The chairman is empowered to exercise his casting vote even though he has not given an original vote as a councillor. (See L.G. Act, 1894, First Schedule, Part II., rule 10.)

595.—AS TO APPOINTMENTS—As Municipal Engineers and Surveyors In the United States or Canada.—Would you kindly answer the following in your much valued paper. What chances or openings are there for an English municipal engineer and surveyor of obtaining an appointment in either America (United States) or Canada? If any, what is the best paper, American or Canadian, to take as an advertising medium? I may mention that my experience has been latterly on water, sewerage, and general municipal work, 37 years of age, and an associate of the Royal Sanitary Institute.—"S. A. W."

We regret we cannot help our correspondent in this matter, but print the query in case any of our readers may be able to furnish the desired information.

596.—BATHS AND WASHHOUSES ACTS—Can they be Adopted by a Parish Council or by a Rural District Council?—Can a parish council or a rural district council adopt the Baths and Washhouses Acts, or must a parish meeting be called to adopt them?—"F. J."

Sec. 7 of the Local Government Act, 1894, provides, *inter alia*, that in every rural parish (*i.e.*, in every parish in a rural district), the parish meeting shall, exclusively, have the power of adopting the Baths and Washhouses Acts. Ten ratepayers can requisition the parish council to convene a parish meeting to determine whether the Acts are to be adopted. The resolution to adopt the Acts must be carried by a majority of two-thirds of the parish meeting or of the parochial electors. (See Baths and Washhouses Acts, 1866, Sec. 5.) The rural district council is not empowered to adopt these Acts. Urban district councils are empowered to adopt the Acts by Sec. 10 of the Public Health Act, 1875.

597.—"STATUTORY COMMITTEES"—WHAT THEY ARE—What Action can the L.G.B. take in Case of Default by a Local Authority?—Through your valuable and highly instructive "Notes and Answers" columns I shall esteem it a great favour if you give me a reply to the following queries:—

1. What are statutory committees, and the functions devolving upon them?

2. What action may be taken by the Local Government Board in case of (a) actual neglect of duty, (b) inefficient discharge of duty, by local authorities?—"D. P."

(1) There does not appear to be any authoritative definition of the term "statutory committee." Apparently, however, it applies to all such committees as are expressly designated by, and appointed under, some statutory authority. Thus it would apply to the watch committee appointed by municipal corporations under the express directions contained in Sec. 190 of the Municipal Corporations Act of 1882; to the finance committee which county councils (and certain other bodies) are required to appoint by Sec. 80 of the Local Government Act, 1888; and to the assessment committees which boards of guardians must appoint in every year at their first meeting after the annual election, by Sec. 2 of the Union Assessment Act, 1862.

(2) The answer to the second question will differ according as the local authority is a district council (rural or urban), a borough council, or a board of guardians, and, further, much will depend on the precise kind of neglect or inefficient discharge of duty which may be complained of. Sec. 299 of the Public Health Act, 1875, provides that where complaint is made to the Local Government Board that a local authority—*i.e.*, an urban or rural sanitary authority—has made default in providing its district with sufficient sewers, or in the maintenance of existing sewers, or in providing its district with a supply of water, in cases where danger arises to the health of the inhabitants from the insufficiency or unwholesomeness of the existing supply of water, and a proper supply can be got at a reasonable cost, or that a local authority has made default in enforcing any provisions of the Public Health Act, 1875, which it is its duty to enforce, (this Act covers the great majority of the sanitary duties of the authority), the L.G.B., if satisfied, after due inquiry, that the authority has been guilty of the alleged default, shall make an order

limiting a time for the performance of its duty in the matter of such complaint. This Order may be enforced by *mandamus*, or the L.G.B. may appoint some person to perform the duty, and direct the authority, by its Order, to pay the reasonable expenses involved in doing the work, together with the costs of the proceedings. The person so appointed shall have all the powers of the local authority, save the powers of levying rates. Generally speaking, these powers would be exercised in respect of default in connection with the sewerage of a district, or the supply of water, and only in a strong case would they be put in force.

In so far as a default, or neglect, on the part of a local authority whose accounts are subject to Government audit involves a loss of money, the matter will come before the district auditor appointed by the L.G.B. at his audit of the accounts of such authority, and thus indirectly the matter may come under the cognisance and jurisdiction of the L.G.B. Thus, where default on the part of a local authority whose accounts are subject to audit by the district auditor can be shown to have resulted in financial loss to the council or the ratepayers, it will be open to the auditor to surcharge the councillors or officers of the council who may be responsible for such default. In the case of neglect of duties by boards of guardians, the L.G.B. has in many respects very wide powers, which it will be unnecessary to detail here.

598.—**SEWERS AND DRAINS—Liability to Repair.**—In a terrace of houses, two of them adjoining, the drains throughout run into one another. The property is in Essex. Does this under the Act constitute a sewer? If so, and when repairs are necessary, would the owners or the local authority be liable?—"CANVASSER."

Section 4 of the Public Health Act, 1875, provides that "Drain" shall mean any drain of and used for the drainage of one building only or premises within the same curtilage, and made merely for the purpose of communicating therefrom with a cesspool or other like receptacle for drainage, or with a sewer into which the drainage of two or more buildings or premises occupied by different persons is conveyed. "Sewer" shall include sewers and drains of every description, except drains to which the word "drain," as above interpreted, applies (and with another exception not relevant here). Where the drainage of a row of houses is conveyed to a sewer by one drain, to which each house is connected, that drain will constitute a sewer, and will, therefore, be vested in and repairable by the local authority, even though the sewer is entirely in private property. ["Travis v. Uttley," 1 Q.B., 233 (1893).] The local authority has power to compel owners of property to make a separate drain for each house about to be built. This tends to prevent contests about the vesting of sewers. A drain from two semi-detached houses under one roof, though taking the sewage of two houses, is not deemed to be a sewer. An important qualification of the above rules is introduced by the Public Health Acts Amendment Act, 1890. Where Part III. of that Act has been adopted, the local authority can, in some cases, cast the expense of abating nuisances caused by combined drains on the owners of the property concerned. Sec. 19 of that Act provides, in effect, that where two or more houses belonging to *different owners* are connected with a public sewer by a single private drain, the local authority may, on complaint as to a nuisance arising therefrom, recover the expense of executing any necessary works from the owners of such houses. (See Sec. 41 of the Public Health Act, 1875, as to complaint of nuisance from drains.)

We have thus dealt with this matter generally because our correspondent's query is not sufficiently specific to enable us to deal with it in detail. He will be able to apply the above principles to the circumstances of the case.

THE crematorium at Lawnswood, just outside the boundary of Leeds, on the Otley Road, is so near to completion that only the sanction of the Local Government Board is now required in order that it may be used.

ABOUT BOOKS.

LAW AND LEGISLATION IN 1904.*

THIS is the sixth issue of one of the most useful local government publications we know of. It is a monument of systematic and careful compilation, and should take its place at once as an indispensable work of reference in the office of every local authority, and in the library of every student of local government. The book contains the statutes of the session annotated and explained; a digest of all cases decided in the courts during the year ended September 30, 1904; and the circulars, orders, and other official information relating to the jurisdiction of local authorities issued during the same period. Last session did not witness any heroic attempts at reform in our local government system, but it gave us the Shop Hours Act—a measure that marks a new social experiment—and the Prevention of Cruelty to Children Act, which strengthens and consolidates previous legislation on that subject. Ten other measures deal with education, poor law, public health, and sundry matters of interest to public bodies. These Acts can usually be obtained without difficulty, but it is not always so easy to preserve the collection of official circulars, memoranda, &c.—last year, of an exceptionally important character — which forms one of the most valuable sections of this useful volume. The book, as we have said, should be in the office of every local authority, and every councillor who desires to keep himself informed, first hand, of the legislative and administrative changes that are constantly taking place in the important branch of public life in which he is engaged, should also possess a copy.

THE GERMAN WORKING CLASSES.†

PROFESSOR ASHLEY'S purpose is to meet the argument of those who say that the condition of the German people is such as properly to deter Great Britain from any departure from her present fiscal policy. He seeks to show that the comparison is a far more difficult and dubious affair than is supposed, and that the balance of advantage is not indisputably in favour of this country; and, further, that whatever may be the comparative position of the two countries, Germany has actually witnessed a great advance in the well-being of the masses of her people within the last 25 years—a period during which she has been pursuing a policy of Protection. It is not contended that German progress in general material prosperity has been the result of Protection, the author contenting himself with an endeavour to show that Protection has not been inconsistent with a great advance.

THE REFORMERS' YEAR BOOK‡

THIS is what its title indicates—a ready reference book for social reforms. But in its municipal section it is not so complete as it should be. Mr. G. C. Cope's article on "Municipal Movements" deals only with municipal trading, and even there the statistics are given in such a way that they would not be found very useful. Municipal movements last year were not wholly in the direction of trading, witness that for the extension of local government areas and the application of an efficient audit system. The book as a whole, however, is a very creditable production, and contains the prime facts relating to practically all the social reform movements of importance now in progress in this country.

* "Local Government Law and Legislation for the Year 1904." Arranged and edited by W. H. Dumsday, Barrister-at-Law. (Hadden, Best and Co., 5, West Harding Street, E.C. 10s.)

† "The Progress of the German Working Classes in the Last Quarter of a Century." By W. J. Ashley. Longmans, Green and Co. 1s. 6d. nett.

‡ "The Reformers' Year Book, 1905." Joint editors, F. W. Pethick Lawrence and Joseph Edwards, London, 19, St. Bride Street, E.C. 2s. and 1s.

"DAILY MAIL YEAR BOOK."*

THE one good thing which the *Daily Mail* organisation produces every year is this Year Book, crammed from cover to cover with facts that are reliable and figures that are accurate. The way to test the volume is to try and find some public subject upon which no information is given, and in the endeavour to apply the test to the disadvantage of the Year Book we must admit an ignominious failure.

"THE UNEMPLOYED."

A BOOK on this evergreen problem, written by Mr. Percy Alden, and containing a preface by Sir John Gorst, will be published almost immediately by Messrs. P. S. King and Son. The author was for twelve years resident in South-west Ham, an extra metropolitan district, which may be regarded as the storm centre of unemployment at the present time. He was warden of the University Settlement known as Mansfield House, and for nine years occupied a seat on the Town Council. In the winter of 1893-4 he acted as hon. secretary of the relief works in West Ham, giving evidence on the subject before the Select Committee on Distress from Want of Employment in 1895. He organised a census of the unemployed throughout the whole of West Ham, which resulted in the discovery that some 20 per cent. of the manual workers in all the poorer districts were unemployed—a result which was confirmed by a later census made officially by the Town Council. As hon. secretary of the Guildhall Conference, held in February, 1903, and also a member of the Mansion House Unemployed Committee, he has had great experience of the practical difficulties of this complex problem.

In the autumn of last year Mr. Percy Alden paid a visit to the labour colonies in Holland, Belgium, and Germany, with a view to seeing how far Continental methods might be adopted with modifications in England. The book does not deal so much with the ultimate and final solution of the unemployed problem, as with the practical remedies that have been tried and tested and found more or less successful in other countries. The idea of a system of graded labour colonies is no longer scouted as Utopian, and Mr. Walter Long's suggestion to the Unemployed Committee of a central colony has brought the whole question within the sphere of practical politics.

Both the author and Sir John Gorst (who writes the preface) lay great stress on the possibility of creating a fresh outlet for unemployed labour in the cultivation of the soil and in giving free access to the land, which at present is the exclusive possession of a comparative few.

A USEFUL YEAR BOOK.

THE Hornsey Borough Council is to be congratulated upon the publication of a most useful and handy little Year Book and Pocket Diary for 1905. Amongst other information in this gilt-edged leather-bound volume is a *résumé* of the Council's work during the year, census and tenement tables, particulars of poor, borough, and general district rates; list of councillors; burgesses' roll; overseers of the poor; guardians and officers of the Edmonton Union; area, population, assessable value of the union, &c.; bye-laws, regulations, &c.; Members of Parliament, and other information useful to councillors and guardians. There is also a useful little map, clearly printed, of the County of Middlesex. The book and diary is printed at the *Hornsey Journal* Office, Crouch Hill, N.

BOOTLE CORPORATION YEAR BOOK.—This year's Bootle Municipal Year Book and Diary, which has just been issued, contains a comprehensive and highly-interesting mass of detailed information, and this compact little volume will, like previous productions of its kind, be extremely valuable and useful to members of the Council and others.

* Edited by Percy L. Parker, and published by the Amalgamated Press, London. Price 1s. 6d.

OUR POST OFFICE.

SITE VALUES TAXATION.

THE CASE OF FULHAM.

To the Editor.

SIR,—The correspondent who writes to you on the "case of Fulham" falls into a too common error when he assumes that any conceivable system of taxing site values could enable the taxing authority to realise each year as income the whole increment of capital valne which accrues to owners who do *not* realise. Nobody can both eat his cake and have it. Because, according to some estimate accepted by him, the capital value of sites in Fulham is said to have risen from £2,500,000 in 1886 to £5,235,000 in 1904, he assumes that no less than the whole difference of £2,735,000, or an average of £152,000 a year, might by the adoption of site value taxation have been made "to flow into the local exchequer." At the same time, he admits that the annual value of the covered sites was only £40,000 a year in 1886 and £140,000 in 1904. I suppose he will desire me to add something for an assumed income on the uncovered land, which he says was worth £1,500.000 out of the £2,500 000 in 1886 and £575,000 out of the £5,235,000 in 1904. Let us be liberal and grant him for the purpose of the argnment 4 per cent. on these sums, *i e.*, £60,000 a year at the beginning and £23,000 at the end of the period. Adding this assumed income to the real income, we get a total of £100.000 a year in 1886, gradually increasing to £163,000 a year in 1904. The average is far below your correspondent's £152,000 a year, so that even if he had imposed a tax of 20s. in the £ on site values in 1886, and levied it steadily till 1904, he could not have got in nearly so much as he supposes.

He probably has some confused idea that he could tax the increment of capital value as well as the income, real and assumed, forgetting that if you take away the income the capital value disappears. If your correspondent had property worth £4 per annum now, and it rose to be worth £8 per annum in 7½ years, the rate of interest being unchanged at 4 per cent., he would, as things are, have a capital increment of 10 per cent. per annum during the seven and a half years; but would that enable him to pay £10 a year in taxes at the beginning of the period and £20 a year at the end without getting poorer? Property so taxed would obviously be worth a considerable *minus* figure. To hold it long enough would ruin the richest man in creation. If your correspondent doubts my argument, I hope he will draw up a schedule showing how his average of £152,000 is spread over the eighteen years, and exactly who would pay it, and what its effect on the capital value of Fulham land would be.—Yours, &c.,

E. C.

MUNICIPAL TRADING AND RATES.

To the Editor.

SIR,—Writing under the auspices of the Liberty and Property Defence League on December 9, Mr. R. N. M'Dougall invited your readers to believe that "municipal trading raises rates." "The return," he said, "compiled by Mr. Jas. Carter shows conclusively how profits from municipal trading are raising rates everywhere. Looking through the list of boroughs in Mr. Carter's annual return, we find that those where little or no profit is made have the lowest rates, while those where profits are over 1s. in the £ have the highest."

That and nothing else is the point at issue between Mr. M'Dougall and myself. His proof consisted in the illegitimate method of selecting here and there from the return a case which suited his purpose; he neglected the precantion of testing it as a whole. By way of checking his statements I adopted the simple expedient of taking from the return all the towns which paid 1s. or more from profits and all those which made no profits at all, and found that in the former the average rates were 7s. 2l., in the latter slightly over 7s. 2½d.

In the face of this comprehensive contradiction from the authority to which he himself appealed, Mr. M'Dougall does not venture to reaffirm his original statement. He throws it to the wolves, and seeks to derive a spurious consolation from a deduction which he erroneously makes from my letter that "municipal trading does not reduce rates!"

What I wrote proved nothing of the sort, and Mr. M. is not skilful in the art of trailing the red herring. If he would stick to his point and endeavour to show, in the first place, any connection between high rates and high municipal profits, and, in the second place, the why and wherefore of such connection, some good purpose might be served. As it is, Mr. Carter's return simply disproves the connection, and one can only wish the Liberty and Property Defence League joy of their prize.—I am, &c.,

F. A. B.

GARDEN CITY AND THE UNEMPLOYED.

To the Editor.

SIR,—It has frequently been suggested that the Garden City Company should provide work for the unemployed on its estate near Hitchin, and the directors of the company have been considering the question of how far it would be possible to give such work without creating competition with the existing local supply of labour. It has, of course, been impossible for them to use the company's funds for charitable purposes, and, on the other hand, they do not desire to raise money on a purely philanthropic basis.

They have, however, accepted a voluntary offer made by a lady interested in the unemployed to subscribe £700 in share capital in the company on condition that the money is immediately used to employ men recommended by the Mansion House Committee.

The work which the company will thus be able to put into operation will be in advance of what would be done under ordinary circumstances, and of what is immediately necessary for the purpose of the development of the Garden City Estate. Arrangements have been made with Mr. Long's committee to supply up to 100 men for about three months, and to undertake the expense of providing accommodation and supervising. The first 20 men will be sent down to Hitchin early next week. The Garden City Company will pay the value of the work done to the extent of the above subscription.

It is desirable, however, that the £700 should be supplemented by additional funds subscribed on the same basis, so as to bring up the total amount available for the special unemployed works to £2,000. This would permit over 200 men to be employed on productive and healthy work for at least three months. The directors are willing to grant shares for subscriptions given on the above footing, and will only use the money for paying for the actual work completed. While the money is therefore being subscribed, and is accepted by the directors, primarily on behalf of the unemployed, it must not be regarded as a purely charitable subscription. The charitable funds will be provided by the unemployed committee which is supporting the scheme.

It may be possible for the best men sent out under this scheme to find permanent occupation in the new city, and in recognition of this possibility the Mansion House Committee is making a special selection of men.

I am sure you recognise the importance and urgency of securing productive and healthy employment for the better class of unemployed workmen, and also of relieving some of the great pressure of population in London.

I trust therefore you will give publicity to this letter, so that those of your readers who are interested in this aspect of the unemployed question can consider the desirability of giving the above scheme their support.—Yours faithfully,

THOS. ADAMS,
Secretary and Manager.

Holborn, W.C.

A GARDEN VILLAGE TRUST.

INTERESTING EXPERIMENT NEAR YORK.

DURING the last few days an interesting attempt to contribute to the solution of the housing problem has reached a further stage of development. Some two or three years ago Mr. Joseph Rowntree, the chairman of Rowntree and Co., Limited, purchased 120 acres of land at Earswick, West Huntington, about two miles from the centre of York, and abont a mile from the factory of his company.

On this he has commenced to erect a garden village. Thirty houses have already been built, and are already occupied; while eleven more are in course of erection, for all of which tenants are waiting. In order to provide for the development of the village, and for the establishment of others elsewhere, when suitable opportunities present themselves, Mr. Rowntree has now conveyed the estate to trustees, to whom he has also transferred a considerable amount of invested capital, which, with the accumulating rents of the houses, will form the endowment of the trust.

The plan of the village provides for adequate recreation-grounds. In the deed of foundation, the founder expresses his desire that not less than one-tenth of the land, exclusive of roads, at any time the property of the trust shall be laid out and used as parks, recreation-grounds, and open spaces; and, further, that the houses to be built shall not occupy more than one-fourth of the sites on which they are built. Most of the houses already erected have gardens of about 350 square yards. The houses are not intended solely for those employed at the cocoa works, and, though the object of the charity which has just been constituted is defined as the improvement of the condition of the working classes, the definition of "working classes" in the trust deed is of a very elastic character.

An effort is being made to provide houses which shall be artistic in appearance, sanitary, and thoroughly well built, and yet within the means of working men earning the ordinary wages of unskilled labour. It is felt that, if the experiment is to be a useful contribution to the housing problem, there should be something like a business return on capital, and it is hoped that the nett rental of the honses may amount to about 3½ per cent. on the capital expended on them. Most of the houses already built are let at 4s. 6d. per week, the tenants paying the rates, which amount to about 8d. per week.

They are of various designs, but the following is a description of the type of house which is most sought after:—On the ground floor is a large living room (12ft. 6in. by 20ft. 6in.), with a bay window, and plenty of cupboard accommodation, a small pantry, and a scullery fitted with patent exhaust to carry the steam direct into the flues, thus preventing the discomfort which often arises in small houses on washing day. The bath is fitted with a drop-down lid, forming a table when the bath is not in use. Upstairs there are three bedrooms, each fitted with a fireplace, and there is a large wardrobe on the landing. The walls are plastered internally with adamant cement, which dries very quickly and assumes a smooth hard surface, and is thus more sanitary than the ordinary plaster. All the rooms are fitted with picture mouldings. Gas is supplied throughout the house and city water is laid on.

The foundation deed provides that the administration of the trust shall be wholly unsectarian and non-political, and that there shall always be a rigid exclusion of all influences calculated to impart to it a character sectarian as regards religion or belief, or exclusive as regards politics.

THE Advisory Committee appointed by the West Riding Quarter Sessions to formulate rules and regulations for the administration of the Licensing Act, 1904, has completed the first part of its task.

Official Advertisements.

CITY OF BIRMINGHAM.

SUPPLY OF STORES.

THE Public Works Committee are prepared to receive TENDERS for the SUPPLY of STORES for One Year, ending March 31, 1906, viz.:—Lias Lime. Portland Cement, Drain Pipes. Gullies, Gully Pans, Brown Bricks, Timber. Drysaltery. Castings, Iron and Steel Ware. Clothing, Lamps, Glass, Enamelling, Brooms, Hose Pipe, Rubber Goods, Incandescent Mantles, and Miscellaneous Stores.

Samples and patterns may be seen on application to the Storekeeper at the Lamp Department. Park Street, and the Corporation Wharf, Sheepcote Street. Forms of tender, copies of conditions, and specifications may be obtained, on and after the 2nd inst., at the City Surveyor's Office, Council House, Birmingham, on payment of £1 for each copy, which will be returned on the receipt of a bona-fide tender for the whole or any portion of the stores required.

Samples of goods tendered for must be sent, carriage paid, to the undersigned; the samples of Portland cement, 5lb. in weight, to be delivered by the 14th of January. Tenders must be made out on the forms provided, and delivered at the under-mentioned offices on the 20th day of January, 1905, endorsed "Tender for Stores," and addressed to the City Surveyor, Council House, Birmingham. The tender of any person or firm paying less than the minimum standard rate of wages current in the districts will not be accepted.

The Committee do not pledge themselves to accept the lowest or any tender, and reserve the right to accept portions only of a tender.

JOHN PRICE,
City Engineer and Surveyor.

The Council House, Birmingham.
January 2, 1905.

CITY OF BIRMINGHAM.

SUPPLY OF MATERIALS.

THE Public Works Committee are prepared to receive TENDERS for the SUPPLY of MATERIALS for One Year, ending March 31, 1906, viz.:—Haslingden and Grauite Kerbs, Setts, Crossing Stones, Granite Chippings, Rowley Setts, Flags, Paving Bricks. Wood Paving Blocks, Ragstone, Gravel, Sand, and Slag.

Forms of tender, copies of conditions, and specifications may be obtained, on and after the 2nd instant, at the City Surveyor's Office, Council House, Birmingham, on payment of £1 for each copy, which will be returned on the receipt of a bona-fide tender for the whole or any portion of the materials required. Samples of Materials tendered for must be sent, carriage paid, to the undersigned.

Tenders must be made out on the forms provided, and delivered at the undermentioned offices on the 20th day of January, 1905, endorsed "Tender for Stone, &c.," and addressed to the City Surveyor, Council House, Birmingham. The tender of any person or firm paying less than the minimum standard rate of wages current in the districts will not be accepted. The person whose tender may be accepted will be required to provide approved sureties in sums of £300 each for the due performance of the contract.

The Committee do not pledge themselves to accept the lowest or any tender, and reserve the right to accept portions only of a tender.

JOHN PRICE.
City Engineer and Surveyor.

The Council House, Birmingham.
2nd January, 1905.

MUNICIPAL OFFICES.

A GENTLEMAN wishes to strongly recommend an ex-Articled Clerk (admitted), with exceptional qualifications, for an ASSISTANT CLERKSHIP. Write to Mr. MONTAGUE BROWNE, Northampton.

WANTED, a thoroughly competent General Clerk, experienced in the work of a Town Clerk's or District Clerk's Office. Expert shorthand writer and typist. Salary £100 per annum, rising to £150 by annual increments of £10. Apply, stating full particulars as to age, previous experience and qualification, with copies of not more than three recent testimonials, before 9th January, to U.D.C. (Box 1334), MUNICIPAL JOURNAL Office, 12, Salisbury Square, Fleet Street, E.C.

CITY OF BRADFORD.

ELECTRICITY DEPARTMENT.

SECOND ASSISTANT ELECTRICAL ENGINEER.

APPLICATIONS are invited (subject to approval to the appointment being given by the City Council) for the post of SECOND ASSISTANT ELECTRICAL ENGINEER upon the Central Office Staff of the City Electrical Engineer and Manager, which is engaged upon the design and supervision of extensions, and the control of the generating, distributing, consumers, and other branches of the department's work through the various departmental staffs.

Applications will only be considered from persons who have practical experience of the generation and distribution of energy upon both the H.T.A.C. and the L.T.C.C. systems, are well up in modern general electricity supply practice, possessed of a good knowledge of mathematics and mechanical drawing, and competent to supervise the work of draughtsmen.

The duties will consist of generally assisting and carrying out the instructions of the City Electrical Engineer and Manager.

Canvassing Members of the Council will be a disqualification.

The person appointed will be required to devote his whole time to the duties of the office, and to reside within the City.

Salary £250 per annum.

Applications, in handwriting of the candidate, stating age, experience, and qualifications, together with copies of not more than three testimonials of recent date (which will not be returned), to be sent in time to reach me not later than the first post on Thursday, the 19th January instant, endorsed "Assistant Electrical Engineer."

FREDERICK STEVENS,
Town Clerk.

Town Hall, Bradford.
3rd January, 1905.

LAMBETH BOROUGH COUNCIL.

TO CONTRACTORS AND OTHERS.

THE Council of the Metropolitan Borough of Lambeth are prepared to receive TENDERS for the following Services and for the SUPPLY of MATERIAL for One Year from the 31st day of March. 1905. viz.:—

Removal of Slops from Roads,
Supply of Men. Horses, and Carts,
Cartage of Materials. &c.,
Barging away Dust and Garbage
(for One or Three Years).
Smiths' Works and Repairs.
Wheelwrights' Work,
Removal of House Refuse
(for One or Three Years).

MATERIALS.

Broken Granite	Portland Cement
Broken Flint	London-made Drain Pipes
Gravel	Lime
Ballast	Castings
Sand	Brooms
York Paving	Brushes
Granite Kerb	Oil and Colours
Granite Paving Setts	Ironmongery, Tools, &c.
Tar Paving	

Specifications and forms of tender may be obtained upon application to Mr. Henry Edwards, C.E., the Borough Engineer, at 346, Kennington Road, S.E., between the hours of 10 and 4 (Saturdays 10 to 1).

Sealed tenders addressed to the Council, and endorsed "Tender," must be delivered at the Town Hall not later than 5 o'clock p.m. on Thursday, the 26th day of January, 1905.

The Council do not bind themselves to accept the lowest or any tender, nor as to quantity required for the period.

By order.

H. J. SMITH,
Town Clerk.

Town Hall, Kennington Green, S.E.
January, 1906.

WANTED, Appointment as Storekeeper, &c. (or Assistant), to Public Institution. Abstainer. Age 30. Nichols, Regent Street, Leighton Buzzard.

JUNIOR CLERK, 20, seeks Re-engagement, One year's experience. Good references. Write "Dinn," Summerhill, Margate Road, Ramsgate.

Official Advertisements.

ST. PANCRAS BOROUGH COUNCIL.

TO PRINTERS, BOOKBINDERS, AND ACCOUNT BOOKMAKERS.

TENDERS are invited for the SUPPLY of PRINTING for all Departments of the Council during the Three Years ending 31st March, 1908.

TENDERS are also invited for the SUPPLY of BOOKBINDING to all Departments of the Council during the Three Years ending 31st March, 1908.

TENDERS are also invited for the SUPPLY of STATIONERY to all Departments of the Council during the Three Years ending 31st March, 1908.

Tenders, sealed and endorsed "Priuting Tender," "Bookbinding Tender," or "Stationery Tender," as the case may be, are to be delivered at the Town Hall, Pancras Road, N.W., not later than 5 o'clock in the afternoon on Friday, the 10th February, 1905.

The contracts for the Printing, Bookbinding, and Stationery are separate and distinct, and the contractors will be required to find satisfactory security for the due performance of the contracts.

The Council do not bind themselves to accept the lowest or any tender, and reserve to themselves the right to accept a tender in whole or in part at their discretion, and the person or firm whose tender may be accepted, in whole or in part, will be required to enter into a contract with the Council accordingly.

The forms of tender, on which alone proposals will be received, may be obtained free of charge on application to the undersigned.

The Samples of the Printing, Stationery, Books, and other documents required, can be inspected at the Town Hall, Pancras Road, any day from the 9th to the 16th January, 1905, inclusive, during the office hours of 9 a.m. to 5.30 p.m., except on Saturday, when the hours are from 9 a.m. to 1 p.m.

The contractors will be required to pay to all their employees who may do work under these contracts wages at such rates and shall observe such conditions of employment as are mutually agreed upon by the associations of employers and employees, and as in practice obtain in the respective trades and for the description of work covered by the contracts.

Tenders will be liable to rejection in which any alteration is made in any of the conditions, schedules, memoranda, or notes.

The contracts to be entered into by the persons whose tenders are accepted will be prepared at the expense of the Council.

By order.

C. H. F. BARRETT,
Town Clerk.

The Town Hall,
Pancras Road, N.W.
3rd January, 1905.

PARISH OF LAMBETH.

GENERAL RELIEVING OFFICER.

THE Guardians of the Poor of the Parish of Lambeth intend to Appoint a GENERAL RELIEVING OFFICER, at a salary of £150 per year, subject to the statutory deduction under the Poor Law Officers' Superannuation Act, 1896.

The officer appointed must be married, and devote his whole time to his duties, and must reside in the Parish of Lambeth. Limits of age, 30 to 45 years.

Candidates must have had previous experience in dealing with lunatics.

Printed form of application will be sent on receipt of stamped addressed foolscap envelope.

Application is to be made by means of such form and in no other manner, and must be sent to me on or before Saturday, the 21st instant.

Canvassing the Guardians, directly or indirectly, is strictly forbidden, and will be deemed a disqualification.

By order of the Board.

R. GREENWOOD,
Acting Clerk.

Guardians' Board Room and Offices,
Brook Street, Kennington, S.E.
4th January, 1905.

INSTITUTE of MUNICIPAL TREASURERS and Accountants' Examinations, June, 1905. Gentlemen coached in class or by correspondence in Law Section. For terms address "Coach," MUNICIPAL JOURNAL Offices, 12, Salisbury Square, Fleet Street, E.C.

Official Advertisements.

URBAN DISTRICT OF CLECKHEATON.

LEDGER CLERK.

THE Council for the above District invites applications for the appointment of LEDGER CLERK in the Clerk's department, at a salary of £80 per annum, rising by increments of £5 to a maximum of £100.

Candidates should have had experience in a similar capacity in connection with Urban District Council, or borough accounts (either in the office of Clerk to the Council, or that of an Accountant), including those relating to gas, water, and electricity undertakings, and preference will be given to those possessed of the latter qualifications.

Applications on forms to be obtained at my office (accompanied by copies of three recent testimonials, and endorsed "Ledger Clerk"), must reach me not later than 4 o'clock on Saturday, the 14th January, 1905.

JOHN H. LINFIELD,
Clerk to the Council.

Town Hall,
Cleckheaton.
22nd December, 1904.

THE BEST JUDGES OF CIGARS
Now obtain their supplies at
BENSON'S, 61, St. Paul's Churchyard, London.
Really good Foreign Cigars at 16s., 20s., 22s. per 100 (and upwards. Samples 5 for 1s., free by post.

GUARANTEED £2 15s. PER CENT. STOCK.

Created under the IRISH LAND ACT, 1903 (Act 3 Edw. VII. ch. 37).

INTEREST PAYABLE HALF-YEARLY, ON THE 1ST JANUARY AND 1ST JULY.

ISSUE OF £6,000,000 STOCK.

MINIMUM PRICE £88 10s. PER CENT.

First Dividend, being Six Months' Interest, payable on the 1st July, 1905.

THE Governor and Company of the Bank of England Give Notice that they are authorised to receive TENDERS for £6,000,000 of the above-mentioned STOCK, to be created under the Irish Land Act, 1903, 3 Edw. VII., ch. 37.

The Stock will be in addition to, and will rank pari passu with, the Guaranteed £2 15s. per cent. Stock already existing.

The Stock consists of perpetual annuities, yielding dividends at the rate of 2¾ per cent. per annum, payable half-yearly, on the nominal amount of the capital. It will not be redeemable until the 1st November, 1933, but on and after that date may be redeemed at par, together with the payment of all arrears of interest, after three months' notice published in the "London Gazette" and in the "Dublin Gazette."

The dividends on the Stock are paid out of the income of the Irish Land Purchase Fund, and if that income is insufficient will be charged on and paid out of the Consolidated Fund of the United Kingdom, or the growing produce thereof.

The Books of the Stock are kept at the Bank of England and at the Bank of Ireland, and the arrangements in regard to the transfer of stock, the transmission of Dividend Warrants by post, and the issue and re-inscription of Stock Certificates are identical with those existing in the case of Consols.

Tenders must be delivered at the Chief Cashier's Office, Bank of England, before 2 o'clock on Tuesday, the 10th January, 1905, and a deposit of £5 per cent. on the nominal amount of the Stock tendered for must be paid at the time of the delivery of the tender. The deposit must not be enclosed in the tender.

Where no allotment is made the deposit will be returned, and, in the case of partial allotment, the balance of the deposit will be applied towards the first instalment.

Tenders must be for even hundreds of Stock, and may be for the whole or any part of the Stock in multiples of £100. Each tender must state what amount of money will be given for every £100 of Stock. The minimum price, below which no tender will be accepted, has been fixed at £88 10s. for every £100 of Stock. All tenders must be at prices which are multiples of sixpence. In the event of the receipt of tenders for a larger amount of Stock than that to be issued, at or above the minimum price, the tenders at the lowest price accepted will be subject to a pro rata diminution.

The dates on which the further payments will be required are as follows:—

On Friday, the 20th January, 1905,
so much as, when added to the deposit, will leave Sixty-five Pounds (sterling) to be paid for each hundred pounds of Stock.
On Friday, the 17th February, 1905, £20 per cent.
On Friday, the 10th March, 1905, £20 per cent.
On Friday, the 7th April, 1905, £25 per cent.

The instalments may be paid in full on, or after, the 20th January, 1905, under discount at the rate of £2½ per cent. per annum. In the case of default in the payment of any instalment at the proper date, the deposit and the instalments previously paid will be liable to forfeiture. Scrip certificates to bearer will be issued in exchange for the provisional receipts.

As soon as these Scrip Certificates to bearer have been paid in full, they can be inscribed (i.e., converted into Stock); or they can be exchanged for Stock Certificates to bearer in denominations of £100, £200, £500, and £1,000, without payment of any fee, provided such exchange be effected not later than the 1st June, 1905.

Tenders must be made upon the printed forms, which may be obtained at the Bank of England, at the Bank of Ireland, and at any of the Branches of those Banks; and of Messrs. Mullens, Marshall and Co., 4, Lombard Street, London, E.C.

NOTES AND COMMENTS.

Crewe and the Railway Company.

WE are glad to see that the Crewe Town Council is making a stand against the presumption of the London and North-Western Railway Company. Many of these large combinations imagine they have a right to dictate and dominate the municipal government of towns in which their works are situate. A Bill which the London and North-Western Company is promoting next session contains a clause which would empower it to break open the streets of Crewe, to lay, or relay, or repair its gas mains. Public convenience and public control are to be at the mercy of the railway company, which would, for all practical purposes, open the streets for traffic, or close them, as it pleased. The Town Council could not come to any other decision than that of opposing the Bill. But it is doing something more. It is writing to the railway company, vigorously protesting against the Bill, and informing the company that it is not prepared to grant any permanent rights in the streets to the railway company as a gas company. The council adds that all future breaking-up of the streets for gas purposes must be done by Corporation officials at the company's expense. It is also pointed out that, while in two, or at the most three, instances, the company has asked permission to break up the streets, in numerous instances it has done so without permission, and the council declines to allow this to be continued.

Landlords and Economics.

SIR ROBERT GIFFEN has an article in this month's *Contemporary Review* which is curiously inconsistent for so practised a writer. Because local expenditure has increased, he argues, local authorities must necessarily be extravagant, and he ignores the fact that he has already disproved his own contention by enumerating a long list of causes—satisfactory causes—that have contributed towards the increased expenditure. We do not think Sir Robert Giffen should generalise in this fashion unless he advances some specific proof in support of his statements:—

> When all is said, however, it remains quite certain that in this particular branch of expenditure we have to do with a real disease of local government; with an expenditure that is partly extravagant and unnecessary, because local authorities are frequently bad managers, even where they are not corrupt. They spend money on what is not really wanted; they spend more than they ought on what happens to be necessary; they incur liabilities and burden the future with a light heart.

But Sir Robert does not attempt to prove that local authorities are bad managers, that they are corrupt, and that they are extravagant and financially light-hearted. Like the Industrial Freedom League, he takes it for granted, which is not an impartial way of dealing with a question. If we are in the frying-pan, however, Sir Robert's remedy would at once precipitate us into the fire. He suggests that local finance would be "improved" if there were infused into our present system of having the local bodies elected by the ratepayers, each person being counted as equal, "a system of representation according to interest, the chief landlords of each district or town having a special representation." This is our old friend, "Shall companies vote," once again, with the ground and other landlords invited to the happy party. We agree that the local debt would not increase with the rapidity it does now if the municipalities were dominated by the company and landlord interests, as they would be were Sir Robert's suggestion adopted. The increase would not take place because, instead of operating remunerative public services through the municipalities, the companies and the landlords would operate them themselves, charge high fees for the services they performed, and put the profits into their own pockets. Sir Robert would have some ground for talking about corruption then! There is this other point, however, that the money would still be spent; but it would cost the ratepayers more in the spending of it. In Sir Robert's own words, "municipal borrowing, where borrowing is necessary, does not touch upon the resource of credit any more than would the borrowing of private traders, whether companies or individuals, by whom the work must otherwise be done."

The "Daily Mail" and West Ham.

IT is amusing to see how the *Daily Mail* is endeavouring to cast upon the shoulders of the municipality the blame for the abnormal distress at present prevailing at West Ham. According to the paper's financial expert, it is all, or nearly all, due to "free and easy borrowing methods," and investors are warned to be careful lest they throw their money away. The allusion is, of course, to the high rates at West Ham, as these are the only channels through which financial maladministration could impose hardship upon the inhabitants. An analysis of West Ham's rate of 9s. 10d. in the £, however, conclusively proves that no municipal trading charges—"reckless borrowings" are always for "trading" purposes—are included in the levy. This is how West Ham's rate of 9s. 10d. in the £ is made up:—

	s.	d.
Poor Law and Cemetery	2	1¼
Borough	0	6¾
Watch	0	5¾
Education	2	8¼
Library and Museum	0	1
General District	4	0
	9	10

One of the reasons why West Ham's rates are high is that the borough did not start municipal trading enterprises until very late in the day. But even under the present circumstances, the profits from the electric lighting undertaking are this year reducing the total rate by 1¾d. in the £. In other words, had there been no municipal trading in electric lighting at West Ham, the rates this year, instead of being 9s. 10d. in the £, would have totalled 9s. 11¾d. So that part of the "free and easy borrowing" of which the *Daily Mail* writer complains has this year had the effect of reducing the rates by nearly twopence in the £. We do not think that the ratepayers will complain of financial maladministration of this description. Even the tramways, which are a recent municipal institution at West Ham, will next year relieve the rates. And this will be the result of more "free and easy borrowing methods"!

The Duty of a Chairman.

MR. JAMES G. MONRO, the Town Clerk of Glasgow, has, in response to questions raised at a recent meeting of the City Council, prepared an interesting "opinion" as to the powers of a chairman at a meeting of the Corporation. Mr. Monro points out that the powers of a chairman of the Corporation are derived not only from the Standing Orders, but also from the common law of the country. Standing Orders are merely for the purpose of regulating the procedure of the meeting. They direct in what manner the business is to be conducted, and, so far as they are not unreasonable or contrary to law, they must be observed by, and be binding upon, the members of the body which has made and adopted them. Apart altogether from Standing Orders, the chairman, in regulating the proceedings of a meeting, is bound to exclude all irrelevant questions or matters from being put or discussed at the meeting, and to allow only such business to be transacted as, in his opinion, is competent. The Standing Orders adopted by any body in no way modify or circumscribe the common law rights, powers, and duties of the chairman, and if any point not provided for in those Orders arises in the course of a meeting, it must necessarily fall to be determined by the chairman under his common law rights. The only remedy in cases of obvious wrong being committed by a chairman is for a person aggrieved to take such proceedings at law as he may be advised are appropriate to the circumstances of the particular case. So high, however, is the authority of the chair in matters of regulation and procedure, that it cannot be overborne by any mere resolution or vote of the Corporation. The proposition that any question or notice of motion submitted by a member of the Corporation, whatever the character or subject of it may be, must be read or allowed to be put by the chairman to the meeting, is absolutely untenable. No such right, either at common law or by statute, or under Standing Orders, exists, and no chairman could, or should, be compelled to be the medium of putting what he regards as incompetent, irrelevant, or libellous interrogatories or notices of motion. This is not only law, we think, but commou sense.

Tramways versus Railways.

THE *Glasgow Herald* a few days ago published an interesting article showing how railways are suffering from the development of the tramway industry. The figures, however, were not new, aud the list of lamentations by railway chairmen and directors was amusing. There was nothing very startling in the article until the last paragraph was reached, when we were gravely told by the writer that "the serious feature from the economic point of view is that the competition is to such a large extent provided by municipal enterprise, and is practically supported by the rates, whilst the railway companies have only their own earnings with which to meet their capital charges." If this means anything at all, it is that municipal tramways lose money and have to go upon the rates. What, however, are the facts? An analysis of the Board of Trade accounts from which the *Glasgow Herald* writer quotes shows that in respect of tramways owned by local authorities a nett return of 6⅜ per cent. was earned on the capital invested. So that this particular form of enterprise, contrary to being "practically supported by the rates," actually supports the rates! The writer of the article did not delve sufficiently far into the facts, but it is a pity that after a column and a half of what may be called subsidiary figures he forgot to consult the really vital ones.

The Success of Hull.

HULL'S successful municipalisation policy has drawn forth the fervid admiration of Mr. W. C. Hamm, the United States Consul in the northern city. In a paper on "The Public Utilities of Hull," which Mr. Hamm has forwarded his Government, the local municipal institutions are referred to in terms of the highest praise. First, there is a reference to the recently completed telephone system, which, it is pointed out, "has brought a speedy reduction in rates." It is also explained that under the terms of the wayleave agreements "other cities can now demand the same telephone rate as is made in Hull." "Thus the competition in this city may prove beneficial to every city in England," adds our American commentator, and he would have exactly hit the mark if he had added, "of the same size as Hull." In respect to the municipal services generally, Mr. Hamm goes into the accounts, and comes to the following conclusions:—

> In each instance, then, with the exception of the crematory and the baths, the municipalisation of public utilities in Hull has resulted in a profit to the city treasury. The profit, it is true, is small, but it must be remembered that the charges for these public services are extremely low.
>
> A ride on the street cars in any direction to the end of the line costs only 1d., an exclusive telephone service in a private house costs £5 a year, and in a business office about £6 a year. Gas is sold at 2s. 6d. per thousand feet, and electricity at 4½d. per unit.
>
> The object is not so much to make a profit for the city out of these utilities as to furnish the public with the best service at the lowest possible price. Viewed in this light, municipalisation in Hull can be pronounced a success.

Reports like this will do much to dispel the misunderstanding that exists in many quarters on the other side of the Atlantic by reason of the interested misrepresentation that has been made by private companies and their supporters.

POOR LAW OUTLOOK.

Striking Differences in the Policies Adopted by two English Boards of Guardians. Betrayal of the Poor and of the Ratepayer at Leicester, as Shown by the District Auditor. Encomiums for the Bradford Board on the Good Results of its Policy. Mistaking a Wave of the Tide of Pauperism. Guardians and their Inability to Relieve Unemployed. Reform Needed.

What is "Lax" Relief?

To give specific instances of either "lax" or "strict" out-door relief is always a thankless, and often dangerous, task. But two such excellent illustrations come to hand this week of extreme divergence of policy which ought to be made widely known. The instances of lax out-door relief, three in number, come from distressed Leicester. A man was on the labour test, and his wife earned from 2s. 6d. to 6s. per week. The man was a bricklayer, but was unable to get a situation, owing to his former dissolute habits. He had been convicted of assaulting his wife, and sent to prison for three months. He had been on the labour test for 18 months, and appeared to regard the test as a permanent situation. Was there ever a clearer case—given on the evidence of the district auditor (Mr. Arthur H. Cunynghame)—in which a man should have been sent to the workhouse? And the auditor rightly took the Leicester Guardians to task at their last meeting for not taking that course.

❦ ❦ ❦

Out-Relief Run Mad.

THE second "lax" case given on the evidence of the auditor was one in which relief was granted to a family. At the ninth week the family earned £1 5s. 6d., and the relief granted was 8s. 4d. This relief continued each week, though in the tenth week the family earned 18s., the eleventh week £2 2s. 9d., the twelfth week £2 2s. 2d., the thirteenth week £2 2s. ½d., the fourteenth week £2 0s. 6½d. In the third instance the earnings of the family amounted to £1 7s. 9d. per week, but the man was placed on the labour test and received 6s. a week for two weeks. Then he received 9s. week. He then went off the labour test for eight weeks. Then he went on again, and though the family earnings amounted to 14s. a week he had relief at the rate of 10s. a week.

❦ ❦ ❦

And the Result.

IT would be difficult to use too strong words of condemnation on these *primâ facie* cases. The second case is made all the worse, inasmuch as the man had been on the labour test for over a year and a half, during which a strong effort might have been made to induce him to seek another situation. The Board is now considering these matters, and it will be interesting to hear the reply. If it be a fixed policy of the Leicester Guardians thus to give indiscriminate relief, it no doubt accounts largely for an increase in out-door relief during the last ten years of over 100 per cent. In 1895 the out-door relief for the whole year amounted to £13,637; for the *half-year* ended Lady Day, 1904, the amount of relief was £13,986.

❦ ❦ ❦

Strong Disapproval.

AND the castigation of the guardians is administered by the *Leicester Daily Post* in no uncertain manner. Presuming these statements of the auditor to be true, it asks:

> What have they been made guardians for, if not to ascertain the entire facts of a case before they play the Lord and Lady Bountiful? And what are their relieving officers for, if not to discover and keep them posted up in the ways and means of the applicants for relief? As it is, the ratepayers owe a debt of gratitude to Mr. Cunynghame for going to the root of at least three cases, and explaining the fashion in which it is alleged the public funds have been frittered away—if not worse.

The frittering away of the public funds, however, is but the less evil. The greater is the degradation and demoralisation which follow such indiscriminate action.

It does not improve matters to argue—as did one guardian at the last meeting of this board—that the members were unable to discover the figures cited by the district auditor.

Unfathomable Wiles of the Beggar.

BEFORE leaving this subject of "lax" administration we will give a good cognate instance of the wiles of the professional beggar. It was told by the Bishop of Manchester (Dr. Knox) the other day. At first when he presented tickets for the Salford Church Army Labour Home to the ordinary beggar the reply was, "nothing would please me better than to go into the home, only in the next street I have a wife and five children, and the home will not take them in." "Now," the bishop continued, "I look at him with as friendly an eye as I can, and say I would gladly do something for him only I cannot keep his wife and five children. Whereupon he assures me that he has not a wife and five children, and then, of course, I produce the ticket for the Church Army Home. I have, however, very little reason to suppose that he goes there. The wiles of the professional beggar are unfathomable." And guardians cannot too fully realise how easy it is to breed this parasite of society.

❦ ❦ ❦

"Scientific Nicety" at Bradford.

IT is with more pleasure that we turn to the Bradford Board of Guardians and the results of its policy. That policy and those good results have been outlined in our columns more than once. The Local Government Board inspector for the district (Mr. P. H. Bagenal), at the last meeting of the guardians, went so far as to say that they had brought their administration to a "scientific nicety." Referring to the lack of employment and distress which had been prevalent during the last few months, the inspector said he thought the attitude the board had taken up was a right one, and was thoroughly sound. They were perfectly right in upholding the main principles of the Poor Law. This policy, our readers know, has resulted in great reduction in the number of out-door relief cases, and in a more liberal treatment of each case. The guardians also deal very generously with the in-door poor, who are almost entirely either sick, imbecile, feeble, or infirm.

❦ ❦ ❦

The Thorn with the Rose.

BUT it is only fair to mention that the inspector had criticisms to offer. He deprecated the overcrowding of the labour shop (the chopping-shed). He entered the shed during his inspection, and he was bound to say that he came out in double quick time. There was an enormous number of men in the place, which was a wretched little shanty, and the heat and want of air were such as would have made an end of him in a very short time. It would not be very easy to find proper accommodation for labour at the workhouse, the site not being very large, but he thought they should provide better accommodation than existed at present. The genial and able chairman of the Board (Mr. F. H. Bentham) admitted the chopping-shed was in a wretched place, and we trust that this black speck will be moved from the Bradford Board's fair escutcheons.

❦ ❦ ❦

Guardians' Powers and the Unemployed.

SHOULD guardians be permitted to grant relief in cases of mere unemployment? The question is one which has been answered in the affirmative by Poplar and other boards of guardians for a good many years. The Chorlton Board has now come to a similar answer. A committee has gone into the whole matter, and at the last meeting of the board its recommendation was adopted:—

> To remind the Local Government Board that in the 52 years which have elapsed since the issuing of the Order, considerable changes have taken place not only in the general conditions of life of the poorer classes, but also in the qualification for the office of guardian, and in the mode of election of boards of guardians, who to-day are more directly in contact with and responsible for the proper carrying out of their duties to the ratepayers than were the guardians of 1852.

But a much bigger reform than this is needed for dealing with the unemployed to-day.

❦ ❦ ❦

A Bigger Scheme on Trial.

MR. WALTER LONG'S Central-Committee-for-London scheme is an attempt to deal with the matter in a bigger way. Is this effort going to be a success? The objects are good, but the difficulty is to carry them out. Thorough discrimination in relief of any kind is a difficult matter. Already it is reported this week that the Battersea authorities have resolved to wash their hands of Mr. Long's scheme. The grounds on which they have acted amount to a charge that the distribution of the money sent to the Central Committee has been injudicious, that the objects of the committee have not been respected, and that its action has been gravely detrimental to the poor. But it is easy to become impatient of results in a movement of this kind. If the Central Committee confines its attention to giving relief in the form of work we need not fear its failure. Large schemes working over large areas are wanted to deal with the problems of unemployment. Legislators will then begin to see more clearly what are the impediments which get between the willing-to-work and the willing-to-buy.

❦ ❦ ❦

A Point in Rating Law.

A REPLY from the Local Government Board on an important point in rating law was received at the last meeting of the Pontefract Board of Guardians. Some months ago the District Auditor (Mr. C. Moresby White), at the request of the overseers of Fairburn and Ferryfrystonl amended the clerk's statement of parochia, balances, and calculated the amount of rate actually due from Fairburn and Ferryfryston on the basis of a supplemental valuation list, which had been granted on an appeal by the Fryston Coal and Colliery Company, which claimed a reduction of its assessment on the ground of the stoppage of its works through the recent long strike. The board, acting on the advice of the Clerk (Mr. T. J. Amies), appealed against Mr. White's decision, and argued that its precept to the overseers was properly based upon the valuation lists actually in force at the date of its issue.

❦ ❦ ❦

Auditor Entirely Wrong.

IN its reply, the Local Government Board states that it finds the district auditor's position untenable in law, and directs that his alterations shall be excised and the original figures restored. The appeal of the Colliery Company, the Local Government Board's letter declares,

> must be regarded as having begun and ended with the Assessment Committee; and, as contended by the clerk, the reduction of the assessment of their property by a supplemental list furnishes no legal ground for any reduction or allowance in respect of any rates levied before that came into force.

This is an important and signal victory for the guardians.

❦ ❦ ❦

Alarmist Cries.

SOME of our readers are desirous to know if the increase in the ratio of paupers to population in London, as shown in "Poverty in London," is a cause for alarm. According to the last annual local taxation return, a nett expenditure of £12,133,478 was borne by the rates and various grants during the year 1902-3. The amount spent on the relief of the poor has increased to that sum from £5,208,027 in 1843, and the rate per head has increased by 1s. 0¾d. But the extent of pauperism is less, for the mean number of paupers of all classes decreased from 1,033,000 in 1869-70 to 802,000 in 1901-2, or, relatively to population, from 46 per 1,000 to 24·6 per 1,000. It appears that pauperism in London has again reached 28 per 1,000, but, though this is unfortunate, it constitutes no real cause for alarm.

HEATING OF BUILDINGS & HOT WATER SUPPLY

FROM LIVE OR EXHAUST STEAM.

The Latest and Best Appliance is

ELECTRICITY SUPPLY.

Educating the Public to the Uses of Electricity. The Need for Municipal Advertisement. Lessons from the Year's Electrical Doings at Derby and West Hartlepool.

LAST week we gave a general summary of the results of the Derby Corporation electricity undertaking for the financial year ended in 1904, and we return to the subject to supplement the particulars which then appeared. The amount given as revenue included a balance carried forward for stock in hand amounting to £1,075, and in the expenditure a sum was put down for a balance of a similar kind of the preceding year. Omitting these items, which in no way concern the trading results of the twelve months in question, the receipts appear as follow:—

	Units.	Yielding.	Per unit.
Private consumers took...	1,215,331	£16,855 =	3·329d.
Public lamps consumed...	275,280	2,815 =	2·454d.
Interim total... ...	1,490,611	£19,670 =	3·167d.
Rentals for meters and motors		1,053 =	·170d.
Rents and interest received		122 =	·081d.
Sales and repairs of lamps, &c.		383 =	
Total revenue for year		£21,228 =	3·418d.

The output for private supply has increased by 220,225 units, but public lighting has diminished by 17,232 units, leaving the nett increase in sales equal to 202,993 units. The receipts from private supply are greater by £1,879, from public lighting by £77, and from sundries by £238, making the total receipts £2,194 in excess of the previous year. Whereas the average private selling price has fallen by ·283d. per unit, it has increased by ·207d. for the portion sold for public lighting. The average of the current sold has been reduced by ·135d. per unit, but as the sundries are greater by ·005d. the nett result is ·130d. only less than before.

THE improvement in the surplus is partly owing to the reduction in expenditure on generation, &c., but to a greater degree to the capital charges being spread over a larger number of units. Thus the expenditure has been reduced by ·094d. per unit, and capital charges by ·187d. per unit, making a total of ·281d. per unit. The revenue having fallen by ·130d. per unit, leaves ·151d. on each unit greater surplus. And these figures have been attained without any change in the class of business, at least without the addition of a traction load; but Derby is one of the places where with a single phase alternating system a great deal has been done in the development of a motor load with entirely successful results. The rates have been fixed so as to encourage this department. They are arranged to discriminate between those used intermittently and those in all-day use. For the former the tariff is 3d. to 1d. per unit, and for the latter a flat rate of 1¼d. Heating is given the same advantages as motive power. The lighting rates are 6d. and 3d. on the maximum demand system, with an alternative of 4¾d. to 4d. on a sliding scale based on quantity. The public lamps pay £22 10s. each for all-night arcs, and 33s. for 16 candle power incandescents. The plant capacity is 2,200 kilowatts, upon which the greatest load in the last financial year was 1,300 kilowatts. There were 108,000 8-candle power lamps connected to the mains, with 79 arc and 657 8 candle power incandescent lamps for public lighting.

❦ ❦ ❦

Capital Expsnditure and Revenue.

IN the expenditure there are two special items which in the published accounts appear in the nett revenue. One of these is bank charges, which has been included with interest charges, while the other, stamp duty, is treated as a portion of the management costs. The allocation of the revenue on this basis was as follows:—

	Amount.	Per unit.
Works cost	£7,020 =	1·130d.
Rates, taxes, and management	2,101 =	·339d.
Total cost...	£9,121 =	1·469d.
Public lamp maintenance	720 =	·115d.
Gross cost	£9,841 =	1·584d.
Interest charges, &c. ...	4,898 =	·789d.
Sinking fund and repayments	4,867 =	·784d. } 1·573d.
Total actual cost of units sold	£19,606 =	3·157d.
Nett surplus for year ...	1,622 =	·261d.
Revenue in all for year	£21,228 =	3·418d.

The capital expenditure at the end of March last included expenditure under the following heads:—

Lands	£8,114
Buildings	21,996
Machinery	68,751
Mains and services	61,529
Transformers and motors	16,765
Meters	7,619
Electrical instruments	1,436
Various	3,176
Total capital invested ...	... £189,386
Loans outstanding	133,520
Amount repaid	25,849

❦ ❦ ❦

Employment of Small Units.

THE details of the accounts at West Hartlepool bear a curious resemblance to those at Derby, although in the former case the totals are considerably less than half those in the latter. The work's cost is 1·141d., compared with 1·130d. per unit, and the receipts 3·011d., against 3·418d. per unit. Although the output is so much less, the capital charges are 1·537d., against 1·573d., as shown above, from which it would appear that the alternating system at Derby does not possess any advantage on the score of first cost over the continuous current supply at West Hartlepool. The age of an undertaking has a great deal to do with the capital required, as, owing

"RONUK" (SANITARY) POLISH FOR FLOORS.

Polishes, Preserves, and Purifies. *Prevents the Harbouring of Germs.*

Used in the principal Hospitals, also in the National Gallery, Tate Gallery, Hertford House, &c., &c.

Awarded Bronze Medal of the Royal Sanitary Institute.
Only Award ever granted to a Polish.

CONTRACT DEPARTMENT.

"Ronuk," Limited, make a Speciality of Polishing all kinds of Flooring. A Large Staff of Specially Trained Workmen is kept by the Company, and inquiries for Estimates for the first preparation or maintenance of any new or previously unpolished Floors will receive immediate attention.

CAUTION.—Customers should see that every package bears the Registered Trade Mark, as endeavours are made to substitute inferior articles on the ground that they are the same as "RONUK."

A Sample, with Full Particulars and Prices, will be sent Free to any Institution on application.

"RONUK," Ltd., Head Office and Factory, **Portslade, near Brighton.**

LONDON DEPÔT: 86, York Road, Lambeth, S.E. MANCHESTER DEPÔT: 285, Deansgate.

to competition and the larger output of plant, manufacturers are now able to sell at a greatly reduced rate per kilowatt. Coupled with this there is the tendency to instal a smaller number of medium-sized generating sets instead of spending money on many more small units. Some ten or a dozen years ago there was—or it was thought there ought to be—safety in numbers, and stations were equipped with several sets of small size and relatively inefficient, with a view to provide plenty of units of "spare" and introduce interchangeability between them in the event of trouble. This has been found not only unnecessary but objectionable, as there is, other things being equal, a greater risk attendant upon the employment of a small unit compare with a larger one. As West Hartlepool is another of the undertakings which has gained a reputation for its steady advocacy of motor power—and it has reaped its reward by having connected 94 motors, aggregating 556 horse power, to the mains—it offers a good example to those concerns where the rates are maintained at an unduly high rate. The prices charged are 4d. for lighting and 2d. to 1d. for motive power or heating. Excluding maintenance, the receipts from public lighting average 1·25d. per unit, the arc lamps being charged £14 per annum. The plant installed amounts to 650 kilowatts, and the maximum load to 512 kilowatts, equal to a load factor of 14·35 per cent.

Progress at West Hartlepool.

THE progress made in the past four years is shown by the following figures :—

Year, to March	1901.	1902.	1903.	1904.
Units sold—				
Private ...	35,877	217,975	368,897	586,930
Public ...	12,138	50,548	56,730	56,737
Total ...	48,015	268,523	425,627	643,667
Maximum load	186 k.w.	264 k.w.	375 k.w.	512 k.w.
Number of consumers ...	133	233	352	433
No. of lamps...	16,958	23,959	42,548	53,076
No. of motors.	7	29	69	94
Horse-power of motors ...	43	153	409	556
Load factor ...	2·95 p.c.	11·61 p.c.	12·96 p.c.	14·35 p.c.
Nett total cost	5·83d.	2·71d.	2·04d.	1·59d.
Average price received private supply	4·24d.	4·03d.	3·43d.	2·80d.

The receipts were obtained from the following sources :—

	Units.	Yielding.	Per unit.
Private consumers took ...	586,930	£6,846	= 2·799d.
Public lamps consumed ...	56,737	546	= 2·310d.
Interim total	643,667	£7,392	= 2·756d.
Meter rentals...	—	234	= ·087d.
Rents and hire of motors ..	—	259	= ·168d.
Fees, sales, and repairs ...	—	191	
Total revenue	643,667	£8,076	= 3·011d.
Units used on works... ...	20,163		
Total accounted for... ...	663,830		
Utilised on distribution ...	66,160		
Total generated ...	729,990		

The changes per unit are very marked. Expenditure has fallen from 2·179d. to 1·683d., or ·496d. per unit better, and capital charges from 2·210d. to 1·537d., or ·673d. better, making an improvement of 1·169d. From this the reduction of revenue, ·474d., has to be taken, leaving ·695d., by which the previous loss of ·904d. has been reduced to ·209d., showing a rapid approach to surplus-making.

Financial Results.

THE receipts were taken up and allocated thus :—

	Amount.	Per unit.
Works cost	£3,060	= 1·141d.
Rates, taxes, and management	1,205	= ·449d.
Total cost	£4,265	= 1·590d.
Public lamp maintenance...	249	= ·093d.
Gross cost	£4,514	= 1·683d.
Interest charges	1,638	= ·611d.
Sinking fund and repayments	2,484	= ·926d.
		1·537d.
Total actual cost of units sold	£8,636	= 3·220d.
Less deficiency for year ...	560	= ·209d.
Reveuue in all	£8,076	= 3·011d.

The capital invested was covered by the following items :—

Lands	£2,140
Buildings	15,524
Machinery	16,882
Accumulators	851
Mains and services	31,397
Meters	2,587
Electrical instruments	1,830
Arc lamps and posts	844
Various	2,966
Total	£75,021

More About Gas v. Electricity.

IN our last issue we referred to the keen rivalry between electricity and gas, and the vigorous manner in which the gas managers throughout the country were pushing their business along. The electrical fraternity should see that during this year nothing is left undone to make known the advantages of electricity as an agent for lighting and power. Systematic canvassing pays, and if the right man be sent round, his personal and persistent advocacy will do more than is perhaps realised from the immediate return. This should be followed by a dissemination of suitable literature of the up-to-date, catchy kind, crisp and to the point, telling the prospective user exactly what electricity can do for him, and to what cost he will be put if he avails himself of it. To cap these endeavours, an exhibition should be held to demonstrate to all and sundry that the claims are no mere exercises of rhetoric, but solid facts that the appliances are to be had when required at a moderate cost, and that they are reliable when in use. By these means the public will be educated up to the uses of electricity, will become conversant with its details, and will have impressed upon them the source to which to apply when in any difficulty. That such lines are the right ones can be proved—if proof be asked for—by an appeal to the practice of the large power companies, which have devoted as much attention to the "publicity department" of their undertakings as to the technical and issue some of the best of the literature of its kind to be found in any industry.

TRAMWAY TOPICS.

The Story of How Ireland Obtained its First Complete Municipal Tramway System. Where Belfast has been Landed through Waiting for the "Approval" of Companies. Cheltenham Council's Attitude to Company's Free Tramway Passes. County Council's Liability for Paving when Light Railways or Tramways are Laid Down.

Bslfast Mnnicipalisation.

BELFAST Street Tramways Compauy's undertaking, including the permanent way, rolling stock, and horses, passed on New Year's Day into the hands of the city Corporation, which will proceed at once to electrify the system at a total cost, including purchase money, of over a million sterling. The transfer of the company's interest in the concern was made on Saturday, in the presence of the Lord Mayor of Belfast and other members of the City Council, by Mr. Barber Glenn, secretary of the company, who drove the first Belfast tramcar 32 years ago, to Sir Samuel Black, town clerk. Three hundred men will be started almost immediately in connection with the electrification process.

New Era in Ireland.

WITH the handing over on Saturday last of this undertaking to the Corporation, the first complete system of Irish municipal tramways came into existence. Let us hope that Ireland is beginning to shake off the hand of the company promoter, as it will one day the hand of the ground landlord. In this fine town is no longer a tramway company, with its headquarters in London and its interests in Belfast only so far as it will yield dividends. The pity of it is that this transference conld not have taken place long ago. The story is interesting.

The Companies "Did Not Approvs."

THE Belfast Tramways Company got its Order in 1871. The Corporation, when the scheme was mooted, referred the matter to a committee for inquiry. A deputation frou this committee visited several large English towns, and soon learned in which direction lay the interests of the ratepayers. It presented a series of conclnsions as to the results of its inquiries, the most important of which were—(1) "That the Corporation should make and maintain the tramways at the expense of the promoters, the estimated cost of constructing the lines to be first lodged in the bank to the credit of the Council, and the cost of repairs to be paid monthly"; and (2) "that the right of purchase after 10 years at cost price, subject to deduction for wear and tear, should be reserved to the Council." Other valuable recommendations as to fares, &c., based on cross-Channel precedent, were also made. The report was adopted by the Corporation, which had a splendid position for practically making its own terms, as there were two rival companies in the field. But this report was afterwards shelved because "neither of the promoting companies approved of it."

Tramways Re-Leassd: Public Protest.

NO stipulation was made for rent, and a lease was granted for 21 years, limiting the Council's powers to the right of purchase at the expiration of that period. In 1893, when the lease of the company expired, the receipts for the year were £94,648, the number of passengers 19,319,323, and a dividend of 7½ per cent. was paid. With a fatuity little short of madness, the Council decided by a majority to intimate to the Tramways Company directors that the Corporation was willing to re-lease the lines for a further period of 14 years at the rate of £4,000 a year for the first seven years, and £5,000 for the second seven. The ratepayers, though not as alert as they might have been, held a public meeting, a strong protest being made against the resolution, and the haste with which the contract had been made. Early in 1903, the growing dissatisfaction with the system induced the Corporation to promote a Bill in Parliament to obtain possession of the undertaking before the expiration of the lease. The Tramways Company prepared to oppose it, and a hard fight was expected, when last March the company unexpectedly made proposals for a settlement, the price of the undertaking to be settled by arbitration. Amongst other stipulations, the Corporation was to take over, and pay off when due, the debentures of the company, which, until they were paid off, would remain a charge upon the undertaking, the amount so payable being deducted from the purchase-money. The company recognised that there was a chauce of the Corporation buying up "the fag end." And it was right. The Corporation offered £90,000 for the undertaking, the lease of which would have fallen through in 30 months, and the company figuratively jumped at it. But all this blundering means that the ratepayer has had to pay, and will continue to pay, a heavy bill. The entire length of the system is 35 miles.

Tramway Passss as "Bribss."

AT the last meeting of the Cheltenham Town Council, one of the members (Mr. Ley Wood), having asked for, and failed to obtain, "a return of the names of all members of the Council and officers of the Council who, during the past year, have held a free pass on the light railway," moved: "That in the opinion of this Council the practice hitherto in vogue of members and officers of the Council accepting free passes on the light railway is a practice which is not condncive to public confidence in its members and officers, and cannot be countenanced." He estimated the value of a free pass on the light railway at €12 per annum, and suggested that no member of the council holding it could be in an independent position when dealing with questions between the company and the Corporation. The strangest circumstance about this strange resolution was that it was carried by twelve to eleven votes.

Nsw Electric Trains.

THE first electric train open to the pnblic on the Metropolitan Railway started from Neasden for Baker Street at eight o'clock on Sunday morning (New Year's morn). Mr. A. E. Ellis, the general manager of the company, was the driver. The service continued up to six o'clock in the evening, 20 electric trains being run to Willesden Green, six to Harrow, and a few to Uxbridge. The public eagerly took advantage of the new order of things, and the officials of the company reported a considerable increase over ordinary Sunday traffic. With the exception of a temporary failure of light in one train, the day's experience was highly satisfactory.

County Councils and Main Roads.

THE Darlington Corporation is claiming from the Durham County Council £14,000, which has been expended on paving certain main roads in the borough where tramways have been laid. The County Council disputes its liability, and contends that macadamising is sufficient for main roads, and that the more costly paving involved by the laying of tramways it is not responsible for. The Corporation has applied to the Local Government Board to adjudicate on the matter, and an inquiry will be held shortly at Darlington to determine the point at issue. The question is one of great interest to all municipalities and local authorities which have tramways or light railways, for this case will form a precedent as to whether county councils are liable for the particular kind of paving which has to be done where light railways or tramways are laid down. Main roads consist of what were formerly regarded as turnpike roads.

Tokyo Contract.

LAST week a special train, consisting of 42 waggons, left Messrs. Dick, Kerr and Co.'s Preston Works, carrying 250 tons of electrical machinery, being shipped in connection with that company's contract for the complete equipment of the Tokyo Denki Tetsudo Kabushiki Company's Tramways. This tramway system, when finished, will cover over 60 miles of line, and operate some 250 cars. The complete installation is being carried out by Messrs. Dick, Kerr and Co., under the supervision of a staff of its engineers, and it is surprising to learn that the only effect the war has had on the progress of the work is in connection with the transportation of the machinery from Yokohama to Tokyo, the railway being congested with war material.

Lancaster and Motors.

THE Electricity Committee of the Lancaster Town Council is considering the advisability of establishing a motor-'bus service.

Manchsstsr to Radcliffe by Car.

THE Radcliffe-to-Whitefield tramway was completed on Saturday morning, and in the afternoon the first car was sent over the lines. The route was opened for traffic this week. The line gives tramway communication between Manchester and Radcliffe.

A Tramway Ssrvice.

ST. Mark's, Kennington, which stands in the centre of the South London tramway system, has become the Mecca of the tram men, and its vicar, the Rev. Dr. Darlington, their prophet. The rev. gentleman has evinced much interest in the aims and aspirations of this extremely civil and useful body of men. A year ago Dr. Darlington organised a special service in their behalf. Enconraged by the success which attended that innovation, the experiment was repeated on New Year's Day. All the men at liberty attended in full uniform, the prayers were read by two of their number in uniform, and the Bishop of Rochester delivered an impressive sermon to the unique congregation, which included a large number of the residents of the district, as well as many attracted from other parts of London by the tram men's parade.

Dsrby Extsnsions.

THE work of extending the electric tramways system at Derby from St. Peter's Street to the Market Place began this week. The contract has been awarded Messrs. White and Company, of London, who completed the electric system now in use.

New Era in London Strsst Transit.

THE action of the London County Council in providing transit conveniences for London is having the welcome effect of stirring competition. The London Road Car Company, which has been experimenting with motor-'buses, has decided to discard its old horse-drawn vehicles, and replace them with roomy and comfortable petrol-propelled conveyances, each capable of carrying 34 passengers. Fifty new motor-'buses are now on order, each costing £600, which is about the price paid for the 16 horses it will replace. These will be on the streets in May, and by the end of the year the company's 460 horsed vehicles will have been superseded by 350 motor-'buses—the reduced number being rendered possible by the increased efficiency of the conveyances. When these are at work the Road Car Company's 5,500 horses will be thrown out of employment, and the departure of these and the unwieldy Juggernauts they draw will materially lessen the congestion of traffic.

Manchester (Official for Ireland.)

MR. A. A. BLACKBURN, A.M.I.E.E., car sheds superintendent of the Manchester Corporation Tramways, has been appointed to the position of car works superintendent to the Belfast Corporation Tramways, at a commencing salary of £300 per annum. Mr. Blackburn has been with the Manchester Corporation Tramways for two and a-half years. He takes up his new duties on February 1st next.

Bournemouth and the B.E.T. Co.

HEARTY congratulations passed at this week's meeting of the Bournemouth Town Council on the fact that the county borough had been freed from the meshes of the Poole and District Electric Traction Company, and that the exorbitant claims put forward by the company (backed by all the resources of the B.E.T. Co.) had been settled by arbitration in a manner entirely satisfactory to the Corporation. On Tuesday the Town Council received the announcement of the settlement with expressions of satisfaction, and passed a resolution of thanks to the town clerk (Mr. George Wm. Bailey), the borough engineer (Mr. F. W. Lacey), and the chairman of the Tramways Committee (Alderman G. J. Lawson) for their services.

Bournemouth Development.

THE Bournemouth Corporation is now going to commence immediately the construction of a tramway to Christchurch by a route which will keep nearly the whole of the line within the county borough. To cross the river into Christchurch, the Corporation has bought the undertaking of the Tuckton Bridge Company. When this extension is complete and the Poole line is in the hands of the Corporation, there will be direct communication by the Corporation cars between Christchurch, Bournemouth, and Poole, the extreme points of the system being about ten miles apart. Regarding the acquirement of the Poole tramway, it is agreed that the Poole and Branksome local authorities will pay to Bournemouth the amount of the arbitration award as regards the lines within their districts and become owners of the lines. the Bournemouth Corporation to take them on lease, work them in conjunction with the municipal system, and pay as rent a sum sufficient to cover interest and instalments of the loan. It is believed the profits from the line will make the undertaking a profitable one for Bournemouth. .

AN EDUCATIONAL INVENTION.

A NEW SCHOOL STAFF INDICATOR.

COUNCILLOR CULLWICK, of Wolverhampton, and Mr. Jesse Varley, F.S.A., F.G.S., the accountant clerk to the Wolverhampton Education Committee, have placed on the market the "Wickley" staff indicator, a specimen of which is now on view at the education offices, Stafford Street. The staff indicator is a capital example of what might be expected from the joint efforts of a practical business man and one with a taste for tabulated mathematical accuracy.

The staffing of schools is a sore plague to education committees, especially where there is a large number of school departments, as in Wolverhamptan. Set out on printed sheets it is possible to ascertain the state of the staff of individual schools, but to attempt by such means to gauge the comparative state of the whole of the schools is as difficult as a Chinese puzzle.

Messrs. Cullwick and Varley have solved the difficulty in a manner that is remarkably effective, and withal so simple that an office boy can in a few seconds record staff changes as they occur. On a large board is the name of each school under the authority, with spaces representing each class. Within each space are hung two discs, one containing the name and status of the teacher, the other containing the number of scholars in the class. Each class of teacher is represented by a different coloured disc. Where a class is without a teacher an ominous red disc appears. One glance at the apparatus shows even the uninitiated—

(1) The number of classes to be catered for.
(2) Number and status of teachers employed.
(3) Size of the classes, and whether the scholars are too few, or too many, for the qualifications of the teacher.
(4) Teachers required to bring the staffs up to requisite strength.

The present cumbersome methods of keeping records of the school staffs is not only wholly unsatisfactory, but decidedly expensive. It costs at least £30 per annum for printing alone, exclusive of the cost of clerical work. The staff indicator will cost considerably less than one year's printing bill, and afterwards entails little or no expense.

The apparatus is being made and placed upon the market by Messrs. E. J. Arnold and Sons, Limited, school outfitters, Leeds, and there is no doubt it will be welcomed by education committees generally.

FOR THE GOOD OF BLACKBURN.

"PLEASE put the enclosed £10 to the credit of the Blackburn Corporation. This amount to be devoted as the Corporation consider best for the general benefit of the town." These words, written in an apparently youthful hand, were on Wednesday read by the borough treasurer of Blackburn (Mr. J. H. Bailey), on his opening a small parcel, containing ten sovereigns, addressed to him.

MESSRS. MATHER AND CROWTHER.

To the Editor.

SIR,—In view of a rumour which is being circulated to the effect that a certain firm of publishers has a financial interest in this company, will you allow us to state through your columns that all the shares have been and are held exclusively by the directors, and no other person, firm, or company has, or ever had, any interest, financial or otherwise, in this business, or the managument of it.—Yours, &c.,

MATHER AND CROWTHER, LTD.
(A. Burbridge. Secretary.)

BOROUGH OF BETHNAL GREEN.

BOROUGH TREASURER'S DEPARTMENT.

APPLICATIONS are invited for the Post of JUNIOR CLERK in the Book-keeping branch of the above Department, at a commencing salary of £60 per annum, rising by conditional annual increments of £7 10s. to a maximum of £90.

Applicants must be between the ages of 19 and 22 years, must have a knowledge of bookkeeping, and be quick and accurate at figures.

The Council may test the qualifications of candidates by examination.

Forms of application (to be returned by January 19th) can be obtained from Mr. W. H. Ashmole, A.S.A.A., Borough Treasurer and Accountant, Town Hall, Bethnal Green, N.E.

ROBERT VOSS,
Town Clerk.

January, 1905.

LONDON AND WESTMINSTER BANK, LIMITED.

NOTICE is Hereby Given, that the ORDINARY HALF-YEARLY GENERAL MEETING of the London and Westminster Bank, Limited, will be held at the Head Office of the Bank, No. 41, Lothbury, in the City of London, on Wednesday, the 25th day of January next, at 1 o'clock precisely, for the following purposes:—

1. To receive the Directors' Report declaring a Dividend, and the Profit and Loss Account and Balance Sheet for the Half-year ending 31st December, 1904, and the Auditors' Report thereon.
2. To elect three Directors. Henry Goschen. Esquire, Sir Alfred Dent, K.C.M.G., and Henry Charles Hambro, Esquire, retire by rotation; but, being eligible, offer themselves for re-election.
3. To elect two Auditors. The present Auditors, Edwin Waterhouse, Esquire (of the firm of Messrs. Price, Waterhouse and Co.), and Alexander Young, Esquire (of the firm of Messrs. Turquand, Youngs and Co.), being eligible, offer themselves for re-election.
4. To transact all such other business as can be transacted at Ordinary General Meetings of the Company.

A. E. MANN,
Secretary.

7th December, 1904.

The Transfer Books of the Company will be Closed to prepare for the Dividend on the 2nd January next, and will be re-opened on the 5th January.

Proprietors registered in the Books of of the Company on the 31st December will be entitled to the Dividend for the current half-year on the number of Shares then standing in their respective names.

URBAN DISTRICT OF FINCHLEY.

ENGINEER'S AND SURVEYOR'S DEPARTMENT. JUNIOR CLERK.

THE Council invite applications for the above appointment, at a salary of £72 10s. per annum.

Candidates must be competent to assist in keeping the books and accounts of the department, and assist generally therein.

Preference will be given to applicants with experience in a municipal engineer's office, and with a knowledge of shorthand and typing.

Applications, endorsed "Junior Clerk," made on forms provided, which may be obtained from the undersigned, and accompanied by copies of not more than three recent testimonials, to reach me by not later than 5 p.m. on the 31st instant.

E. H. LISTER,
Clerk to the Council.

Council Offices, Church End, Finchley.
11th January, 1905.

CITY OF GLASGOW.

TOWN CLERKSHIP.

THE Corporation of Glasgow invite Applications for the office of TOWN CLERK of the City, which is about to become vacant through the resignation of the Subscriber.

The person appointed to the office, in addition to performing all the duties appertaining thereto at common law, under statute, or otherwise, will be required to act as law agent, parliamentary solicitor, clerk and secretary to the Corporation in relation to all the business of its various departments for the time being, including the general department, and the police, tramways, water, gas, electricity, city improvements, parks, markets, and telephone departments, and of all or any trusts, boards, or commissions, now existing, or which may hereafter be created in connection with the Corporation, or in which the Corporation may be interested.

The tenure of the office is now regulated by the provisions contained in Section 17 sub-section (1) of the Glasgow Corporation and Police Act, 1895. The salary (which will not be less than £1,500 per annum) to be paid to the Town Clerk in respect of the whole duties and services to be performed by him as above-mentioned, and the other terms and conditions upon which the office is to be held, will be such as may be mutually arranged and agreed upon between the Coporation and the person receiving the appointment, subject to the provisions of the said Act.

Sealed applications, marked on the outside "Town Clerkship," giving full particulars as to the experience and qualifications of the applicant, to be addressed to, and lodged with, the Subscriber on or before Tuesday, the 31st instant.

JAMES G. MONRO,
City Chambers, Glasgow. Town Clerk.
6th January 1905.

BOROUGH OF CAMBERWELL.

TO ASPHALTE CONTRACTORS.

THE Borough Council, being about to PAVE the roadways of Hollington Street and Sultan Street with MASTIC ASPHALTE, the Works and General Purposes Committee will meet at the Town Hall, Peckham Road, S.E., on Monday, 23rd January, 1905, at 6.30 p.m. precisely, to receive TENDERS for same.

Specifications and forms of tender can be obtained from Mr. W. Oxtoby, Borough Engineer, Town Hall, Camberwell. The Borough Council does not bind itself to accept the lowest or any tender.

Persons tendering must comply with the conditions as regards rates of pay and hours of labour, as contained in the form of contract.

C. WILLIAM TAGG,
Town Clerk.

10th January, 1905.

PARISH OF LAMBETH.

ASSISTANT MASTER.

THE Guardians of the Poor of the Parish of Lambeth hereby invite Applications for the post of ASSISTANT MASTER at their Workhouse, Renfrew Road, Lower Kennington Lane, S.E.

The commencing salary will be £60 per annum, rising by annual increments of £5 to a maximum of £70 per annum, together with board, lodging, and washing.

The appointment will be made subject to the provisions of the Poor Law Officers' Superannuation Act.

Candidates must be single, and thoroughly competent to keep the books and accounts of a large institution.

Printed form of application will be sent on receipt of stamped addressed foolscap envelope.

Application is to be made by means of such form, and in no other manner, and must be sent to me on or before Tuesday, the 24th January, 1905.

Canvassing the Guardians, either directly or indirectly, is strictly forbidden, and will be deemed a disqualification.

By order.
R. GREENWOOD,
Acting Clerk.

Guardians' Board Room and Offices,
Brook Street,
Kennington Road, S.E.,
9th January, 1905.

COUNTY BOROUGH OF SUNDERLAND

THE Corporation are prepared to receive LOANS of £50 and upwards on security of the Rates of the Borough, at six months' notice or for a fixed period.

For further particulars apply to Haswell Brown, Borough Accountant, Town Hall, Sunderland.

THE MUNICIPAL JOURNAL
ESTABLISHED AS "LONDON" THIRTEENTH YEAR OF ISSUE.

No. 624.—Vol. XIV. JANUARY 13, 1905.

THREE LONDON NEEDS.

A Notable Scheme is Put Forward by the Well-known Electrician, Mr. A. R. Bennett, M.I.E.E., to Link the Northern Tramways with the Southern; to Construct a New Thames Bridge for Foot and Vehicular Traffic; and to Build a Magnificent County Hall Over the River. How the Three Proposals could be Carried Out as One Improvement.

LONDON at the present time has three great needs. One is the linking of the tramway systems north and south of the Thames; another, increased bridge accommodation across the river; and a third, the provision of a new county hall.

There is a tide in the affairs of cities as well as of men, and the present moment has been seized for putting forth a remarkable suggestion by which these three needed reforms can be carried out at one stroke. Mr. Alfred R. Bennett, M.I.E.E., the well-known electrician and telephone expert, proposes to build a new bridge, on which a handsome hall worthy of London would be erected, with the basements so constructed that tramways could be taken through them.

Our illustrations show at a glance the nature and magnitude of the scheme. The respective levels of the river and the Strand at the head of Arundel Street render it possible to construct a bridge across the Thames from the foot of Arundel Street, which, while being practically level, like Waterloo Bridge, would give more than the headway necessary for the river traffic, and meet all the other requirements of the Thames Conservancy. Such a bridge could be connected with the new County Council tramway tunnel, already existing, by a falling gradient, ending at the southern side of the Strand. A short subway under the Strand would connect with the tunnel at Aldwych. The northern tramways could thus be continued to the Surrey side of the Thames, and if a new thoroughfare were made through the poor property which intervenes between the southern end of such a bridge and the Waterloo Road, or, preferably, continued straight to St. George's Circus, a perfect junction for the tramway systems would result. The erection of such a bridge would also solve the foot passenger and vehicular problem.

PROPOSED COUNTY HALL FOR LONDON (FROM THE RIVER).

The amount of property that would have to be acquired on the northern side of the Thames, as on the southern, would be comparatively small; consisting of a portion of the block between the east side of Arundel Street and Milford Lane, the cost of acquiring which, it is calculated, would be at least partly compensated for by the increased value of the sites in Aldwych and King's Way, owing to the connection of those thoroughfares with the new through route to the Surrey side. The viaduct between the Strand and Victoria Embankment would contain many spacious arches, the letting of which would bring in a recurring yearly income.

So far, the scheme is a self-contained one, and provides for the two first-mentioned wants—tramway linking and bridge accommodation. It *may* stop there, but by departing somewhat from the commonplace, it may be made to include the third improvement.

The search for a central site large enough for a building on a scale commensurate with the London County Council's requirements has recently been described as hopeless. Thus the way to a county hall worthy of the Metropolis appears permanently barred, while to erect one that is too small for its purposes, or otherwise unworthy, would be lamentable.

This suggestion to create a site out of the Thames by building the new bridge of sufficient size and strength to support a County Hall is a bold and taking one. But a bridge-supported building is by no means without precedent. Old London Bridge was for centuries so covered with houses as to form an almost complete street, and the Ponte Vecchio at Florence, and the Château de Chenonceau in France, are other examples.

The bridge would be surmounted in the first place by lofty vaulting with open sides, so that light and air would have free access, and under this vaulting, which would completely cover he roadways and footpaths, the traffic would be conducted. On the vaulting the main building would be erected. As the available space would permit of a building nearly 1,100ft. long, and of a width of from 70ft. to 100ft., it will be seen that a large amount of accommodation would be obtainable. It has recently been stated that five acres would not be too much as a site for the county hall. This area, in the mind of the speaker, no doubt included an inner quadrangular court, indispensable for light and air purposes in a building of ordinary plan. A three-storey building erected on the bridge would yield a floor space of about four and a half acres, all available for working purposes, since the building would require no interior source of light or air, for it would, from its position and construction, undoubtedly be the best-lighted building in London. In an ordinary square building covering a large site an inner court or well is indispensable, yet such a building must necessarily contain many ill-lit rooms into which the sun probably never shines, a condition of things which constitutes a perpetual hindrance to work, renders costly artificial illumination unavoidable, and is decidedly inimical to the health of the employees. The proposed Bridge Hall would be entirely free from these defects. Its direction north and south would secure for it the maximum amount of sunshine both morning and afternoon. Should, contrary to expectation, the actual bridge space not prove sufficient for a long time to come, there would exist means of easy extension, for the Hall could be prolonged over, and by the side of, the approaches on the Surrey side; or a separate building could be erected there later on.

THE VIEW FROM THE STRAND.

The second and third storeys of such a building could be devoted to the departmental offices, while the first, or main, storey, immediately over the vaulting, could contain a Council Chamber of magnificent proportions, committee rooms, a ball room, dining-room, a concert hall, which could also be used for public meetings and as a picture gallery, a library and reading-room, and museum.

The style suggested is the Perpendicular English Gothic, both for the building and for the bridge. The vaulting over the roadway would represent the ground floor of the Hall, and as we have already partially explained, under the vaulting would run two footpaths, each 14ft. wide; two carriage-ways, each 20ft. wide; while 20ft. would remain in the middle to accommodate a double-track tramway.

It is centuries since any municipal building worthy of note has been erected in London. Manchester, Glasgow, Leeds, and many other provincial towns have provided themselves with worthy temples of civic life. Abroad, in Germany and elsewhere, monumental town halls have arisen in recent years. The first City of the World alone appears too poor to provide itself with a worthy local habitation. London has been too much divided against herself, and a central home of commanding character and interest would help the change that is taking place towards a more unified London.

These are some of the reflections that have led Mr. Bennett to suggest a building entirely out of the common. The hall would be a worthy landmark.

A commanding feature would be the central tower and spire, reaching to 445ft. above the roadway, and 487ft. above high-water mark. This would be the tallest spire in the United Kingdom, and the second highest in the world. At 349ft. above high-water mark would be situated an observation platform, rendered easy of access by an electric lift. From it would be obtainable views of London and the surrounding country not to be paralleled elsewhere. The pier supporting the central tower would be of much larger dimensions than the others, following the example of Old London Bridge, which was distinguished by its massive central pier. In the pier would be located the apparatus for heating the building and other machinery. Under the tower, on the first floor, would be situated the Council Chamber. The second, third, and fourth storeys of the tower would be divided into offices, and plenty of floor space would be available on the still higher floors for stores and record rooms. The Hall would also have four corner towers, two at each end, of noble proportions, which would provide much additional floor space on their various storeys.

The question of cost is extremely important. Mr. Bennett estimates that it need not be excessive, for it is now possible to mould where it was in the past necessary to carve ornamentation, &c. It is suggested that the hall should be faced with Carrara ware, as used in the new Savoy Hotel buildings. This would give a light and fairy-like appearance, and yield very beautiful results in favourable lights. The cost would, of course, depend upon the method of construction. In the Gothic style, as described, with a liberal margin for adequate internal decorations, it would cost £2,250,000, and the cost of the bridge, with the approaches, tramway connections, together with the acquisition of the necessary property on both sides of the river would be a further sum of £2,500,000, or a total of £4,750,000. As a set-off to this, it is calculated that the County Council would save the following expenses:—

Widening of Waterloo Bridge no longer necessary ...	£500,000
Saving on the purchase of sites	1,000,000
Capitalisation at 5 per cent. of the annual rents now paid for office accommodation	700,000
Betterment of existing sites owned by the County Council	30,000
Saving of expenditure on some other method of linking the tramways now rendered unnecessary	60,000
	£2,290.000

Other economies and additional sources of revenue are expected to bring the total sum saved to £2,590,000, which would leave the nett cost of the new bridge and County Hall at £2,160,000.

UNDER the new forms for use in proceedings under the Housing of the Working Classes Acts, 1890 to 1903, issued this week by the Local Government Board, a "closing order" may be made where, in the opinion of the local authority (a), any dwelling-house is not reasonably capable of being made fit for habitation, or (b) is in such a state that the occupation thereof should be immediately discontinued.

MUNICIPAL SAVINGS BANKS.

A Strong Opinion Against Them from the Borough Treasurer of Bury. Proposal that Savings Banks shall Invest with Corporations. Small Loans Undesirable on Account of Expense, Extra Staff, and "Risk of Misappropriation." Joint Stock Banks and Small Deposits.

(By R. W. BUXTON, the Borough Treasurer of Bury.)

[In view of the widespread interest that has been created by the publication of a summary of Mr. Buxton's report on Small Loans, we reproduce the document in full this week. We do not, however, agree with its conclusions. See "Notes and Comments."—ED. M.J.]

I HAVE made an exhaustive examination into the question of accepting small loans of £10 and multiples of £10, either on deposit or on mortgage, and beg to make the following report as the result of my inquiries.

In the first place it was advisable to obtain the experience of other Corporations in this matter, and with that object in view a series of questions were framed and issued to about 100 boroughs. Nineteen boroughs have carried out the arrangement of accepting loans from £10 to £90, and (with the exception of one or two instances which will be dealt with later in this report) they have met with a very poor response, and in some cases absolute failure. Eight of the boroughs have still the subject under consideration, and 62 have not entertained the question, several stating they consider the small loan system is not a suitable one for Corporations.

The Case of Bootle.

Of the boroughs which have succeeded in raising a considerable amount in this way, the most notable is the neighbouring Borough of Bolton, the treasurer stating that they have raised about £50,000 in small loans of not less than £20 on deposit. The interest on these loans, varying from 3 to 3¼ per cent., is paid by cheque each half-year and ledger accounts kept of each of these items, and the whole of the work, it is said, is done without additional staff or cost. The plan adopted is as follows:—The depositor calls on the borough treasurer, who furnishes him with a banker's ticket, which authorises the bank to accept the money he desires to lend. The banker gives the depositor a receipt, which is taken back to the town hall, and handed to the town clerk, who thereupon at once issues a deposit note under a sixpenny stamp. This method, though somewhat clumsy, is carried out with the object of protecting the Corporation, the bank alone handling the money, the treasurer giving the authority to receive it, and the town clerk issuing the security. The Inland Revenue authorities are claiming that a further stamp duty of 2s. 6d. per cent. is due to the Government on this issue, and although the Corporation of Bolton is resisting this claim, there is every probability that the Inland Revenue will succeed in its claim.

Stoke and Others.

The Corporation of Stoke made a very strong attempt to raise money in this way, with the object of raising £30,000, and pressed the same before the public notice by the issue of pamphlets and by a long article in the local paper. The Corporation was prepared to accept sums of £10 and multiples of £10 on deposit, repayable at three months' notice, and bearing interest after the rate of 3 per cent. Deposits were to be made at the borough treasurer's office during office hours. No form of application was needed, and investors could send crossed cheques for these small amounts through the post, and thus every facility was given to make the investment easy, and yet the effort has been quite a failure, as only some £1,100 has been received.

The Corporation of Birmingham raised, a few years ago, a sum of £159,190, but this was not made up of sums of £20, but items as low as £20 were received; but the treasurer states that the scheme entailed a great deal of extra labour, and the Corporation has abandoned the scheme, and has already reduced the amount by the repayment of over £100,000.

It may also be pointed out that the Bury Corporation (acting then as Commissioners) some 30 years ago adopted the plan of accepting loans of £20 or more, at 4 per cent., and 4¼ per cent., and by this means raised a sum of £10,814 in the course of three years; but the Commissioners at that time were not satisfied with the result, and instructions were given shortly afterwards not to accept sums of less than £100.

Banks on the Question.

With regard to the question of the establishment of a municipal savings bank, it would first of all be necessary to obtain statutory powers to borrow by this means, and which can only be done by Act of Parliament. The raising of money by this method would, of course, require an entirely separate department, with additional staff to carry out the work efficiently, and with sufficient check to prevent the misappropriation of money received, and in view of the facilities already offered for the saving of small sums, it is extremely doubtful whether such a system could be worked to advantage to a corporation from information gathered from existing savings banks. It seems to me the solution lies in the hands of the present Government Savings Banks. By the Savings Bank Act, 1904, the trustees of the banks are empowered to make special investments. The clause runs thus:—

> Money received for special investments may, notwithstanding anything in Sec. 10 of the Savings Bank Act, 1891, be invested in any securities under the Loans Act, 1875, and in loans secured on the security of any local rate levied under the authority of any Act of Parliament by any local authority authorised to borrow money on that security.

By this means savings banks can invest with corporations large sums of accumulated funds at a small rate of interest above the amount paid to the depositors, and thus secure for the corporations loans at a much less rate than they are at present giving, and at a considerable less cost than the expense of running a municipal savings bank. This has been the case in Manchester, Preston, Leeds, and other large towns. The Bury Savings Bank proposes to adopt the Act, and it may be safely anticipated that the Bury Corporation will have the first refusal of the bank's investments. We should thus be saved the labour, expense, and risk incurred by the opening up of a channel for small investments either by means of small loans or the institution of a municipal savings bank.

It must also be pointed out that receiving small deposits also entails the repayment by small amounts, which would have the effect of doubling the additional labour consequent upon receiving small sums, and the result of my inquiries is that in order to raise a clear sum of £10,000 we should have to turn over at least £30,000, and stamp duty would be necessary on the larger sum.

It will probably be argued that the expense will be very small and the labour not worth consideration, but where the staff is already worked to its full capacity the engagement of additional clerks would be absolutely necessary, and the expense, as well as the labour, would be of no small dimensions if an amount worthy the effort is to be received, retained, and dealt with.

Risks.

The risk of misappropriation is by no means inconsiderable, unless a staff of efficient auditors is continually on the premises. Savings banks are constantly under Government official control and inspection, and a voluminous system of checks is in practice, involving a large number of books, and weekly as well as annual returns to Government. There were in the Bury Savings Bank about 17,000 transactions during last year, and each transaction requires at least six different book entries. Another advantage to the savings bank investors is their freedom from income tax, as well as the stamp duty, and in these two items alone a considerable saving is effected.

Since writing the above, some joint stock banks have entered upon an experiment of receiving across their counters items as small as one shilling, offering the ordinary bank rate on these deposits, with a view, no doubt, of capturing some portion of the deposits which now go to swell the Government Savings Banks; but it can scarcely be conceived that investors are prepared to sacrifice probably from 1 per cent. to 1½ per cent. interest for the privilege of an easy access to their money. This venture would further tend to decrease the chances of success of your Corporation establishing a small loan account.

Weighing the whole evidence up for and against the experiment, my conclusions are against the scheme. If I could bring myself to believe that a large sum could be realised by this means at a small cost, there would be no hesitation on my part to recommend the Bury Corporation to adopt the system, but after giving the matter most careful consideration, and after consultation with others, both in the financial and municipal world, my opinion is that the methods of raising money in this way is unsuitable to a Corporation.

WHITBY BILL.

DRASTIC MUNICIPALISATION PROPOSALS MODIFIED.

IN a modified form the Whitby Parliamentary Bill was approved by the local ratepayers on Monday. Our readers are aware that the original proposals were very extensive. The promoters have now dropped the clauses relating to the acquisition of the waterworks and the West Cliff, a piece of land nine acres in extent, which on a small scale is to Whitby what the Spa is to Scarborough.

Several important provisions, however, remain in the Bill. First and foremost there is the proposal to purchase the undertaking of the harbour trustees, a body constituted by Act of Parliament, and whose main, if not only, source of revenue consists of dues, which represent a diminishing income.

Next in importance come the clauses to acquire the market and fair rights within the district, and the right to close slaughterhouses on the provision of a public abattoir, and to acquire the foreshore and other lands, including the bed of the harbour, the Abbey Plain, and the soil of the ancient streets, and the disposal of sands.

Powers are also sought in regard to the provision of music in the pleasure grounds and pavilion, and the regulation of the seashore, and to make police provisions as to the cleanliness of the streets, the leading and driving of cattle, the crying of newspapers on Sunday, and the control of itinerant musicians.

Another object aimed at is the power to spend money in advertising the attractions of Whitby.

RATEPAYERS AND MUNICIPAL ADVERTISING.

THE Aberystwith Ratepayers' Association, realising the undoubted advantages of municipal advertising, has decided to wake up its Town Council on the matter. At the annual meeting of the Association this week complaints were made as to slackness in winter advertising, and it was agreed that a special meeting of the executive be called to draw up a letter to be sent to the Council.

CHILDREN AND THE UNEMPLOYED.

WITH the object of helping the unemployed, the teachers and the scholars in the Holbeach Road Council Schools, Lewisham, have been long preparing for an entertainment which is to be given to-night (Friday) in the Parish Hall, Ladywell Road. An excellent programme has been arranged.

EDUCATIONAL NOTES.

The Appeal to Cæsar! and the Result. School Hours at Bolton and Twickenham. Burnley's New Technical School. Scholars Employed as "Beaters." Hebrew Children at Hull. The Right of Entry to Voluntary Schools. Should Teachers Work when their Schools are Closed. Whitehall and Secondary School Fees at Worcester.

Association of Education Committees.—The interview which the executive committee of the association had with Sir William Anson upon the important educational questions of increased grants for elementary and secondary schools for training of pupil teachers, and the reintroduction of the epidemic grant, has been unsuccessful in its results. The Permanent Secretary, after a lengthy reply, held out no hopes in the direction of increasing the imperial grants.

Bedfordshire.—The Education Committee has decided that the director of education be authorised to obtain the necessary tools required for school gardens, at a cost not to exceed £6 for each school.

Birmingham.—The Board of Education has condemned the St. Mary's Infant School in Handsworth, the handsome suburb of Birmingham. The school was built in 1872, and adjoins the parish church.

Bolton.—The Education Committee has passed the following resolution:—"That the committee do approve any school time-table in which managers have made provision for opening school at 9.45 on not more than one morning per week; and that managers who desire to take advantage of this provision must submit a new time-table and have the same approved before any action is taken upon it."

Bournemouth.—The Education Committee has decided that managers of Voluntary schools are to pay for the lamp shades and chimneys required in the Voluntary schools.

Brighton.—The Education Committee has decided that managers of Council and Voluntary schools be permitted to give holidays in the schools under their control on not more than six days, or twelve half-days in each year, beyond the general holidays, subject to the minimum number (400) of school meetings required by the Code.

Burnley.—The Corporation has purchased a site in the Ormerod Road for the erection of a new technical school. The site comprises 10,000 square yards, and cost £5,000. It is proposed to expend £60,000 upon the building and its equipment. The existing technical school accommodation has been condemned by the authorities at Whitehall.

Durham.—The City Council has given powers to its Education Committee as follows:—(1) Subject to the levying of a rate and borrowing money, all the executive power of the Council be delegated to the Education Committee, except the appointment of officials or teachers with salaries of £120 a year or upwards; (2) that there shall be reserved for the Council's final sanction (a) any general scheme of policy, (b) any variations from decisions already arrived at by the Council, (c) any proposal involving capital expenditure or a general permanent increase, (d) any county time-table or curriculum; (3) that the committee, on all matters of increased expenditure on its financial proposals, shall consult with the Finance Committee of the Council; (4) that the committee shall make a full detailed report of its proceedings once a quarter to the Council, in addition to an annual report.

East Suffolk.—The attention of the Education Committee was called to the fact that the school at Tattingstone was recently closed, so as to enable the boys to be employed as "beaters" for a shooting party. Instructions were given for a letter to be sent to the employer deprecating such a course, and to the managers, intimating that the committee hoped that no future closure would take place for this object.

Hertfordshire.—The Education Committee has approved the form of bye-laws for school attendance, included in which is the new model clause as drafted by the authorities at Whitehall. With regard to the payment to be made by managers for the use of a classroom, the Committee has decided that for the use of fuel and light and cleaning, the charge shall be 5s. per meeting for single occasions, and 3s. for a series.

Hull.—The Education Committee has agreed to allow the Hebrew children in its schools to leave school at 3.30 during the winter months to attend worship.

Isle of Ely.—The Education Committee agreed that the charge to managers of Sunday schools for the use of the committee's schools be at the rate of 5s. per fire per annum, to be retrospective as from the "appointed day."

Leicester.—At the Education Committee it was agreed to communicate with the authorities of the voluntary schools, with a view to securing for members of the Education Committee and the town council admission to the schools in the same way as in the council schools.

Manchester.—The Education Committee has secured Swinton House, Swinton Park, as a residential school for the training of crippled scholars. In addition, a fourth school for the training of the feeble-minded is being established, and arrangements are proposed for the provision of a home for epileptics outside the city.

Middlesex.—The Education Committee has notified the Twickenham Council that it is prepared to defray the cost of instruction of pupil teachers, but not their travelling expenses. Any additional expenditure is to be borne by the local committee.

Richmond (Surrey).—The Education Committee has agreed to print an educational handbook for the new year for the use of the committee and the managers.

Twickenham.—The Education Committee has decided to recommend the Council to assent to the principle that where the parent has notified to the managers in writing his intention to withdraw a child from religious instruction, such child shall be deemed to have made an early attendance if present at 9.45 a.m.

West Suffolk.—It was reported to the Education Committee that the sub-committee on Teaching Staff was of opinion that when a school was closed for a greater part of three months, the teachers should be employed at other schools where their services could be utilised. The secretary stated that the National Union of Teachers was about to test the question, and that the matter could therefore wait.

Worcester.—The Board of Education has intimated that it is of opinion that the proposed fee of 13s. 6d. per term at the Victoria Institute Secondary School was open to serious objection on general educational grounds, and further that, except in very special circumstances, a tuition fee of not less than £3 per annum should be imposed. The Board added that in the case of poverty, it would not object to exemption from fees, such only to be granted on the result of examination or other suitable test, and the number to be limited to 25 per cent. of the total number in the school.

Moral Instruction.—The Moral Instruction League has for its objects the introduction into schools of systematised non-theological moral instruction, and the formation of character of the scholars. The following education authorities have made provision in their schools for moral lessons in addition to the Scripture lessons—Durham, Monmouth, Nottinghamshire, Birmingham, Bradford, Leicester, Burton-on-Trent, Shipley, Barry, and Bexhill.

MUNICIPAL TELEPHONES.

PROGRESS IN 1904.

THE following table shows concisely the progress made by the various municipal telephone enterprises during the past year:—

Place.	Number of instruments working at December 31, 1903.	Added during 1904.	Total at December 31, 1904.	Junction lines working at December 31, 1904.	Grand total of instruments and junction lines working at December 31, 1904.
Guernsey ...	1,215	158	1,373	32	1,405
Glasgow ...	10,632	1,504	12,136	834	12,970
Portsmouth...	1,486	553	2,039	20	2,059
Swansea ...	579	488	1,067	11	1,078
Brighton ..	431	1,199	1,630	22	1,652
Hull	—	943	943	59	1,002
		4,845	19,188	978	20,166

The total number of switch-rooms in operation was 50. The best telephoned area in the United Kingdom is still Guernsey, which has now one telephone to every 29 persons. In each place there is a considerable number of orders still to execute, amounting to 1,000 in the case of Hull.

A GIFT TO MANCHESTER.

THE Royal Botanical Gardens at Manchester have been offered to the Corporation for the benefit of the public. The gardens, which are situated at Old Trafford, were opened in 1831. They are 16 acres in extent.

The ornamental grounds have been carefully and tastefully laid out, and contain a fine collection of shrubs and trees, flowers and ferns. It is an open secret that financially the gardens have been in a bad way for some years past, owing to changes in the neighbourhood.

About a year ago it was proposed that the Stretford Council should purchase the estate for £20,000, and this was agreed to by the society, but subsequently the scheme was defeated on a poll of the ratepayers of the district. This amount does not in any way represent the value of the property, which, it has been estimated, would realise at least £50,000 if put on the open market.

ACRES FOR STOCKPORT.

LADY DUNDONALD has presented to Stockport three acres of land for the purpose of a recreation-ground. The land is situated in the Ashwood district, where a large number of houses have recently been built, and the gift is free of restrictions. The value of the land is about £3,000.

Lady Dundonald, who is the wife of Lord Dundonald, the brilliant cavalry leader, owns a large amount of property in Stockport and district. Stockport is now well supplied with parks and recreation-grounds, the majority of which have been presented by the town's benefactors.

SUNDERLAND LIBRARIES.

BOOKS BY TELEPHONE AND TRAMWAY.

MR. CARNEGIE recently made an offer to Sunderland of £10,000 for the building of two branch libraries; but the Sunderland public librarian (Mr. J. A. Charlton Deas), in a report to the Town Council just issued, suggests that there should be three instead of two, and he makes a further very interesting proposal.

In order to put the stock of books at all the libraries at the equal disposal of all the ratepayers, he suggests that telephones should be installed in the branch libraries to give readers the opportunity of easily ascertaining whether a desired volume, not at the nearest branch, happens to be in the others, and if found to be available he would, he says, send the book by tramway to the branch nearest the borrower's residence.

THE BATHS OF BUXTON.

As from the Beginning of the Year the Famous Baths at Buxton Passed from the Ownership of the Duke of Devonshire to that of the District Council. The Terms of Transfer—a "Perpetual Chief Rent" Frustrated. The Baths Described. A Royal Visit Last Week.

WITH the opening of 1905, the far-famed mineral waters of Buxton passed from private ownership into the hands of the town. Buxton is not a town of mushroom growth, but possesses a reputation which has come down unimpaired through the centuries. It is one of the most ancient watering-places in the kingdom, and the many remains of Roman roads, baths, and villas indicate that the invaders indulged their love of bathing in the health-giving waters.

THE THERMAL BATHS.

Up to the present time the springs have been the property of the Duke of Devonshire, but last year his Grace's agent intimated to the Council that the Waters and Baths were for disposal, and the town would be given the first opportunity of acquiring them. It was felt that the vital prosperity of Buxton depended so largely on its waters that to allow the opportunity for municipal control to pass would be disastrous.

The purchase price was fixed at £25,000, with a perpetual chief rent of £1,000 per annum. When the Bill came before the Committee of the House of Lords, the Lords Chairman and also the Local Government Board objected to a perpetual chief rent. Further negotiations took place, and it was agreed that the Council should pay an annual sum of £2,431, terminable in sixty years, and to include principal and interest, the actual purchase price being £55,000. At the termination of this period the baths will be the absolute property of the Council without the incubus of a heavy chief rent. The seal of the Council was formally affixed to the agreement on the 24th June, 1904.

There has been a steady improvement from the earliest bath of which we have any reliable record—the remains of which Dr. Leigh described in the 17th century as being "cemented with plaster, red and hard as brick, and resembling some kind of tile, and probably of Roman erection"—to the handsome building and elaborate fittings of the present day.

The bathing establishment is divided into the Natural Baths, where the water is used at its natural temperature of 82 degrees Fahr., and the Thermal Baths, where water of any desired temperature can be applied. The natural baths are paved with slabs of perforated marble, through which a stream of fresh mineral water is constantly flowing. There are two swimming and six private baths for gentlemen, and one swimming and five private baths for ladies. The thermal baths are situated on the opposite side of The Crescent. The mineral water is collected in larger tanks, and heated to the desired temperature by means of steam coils. There are 14 private baths for ladies and 10 for gentlemen. The baths are fitted with douches of all forms—wave, spray, ascending and descending; and attached to the thermal baths are the needle, Russian vapour, and massage baths.

The mineral waters flow from several fissures in the limestone at the edge of this formation at an elevation of 1,000ft. above sea level. The water is clear, tasteless, and odourless, and when seen in bulk of a faint blue colour. A detailed analysis of the waters was made some few years ago by Dr. John C. Thresh, the eminent authority on water. The distinctive feature of the Buxton water is the large quantity of nitrogen with which it is charged, the proportion contained being larger than that in any other known medicinal spring. Dr. Thresh determined the amount as follows:—

	Cubic inches per gallon of water.
Nitrogen	6·1
Carbon dioxide	4·1
	—10·2

The waters are usually classed with those of Gastein and Wildbad, but the foreign spas are greatly inferior to Buxton in the amount of free nitrogen which their waters contain. The water at Gastein, in Austria, contains four cubic inches of nitrogen per gallon, and that of Wildbad, in Würtemburg, 4·7 cubic inches per gallon, so that the free nitrogen in the Buxton water exceeds that of the continental spas by one-third.

Sir Dyer Duckworth, M.D., in his standard book on gout, discusses the many health resorts available for the sufferer, and places the thermal springs of Buxton first: followed by Bath, Schlangenbad, Wildbad, Gastein, Plombierres, Pfeffers, and Teplitly.

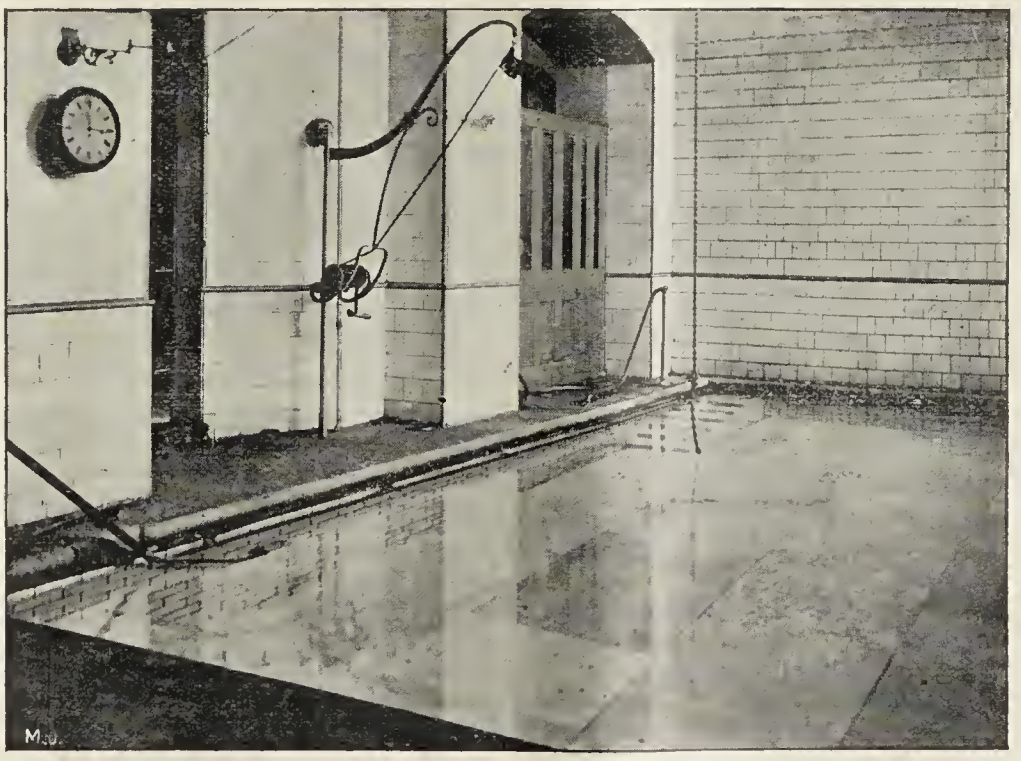
In addition to gout, the waters are employed with marked success in rheumatism, sciatica, and lumbago, and are most efficacious in diseases of the stomach, bladder, liver, kidneys, and nerves.

The average number of bathers during the last 20 years has been nearly 63,000 per annum.

The baths are open throughout the year, and although the waters may be safely used in winter—and, indeed, the experience is that patients obtain more benefit in winter, spring, and autumn than in the hot months of summer — the charges are half-price from November 1st to March 1st. The advantages of Buxton as a winter health resort are gradually becoming more appreciated.

For drinking purposes the medicinal water is obtained at the Pump Room, a handsome building presented to the town in 1894 by the Duke of Devonshire. It is furnished with a polished counter, with an Italian marble top, fitted with five silver fountains through which the water flows in a continuous stream. Over 1,000,000 glasses of the mineral waters are drunk every year. A free supply is given to the public pump at the west end of the pump room.

On Saturday last their Majesties the King and Queen visited Buxton. The Devonshire Hospital was first inspected, the senior medical officer, Dr. Turner, conducting the Royal party over the wards. The King, noticing that the operating-table in the accident ward was only a wooden one, promised to give a modern table to the hospital. After leaving the hospital, their Majesties visited the Pump Room, where the chairman of the Council, Mr. Abm. Brown, was presented to the King, and read an address of welcome on behalf of the Council and inhabitants of Buxton. The King and Queen then asked for glasses of the famous mineral water, the Queen remarking that it was very nice. The natural and hot baths were also visited and carefully inspected. Before leaving for Chatsworth their Majesties inscribed their names in the visitors' book.



NATURAL BATHS (GENTLEMEN'S SWIMMING BATH).

OFFICIAL & PERSONAL.

WEST RIDING ANALYST.

APPLICATIONS are shortly to be invited by advertisement for the office of public analyst to the West Riding, rendered vacant by the death of Mr. A. H. Allen, of Sheffield. The retaining fee is to be one of £200 per annum, with 6s. for each sample of food, drugs, and water analysed, and a special allowance for chemical examinations.

COVENTRY SEWAGE FARM SUPERINTENDENT.

IT is understood that Mr. W. Main, manager of the Wellingborough sewage farm, has been appointed as successor to Mr. W. J. Beavan as manager of the Coventry Corporation sewage farm, the salary being £250 per annum.

GLASGOW AND THE DEPUTY TOWN CLERK.

A PROLONGED discussion took place at the Glasgow Town Council last week in regard to the resignation of Mr. James G. Monro, interim town clerk.

The special committee's recommendation was that Mr. Monro's resignation be accepted, that he be paid at the rate of £1,000 per annum during the year he had acted as interim town clerk, and that he be paid an honorarium of £700 in respect of his long and valued services as a deputy town clerk. The counter proposals were that no honorarium should be paid; that the honorarium should be £1,000; and that the salary be £700, with an honorarium of a like amount.

Eventually the committee's recommendation was adopted by a considerable majority.

At a meeting on Wednesday of a special committee on the town clerkship, it was agreed to recommend that Mr. John Bowers, town clerk deputy, be appointed town clerk for three months, at a salary at the rate of £1,000 per annum.

BRADFORD REORGANISATION.
The Town Clerk's Department.

MR. F. STEVENS, the Town Clerk of Bradford, has drawn up a special report dealing with the increased work of his department, and the inadequacy of his staff to cope with it. Mr. Stevens stated that the new deputy town clerk (Mr. Percy Saunders) would experience the greatest difficulty in performing the work attached to his office, and it was necessary in order to maintain the efficiency of the department, to rearrange the staff.

He proposed to change about the work and responsibility attached to the two assistant solicitors in the department, and to introdnce another assistant to help both, so far as possible, in the criminal and common law work. In view of the extra responsibility thrown upon the assistant solicitors, Mr. Stevens further recommended an advance in their salaries of £50 each; also, owing to the great growth in the clerical work, the appointment of another shorthand and type-writing clerk at a salary of 30s. per week.

By such changes he thought the new deputy would have a chance of success which otherwise would be imperilled, especially in view of the fact that the next parliamentary session, which begins in February, will be a very heavy one, there being three Bradford Provisional Orders, the opposition to the Rivers Board Bill, and two other heavy oppositions which are pending.

HALIFAX GAS MANAGER'S SALARY.

AT the last meeting of the Halifax Town Council a recommendation was submitted by the Gas Committee in favour of advancing the salary of Mr. John Wilkinson, the gas manager, from £500 to £600 per annum. It was urged, in opposition, that Mr. Wilkinson had only been in the service of the Corporation a little over 12 months, and that so large an increase was not warranted after so short an interval. The committee enlarged on the improved position to which the gasworks had been brought nnder Mr. Wilkinson's management. By 27 votes to 23 the Council defeated the proposed increase.

MAIDSTONE TOWN CLERKSHIP.

MR. LANCE MONCKTON, consin to the late Sir John Monckton, was on Satnrday morning appointed Town Clerk for the borough of Maidstone.

NEWCASTLE TRAMWAYS MANAGERSHIP.

SATURDAY was the last day for receiving applications for the post of general tramways manager for Newcastle Corporation, rendered vacant by the resignation of Mr. A. E. le Rossignol. The position is worth £700 a year, rising by increments of £50 to £800. Between 70 and 80 applications have been received.

BOLTON AND THE LATE TOWN CLERK.

THE Bolton Town Council passed the following resolution last week:—

> That the Council, as their first and most impressivo act of this day's proceedings, refer with feelings of deep sorrow to the absence from their assembly of the late Robert Gudgeon Hinnell, the venerable Town Clerk of the County Borough of Bolton. As chief official of this borough for a period exceeding 40 years, the deprivation of his energy and ablity and wide experience must to this borough be severely felt. The Council are grateful for the conspicnous services he has rendered, and with confidence regard those services as a guiding influence in their futnre work. Privileged to aid in carrying out and live to see the beneficial effect of Bolton's corporate enterprise, his sudden removal at a most important period when engaged in works which will eventually result in the carrying ont of undertakings of greatest importance to the borough, the Council most sincerely deplore his death, and respectfully offer to his family their assurance of heartfelt sympathy in their bereavement.

IT was claimed for Mr. Hinnell that he was the oldest town clerk in England. He was 77 years of age, and had held office for 40 years. His record, however, is beaten by Mr. John Eastham, town clerk of Clitheroe, who has occupied the position since 1862, and before that—from 1853—was clerk to the Local Board of Health. Mr. Eastham is now close upon 78 years of age, and is still active in the discharge of his duty.

EXETER TRAMWAYS MANAGER.

THE Tramways Committee of the Exeter City Council reports having appointed Mr. Hederstead, in the employ of the London County Council, in connection with the tramway system, as chief officer of tramways in Exeter, at an inclusive salary of £400 for three months' contiuuous service and for consultation and advisory services for a further period of nine months. Mr. Hederstead will take up his duties next week The committee also reports that arrangements will be made forthwith for extending the tram line through Heavitree.

BRIGHOUSE TEACHERS' SALARIES.

BRIGHOUSE Education Committee last week sanctioned increases in teachers' salaries at provided and non-provided schools amounting to £172 for the year, the largest single increase being £10. Two-thirds of the total increases were brought about by the action of the automatic scale of salaries adopted by the committee a few months ago, and went to the younger teachers in the employ of the committee.

SALFORD FIRE BRIGADE CHIEF OFFICER.

AT a meeting of the Salford Watch Committee last week it was decided to appoint Mr. Francis Myers chief officer of the Salford Fire Brigade for six months, in succession to the late Mr. A. Bentley.

The new chief officer joined the Salford brigade over thirteen years ago as an ordinary fireman, and he was quickly promoted acting engineer, and next engineer. During the last three years he has been second officer of the brigade.

Before joining the Salford brigade Mr. Myers was for nearly five years connected with the Bradford (Yorkshire) fire brigade. He is a very popular officer, and dnring his connection with Salford he has done much valuable work in perfecting the outfit of the brigade.

The committee decided not to appoint any second officer, and the position will be reviewed at the end of six months.

COUNCIL'S DILEMMA.

LANCASTER AND A CANCELLED MARKET SCHEME.

SOME extraordinary fluctnations in policy have been shown by the Lancaster Corporation in regard to its market undertakings. Some time ago an hotel was purchased from the Corporation by a Mr. Mitchell, it being mentioned in the sale conditions that it was the intention of the Corporation to build a large covered vegetable market on part of the adjoining land retained for that purpose. Rather more than twelve months ago, however, public opinion changed, and objection was taken to a scheme which was to cost £10,000 or £12,000 on the ground that it would not yield an adequate return. So strong was the opposition, that the Council cancelled an order that had been placed for a single span iron roof for the market, and paid a considerable sum in compensation. Then Mr. Mitchell insisted on the fulfilment of the obligation which, he said, rested with the Corporation to build the market as originally intended, or, alternatively, to take back the hotel at the price he had given for it. A modified scheme for a small vegetable market was put forward, but this did not satisfy either Mr. Mitchell or the opponents of the market scheme.

A committee was appointed to confer with Mr. Mitchell and his solicitors, and, as the result of the negotiations, a meeting of the Council in committee was held this week. After much discussion, it was agreed that the vacant land adjoining the hotel (on which it was proposed originally to build the market) should be handed over to Mr. Mitchell, and that the Corporation should be relieved in return of all obligation, legal or moral, to erect a market on what is known as the King's Arms site. There are also other minor conditions.

The effect of the arrangement will be to allow the Corporation, if it is thought desirable, to alter the existing market so as to provide accommodation for the farmers and market gardeners who bring prodnce to Lancaster, and who at present stand in the open street. The Corporation retains the Assembly Rooms in King Street, and other premises with a frontage to the same street. It is estimated that the giving up of the land to Mr. Mitchell, the compensation paid to the contractors for the market roof, and other expenses connected with the negotiations, will amouut to about £5,000. The Corporation, however, is released from a difficult position, a law suit has been avoided, and the Council is free to deal with the existing market in any way that seems to accord with public opinion.

IMPROVING BLACKPOOL.

IT is sought to make several very important improvements to Blackpool under a new Omnibus Bill, to be promoted in the ensuing session of Parliament. Street-widening and re-construction of "Skew Bridge"—so designated because of its extreme narrowness—are provided for. Another clause is to authorise the Corporation to constrnct additioual tramways, for which it has already running powers.

Some time ago the Corporation purchased the sea-water works, and in the present Bill it asks that in connection with the authorised new promenade and parade works at North Shore, authorised by the Blackpool Improvement Act, 1899, it be empowered to acquire the sea-water well, apparatus, and pipes; and further, that its present powers in regard to the taking and supply of sea water be enlarged, and the provisions of the Blackpool Sea Water Act, 1873, be amended.

Another clause in the Bill is to extend the borrowing powers of the Corporation, and to make other provision in regard to existing and future loans and other financial matters. This applies mainly to the Corporation's electricity undertaking. Under the existing provisions of the Act of 1875, the Corporation cannot borrow for this undertaking a sum exceeding in amount the equivalent of a two-years' rate, bnt under the new clause it will have more a titude in this respect.

RIVAL ILLUMINANTS.

Gas Compared with Electricity in Regard to Cost and Power. Gleaning Results from All Quarters. The Experience of Various English Towns. Improved Methods Have Given to Gas as a Street Illuminant a New Lease of Life.

IN the race for street lighting, which is going to win—electricity or incandescent gas? As yet the resnlt lies in the lap of time, but the advocates of both systems are both numerous and enthusiastic.

Those who favonr gas say that street lighting by electricity has already had a snfficient trial, and that, in the main, it is less satisfactory than incandescent gas, besides being at least twice as expensive. On the other hand, so satisfied are the advocates of electricity with their experiments that they not only propose to continne them, but contemplate extensions. Not that they regard the modern system of gas lighting with any disfavour; on the contrary, the general opinion seems to be that the improved methods, into which the nse of incandescent mantles enters so largely, have given to gas, as a street illuminant, a new lease of life.

Cheap and Powerful.

In London no fewer than twenty-five of the metropolitan borough councils are reported to have more or less completely adopted incandescent gas as their system in preference to electricity. The new thoroughfare Aldwych and its extension, Kingsway, are both, it appears, to be lighted by gas by the Westminster Borough Council. At Manchester, too, the incandescent system of gas lighting is declared to be more effective and economical than electric lighting, and is being extended, though not without some talk of experiments "to be made on fair and equal bases with the view of deciding the relative cost of the two systems." Here there are but few public electric lamps in use, and those have been fixed for a special purpose. Much the same state of things is reported from Oldham, the authorities there having come to the conclusion that incandescent gas can be used at one-third the cost of electric light of the same power.

An interesting inquiry has just been made as to what is being done in Yorkshire towns in regard to this matter. Bradford finds a vast difference between the cost of gas and the cost of electricity. Gas entails an expenditure of £2 6s. 8d. per lamp per annum; electricity £12 10s. per lamp per annum to midnight only. There are 11,217 gas lamps, incandescent burners being exclusively used, and each lamp is of 45 candle power. The arc lamps number 51, and are of the open type of 1,000 (nominal) candle power. For rather more than five times the cost of gas an illuminant of 18 times the brilliancy is secured.

Reports from Yorkshire Towns.

At Sheffield the whole of the street lighting is done by gas, and there is at present no intention of introducing electricity. The cost varies from £1 7s. 6d. to £3 19s. 2d. per lamp per annum, according to the power used.

The experience of Hull is that arc lamps are too expensive for general lighting, and there is a difference of opinion as to the relative merits of the Nernst electric and the corresponding gas lamps. There are 24 arc lamps, 20 ½-ampere Nernst lamps and 24 ¼-ampere Nernst lamps. The arc lamps are of 1,000 candle power (nominally) and cost £22 per lamp per annum; while the largest gas lamps (5-light clusters of between 300 and 400-candle power) cost £7 10s. Here, as in Bradford, there is, as yet, no scheme on hand for either extending or curtailing the electric system.

In Halifax two miles of streets in the centre of the town are lit by electricity, the cost being at the rate of £849 per mile, as compared with £57 per mile for 190 miles of streets illumined by gas. Both systems seem to give pnblic satisfaction, but here again there is a feeling that the incandescent gas lighting is the more effective and economical of the two. The matter, however, has yet to be thoroughly considered by the responsible Corporation Committee, which proposes shortly to discnss the question of possible electrical extensions.

The Huddersfield Corporation confines its electric street-lighting to a small area in the centre of the town, and this is the case with Barnsley, where, however, its effectiveness has so impressed the authorities that they propose to extend the system. To a similar extent, Wakefield finds electricity useful, besides being, in consideration of the particular circumstances, neither less effective nor more costly than gas.

Leeds Successful Electric Light Undertaking.

From the shop-keepers' point of view, the arc lamps are a decided acquisition in some cases. This seems to be so in the Shipley Urban District, where experiments are being made with the idea of extending the system. At Batley, street lighting by electricity is conducted only to a limited extent, and partakes largely of the nature of a preliminary trial. Whether it will be continued or extended depends on reports that have yet to be made to the Lighting Committee.

The Urban District Council of Heckmondwike, on the other hand, owning no gasworks itself, is making a feature of street electric lighting, the cost being the same as that for gas. About one-third of the street lamps are lighted by electricity; and, although there is a diversity of opinion as to whether incandescent gas or electric light is the more effective, so satisfied are the authorities with the arc-lamp illumination that they contemplate an extension.

In a few weeks' time the chief tramway thoroughfares of Leeds for a radius of one mile from the centre of the city will be lighted by electricity in place of gas. This means that the present number of arc lamps will be nearly trebled.

An attempt is being made to increase the arc lamp's capacity for giving light. The older forms of arc lamp in use in Leeds burned for a period of about 30 hours only; the new will last more than twice that time. A saving is thus gained through reduced labour. The Leeds Corporation's electric lighting undertaking ranks as one of the most successful and cheapest in the country, and the street-lighting department is able to keep the arc lamps going for as little as 1¼d. per unit, the cost working out at practically no more than that of gas.

When the present extension scheme is carried out, Leeds will have some 650 arc lamps lighting its main streets, a nnmber far in excess of any other Yorkshire town, and many other large towns in the country.

A FEAT AT PLYMOUTH.

A RECORD of a very plucky achievement on the part of the distinguished engineer and lighthouse expert, Mr. W. T. Douglass, comes to hand this week.

The Corporation of Plymouth wished recently to have its sewage outfall examined. The outfall occurs at a depth of 70ft. under water, and several eminent engineers rather shrank from the task. Mr. Douglass, who had not had on a diving dress for twenty-five years, and is nearly fifty, went into regular training for the work. Finally, for two periods of a week each, he spent from two to four hours every day 70ft. down. When the tide was low it was not easy to see far in the Tamar water, bnt when the tide came in from Plymouth Sound objects could be observed at half-a-dozen yards, This performance is not extraordinary for a practised diver, but for a man of Mr. Douglass's age, who has not made any attempt to dive for a quarter of a century, it is nnique.

LARGER AREAS MOVEMENT.

THE CASE FOR LIVERPOOL.

LIVERPOOL and Hanley are seeking to extend their boundaries, the former by the inclusion of the township of Fazakerley, and Hanley by taking in a portion of the parishes of Milton and Stoke Rural. At both centres Local Government Board inquiries have been held this week.

Fazakerley is on the north-east side of Liverpool, and has an area of 1,710 acres. Its popnlation was 1887 in 1901, but it has increased so rapidly in the last three years that it is now estimated at 3,500; whilst the rateable value of the district is now £32,431, and the assessable valne £27,363. The rapid increase of population during recent years is largely due to the extension of the Liverpool tramway system in the direction of Fazakerley. Liverpool Corporation already owns 348 acres in Fazakerley, and, when the addition of certain burial grounds is shortly made, one-qnarter of the whole district will belong to the city. One of the main reasons for the proposed extension is the existing difficulty of draining the district except by means of the Corporation sewers.

HANLEY AND MILTON.

IN regard to Hanley the original proposal of the Corporation was to take in the whole of the parish of Milton, containing 1,397 acres and a population of 2,785, and the whole of the Stoke Rural District (parishes of Bagnall and Stoke Rural), containing 4,954 acres and a population of 4,808. That proposal fell into abeyance in consequence of the introdnction of a much larger scheme for the federation of the Pottery towns. It was found impossible, however, to carry out this scheme, and, on its being dropped, the proposal of the Hanley Corporation was renewed. After an informal inquiry the Local Government Board suggested that the Council scheme was rather too pretentious, and shonld be modified. The present proposal, therefore, is to annex a portion of the parish of Milton, containing 199 acres, and 1,138 population, and portions of Botteslow and Bucknall Wards of the parish of Stoke Rural, containing 440 acres and 227 population. In the event of the application being granted, the Council proposes to add a portion of the Milton area to the Providence Ward and a portion to the Northwood Ward, and to add the whole of the annexed Stoke Rural area to the Eastwood Ward.

POOLE AND BRANKSOME.

PROGRESS is being made with the arrangements for the incorporation of the Urban District of Branksome in the municipal borongh of Poole. Wednesday, the 25th inst., has been fixed as the date for the holding of the usual local inquiry. It is understood that there is a slight difference of opinion with regard to the number and boundaries of the wards to be added. The proposal of the Poole Corporation is that there shall be nine wards, which will give a Council of 36 members—nine aldermen and 27 councillors. There is a feeling at Branksome that this will not fully meet the requirements of the case, and that provision should be made so that Branksome Park—which has a distinctive character of its own—may have separate and distinct representation.

MANCHESTER AND SALFORD.

THE Special Committee of the Salford Corporation which has been considering the question of the federation of Salford and Manchester is now engaged in preparing its report.

The committee has accumnlated a great deal of information upon the subject dnring the past six months or so, and the report will deal thoroughly with the positions of the two municipalities from the points of view of finance and of administration.

The report will be presented to the Council in due course, but it is expected that some weeks at least will elapse before the committee will have finished its labours.

MUNICIPAL MOTOR VANS.

ARE THEY DESIRABLE?

*(By Mr. Wm. N. BLAIR, Engineer and Surveyor, St. Pancras Borough Council.)**

FOR some time past I have been accumulating information on the subject of the use of motor vans for municipal purposes. I have seen most makes of vans now in use in this country, and have been present at various meetings when their use has been discussed. I have also had personal interviews with several manufacturers, and regret to find that the concensus of evidence obtainable is by no means so favonrable to the use of motor vans for municipal purposes as I hoped to be able to submit.

Their cost is considerable, varying from £525 for a flat-topped carriage with open rail sides, suitable for carrying sacks or casks, but not for loose material, up to £750 for a waggon body, with a water-van body interchangeable.

The evidence obtained from users of such vans indicates that repairs are freqnently necessary, and involve a cost from 10 to 15 per cent. per annum.

Questions asked as to their comparison with horse traction on the point of cost produced answers which are by no means unanimous; but it would appear that for hanlage purposes it is necessary to have a full load, a long lead, and constant employment to produce economical results. In some instances a motor van is a satisfactory vehicle for hauling materials which can be quickly loaded up, and are of considerable weight, owing to its quicker speed.

For street watering purposes, which can be continued night and day, a motor van may be satisfactorily employed, provided means for filling quickly are available.

For the purpose of collecting house refuse, however, the evidence I have obtained is all to the one conclusion, that motor vans are not a success, owing to the nature of the work occupying too much time in loading, and the short period during which the motor is actually travelling, and, further, owing to the light character of the material not producing sufficient weight on the van load to make motor haulage economical.

Glasgow had a van so employed, but abandoned its use. Lambeth tried a motor for hauling house refuse, but the experiment did not prove a success. Hampstead had two vans collecting dust, and although their destructor was two or three miles outside the borough boundary, the work did not come out economical as compared with horse haulage.

The manufacturers with whom I have discussed the matter have, without exception, admitted that a motor van is not a suitable vehicle for the collection of house refuse, owing to the time occupied in moving only from door to door while filling a load large in bulk, but light in weight.

There is another point of view from which it appears to me that there is a material objection to their use for dust collection. Assuming that a motor van and trailer will contain as much as three ordinary dust vans, it follows that only one-third of the number of horses employed would be necessary as motors. There would, therefore, be only one-third of the number of points of call at one time, and the tendency would be to produce larger quantities at longer intervals, rather than that which is to be greatly desired, small quantities at freqnent intervals.

It will be obvious from the foregoing that the effect of this report is against the adoption of motor vans for dnst collection. I much regret this conclusion, bnt cannot avoid it.

THE Norwich Corporation is pressing the aid of attractive advertising into service. It has redneed the cost of the electric light from 5d. to 4½d. per nnit, and makes a prominent feature of an appeal to the citizens to "deal at their own shop."

---

* A report presented to the St. Pancras Borough Council.

A "PERSONAL CLEANSING" STATION.

AN INNOVATION AT ST. PANCRAS.

THE Borough Council of St. Pancras has established in conuection with its public health department a personal cleansing station. The station has now been in operation since the beginning of May, a period of eight months to the end of the year 1904, and during this period a total number of 1,798 persons have undergone a process of personal cleansing in the hot baths provided at the personal cleansing station, and their clothing has been sterilised in the steam disinfecting apparatus adjoining.

Only those persons who are affected with verminous or parasitic diseases have been received. A considerable portion of the persons treated have been school children under 14 years of age; and the number of these children is larger than actually appears in the return, because it is the custom of the Public Health Department to only class children under 10 years of age as children for statistical purposes in order to conform with the Registrar-General's returns and other statistics, so that children between the ages of 10 and 14 are classed among adults in the return of the personal cleansing station.

In a family where the school children sent by the teachers are infested with vermin or parasites, the probability is that the elder children and the mother would come with them in order to be cleansed and disinfected. The following is a complete table showing the proportion of males, females, and children in each of the three quarters last year:—

	Males.	Females.	Children under 10.	Total.
Second quarter	266	127	79	472
Third ,,	395	217	163	780
Fourth ,,	291	170	85	546
Total...	952	514	332	1,798

LONDON WATER PURCHASE.

HOW THE COMPANIES FARED.

ALDERMAN H. J. BUTTER, the Woolwich Borough Council's representative on the Metropolitan Water Board, puts the effect of the recent purchase in a striking manner in a report he has just made. He points out that—

	£	£
East London Company has only	54 for every	100 claimed
New River ,, has only	45 ,,	100 ,,
Grand Junction ,, has only	69 ,,	100 ,,
West Middlesex ,, has only	84 ,,	100 ,,
Lambeth ,, has only	78 ,,	100 ,,
Southwark & Vauxhall Company has only	63 ,,	100 ,,
Chelsea ,, has only	57 ,,	100 ,,
Kent ,, has only	73 ,,	100 ,,

The Board succeeded in getting the claims of the companies reduced by 20¼ millions; in other words, it has only to pay £60 for every £100 claimed.

A TOWN WITHOUT A PUBLIC FIRE BRIGADE.

NEW MILLS has a popnlation of 8,000, and the town contains calico printing works, bleach works, paper mills, cotton mills, engineering and engraving works, bnt has no public fire engine or fire brigade. The matter came before the Urban Council on Wednesday night. An attempt has been made to secnre the co-operation of Disley, Hayfield, and Whaley Bridge for the purchase and maintenance of an engine and a brigade, but without success. The Council decided to purchase hydrants and other appliances.

A REMARKABLE state of affairs has happened at Shavington, a considerable subnrb of Crewe. Recently the parish council erected some lamps. The ratepayers held a meeting, roundly denounced its action, passed a resolution protesting against the lamps being paid for out of the rates, censuring the Council, and requesting the latter to resign. For some nights following the lamps were unlighted. Now they are relighted, and there is a recurrence of excitement.

BOROUGH OFFICIALS HONOURED.

DINNER GIVEN BY THE MAYOR OF MARYLEBONE.

THE Mayor of St. Marylebone (the Rev. H. Russell Wakefield) is a fervent admirer of the work p rformed by municipal officials, and he has this week demonstrated his admiration. Last year, which was the first in his term of office, he gave a dinner to the borough councillors and chief citizens, and also one to the workmen (out-door staff).

On Monday the Mayor provided a dinner to the borough officers, which took place in one of the handsome halls of the Great Central Hotel. Besides the Mayor, who was in the chair, there were present Rev. L. T. Dodd, Aldermen J. Anglim, F. Trehawke Davies, Dennis, G. J. Elgood, J.P., J. Thomas; Councillors J. Lichtenfeld, C. Kempton, J. Lea-Smith, E. T. Fowler, H. Tatton Sykes, Dr. J. Fletcher Little, Lieutenant-Colonel A. J. Hopkins, W. Leaf, E. R. Debenham, C. Head, E. Penton, jun., W. H. Sands, Messrs. Herbert Wakefield and A. Wright; The officials present were the town clerk (Mr. J. Wilson), chief assistant clerk (Mr. A. Wilson), borough engineer (Mr. J. Paget Waddington), medical officer of health (Mr. A. Wynter Blyth), borough accountant (Mr. T. H. Puzey), electrical engineer (Mr. F. A. Wilkinson); Messrs. R. Harnett, T. George, A. J. Jarman, R. Rayner, A. H. Edwards, H. W. Newton, J. L. Harrison, A. McLean, E. Lumley, W. G. Ellis, D. L. Turbayne, T. Langston, J. P. Garner, H. W. Cooke, W. F. Sutton, E. S. Foot, R. Phillips, J. Hodges, G. F. Sutton, P. G. Hart, T. S. Latham, H. Middleton, W. Worville, H. Earle, C. Gabb, A. Perry, J. Knight, T. Bevan, T. G. Bacon, H. E. Curtis, J. D. Cairns, E. Sheriff, W. Crow, E. J. Jennings, C. H. Smyth, B. Pitt, G. Gunnell, A. H. Thomson, P. O. Hillman, H. J. Bantick, A. Timothy, O. L. Marchant, H. W. Drew, T. G. Langridge, E. J. Draper, G. H. Chillcott, F. McCarthy, E. G. Batcheler, F. A. Hill, W. J. Howe, G. A. Johnson, T. Kennett, G. Lightfoot, T. E. Jenkins, C. J. Bantick, W. E. A. Baillie, S. R. Weeks, H. R. Allen, F. Selley, W. C. Mapleson, T. Winter, T. Gorniot, E. J. Bickmore, A. Bridges, A. Williams, J. Hodges, jun., D. J. Andrews.

The Chairman having given the toast of "The King," whom, he said, was the chief official in the land, and "The Queen, Prince and Princess of Wales, and other Members of the Royal Family," Colonel E. R. Debenham proposed "The Imperial Forces," to which Lieut.-Colonel A. J. Hopkins and Trooper T. Kennett responded.

In proposing the principal toast of the evening, "The Officers of the St. Marylebone Borough Council," the Chairman passed very high encominms on the work of the officers—"that wonderful backbone of officialdom on which we rest," and said there never was anyone much more loyal, if so loyal, as their town clerk. (Applause.)

The Town Clerk, who was the first to respond, alluded to the recent words of the chairman of the London County Council, that the County Council did everything from the cradle to the grave, while he sat like a little cherub aloft. But he (the town clerk) did not look for help to the little cherub aloft, but to the man at the wheel. (Hear, hear.)

The Medical Officer of Health and the Borough Surveyor responded.

Alderman J. A. Michell, J.P., proposed "Other Local Officers," with which toast he coupled the names of the Clerk to the Marylebone Police-court (Mr. W. Crow), the Superintendent of the Police (Mr. Bantick), the Postmaster of the District (Mr. B. Pitt), and the Crown Surveyor of Taxes (Mr. Hillman), all of whom responded.

Other toasts followed.

THE Hampstead Borough Council has decided to purchase the nndertaking of the North-West London Electric Supply Company for £12,000. The purchase money is to be provided out of profits already made.

NOTES AND ANSWERS.

Rights of Members of Town Councils to Inspect the Accounts and Undertakings of the Authority on which they Act. Objecting to Assessment for Purposes of Inhabited House Duty. Burial Loans Repayments.

599.—**INSPECTORSHIP OF WEIGHTS AND MEASURES—Examination for.**—As a constant reader of your journal I beg to ask whether you can tell me the best way to set to work to qualify for the position of inspector of weights and measures. I have to attend a Board of Trade examinatiou, but have no idea of the requirements necessary for the examination. If you cau assist me by a reply through your publicatiou I shall feel greatly obliged.—"ETON."

We presume our correspondent has been appointed to act as an inspector of weights and measures, as only such as are actually appointed may attend the examination conducted by the Board of Trade, mere candidates for appointments being excluded. The Board of Trade holds these examinations under Sec. 11 of the Weights and Measures Act, 1889, in order to ascertain whether persons appointed as inspectors possess sufficient *practical* knowledge for the proper performance of their duties, and the Board must grant certificates to persons who satisfactorily pass such examinations. We are not aware that any official information has been published which would show exactly what is required at these examinations: obviously a candidate must be familiar with the Weights and Measures Acts to begin with. In this connection "Roberts' Handbook of Weights and Measures" (second edition, 1899, price 5s., published by Butterworth and Co., Bell Yard, Temple Bar, E.C.) may be found useful. The practical knowledge, however, can only be adequately acquired, we should think, by service under, or with, an inspector who has had practical experience. Our correspondent should request the secretary, at the office of Weights and Measures, 7, Old Palace Yard, Westminster, to furnish him with full information as to the subjects of the examination.

600.—**MEMBERS OF FINANCE COMMITTEE OF TOWN COUNCIL—Can he Insist on inspecting all Accounts and Vouchers of the Council?**—I am a member of the Finance and General Purposes Committee of our Corporatiou, which is composed of all the members of the council. I am desirous of inspectiug every account or voucher which is passed by each committee, with a view, if necessary, of making extracts for public use. I have been informed that I can only make extracts from those accounts which come before the committee of which I am a member, namely, four out of sixteeu. Does not the fact that I am a member of the Finance Committee give me the right to inspect auy account or voucher passed by any committee during the previous month?—"REFORMER."

We gather that the finance committee does not have before it all the accounts of the council, and that this limitation of its functions is imposed by the council. A member of the finance committee cannot, in our opinion, as snch, insist under the circumstances on inspecting all the accounts and vouchers of the council and its officers. We may point out, however, that the *treasurer's* accounts are required, by Sec. 233 (3) of the Municipal Corporations Act, 1882, to be open to the inspection of the council, and a member of the council may make a copy thereof, or take any extract therefrom. We should imagine, though the general legal right does not appear to exist, that our correspondent would be granted the opportunity, as a matter of courtesy, of inspecting any accounts and vouchers he may desire to see.

601.—**Has a Town Councillor or Member of a Committee the Right to Inspect Gas, Water, &c., Works owned by the Town Council and worked under the Committee?**—I should be pleased to have replies to the following questions:—

(1) Has a member of a town couucil the legal right to visit unofficially the works (gas, water electricity, &c.) owned and worked by the muuicipality?

(2) Has a town councillor who is a member of the Gas, Water and Electricity Committees the legal right to visit unofficially the works in counection with the above-named departments, the same being owned and controlled by the muuicipality?—"TUCKER."

It appears to us that a member of the committee of the council has no individual right of unofficially visiting and inspecting the gas, water, electricity, or other works of any undertaking which the particular committee in question may control. Still less can an ordinary councillor claim such a right. A similar question was dealt with in this column in our issue of March 4th last, and it will be useful to repeat what was there said:—"We are not aware of any authority in law under which our correspondent could claim the right as a member of the electricity committee of the town council to inspect at will the works of the council's electricity undertaking. The committee, as a body, may claim to do so, and it may also, apparently, delegate its powers and rights in the matter to one or more members of the committee. But a member of committee can ordinarily only act in and with his committee; and apart from it, and in the absence of any delegated power or trust from it, he seems to have no *locus standi* in the matter. We may refer to an analogous point arising under the Poor Law. The question had been raised from time to time as to whether a member of a board of guardians, or of one of the board's committees, could insist at will on visiting the workhouse or other institution belonging to the guardians. It was considered that no such general right could legally be claimed, and, accordingly, the Local Government Board, in the exercise of its statutory powers in the matter, and after due consideration of the general expediency of the proposal, issued an Order authorising individual guardians to visit at any time workhouses or other institutions under the control of the board to which they belong."

602.—**ASSESSMENT FOR PURPOSES OF INHABITED HOUSE DUTY.**—I have a house let at 11s. per week, and for rate purposes I am assessed at £15 10s. nett value, and £19 10s. gross. Until the last six months the assessmeut was £1 less in both cases, but a re-assessment has taken place, although the rent still remains the same. Since the re-assessment I have been compelled by the Inhabited House Duty Authorities to pay iuhabited house duty on £20, and when I appealed against same I was told that my gross value of £19 10s. was uear enough for £20, and again on writing them I was told that the assessment in force in the district had uothing to do with their ratiug. I shall therefore be obliged if you could kindly inform me if you think I am entitled to pay this house duty on the £20 (I believe this is the minimum amount they rate on), with a house let at 11s. per week, and rates at 9s. 8d. in the £ on the above assessment—viz., £15 10s., and if so, how the figures are arrived at.—"HARROW."

In the *Metropolis* the valuation list (which is revised annually by the Borough Councils) is to be deemed the annual value for purposes of assessing income tax under Schedules A and B of the Income Tax Acts. We understand, however, that our correspondent's property is outside the Metropolis. In that case the Income Tax Commissioners are not bound to regard the local assessments for rating purposes. The annual value for purposes of the house tax will then be the ordinary rack rent, or if the house is not let at a rack rent, the tax will be based on the full rent which the house would fetch in the ordinary way. We are not aware that the tax is limited to rents of £20 and upwards. It does not seem to us that our correspondent can effectively object to the assessment made.

603.—**URBAN COUNCIL ACTING AS BURIAL BOARD—Methods of Repaying Loans for Burial Purposes.**—In what manner may an urban authority, actiug as the Burial Board for its district, repay its loaus? Some loans procured several years ago by the district council with which I am connected are being paid off by equal yearly instalments of principal and interest combined. The council has recently had further loans for burial purposes, and I am informed that the repayment of the principal should be provided for by means of a sinking fund. Which is the legal method of repayment? and will you kindly refer to the section of the Burial Acts on which you base your reply.—"E. W. J."

The urban district council in this case will be in the position of a burial board, and subject to the statutes affecting such board. Sec. 19 of the Burial Act, 1857, applies the clauses of the Commissioners Clauses Act, 1847, to mortgages and other securities to be executed by burial boards. Sec. 84 of the latter Act provides for the discharge of money borrowed on the security of any of the rates by a sinking fund. A sum is to be set aside every year, and to be invested from time to time until it shall amount, with "compound interest or otherwise," to a sum sufficient to pay off the principal debt. The following section, No. 20, of the Burial Act of 1857, referred to, enacts that for the purpose of providing a sinking fund for paying off the principal money borrowed, the burial board shall once in every year set aside, out of the moneys charged by such mortgages, such sum as they think proper, being a sum equal to or exceeding one-fiftieth part of the principal money so borrowed. The Burial Acts do not appear to contemplate the repayment of burial loans by any other method than through a sinking fund.

604.—**ELECTRIC LIGHTING AND POWER PROVISIONAL ORDERS.**—(1) Where an electric power company has an Act of Parliament sanctioning its use of the streets of a burgh for the purpose of laying cables for the supply of electricity in bulk, is it competent for the municipality to apply for a Provisioual Order authorising it to supply electricity within the burgh for lightiug and power purposes, including public lighting?

(2) When a municipality seeks powers to become "authorised distributors" within the meaning of the company's Act, do such powers, if granted, sanction the erection of generatiug stations and the laying of cables for the purpose of giving a supply iudepeudent of the power company, or do they only sanction distribution by an arrangement ot purchase from the power company?

(3) Can a Provisional Order be applied for during the months of February or March?—"N. B."

(1) It is competent for the local authority to make an application in the matter, as, generally speaking, the private Act under which the power company operates does not in terms grant a monopoly to the company. It is improbable, however, that the Board of Trade or Parliament will, in the absence of special circumstances, confer on the local authority the right to generate electricity. It seems to us that the application to the Board of Trade shonld be limited to the distribution as distinct from the supply of electricity, and that ordinarily the local authority must come to terms with the company as to the taking of electricity in bulk from it.

(2) We think that "authorised distributors" cannot legally proceed to erect generating stations, or arrange for providing a supply of electricity independently of the power company. The power of the municipality in the matter will be limited to the erection and provision of such buildings, &c., as are required to distribute, as distinct from supplying and generating, the electric current. The company's Act, however, should be carefully read to ascertain what powers it has been granted, and what sphere is open to local authority which will not interfere with the practical monopoly conferred on the company.

(3) The Board of Trade rules require public notice of any intended application for a Provisional Order in this matter, to be given on or before the 1st November. Applicants must deposit maps, &c., of the district by the 30th November; and the Parliamentary agents must be prepared to prove compliance with the statutory provisions and the rules of the Board of Trade by the 15th January, and all such proofs must be completed on or before the 22nd February.

(We are compelled to hold over until next week a number of queries received.)

Official Advertisements.

CITY OF BRADFORD.

ELECTRICITY DEPARTMENT.

SECOND ASSISTANT ELECTRICAL ENGINEER.

APPLICATIONS are invited (subject to approval to the appointment being given by the City Council) for the post of SECOND ASSISTANT ELECTRICAL ENGINEER upon the Central Office Staff of the City Electrical Engineer and Manager, which is engaged upon the design and supervision of extensions, and the control of the generating, distributing, consumers, and other branches of the department's work through the various departmental staffs.

Applications will only be considered from persons who have practical experience of the generation and distribution of energy upon both the H.T.A.C. and the L.T.C.C. systems, are well up in modern general electricity supply practice, possessed of a good knowledge of mathematics and mechanical drawing, and competent to supervise the work of draughtsmen.

The duties will consist of generally assisting and carrying out the instructions of the City Electrical Engineer and Manager.

Canvassing Members of the Council will be a disqualification.

The person appointed will be required to devote his whole time to the duties of the office, and to reside within the City.

Salary £250 per annum.

Applications, in handwriting of the candidate, stating age, experience, and qualifications, together with copies of not more than three testimonials of recent date (which will not be returned), to be sent in time to reach me not later than the first post on Thursday, the 19th January instant, endorsed "Assistant Electrical Engineer."

FREDERICK STEVENS,
Town Hall, Bradford. Town Clerk.
3rd January, 1905.

METROPOLITAN BOROUGH OF GREENWICH.

APPOINTMENT OF A SUPERINTENDENT AT GREENWICH CEMETERY, SHOOTERS' HILL.

THE Council of the Metropolitan Borough of Greenwich is prepared to receive Applications for the position of SUPERINTENDENT at Greenwich Cemetery, Shooters Hill, at a commencing weekly wage of £2 5s., together with house, coal, and gas.

The person to be appointed should not be more than 45 years of age; he should be a practical gardener, and good writer, and preference will be given to one having had experience in the management, or assisted in the management, of a Cemetery. The person appointed shall not on retirement claim, or be entitled to, any pension under the Superannuation Allowances Act, 1866.

Applications must be in the handwriting of the applicants, on forms to be obtained from the undersigned, stating age and previous experience, accompanied by copies of not more than three recent testimonials, and must be sealed up, and endorsed outside "Application for Cemetery Superintendent," and must be sent in, addressed to me, before noon on Monday, January 23rd, 1905.

Canvassing the members of the Council will be a disqualification.

FRANCIS ROBINSON.
Town Clerk.

Town Hall, Greenwich, S.E.
12th January, 1905.

CITY OF BATH.

A JUNIOR CLERK is REQUIRED in the Town Clerk's Office, at a salary of £1 per week. Previous experience in municipal and legal work desirable. Good hand writing and knowledge of shorthand required. Apply in own handwriting, with references, to Town Clerk, Guildhall, Bath, on or before Tuesday, 17th inst.

MUNICIPAL OFFICES.

A GENTLEMAN wishes to strongly recommend an ex-Articled Clerk (admitted), with exceptional qualifications, for an ASSISTANT CLERKSHIP. Write to Mr. MONTAGUE BROWNE, Northampton.

JUNIOR CLERK, 20, seeks Re-engagement, One year's experience. Good references. Write "Dinn," Summerhill, Margate Road, Ramsgate.

BATTERSEA BOROUGH COUNCIL.

TO ELECTRICAL ENGINEERS.

THE Council invite Applications from persons, not less than 28 years of age, for the Appointment of ELECTRICAL ENGINEER, to take entire charge of the Electric Supply Department and the running of the station. Applicants must have had experience in the working of a three-wire continuous current system.

Commencing salary £400 per annum.

Forms of application and particulars of duties may be obtained at the Town Hall, Lavender Hill, S.W., and must be delivered to me, duly filled up and accompanied by copies of not more than four recent testimonials, under cover, endorsed "Electrical Engineer," by midday, Tuesday, 31st January.

The person appointed will be required to reside within the borough.

Personal canvassing strictly prohibited.

W. MARCUS WILKINS,
Town Clerk.

12th January, 1905.

WANTED, Appointment as Storekeeper, &c. (or Assistant) to Public Institution. Abstainer. Age 30. Nichols, Regent Street, Leighton Buzzard.

WARD & MACONIE,
15, HANOVER STREET, LONDON, W.
Municipal Robe Makers and Court Tailors.
PRICE LIST ON APPLICATION.

Third Impression of Third Edition of "RED CODE," 1904. Fully Revised. Complete, up-to-date Edition of Code and other documents for Schools under Parts II. and III. of Education Act, 1902.

1s. net. Post free 1s. 3d., from Educational Supply Association, Ltd. 42a, Holborn Viaduct, London, E.C.

An admirable Food of the
EPPS'S
Finest quality and flavour.
COCOA
Nutritious and Economical.

MUNICIPAL JOURNAL
FRIDAY, JANUARY 13, 1905.

NOTES AND COMMENTS.

Municipal Small Loans.

IF the average councillor pays due attention to everything that has been published during the last few days concerning small municipal loans, or municipal savings banks, whatever he is pleased to call the new departure in local government finance, he will find the greatest difficulty in making up his mind. In the opinion of the borough treasurer of Bury, the system has already been demonstrated a failure. Very little money has been raised by it, and what has been raised has not been worth the trouble and expense of raising. The proper course is to encourage the savings banks themselves to invest with the municipalities. This is the Bury borough treasurer's view. On the other hand, the *Globe* has published a leading article headed "Banking and Municipal Trading," in which an endeavour was made to prove that the system of short loans has already made such enormous strides that it was interfering with the business of banking. The *Globe* said—

> Municipalities now both raise capital by short loan borrowing, and employ the proceeds for purposes which formerly had to

be largely accomplished by banking advances to contractors and others. Furthermore, this rate-supported rivalry absorbs much of the floating capital which would otherwise be placed on deposit bearing interest.

According to the *Globe*, and in this statement we are in cordial agreement, the chairmen of joint stock banks have been complaining of the injury done to the banking business by "this newer form of municipal trading." It will possibly be objected that "short loans" are not necessarily the same kind of thing as "small loans," but our reply is that both are part and parcel of the system by which it is hoped to avert the fulfilment of the bankers' threat to "stop supplies." The *Globe* adds that the municipalities are offering more generous terms than the banks can afford, and that "this most unfair and illegitimate competition" leads "directly to jobbery." Now, the banks must be hard hit if their journalistic representatives write in this fashion—hit, too, it must be remembered, by a development a part of which the Bury borough treasurer describes as a failure, and cannot support. On the top of these two extremes we have the decision of the Islington Borough Council—a unanimous decision, arrived at without any appreciable difference of opinion—to inaugurate a scheme of "borrowing for capital expenditure by means of what have been termed 'short-term mortgages.'"

Mr. Buxton's Report.

THIS week we publish the report made by the borough treasurer of Bury (Mr. R. W. Buxton), and next week we shall publish the table containing the material upon which he based his report. We have a copy of the table before us, and, in our opinion, it does not justify the sweeping condemnation Mr. Buxton makes. One defect of the report is that we are not told how long the system has been in operation at the various towns referred to. If it is of recent inauguration, it is unjust to condemn it because the results do not approximate towards those of a successful private banking business. There is nothing in the report, either, to show us the extent to which the system has been made known to the ratepayers. In those towns where, to our knowledge, it has been well advertised the verdict is a favourable one. At Devonport, where the scheme has only been in operation about two months, the results are already "very satisfactory." At Middleton £790 has been raised since last April, but the official to whom the questions were addressed does not consider the result worth the expense and trouble, although he replies "Not at present" to the immediately preceding query, "Do you require additional staff, or is there any additional cost?" A system that brings in £790 without any expense and without the employment of additional staff can scarcely be described as unworthy the expense and trouble. At Bolton £50,000 has been raised, and the result is "certainly" worth the effort. It is obvious from the replies to Mr. Buxton's questions that the scheme can be made a success if worked properly.

Expense and Labour.

TO turn to Mr. Buxton's report proper, we find him making the following statement:—

> It will probably be argued that the expense will be very small and the labour not worth consideration, but where the staff is already worked to its full capacity the engagement of additional clerks would be absolutely necessary, and the expense, as well as the labour, would be of no small dimensions if an amount worthy the effort is to be received, retained, and dealt with.

Now, of the nineteen towns to which Mr. Buxton wrote not one indicated that the adoption of the system necessitated additional staff or involved any appreciable additional cost. So that the assumption that more clerks would be "absolutely necessary" is not supported by the evidence. Mr. Buxton also raises the question of stamp duty, and it is interesting to see how Islington disposes of this point—

> We understand that one disadvantage of accepting such small sums is the additional cost of stamp duty on the mortgage; but we think, in view of the advantages and the security offered, it is not unreasonable to require the investor to bear such additional cost.
>
> The stamp duty on a mortgage exceeding £10 and not exceeding £25 is 8d.; on sums exceeding £25 and not exceeding £50, 1s. 3d.; and on sums exceeding £50 and not exceeding £100, 2s. 6d. The stamp duty which the Council has hitherto paid on mortgages has been 2s. 6d. per cent. We do not anticipate much difficulty on this point.

Evidently those difficulties which the borough treasurer of Bury considers insuperable the Islington Borough Council regards as incidents. Mr. Buxton also refers to the risk of misappropriation, which, of course, is common to every department of a corporation handling money. That risk, however, has not acted as a deterrent hitherto, and it does not appear to have been a vital consideration to the nineteen corporations. At any rate, no mention is made of it.

Islington Conclusions.

WE have already contrasted one of Islington's statements with Mr. Buxton's, and other of the principles upon which the London borough is acting are not uninteresting. The points which particularly engaged the attention of the Islington Finance Committee were—first, the minimum amount which should be accepted on loan; secondly, the rate of interest to be offered; and thirdly, the period for which loans of this class should be accepted. The committee came to the conclusion that, with the view of attaching public interest to the scheme and attracting the class of investors who, it is hoped, will avail themselves of this form of investment, the Council should fix a limit of £10, loans being accepted of this amount and upwards in multiples of £10. With regard to the rate of interest, it is proposed to offer £3 per cent. per annum, payable half-yearly on the 31st March and the 30th September. Money will be taken up for terms of either 18 months, three years, or five years, at the option of the lender, and repayable by three months' notice on either side, and the security offered will be a mortgage deed under the seal of the Council. The committee concludes:—

> We have, since the last meeting of the Council, had an opportunity of reconsidering the report which it will be remembered we then withdrew. We, however, adhere to it, being of opinion that, having regard to the convenience which it is proposed to afford to persons desirous of investing money in small sums, and to the expenses attaching to such a mode of borrowing, the Council would not be justified in raising money by this means, at all events for the present, at a rate exceeding 3 per cent.

This is the rate of interest paid in the majority of cases alluded to in the Bury return. On the whole, we cannot see that Mr. Buxton has made out a case against municipal small loans.

Unemployed Problem in Scotland.

GLASGOW is evincing a desire to follow London in regard to relieving the unemployed on really broad lines. The movement, however, is not the work of a day. Glasgow, like other large towns and cities, for years has felt that with advancing commercial prosperity there is increasing poverty. It almost seems as though a wedge is being driven in between the rich and the poor, making the poor poorer and the rich richer. Social reformers have still to come to some agreement as to the nature of that wedge. The agitation in Glasgow has eventuated this week in a conference of representatives of town councils, parish councils, and trades' councils, convened by the Corporation of Glasgow. The object was really to methodise efforts already put forth to solve the problem, or rather problems, connected with unemployment. The vital point of the matter—land—was referred to in a document submitted for consideration of the conference, embodying proposals for the employment of the unemployed and for prevention of vagrancy and other purposes. The proposals were to the effect that (in burghs and parishes) boards should be created with power to purchase or lease land and to set up and manage labour colonies, such boards to be composed of equal numbers from the members of town and parish councils, and that power should be given to co-opt ex-members of local boards; that to defray the cost of carrying on the board powers should be given to levy a separate rate; that county councils should be empowered to combine with the board for the acquisition of land; that the board should have the sole control and management of all matters referring to unemployed vagrants and beggars: that the board should have power to send to labour colonies such able-bodied persons able to work as might be found necessary; that all other persons who were not able to work and who had no visible means of subsistence, should be taken before a Magistrate and committed to a poorhouse. It was further suggested that existing statutes regarding vagrancy, begging, inebriety, loitering, &c., should be strengthened and vigorously enforced; and that in regard to persons employed in a colony the laws relating to settlement and removal should apply as if the colony was their home and place of residence. Many methods of solving the question of unemployment in Scotland were discussed—even so original a one as constructing a deep-water channel between the Firth of Forth and Loch Lomond, which would lead direct into the Clyde and the western ocean. But the main outcome of the conference is that a Government inquiry is to be pressed for. The intention is that a Government Departmental Committee should be appointed, consisting one-half of members or officials of the departments concerned and one-half of well-known members of public bodies, to inquire into the question of providing employment for the recurring number of the unemployed. Personally, we do not have any very great faith in Government action, but, as constituted, the committee may do good work, and the full investigation it is likely to give matters should result in good.

The Government and the Telephones.

RUMOUR has been busy this week with the intentions of the Government towards the undertaking of the National Telephone Company. There is one thing, however.that maybe taken for granted,and that is that no agreement can be entered into without the approval of Parliament. It is possible—we think it is probable—that the draft of an arrangement has been prepared, and that it will be submitted to Parliament as soon as an opportunity occurs. The company has everything to gain by purchase, and the public have everything to lose. The Post Office has always been helpless when dealing with the monopoly, and there is no reason for believing that in the present instance it will depart from its usual policy of complete capitulation. Our hope that purchase will not take place, but that things will be allowed to take their normal course until the expiration of the lease in 1911, rests not with the Post Office,but with Parliament, which on the eve of a dissolution will display the worst of tactics if it so grossly betrays the public interests as to pay over to the National Telephone Company a price for its undertaking that will make cheap telephones impossible for the next half century. For there is no doubt that this is what purchase with a goodwill consideration means. The watered capital will simply be transferred from the company to the nation, and if both ends are going to be made to meet there will be no reduction in telephone charges. On the other hand, if the municipalities are encouraged to establish the nucleus of a new system, it will only be necessary in 1911 to purchase that portion of the company's plant necessary to link up the whole into one complete undertaking. This would be in accordance with the recommendations of the Select Committee which reported in 1899, and would not be unfair to the company, which has all along conducted its operations in the light of the knowledge that its licence expires in 1911.

Liverpool and the Goods Scheme.

LIVERPOOL'S two proposed Parliamentary Bills had a stormy reception tion a few days ago at the ratepayers' meeting, and we are sorry to see that the scheme by which it was sought to establish an efficient system of transport between the docks and South Lancashire was rejected. The sum and substance of the opposition seems to have been, "Let the Tramways Committee stick to the carriage of passengers and parcels—a work it is doing exceptionally well—and leave goods alone." This might have been an argument if the facilities which the Tramways Committee proposed to provide already existed, but under the circumstances it was merely an excuse for inaction such as we expect to hear from retrogressive persons and bodies; certainly not from the level-headed business men of Liverpool. The Tramways Committee had been in conference with 28 South Lancashire towns, all of which agreed as to the benefit of developing tram routes for the transit of goods. As Sir Charles Petrie pointed out, the proposed scheme for the transit of merchandise would be cheaper than railway or any other mode of transit. The existing city lines would not be used for anything but passenger traffic. The scheme was demanded by the competition with which the port of Liverpool was faced. Further, by means of improved transit more manufacturers would be attracted to Liverpool. It certainly seems to us that other considerations besides that of the welfare of the city of Liverpool actuated this particular ratepayers' meeting. The people who may be expected to benefit by this scheme not being carried out are the directors and shareholders of the railway companies. Similarly, it will not be the general body of Liverpool citizens who will gain from the rejection of the clause in the omnibus Bill providing that "it shall not be lawful to occupy as a dwelling or sleeping-room any room whereof the floor is more than 3ft. 6in. below the surface of the adjacent ground." If this clause had been approved by the ratepayers and by Parliament some 2,000 cellar dwellings in Liverpool would in course of time have been closed. Clearly the supporters of the interests of private enterprise turned up in strong force at this ratepayers' meeting. Where were the general public? Afternoon ratepayers' meetings, under the Borough Funds Acts, would appear to be a mixed blessing.

McClellan's First Year.

IT may cheerfully be admitted by lovers of honest government that Colonel McClellan has exceeded all expectations by the excellence of his administration during his first year as Mayor of New York. Never has Tammany been so virtuous, and some critics have gone so far as to say that had Colonel McClellan had under him subordinates of the type that supported Mr. Seth Low, his record would have easily beaten that of the Fusionists. One of the most ardent reformers in the city recently remarked, "I am sorry that Mayor McClellan is doing so well; he is not by any means doing so well as the public think he is, but he is doing well enough to make it useless to talk about an anti-Tammany or reform movement for a long time to come." This simply bears out what we said 12 months ago, when Colonel McClellan took up the reins of office, that "every fresh reform administration means that the level even of the next reactionary régime will be higher than its predecessor." Colonel McClellan's personal actions have been irreproachable. He has refused to accept the dictation of Tammany in many particulars; he has vigorously backed the best of his heads of departments when they incurred the displeasure of the Wigwam for being too honest, and he has not been too tender of the gas and other monopolies that are still able to levy toll on the citizens. His most remarkable feat of independence was his dismissal of a batch of civil service and park commissioners for violating the law. He did not even give them the option of resigning, but summarily sent them adrift, to the consternation not only of Tammany officials, but of the rank and file of that organisation. The supreme test of the success of any New York administration, however, is the way in which the police are handled. and to this test the McClellan régime does not respond so well as we should like. District-Attorney Jerome, indeed, says he has never known the force so disorganised, but he also says that that is largely due to the fact that it has to administer laws the public do not respect. There can be no doubt of both the Mayor's and Commissioner McAdoo's earnest wish to have an efficient and reliable police department, and perhaps the present year, especially if it sees an improvement in the status of the deputy commissioners, will witness a more radical reform in this vital section of the public service of New York.

Manchester and Insurance.

"HE had investigated the figures as to the profits of insurance companies, and he found that for every sovereign paid into the coffers of the great insurance companies, the public got back 5s. 9d." This is a sentence from the speech of a councillor who moved at the meeting of the Manchester Corporation last week the establishment of a municipal insurance fund; and it is the justification of the action of those local authorities which have already cut themselves adrift from the companies. Even though the Manchester Corporation were to start insuring itself, it would find at the very outset that the premiums exceeded those which most insurance companies have commenced with. The Corporation insures boilers, ships, against street accidents, tramways, and many kinds of buildings and other property. A return prepared recently for the Northumberland County Council showed that during a period of twenty years 377 municipalities had spent £445,000 in insurance premiums, and that they had only received in return a little over £100.000. This ought to be a sufficient argument for Manchester, which might also take into consideration the fact that the insurance companies are reaping benefits from improved fire protection facilities provided by the Corporation. In those benefits the Corporation does not participate as it should. The result of last week's debate was a decision to appoint a special committee to inquire whether insurances should be dispensed with or could be placed on a better basis. The Special Committee, when making its inquiries, must not forget to communicate with Municipal Mutual Insurance, Limited.

"To Fight the Anti's."

THE *Eastern Morning News* the other day had some interesting comments upon the suggestion recently made in our columns that Coporation officials should endeavour to make clear to local newspapers the facts concerning municipal enterprise. The paper points out that at Hull "municipal elections are not conducted on political lines (at least not avowedly so), and so we escape all the evils which admittedly attend that system. Another advantage which is enjoyed in Hull is the fact of the meetings of the various corporation committees being open to the representatives of the Press. This enables the public to follow much more closely, and to appreciate much more highly, the work of the Corporation. It is not the custom either in Hull or anywhere else for corporation officials to write to the Press, especially on controversial subjects, but those in Lowgate are willing, at all times, to assist the Press and the public in acquiring a knowledge of any department of municipal enterprise." Respecting the further suggestion that corporations should set aside rooms for lectures, essays, and discussions on municipal subjects, the *Eastern Morning News* says—

> The spirit of the idea has been anticipated by the North Newington Ward Ratepayers' Association. The president of that body, knowing the willingness of the heads of departments in the Corporation to enlighten the public, has agreed with several of them to give lectures descriptive of the works under their control during the present winter.

We hope that Hull's example will be copied, to the corresponding enlightenment of citizens throughout the country.

POOR LAW OUTLOOK.

[Appointing ex-Members of a Board of Guardians to Official Positions under the Authority. One or Two Matters in Lambeth and in Newcastle. Relieving Destitution in Military Barracks and the Unenviable Position of the War Office. New Scheme for Treating the Sick in their Own Homes. Suggested Introduction of the Elberfeld System of Poor Relief into Edinburgh.

Checking Abuses.

THE principle that members of public bodies should not make use of their positions for their own personal gain and profit is one which cannot be too closely kept in mind. One or two matters have arisen at Newcastle bearing on the recent appointment of two of the members of the Board of Guardians to the registrarships of two important sub-districts, and to the costs of a deputation appointed in respect to the appointment of a new workhouse master and matron, and the local Ratepayers' Association is alarmed. This week the following resolution was unanimously passed, and forwarded to us·—.

> This association, having for one of its objects the checking of the abuse of privilege and power, whether in the case of members of governing bodies or the paid officials of the same, regrets that the Registrar-General of Births and Deaths has deemed it right to confirm the appointments by the Newcastle-upon-Tyne Board of Guardians of James H. Rodgers and James Neylon, who were until October 3rd last members of the same board, to the respective sub districts of Elswick and Benwell, and thereby approved of the principle that members of public bodies should make use of their positions for their own personal gain and profit. This association learns with astonishment that, whereas a deputation of three members of the board of guardians was appointed to visit certain persons and places connected with the posts of master and matron to the workhouse, the deputation consisted of four members. The association protests against the ratepayers' money being spent in this way, and hereby calls the attention of the Government auditor to the matter, with a view of having this additional and unauthorised expense surcharged.

If the allegations be true, the Ratepayers' Association is quite right in taking action. We wish that ratepayers' associations were as keenly interested in every phase of civic activity.

❦ ❦ ❦

"Another Job" from Southwark.

A SOMEWHAT similar position was disclosed at the last meeting of the Southwark Guardians. A joint committee on the unemployed reported having considered applications for the two appointments as investigators *re* the unemployed, and had requested six applicants to attend the Board meeting. Included among the six were a member of the Southwark Borough Council and of the Unemployed Committee, and a member of the Borough Council, who was until a few months ago a member of the Board of Guardians. Both these gentlemen, with the other candidates, were interviewed by the Board. A cry of "Another Job" was raised on a motion to suspend the standing order which prohibits an ex-guardian from being appointed to a position under the Board. We do not suggest that any great harm would be done by an appointment of this kind, but public representatives, like a certain notable historic character, should be above suspicion, and we are glad that the Board (by a small majority) decided not to suspend the standing order. This was not done, however, without a cutting gibe or two being made. One member remarked, "It seems that the Board exists to get jobs for the members."

❦ ❦ ❦

Reform Needed.

REFORM is needed in the Local Government Act of 1894. This measure enacted that a parish situate partly in an urban district and partly in a rural district, or in more than one urban district, should be divided, and the parts of the parish in each such district should constitute separate parishes. Under the present interpretation of the law, the frequent result is that upon a person becoming chargeable to a union, after a short non-qualifying residence therein, such person becomes a permanent burden upon the rates of that union. Some time ago the Cannock and Dudley Unions addressed a letter through the service journals asking for co-operation in taking joint action upon a case to be stated for obtaining the opinion of the High Court as to the position of guardians in reference to settlements acquired in parishes divided or altered subsequent to such settlements being acquired. As a result of this letter, a preliminary meeting of representatives of several unions interested was held at Stafford, on December 20 last, at which it was unanimously resolved that a conference of boards of guardians in England and Wales be convened for the general discussion of the question as to settlements in divided parishes. The conference is accordingly to be held on Tuesday week at Birmingham.

❦ ❦ ❦

Grant-in-Aid.

IT is interesting to recall in this connection that the decision in "Reg. v. Inhabitants of Tipton" (1842), 3 Q.B. 215, established the rule that a settlement in a parish gained by birth therein is a settlement in a parish as an entity, and not in any particular township therein, and if after a birth settlement has been gained a parish be divided by Act of Parliament into two or more separate parishes, so that it cease to exist as an entire parish, the birth settlement gained in the old parish will cease to exist also. The vexatious nature of the law as to irremovability and settlement has arisen through the disposition to preserve the present inequalities of administrations. What is needed is greater co-ordination. A substantial imperial grant-in-aid of guardians' expenditure would considerably help towards this end. At present the rich who are in favoured localities escape heavy poor rates, and the poor are still further impoverished.

❦ ❦ ❦

Lambeth's Medical Relief Scheme.

THE medical relief scheme of the Lambeth Guardians for treating the sick poor in their own homes instead of sending them to the infirmary has advanced one step further. The Local Government Board has written to the Guardians, "desiring information on several points." There are some difficulties to be removed. The medical officers have to be compensated for loss of office, and one of them (Mr. Brookes) now reports that he is not prepared to vacate his office until the Guardians have declared the amount of compensation to be given. At the last meeting it was recommended that—

> In pursuance of Sec. 8 of the Poor Law Officers Superannuation Act, 1896, he be compensated to the extent of one year's salary, viz., £100.

But it was stated that compensation only to that amount has been refused by the medical officer. It was consequently decided at the last meeting that in the event of another refusal to accept it, the Local Government Board should be asked to give the Guardians permission to give Mr. Brookes six months' notice to terminate his appointment. This is a very proper course to take.

❦ ❦ ❦

Who is Responsible?

CAN a man be considered destitute when in military barracks? An interesting situation has arisen in the Christchurch Union. A little more than a year ago one of the relieving officers received a visit from a bombardier, who told him that his brother was suffering from quinsy, and asked him if he could give an order for his removal from the Christchurch Barracks to the workhouse. He declined to give the order, unless the medical officer could see the man, or he could have a certificate from the barracks doctor, as the disease might be infectious. On the following day Major Goulbourn sent for him and told him that the man had scarlet fever, and requested his immediate removal. He declined to give an order, and said he would report to the guardians. Later he learnt that the man had been removed to the Sanitary Hospital.

❦ ❦ ❦

War Office's Dilemma.

IT appears that the man came to the barracks from London with a view of obtaining a special enlistment in the army as a tailor, as he was not up to the standard to be admitted in the ordinary way. He was living with his brother, a non-commissioned officer, when he took the disease. The War Office is in a dilemma as to who should bear the costs. It first stopped part of the brother's pay, but this has been repaid, as it has been advised that it was not legal to do so. It then endeavoured to get the money from the Christchurch Town Council, which is the sanitary authority. Now the unfortunate department has fixed upon the guardians, and at the last meeting of that body a letter was read from the War Office stating that as the board had declined to pay the cost of the removal and maintenance of a man named Marshall, who, while on a visit to the barracks, had contracted scarlet fever, it had issued a writ of subpœna to recover the cost (£21 2s. 6d.), and asked whether the guardians would accept service. The guardians are well advised in standing out, and the War Office will have the difficult task of proving that the man was destitute. It was decided to accept the writ, and in the meanwhile to ascertain how the man got into the barracks, and at whose invitation. An amendment, "That the sanction of the Local Government Board be asked for the payment of the money," was lost by 13 votes to 8.

❦ ❦ ❦

Loving the Workhouse.

HABIT is second nature, and how well the old people may get to love their workhouse is illustrated this week by the scenes in connection with the closing of the old Glasgow Poorhouse. This was not one of the modern workhouses such as the *Times* recently indicted as being too comfortable, but many of the inmates had become greatly attached to the old place through long residence within its walls, and, despite the decided advantages of the new poorhouse at Stobhill, with its rural surroundings, the old men and women cried, we are told by a local writer, "like babies to get back home." But the poorhouse was no longer desirable as a habitation. Originally it was a lunatic asylum, and in the dingy old cellars are to be found neckpieces and rusty chains attached to the walls of the cellars, reminders of man's past inhumanity to man.

❦ ❦ ❦

Elberfeld System and Edinburgh.

IF the capital of Scotland, the "Modern Athens," adopts the Elberfeld system of poor relief, as it gives signs of doing, the movement will be assured in the kingdom. As our readers know, Bradford, in adopting a modification of it a few months ago, was the first in England to do so, and the enthusiastic manner in which it was taken up by 500 of the citizens was pointed out. Our readers do not need to be reminded of the nature of the Elberfeld system, but the question just now is, will Edinburgh adopt it? The authoress of "Britain's Next Campaign" has thrown her whole weight in support of it. This is her burning message, delivered in a letter to the *Scotsman* this week—

> For God's sake do not wait, you Edinburgh men and women, for it rests with yourselves now to become the pioneer city of Britain for the saving of every slum-troubled town north and south. At Elberfeld the scheme was first thought of and set going by a banker; at Leipzig a wholesale draper was the man chiefly instrumental when that place followed suit, thus showing that almost any man of heart and head can make himself in this respect a leader of his city. But what an opportunity for your present Lord Provost that he should be that leader, that his name should go down to posterity as that of the chief magistrate who led Edinburgh citizens in this blessed work of reform. Who would miss such a chance, so rare a distinction, so fine a privilege?

What is really wanted is an Edinburgh sys-

tem on Elberfeld lines. The need in Edinbnrgh for reform is great. Julie Sutter's book, written "at a white heat of pity," as Canon Scott-Holland says in his preface, was the outcome of her personal experience, particularly in that city, where it was written.

❦ ❦ ❦

The Bradford Movement.

MISS SUTTER has something to say of the Bradford effort, of which she confesses to be proud, as "it is in its way the first-born child of my book." The citizen's "Guild of Help" has followed the Elberfeld model pretty closely as regards organisation, but it has "made one fatal mistake":—

> This new Bradford Guild is a private body—it is, as I have vainly striven to show them, a sort of Charity Organisation Society under another name. Elberfeld itself would be that, but for one vital difference—namely, that a true Elberfeld system is a civic enterprise; it is strictly municipal. Let me urge this upon your people from the outset—It is your only chance of success.

Only municipalise, municipalise, she elsewhere exclaims, and you will have an "Edinburgh system" with sure promise of success. The new Edinburgh scheme, being a civic enterprise, will have recourse to the power of calling a rate, but Miss Sutter's suggestion for accomplishing this is ingenious, to say the least. At present there is no law enabling a town council to do this for the purpose under consideration, but, says the writer, "if you cannot do it in any recognised lawful fashion, there is always a round-about way."

❦ ❦

How to Get to Work.

THIS is how the thing is to be started. Let a list be opened at the City Chambers, where every Edinburgh citizen, himself above the poverty line, who is willing to serve his city, can enter his name. Of those who offer let the "city" choose the most capable, and nominate them to the civic helpership for three years; that is to say, a helper shall be at liberty to retire after having served his city for the space of three years, but if willing to continue he could, of course, be reappointed. There is to be a central directorship consisting, it is suggested, of six town conncillors or bailies, and six non-official citizens. The existing Poor Law is to continue, for—

> Here I would first point ont that your new Edinburgh scheme would not at all encroach on the domain of the parish council, for that domain is closely defined; no man in Scotland can come upon the poor-rate proper until he is absolutely penniless and disabled besides. Leave such paupers to the parish council, and let the new Edinburgh system address itself to the great work of keeping the poor from ever sinking to that level. Let its motto be "A stitch in time saves nine."

We heartily agree, for the Poor Law can only *relieve* destitution. Such a system should also prevent indiscriminate charity, which makes cads of the poor and cadgers of the rich. The system makes for a reduction of pauperism.

❦ ❦ ❦

Essentially Economical.

A SHORT time ago another correspondent to the *Scotsman*, writing in favour of an Elberfeld-Edinbnrgh system, brought out very strongly this phase of the system:—

> Everyone who has been permitted to help personally among our poorer neighbours (I speak now of our deserving poor) must have felt the danger of giving, as one to be carefully avoided—"How to do good without doing evil" has been ever one of life's problems. Elberfeld minimises these dangers by getting the giver into kindly, fatherly, or brotherly contact with the receiver—by not waiting till the purse was empty, by securing that no one in the town shall want the necessaries of life—that all shall be cared for as "Christ's little ones." And above all, this charity, which has been "made in Germany," is essentially economical.

But the claims of this German plan for relieving destitution have already appeared at some length in our columns.

❦ ❦ ❦

Are Paupers too Comfortable?

THE interest in Poor Law matters in Scotland just now appears to be healthy. A contributor to the *Glasgow Herald*, discussing allegations as to recipients of relief being made too comfortable, persuasively reasons as follows:—

> The poor are always with us, and one is apt to become callous to suffering that he regards as inevitable. The sight of cattle being led to the shambles evokes scant pity from the average citizen, and the Parisian laughs and talks most gaily when peering through the glass at the latest addition to the slab at the Morgue. It is almost a truism to suggest that the danger to which the agents of the Poor Law are peculiarly exposed lies not in excess of sympathy but in indifference.

The conclusion is a logical one, and, moreover, is proved by experience.

❦ ❦ ❦

"What is 'Lax Out-Relief.'"

A COMMITTEE of the Leicester Board of Guardians has replied to the Local Government Board auditor's criticisms in reference to the three cases of out-relief alluded to in our last impression. The reply must be read in the light of the circumstances of the cases, and thns help to solve the troublesome question of what is "lax" and what "strict" out-relief. In regard to the first case, in the opinion of the committee it would not have had a reformatory effect to send the man to the workhouse, as, although formerly of dissolute habits, the committee believed that latterly he keenly felt his position, and had reformed both as regarded his personal conduct and appearance and as regarded the care of his family. It believed that he did his utmost to get work, and that when trade revived he would readily get back to his old trade. In regard to the second case, when the information was given as to his earnings, the relief was discontinued; but since then the chief wage-earner of the family had gone away, and necessitated the giving of further relief. As to the third case, in no single week did the joint income exceed the average set by the Board, viz., 3s. per head. The committee thonght that 18s., the total income, was not enough for a family of eight, and accordingly granted relief to an extent which they considered perfectly fair. This, again, comes to the question of point of view, and it is impossible for an outsider to judge on the merits of the cases. No answer or explanation, however, is given as to the enormous increase in out-relief in this union.

More Particulars about the Hampstead Undertaking. Exeter Surplus, and How it was Obtained. Bedford's Varying Fortunes—a Satisfactory Year's Results. Coventry and its "Venturesome Forward Policy." Enterprise that has Justified itself.

IN our issue of the 30th of December we gave a general *résumé* of the accounts of the metropolitan Borough of Hampstead and of the City of Exeter. The information then presented is now supplemented by the particulars given below of the receipts and allocation of expenditure. It will be seen that while the expenditure at Hampstead has fallen by ·231d. per unit, and the receipts by only ·152d., leaving the gross profit greater by ·079d., the capital charges have actually increased per unit by ·066d., so that the surplus is ·013d. more than before. Hampstead is one of the undertakings deriving appreciable aid from meter rents, and it is an open question whether consumers feel the small sums charged quarterly while in the aggregate they amount to the substantial figure of over £2,500, thus representing nearly half the year's surplus. Few of the London undertakings have brought their average receipts down to the figures which are reported from the provinces, even where the load is purely a lighting one; but this must not, of course, be considered altogether a reflection upon the management of these concerns, as the expenses, especially in the direction of coal and labour, are exceedingly high in the metropolitan area for reasons outside any question of management—

HAMPSTEAD.	Units.	Yielding.	Per unit.
Private consumers took ...	3,008,025	£51,709	= 4·125d.
Public lamps consumed ...	270,134	3,662	= 3·250d.
Interim total	3,278,159	£55,371	= 4·054d.
Meter rentals...	—	2,514	= ·184d.
Sundry receipts	—	166	= ·012d.
Revenue in all	3,278,159	£58,051	= 4·250d.

Allocation of Expenditure.

THE maximum load at Hampstead was 2,666 kilowatts and the plant installed 4,345 kilowatts. 212,307 private eight-candle power or equivalent were connected, and the public lighting consists of 122 arc lamps, each of these being charged at the rate of £28 annually. The private lighting rates are on a sliding scale of 6d. and 2½d., while motors are supplied at 2d. to 1½d., and heating at 2d. per unit, which are about the average for London local authorities. The receipts were taken up and allocated thus:—

	Amount.	Per unit.	
Works cost	£18,286	= 1·339d.	
Rates, taxes, and management, &c.	7,422	= ·543d.	
Total cost	£25,708	= 1·882d.	
Distribution and public lamp maintenance ...	3,423	= ·251d.	
Gross cost	£29,131	= 2·133d.	
Interest charges	10,746	= ·787d.	1·693d.
Sinking fund charges ...	12,378	= ·906d.	
Total actual cost of units sold	£52,255	= 3·826d.	
Surplus for year	5,796	= ·424d.	
Revenue in all	£58,051	= 4·250d.	

Exeter.

THE surplus at Exeter is accounted for by the high average received. The charges for private lighting vary from 6d. to 4d. per unit, for motor 3d., and the same for heating. These result in an all-round figure of over 5¾d., at which rapid extension can hardly be expected. Public lighting pays 2½d. per unit for current only. The number of lamps connected equals 33,261 8-candle power, including 30 motors, the plant installed 670 kilowatts, and maximum load 452 kilowatts. The income was derived from the following sources:—

EXETER.	Units.	Yielding.	Per unit.
Private consumers took ...	366,452	£8,937	= 5·803d.
Public lamps consumed ...	75,427	888	= 2 825d.
Interim total	441,879	£9,825	= 5·295d.
Meter rentals	—	336	= ·183d.
Sundry receipts... ...	—	238	= ·129d.
Revenue in all	441,879	£10,323	= 5 607d.

The amount received was taken up and appropriated thus:—

	Amount.	Per unit.	
Works cost	£4,526	= 2·458d.	
Rates, taxes, and management, &c.	1,595	= ·867d.	
Total cost	£6,121	= 3·325d.	
Public lamp maintenance	131	= ·071d.	
Gross cost	£6,252	= 3·396d.	
Interest charges	1,832	= ·995d.	1·603d.
Sinking fund charges ...	1,120	= ·608d.	
Total actual cost of units sold	£9,204	= 4·999d.	
Surplus for year	1,119	= ·608d.	
Revenue in all	£10,323	= 5·607d.	

Bedford.

THE fortunes of the Corporation of Bedford electricity supply undertaking have varied from year to year, and local opinion has been exercised in an attempt to locate the cause of the deficiencies which have shown themselves at intervals. There is very little wrong with the results for the last financial year, and the works cost is so low for a medium-sized station working on the alternating system that the critics should be silenced. If anyone can be called to account it is the Corporation itself, which obtains 4·84d. from its consumers for the general supply, and while paying 3·861d. for its public lighting takes 167,626 units at 2d. for sewage pumping. No doubt the argument of day-supply will be held to be an unanswerable one, and it may be that this load does not come on the peak. That this price should pay under such conditions is undoubtedly the case, but in past years the pumping output has been a source of loss rather than of profit.

Details.

THE published accounts for the last financial year to the 31st of March, 1904, show that:—

The revenue derived from sales of current, &c., amounted to	£14,658
And the working expenditure to	7,487
Leaving a gross profit of	£7,171
Out of this sum the following requirements were met:—	
Interest on mortgage debt... ...	£2,527
Sinking fund and repayments	3,900
Total of capital charges	6,427
Surplus for year	£744
Add balance from previous account	24
Amount transferred to credit of local rate	£768

Private motive power has not yet attained very large dimensions, as it represented 25,998 units, against 455,057 sold for lighting. Owing to the proportion of load and other circumstances the capital charges are above the average, being 1·849d. per unit. It is therefore to be regretted that the surplus should have been taken to the borough rate, although it has no doubt been held that since the undertaking in years past was largely assisted from this source, it should repay some of its indebtedness when the time came. The receipts were obtained as follows:—

BEDFORD.	Units.	Yielding.	Per unit.
Private consumers took ...	481,055	£9,701	= 4·840d.
Sold to Corporation for pumping	167,626	1,397	= 2·000d.
Public lamps consumed ...	185,783	2,988	= 3·860d.
Interim total	834,464	£14,086	= 4·051d.
Meter rentals	—	461	= ·133d.
Sundry receipts	—	111	= ·032d.
Revenue in all	834,464	£14,658	= 4·216d.
Used on works...	47,831		
Total accounted for ...	882,295	(Maximum load	
Utilised on distribution ...	103,455	was 600 kilowatts.)	
Total units generated ...	985,750		

The amount received was taken up and appropriated thus:—

	Amount.	Per unit.	
Works cost	£5,512	= 1·585d.	
Rates, taxes, and management .	1,692	= ·487d.	
Total cost	£7,204	= 2·072d.	
Public lamp maintenance ...	283	= ·081d.	
Gross cost	£7,487	= 2·153d.	
Interest charges	2,527	= ·727d.	1·849d
Sinking fund charges	3,900	= 1·122d.	
Total actual cost of units sold...	£13,914	= 4·002d.	
Surplus for year	744	= ·214d.	
Revenue in all	£14,658	= 4·216d.	

Coventry.

FOR the year ended March 31st, 1903, the Coventry Corporation electricity undertaking made a loss of £189. Last year the accounts showed a surplus of £776. It will be remembered that a steady reduction in the loss per unit has been effected since 1896, but some two years ago it was decided to extend the mains on a systematic plan—to change over to a two-phase system, and to add plant to meet the demand which it was anticipated would follow large reductions in the rates charged. The policy of extending the business has met with complete success, and the Council may be congratulated upon the profit-yielding state which has been reached as a direct result of what many regarded as a rather risky and venturesome forward policy.

The revenue derived from sales of current, &c., amounted to		£10,844
And the working expenditure to		4,599
Leaving a gross profit of		£6,245
To this was added an amount received from the general district fund		466
Making a total of...		£6,711
Out of this sum the following requirements were met:—		
Interest on mortgage debt	£1,949	
Interest on temporary loans	1,277	
Bank charges	176	
Sinking fund charges	1,850	
Loan capital charges...	90	
Stamp duty	35	
Property tax interest	91	
Interest on deposits	1	
Total of capital and special charges ...		5,469
Gross surplus		£1,242
Add balance from previous year		383
Total balance		£1,625

Increased Revenue.

THE revenue has been increased by £2,768, and the expenditure by £1,035, showing an improvement in gross profit of £1,733. In consequence of the capital expenditure incurred in additions and alterations, the capital charges are now £768 higher than before, but this has left £965 to turn the loss of £189 into a profit of £776. As was believed, the success of the business depended upon an immediate increase in the output and consequent augmentation of revenue, which could only be accomplished by popularising the supply at a lower tariff. The effect of the policy adopted has been to increase the private output by 353,024 units, and the public lighting sales by 437 units, or a total of 353,461 units. The receipts per unit have suffered by ·594d., but the costs have been reduced by ·330d., leaving only ·264d., which is less than half the saving in capital charges of ·546d., so that the loss of ·080d. was turned into a profit of ·202d. per unit. The sales were as follow:—

COVENTRY.	Units.	Yielding.	Per unit.
Private consumers took ..	857,242	£9,582	= 2·685d.
Public lamps consumed...	62,950	800	= 3·050d.
Interim total... ...	920,192	£10,382	= 2·708d.
Meter rentals	—	462	= ·120d.
Revenue in all	920,192	£10,844	= 2·828d.
Units used on works ...	40,800		
Total accounted for ...	960,992		
Utilised on distribution	126,811	(Maximum load was 698 kilowatts.)	
Total units generated..	1,087,803		

The expenditure was covered by the following items:—

	Amount.	Per unit.
Works cost	£3,127 =	·816d.
Rates, taxes, and management	1,450 =	·378d.
Total cost	£4,577 =	1·194d.
Public lamp maintenance ...	149 =	·039d.
Gross cost	£4,726 =	1·233d.
Interest charges	3,402 =	·887d. } 1·393d.
Sinking fund charges	1,940 =	·505d. }
Total actual cost of units sold	£10.068 =	2·626d.
Surplus for year...	776 =	·202d.
Revenue in all	£10,844 =	2·828d.

❦ ❦ ❦

Invested Capital.

THE capital invested in the last two undertakings, both of them alternating systems, was spread over the various items thus:—

	Bedford.	Coventry.
Lands	—	£1,581
Buildings	£9,908	19,140
Machinery	33,429	36,116
Mains and services ...	44,034	38,320
Transformers, &c. ...	5,017	10,243
Meters	4,950	5,000
Electrical instruments ..	1,402	4,343
Public lamps	3,422	1,182
Various	3,447	3,546
Total expended on capital account ...	£105,609	£119,471

MUNICIPAL FINANCE.

A USEFUL BOOK FOR STUDENTS.*

THIS book is described as a "short elementary work on municipal accountancy and finance," and, unlike many elementary works it really gives the reader an insight into the subject with which it deals. It is by no means perfect, and it is still less exhaustive, neither of which qualifications could be fulfilled in a volume of 63 pages. But it will impel the intelligent student of it to a more extensive inquiry into the principles that underlie the exceedingly difficult subject of municipal finance, which necessarily embraces every branch of local government. The author, who veils his identity under the guise of "A Municipal Accountant," has evidently a thorough knowledge of his business, or he could not have given us such an admirable condensation of it. We hope that it will not be long before he redeems the promise he gives in his preface "to deal more thoroughly with the subjects herein treated."

The book, we believe, appeared in serial form in the columns of the *Accountant's Journal*, and one of the chapters was reproduced in our own *Journal* in the latter part of last year, headed "The Pros and Cons. of Municipal Trading." One of the things we most admire in the volume is the ingenious way the author has avoided expressions of opinion on some of those subjects which are being heatedly argued by municipal controversialists. We could not trust ourselves, for instance, to write an article on the subject of depreciation without letting our readers know that we hold some very decided views concerning it. Our author, however, very ably demonstrates every point of view except his own, which must be a definite one, coming from "a municipal accountant."

On the subject of municipal audit, again, we are given every possible opinion, and the reader is invited to weigh them all in the balance and decide for himself which are most wanting as effective remedies for this difficult problem. We have only to add that the book contains a very excellent bird's-eye view of the constitution of local government. The author is evidently not a lawyer, or he could not have made this chapter so clear. More of this non-legal aspect of municipal administration is wanted, and we hope we shall get it.

* "Municipal Finance for Students." By a Municipal Accountant. (London: Gee and Co., Printers and Publishers, 34, Moorgate Street, E.C. 2s. 6d. nett.)

CORRESPONDENCE.

SIR ROBERT GIFFEN'S ARTICLE.

To the Editor.

SIR,—I read the article in your journal, commenting on Sir Robert Giffen's article in the "Contemporary Review." You say: "We do not think Sir Robert Giffen should generalise in this fashion unless he advances some specific proof in support of his statement": "We have to do with a real disease of local government; with an expenditure that is partly extravagant and unnecessary, because authorities are frequently bad managers; they spend money on what is really not wanted, they spend more than they ought on what happens to be necessary."

May I, as a student of local government management, be allowed to say how heartily I agree with Sir Robert Giffen's statement on local government? I charge the local authorities with putting a heavy burden upon the backs of the poorer shopkeepers and working men by the extravagant, unnecessary waste of the ratepayers' money. You state Sir Robert Giffen does not give specific proof. May I be allowed to give some proof of wastage of the ratepayers' money in the borough of Lewisham?

My rates are more by £1 6s. 4d. per year than they were six years ago. I live in a small five-roomed house, with stable, and, of course, there are a great number of small houses in the borough; small shopkeepers' rates have risen from £12 per year to £16 4s. Is not that amount a heavy burden on the poor—*the thrifty, hard-working poor*?

I also know of cases of the poor at Deptford (I call a man poor when he earns 30s. a week and has to pay 11s. rent out of it and keep wife and family) having a burden of 26s. to 52s. per year. It comes about in this way. The landlord calls and says he must raise the rent because the rates are higher, so the poorer ratepayers, through the extravagant waste of money, are burdened more than they can pay—proof of wastage of rates in the borough of Lewisham. The dust destructor cost £2,000, but it is of no use, and the dust goes by rail; £1,000 was spent in gas jets and fireworks and fancy dress balls Coronation week; £200 was spent in law costs over publican's sign-post; the latest item is English turkeys for officials' Christmas' dinner. There are other items, but space will not permit.—Yours, &c.,

J. Robinson.

167, Glenfarg Road, Catford.
January 9th, 1905.

[Our correspondent follows exactly the same line of argument as that adopted by Sir Robert Giffen in the article we criticised. *Because* rates have increased, he assumes that waste and extravagance have necessarily taken place. It does not follow at all. The town with the highest rates in the country is not necessarily the worst managed, nor is the town with the lowest rates necessarily the best managed. We should like to hear a little more about those turkeys for the officials' Christmas dinner. What officials? — Ed. *M. J.*]

MUNICIPAL ENGINEERS AND SURVEYORS IN THE UNITED STATES AND CANADA.

To the Editor.

SIR,—Referring to "S. A. W.'s" query on page 7 of the *Municipal Journal* of the 6th inst., I would suggest that he should get a copy of the "Professional Handbook," price 3d, issued by the Emigrants' Office, 31, Broadway, Westminster, S.W. It is also sold by Eyre and Spottiswoode; Olever and Boyd, Edinburgh; and E. Ponsonby, 116, Grafton Street, Dublin; Messrs. W. Dawson and Sons, Cannon House, Breams Buildings, London, E.C.; and the International News Company, of 5, Breams Buildings, Chancery Lane, London, E.C., issues a catalogue of American and Canadian newspapers.—Yours truly,

T. M. S.

27, Queen's Terrace, Newcastle-on-Tyne.
January 7, 1905.

THE "DAILY MAIL" AND WEST HAM.

To the Editor.

SIR,—I notice in your leader on "The *Daily Mail* and West Ham" in your issue for to-day that you state that "the profits from the electric lighting undertaking are this year reducing the total rate by 1¾d. in the £." For your information, I beg to inform you that these profits are not electric lighting, but *tramway* profits.—Yours, &c.,

H. E. Blain
(Tramways Manager).

West Ham Lane, West Ham, E.
6th January, 1905.

[We are pleased that the credit of reducing West Ham's rates shall go to the proper quarter. For the purposes of the argument we were using, however, it does not very much matter whether the profits are tramway profits or electricity profits, as both come under the category of "municipal trading."—Ed. *M. J.*]

MUNICIPAL MUSIC.

FREE ORCHESTRAL CONCERTS WANTED BY MUSICIANS.

THE Incorporated Society of Musicians has been discussing at Manchester the question of municipal music.

Mr. S. Midgley, of Bradford, read a paper on "Municipalities and music, with special reference to a municipal orchestra." Considering what a municipality might do to develop music in a large city, he said a city councillor might point to the musical aspect of Manchester as an argument for leaving music to private enterprise. He did not suppose that in any part of the Empire there was a better equipped city from the musical point of view than Manchester, but the attendance at the orchestral concerts showed that even in Manchester two per cent. of the population was not an unfair estimate of the number of those who really loved music. With a view of encouraging the love of music, he suggested that the municipalities of the great cities should promote free orchestral concerts in all the wards of the city. Music was a fine antidote to much that disfigured society of all classes, and its more general development would be an uplifting and purifying influence in all directions. It would be good for the general body of orchestral players, thousands of whom were at present obliged to follow other avocations to help to keep themselves in decency and comfort, and it would be good, too, for the young composers, many of whom had no chance whatever of hearing their works played with the help of an efficient orchestra under present conditions.

The discussion showed some difference of opinion as to the advantages of municipal concerts from the point of view of the profession. Dr. Weekes complained that municipal concerts in Plymouth had lessened seriously the attendance at a series of concerts which he had himself conducted for a long time, and the proceeds of which were handed over to charitable purposes. The result was that he had had to cut down the orchestral band and the performances could not be given on so large a scale. If municipal concerts attracted poor people he would do all he could to promote their success, but his experience was that they were attended by the middle class, who could well afford to pay for their music themselves.

Mr. J. G. Halford, of Birmingham, was favourably disposed towards municipal concerts, but thought that a small charge should be made.

Dr. Coward, of Sheffield, whilst strongly opposed to a municipal orchestra, suggested that the Town Council might subsidise existing societies, on condition that a certain number of free seats were allotted at their concerts to people who could not afford to pay for admission.

Dr. Vincent, of London, thought the formation of municipal orchestras would help existing societies by bringing into the town trained orchestral members who would be able to give them assistance when required.

TRAMWAY TOPICS.

Bradford is Keenly Alive to the Importance of Tramways as a Civic Enterprise, and Many Lessons may be Learned of its Last Official Year's Doings. What the Belfast Ratepayers have Lost through Lack of Earlier Appreciation of Tramway Enterprise. The B.E.T. and Wednesbury.

THE year's working of the Bradford municipal tramways to 31st March last resulted in the healthy nett balance of £13,399 15s. 6d. But this is far from the most important item affecting the welfare, convenience, and pockets of the local ratepayers. The route length of the tramways worked by the Corporation has increased from 45 miles to 53—that is to say, in 53 miles of streets electric tramways are constructed, and a service is in daily operation. These extensions, in pursuance of previous policy, have been carried out without the aid of contractors, and, in the language of the Tramways Committee, "this work has again been executed by the department with very satisfactory results."

❦ ❦ ❦

Some Well-Tramwayed Cities.

IN view of these recent extensions, it is interesting to show what is the position of Bradford compared with some of the principal English cities. This is given in the Tramways Committee's annual report and accounts, dated August 31, 1904, just to hand, which is as follows:—

Town or City.	Miles.	City population.	Population per mile of tramway.		
Manchester..	79	No	com	parable	data.
Glasgow ...	70	781,000	(1)	11,157	(4)
Liverpool ...	57	710,337	(2(	12,062	(3)
Bradford ...	53½	279,767	(5)	5,180	(7)
Leeds ...	42½	443,599	(3)	10,437	(5)
Sheffield ...	32½	426,686	(4)	10,128	(2)
Newcastle ...	28	215,328	(7)	7,700	(6)
Nottingham	16	239,753	(6)	14,900	(1)

It will be noted that in point of ronte mileage Bradford is fourth, in popnlation fifth, in population per route mile of tramway seventh. The tramways serve a population of 324,000 (approximate), which includes 40,000 outside the city. It will, therefore, be seen, when comparing the population served by the passengers carried, that the tramways have carried the total popnlation 134 times during the twelve months. The car mileage has increased by 502,884 miles, and the receipts by £29,353. On April 30 last the department took over as a running concern the Shipley Tramways, by arrangement with the Shipley Urban District Council and the Mid-Yorkshire Tramways Company. Since that date these tramways have been in daily operation under the control of the committee with satisfactory results.

❦ ❦ ❦

Taking Care of the Cars.

A WORD or two as to the treatment of the 239 cars. Just 100 cars have been fitted with covered tops, and from the report these seem to have been appreciated by the travelling public. It is always to be remembered that there is a set-off against the cost of these car-tops by the increase of revenue they are likely to bring; and in Bradford, indeed, the expenditure is expected to be more than counterbalanced in this way. As in several other towns recently, the Corporation has decided to adopt steel tyres, after considerable experience with chilled iron wheels, and in this manner it is hoped to effect considerable saving in car maintenance and repairs. The committee rightly believes in having the cars in first-class condition, and during the financial year no less a sum than £28,526, or 1·48 per car mile, was spent in repairs, renewals, cleaning and inspection of rolling stock. The utility of life-guards is shown by the fact that in 63 cases where persons were knocked down, 56 were picked up safely by the life-guard, as against seven fatal cases.

❦ ❦ ❦

The Year in Figures.

TO accurately gauge the year's working a few figures must be given. The number of car miles covered was 4,546,942; estimated number of passengers carried, 39,639,414; average traffic revenue per car mile, 10·198d.; average total revenue per car mile, 10·421d.; traffic revenue, £193,206; total revenue, £197,437; working expenses, £137,932. The disposal of the nett balance was as follows:—Proportion of company's profits (final instalments), £10,482; transfer to reserve or renewals fund, £2,916 19s. 10d. The general manager of this successful undertaking is Mr. C. J. Spencer, A.M.I.E.E.

❦ ❦ ❦

The Belfast Purchase.

WE recorded last week the transfer of the undertaking of the Belfast Street Tramways to the Corporation, and gave some account of the relations between the company and the municipality to show that expropriation was the only possible solution of what had become a serious problem. What the citizens have lost by the neglect of the Council to enforce the recommendations of its own committee of inquiry in 1871 it is not now, of course, possible to estimate, but it is worth while showing what the loss mnst have approximately been during the last few years, if only to rub well home the lesson Belfast teaches to all supine cities which allow their street transportation services to become the prey of private monopolists. The following table shows the profit made by the Belfast Street Tramways Company during the past seven years, the dividend distributed on the ordinary share capital, and the rent, &c., paid to the Corporation:—

Year ended June 30.	Profit.	Rent, &c., paid to Corporation.		Dividend on Ordinary Shares.		
		Amount.	Proportion of profit.	Amount.	Ratio to capital.	Proportion of profit.
	£	£	%	£	%	%
1898	41,303	3,867	9½	18,450	7½	44¼
1899	42,736	3,867	9	18,450	7½	43¼
1900	41,428	3,850	9¼	18,450	7½	44½
1901	34,510	7,523	21¾	19,950	7½	57¾
1902	28,134	8,429	30	15,950	6	56¾
1903	31,034	8,404	27	14,630	5½	47¼
1904	32,278	8,962	27¾	14,630	5½	45½

The above table indicates pretty plainly how the lion's share of the profits went to the company. even the most subordinate class of proprietors getting more than the city even in recent years, when the leasing terms had been revised.

❦ ❦ ❦

What Might Have Been.

THE next table shows what profit wonld approximately have gone to the municipality had it owned the lines, and the poundage by which the rates could have been reduced:—

Year ended June 30.	Profit.	Estimated capital charges, &c.	Surplus available for reduction of rates.	
			Amount.	Equivalent rate.
£	£	£	£	d.
1898	41,303	25,000	16,303	3¾
1899	42,736	25,000	17,736	3¾
1900	41,428	25,000	16,428	3½
1901	34,510	25,000	9,510	2
1902	28,134	25,000	3,134	¾
1903	31,034	25,000	6,034	1
1904	32,278	25,000	7,278	1½

This estimate is worked out of the existing figures. Our knowledge of municipal working enables us to say that infinitely better resnlts wonld have been shown had the lines been operated by the Corporation from the start. To begin with, municipalities can work about 10 per cent. cheaper than companies, in spite of paying better wages and charging smaller fares, and it is pretty certain Belfast would never have allowed the public transportation service to deteriorate. The system would long ago have been electrified, and Belfast, whose population has increased 15 per cent. during the last seven years, would have found its tramways a fine revenue-raising concern. It will, undoubtedly, still find them profitable enough, but a much greater proportion of the earnings will have to go in meeting capital charges arising out of the heavy price that has had to be paid to get rid of the company.

❦ ❦ ❦

Free Passes Satire.

AS a satire on the decision of the Belfast Corporation to grant free passes to the members on the municipal tramways, a novel notice of motion has been given for the next meeting of the United Trades and Labour Council. The motion declares that the Corporation is altogether too modest, and that the resolution should be extended by granting free passes to all the municipal baths, and that a double grave plot should be allotted in Dundonald Cemetery, with a willow sapling from the local park placed at the head of it.

❦ ❦ ❦

Board of Trade and North London Conduit.

THE Board of Trade, after full consideration of all sides of the question which has long been in dispute, has approved the use of a slot not exceeding one inch in width, in connection with the underground conduit system for the electrification of the London County Council tramways in North London.

❦ ❦ ❦

South Lancashire Company and Leigh.

THE South Lancashire Tramway Company has notified the Leigh Corporation of its intention to promote a Bill in the next session of Parliament for the purpose of extending the time of the construction of some of its proposed tramways, and enable it to abandon and relinquish the construction of certain tramways authorised by its Act of 1900, within the borough of Leigh. Several lengths are now working.

Kaiser and Electric Trams.

THE question whether Potsdam is to have electric trams in place of its present antiquated service of horse trams has become one of almost national importance. The Kaiser, who has the last word in every matter concerning Potsdam, objects to electric overhead wires on the line connecting the town with the railway station which passes the town palace in which Frederick the Great was born. Not only would the architectural effect be spoilt, but the remains of the old linden tree in the middle of the road, round which people used to wait with petitions for the Great Frederick, would have to be removed. Consequently the Kaiser suggested a second bridge, well out of sight of the palace, and it is evident that Potsdam will have to build it. The Kaiser has promised that the State shall bear half the cost of the new bridge and approaches, but Potsdam's share will still be rather more than £30,000. Potsdam, as a community, is exceedingly poor, and a discussion is now going on whether the inhabitants ought to be mulcted in such a large sum merely to preserve a sentimental interest in a tree trunk incased in lime and held up by iron supports.

❦ ❦ ❦

B.E.T. Company and Wednesbury.

REPORTS have recently gained currency that the difficulties which some time ago led to the stoppage of the tramway service between Wednesbury and Darlaston and Wednesbury and Dudley had been in a great measnre overcome, and that there was a prospect of all outstanding questions between

the tramway company, now incorporated in the Birmingham and Midland Joint Committee, but still the B.E.T. Co., and any of the local authorities concerned, being adjusted without further loss of time. Inquiries, however, fail to show that so favourable a view of the situation is justified, and it is officially stated that the position is, to all intents and purposes, unchanged. The points at issue between the company and Wednesbury Town Council have made no further progress towards settlement.

❦ ❦ ❦

Questions at Issue.

IT is understood that the trouble all arises over a question as to whether the Corporation should purchase not only the tramways, but also the tramway depot. The latter is situated in the borough of Wednesbury, but the Corporation contends that it is only concerned in securing the control of the highways, and strong objection has been raised to an expenditure of some thousands of pounds for acquiring premises which, it is stated, might under certain conditions at some future time be, as far as the Corporation is concerned, of no possible utility. The tramway company, on the other hand, absolutely refuses to agree to the suggestion that the Corporation should lease it the tramways, but require it to buy the depot. The two things, it is pointed out, are part and parcel of the one undertaking, the depot being essential to the working of the tramways, and it is urged that it would be a most unreasonable position to have a division of ownership. Until this question has been satisfactorily adjusted there seems to be little prospect of the tramway line between Wednesbury and Darlaston being re-opened. Its closure has occasioned much inconvenience, it being the only means of communication between the two towns. An authoritative assurance is given that plans have been drawn up for relaying and re-equipping not only this but other lines in the Wednesbury district, whenever a settlement of the existing dispute is arrived at. For some time past negotiations between the two parties have been practically at a standstill, but it is understood that there is now a likelihood of their resumption with a better chance of the difficulty being solved.

❦ ❦ ❦

Tipton to Dudley.

AS regards the tramway through Tipton to Dudley, the B.E.T. Co. attributes its continued closure to the mining subsidences at Gospel Oak. No sane person, it is said, would expect the line to be re-equipped for traffic under existing circumstances; as at one point the road has recently had to be raised no less than 8ft., and the subsidences continue to such an extent that the company has been compelled to largely augment its staff in order to preserve the permanent way. The re-opening of this particular line in the immediate future therefore appears extremely improbable. There may be reason in these excuses, and there may not be. But it is a noticeable fact that a local authority which has anything to do with the Trust at some time or other comes in conflict with it. The wisest and best plan for municipal bodies to pursue is to have nothing to do with the B.E.T. Co.

❦ ❦ ❦

Warrington and Knutsford Scheme.

THE Runcorn Rural District Council has decided to oppose the Warrington to Knutsford light railway scheme unless the promoters make a deviation from their plan at Latchford Without, which, the Council contends, will make that railway of greater convenience to the public without lengthening the road.

STRETFORD'S ELECTRICITY.

A GROWING UNDERTAKING.

SO successful has the Stretford District Council been with its electricity undertaking that it is now taking advantage of a local Act of last year to extend the tramway system; to supply electric current outside the boundary of the township; and to undertake certain public duties inside the area of Trafford Park. The Council has extended the electrical generating station at Longford Bridge to double its capacity, and contemplates yet further additions. When opened little more than a year ago the electrical plant to carry the full estimated load was equal to 400 kilowatts on four dynamos of 100 kilowatts each. It soon became apparent that the plant was insufficient. The station was extended and a 400-kilowatt dynamo is now in course of erection. The Electricity Committee anticipates that the increased plant will be completed for use by the 1st of February.

Such a large addition has been necessitated by the fact that the station when opened had no stand-by plant, as the full load was required to meet the demand for lighting and traction purposes. With the increasing demand for electric current for private lighting purposes by the residents, the new provisions obtained by the Council, and the opening within a brief period of the tramway extensions at Old Trafford, the authority is justified in a capital outlay almost equal to the original cost. As negotiations are proceeding which may result in the Council undertaking the electric lighting of the streets in Trafford Park, a big increase in demand for current is anticipated. Prices charged are being revised, and a reduction is proposed of the flat rate from 6d. to 4½d. per unit. However, the committee desires to know the possible effect on the demand such a drop in price would create before committing itself.

FIRE EXTINCTION WHILE YOU WAIT.

THE "PERFECTION" CHEMICAL EXTINGUISHER.

HOWEVER good an invention may be, it has to be widely known to be appreciated. This is especially true of chemical fire extinguishers. The tendency is to rush to water as the only way of putting out a fire. But obviously water is not always to hand. In the country there may be miles of roads—perhaps muddy and slippery roads—to be traversed before a steam-engine is available. But even in cases where it is quickly available it is often questionable whether it does not cause as much damage as the fire it is used to check. Local authorities, who are responsible for so many million pounds worth of property, cannot afford to get behind the times in regard to fire extinction. A number of them are now ordering the "Perfection Chemical Fire Extinguisher." Amongst other local bodies that have seen the advantages of the new appliance and had it supplied, are:—Alverstocke Parish of Gosport, the Brighton Corporation, Eastbourne Corporation, Southampton Corporation, City of London Asylum Authority, Croydon Infirmary and Education Committee, Whitechapel Infirmary Authority, and Whitechapel Poor Law Guardians.

These extinguishers seems to be simple, effective, durable, economic and safe, and what more could be said? except that they are always ready, and cannot get out of order. The machines are made from heavy solid copper throughout, tested and guaranteed to stand a pressure of 300lb. per square inch. Highly polished, they are handsome in appearance, and being the result of many years of practical experience, embody the best features of all modern methods for extingnishing fire. It is said that they afford the cheapest method of protection from fire yet devised, and, as there are no cocks, gauges, couplings, or valves about them, it is absolutely impossible for the machine to get out of order. They can be operated instantly by any person who has never seen the machine before.

In case of fire, it appears that all that it is necessary to do is to turn the machine upside down, when you will immediately get a 50ft. stream of fire-destroying chemical fluid.

Particulars of this cheapest method of protection from fire—6d. is the cost of refilling a two-guinea extinguisher — may be obtained from Messrs. Frank Walker and Co., 27-28, King William Street, London, E.C.

PRIVATE BILLS IN PARLIAMENT.

THIS week the time expires for depositing in the Private Bill Office memorials alleging non-compliance with the Standing Orders of Parliament in the case of the first hundred Bills on the list of those to be promoted next session.

Five memorials were lodged. One was against the Metropolitan Electric Supply Company (various powers) Bill by the Willesden Urban District Council. The others were against the Mullingar, Kells, and Drogheda Railway Bill, by the Great Northern Company of Ireland; against the Wellingborough and District Tramroads and Electricity Supply Bill, by the Northamptonshire County Council; against the Hastings Tramways Bill, by the Bexhill Corporation; and against the Metropolitan Railway Bill, by the Willesden Urban District Council.

Among the Bills which will be unopposed at this preliminary stage are the following: Stepney Borough Council (Superannuation); Administrative County of London and District Electric Power Company; South Metropolitan Gas; Charing Cross and Strand Electric Supply Corporation (Power Supply); London County Council (Tramways); London Building Acts (Amendment); Metropolitan Pneumatic Dispatch Company; London United Tramways; East London and Lower Thames Electric Power; Thames Conservancy; London Port and Docks Commission; and the Central London Railway (New Lines).

MUNICIPAL ADVERTISING.

AT the last meeting of the Lowestoft Town Council a deputation from the Town Advertising Committee waited on the Council and asked it to make a grant to the Mayor in order that he might devote it to the purpose of advertising Lowestoft, a work which has been hitherto carried out by subscriptions from a comparatively few townsfolk, but which it was felt should be borne by the whole community. The question was referred to the General Purposes Committee. That committee met on Wednesday evening, and debated it at considerable length and with much warmth. In the end there were six members for the making of the grant and six against, so that the matter will come up again before the Council for decision. It is to be hoped the Council will see its way clear to make the grant, for other towns are advertising, and Lowestoft must not be behind.

CITY OF GLASGOW.

TOWN CLERKSHIP.

THE Corporation of Glasgow invite Applications for the office of TOWN CLERK of the City, which is about to become vacant through the resignation of the Subscriber.

The person appointed to the office, in addition to performing all the duties appertaining thereto at common law, under statute, or otherwise, will be required to act as law agent, parliamentary solicitor, clerk and secretary to the Corporation in relation to all the business of its various departments for the time being, including the general department, and the police, tramways, water, gas, electricity, city improvements, parks, markets, and telephone departments, and of all or any trusts, boards, or commissions, now existing, or which may hereafter be created in connection with the Corporation, or in which the Corporation may be interested.

The tenure of the office is now regulated by the provisions contained in Section 17 sub-section (1) of the Glasgow Corporation and Police Act, 1895. The salary (which will not be less than £1,500 per annum) to be paid to the Town Clerk in respect of the whole duties and services to be performed by him as above-mentioned, and the other terms and conditions upon which the office is to be held, will be such as may be mutually arranged and agreed upon between the Coporation and the person receiving the appointment, subject to the provisions of the said Act.

Sealed applications, marked on the outside "Town Clerkship," giving full particulars as to the experience and qualifications of the applicant, to be addressed to, and lodged with, the Subscriber on or before Tuesday, the 31st instant.

JAMES G. MONRO,
City Chambers, Glasgow. Town Clerk.
6th January 1905.

URBAN DISTRICT OF FINCHLEY.

ENGINEER'S AND SURVEYOR'S DEPARTMENT. JUNIOR CLERK.

THE Council invite applications for the above appointment, at a salary of £72 10s. per annum.

Candidates must be competent to assist in keeping the books and accounts of the department, and assist generally therein.

Preference will be given to applicants with experience in a municipal engineer's office, and with a knowledge of shorthand and typing.

Applications, endorsed "Junior Clerk," made on forms provided, which may be obtained from the undersigned, and accompanied by copies of not more than three recent testimonials, to reach me by not later than 5 p.m. on the 31st instant.

THE MUNICIPAL JOURNAL
ESTABLISHED AS "LONDON." THIRTEENTH YEAR OF ISSUE.

No. 625.—Vol. XIV. JANUARY 20, 1905.

SLUM REMOVING.

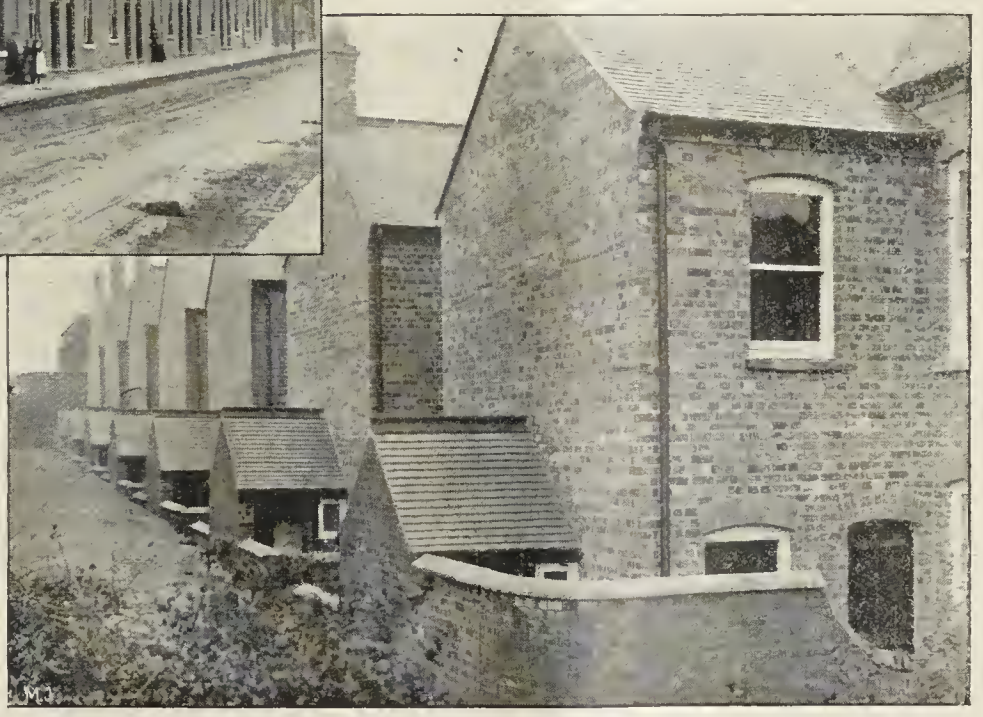
The City Council of Lichfield has Just Carried Out an Interesting Housing Scheme. Condemned Cottages Razed and New Workmen's Dwellings Erected. The Improvement will Cost Less than a Penny Rate and is Greatly Appreciated by the Citizens.

THE Town Council of the city of Lichfield has recently erected fourteen dwellings for persons of the working classes at a cost of about £4,900, and the scheme is one that contains some interesting features. On the site on which the dwellings have been erected formerly stood fourteen old cottages and buildings which were closed by order of the magistrates, the whole area being considered insanitary. These old houses were purchased by the Council — some by private treaty, others by public auction—and the remainder were acquired compulsorily under a Provisional Order obtained by the Council. The total cost was £1,600, for which the Local Government Board issued its sanction to the borrowing at interest by the Council, the money to be repaid with interest within eighty years.

LICHFIELD'S NEW COTTAGES.

The Council subsequently decided to pull down the buildings and erect fourteen cottages on the site in accordance with plans and specifications prepared by the city surveyor, Mr. Emerson Brooke, who estimated the cost, including removal of the old buildings, excavating soil, and building boundary wall, at £3,080 10s., the total area available being 1,232 square yards, i.e., 88 yards to each house, or nearly four times the size of the area of each of the old buildings. Application was accordingly made to the Local Government Board for sanction to borrow the further sum of £3,150 to complete the improvement scheme. The Local Government Board instructed one of its inspectors (Mr. H. P. Boulnois) to hold a public inquiry respecting the Council's application, to which no opposition was raised, and the plans were approved, and the necessary sanction was granted by the Local Government Board to borrow the money, the latter to be repaid with interest within 60 years from the date of the borrowing.

The Council advertised for tenders for erecting the cottages, ten being received. That of Mr. J. R. Deacon, builder, Lichfield (now trading as Deacon Brothers), amounting to £3,258 9s., was accepted by the Council in March last, and the work was immediately commenced, the whole of the houses being completed by the end of December, the time fixed by the contract. All the houses have since been let at rents of 5s. 6d. each, including rates, about thirty applications being received for the houses. The cottages present a good appearance, the rooms are admirably arranged, and the whole of the building operations have been satisfactorily carried out by the contractor under the superintendence of the city surveyor.



BACK VIEW.

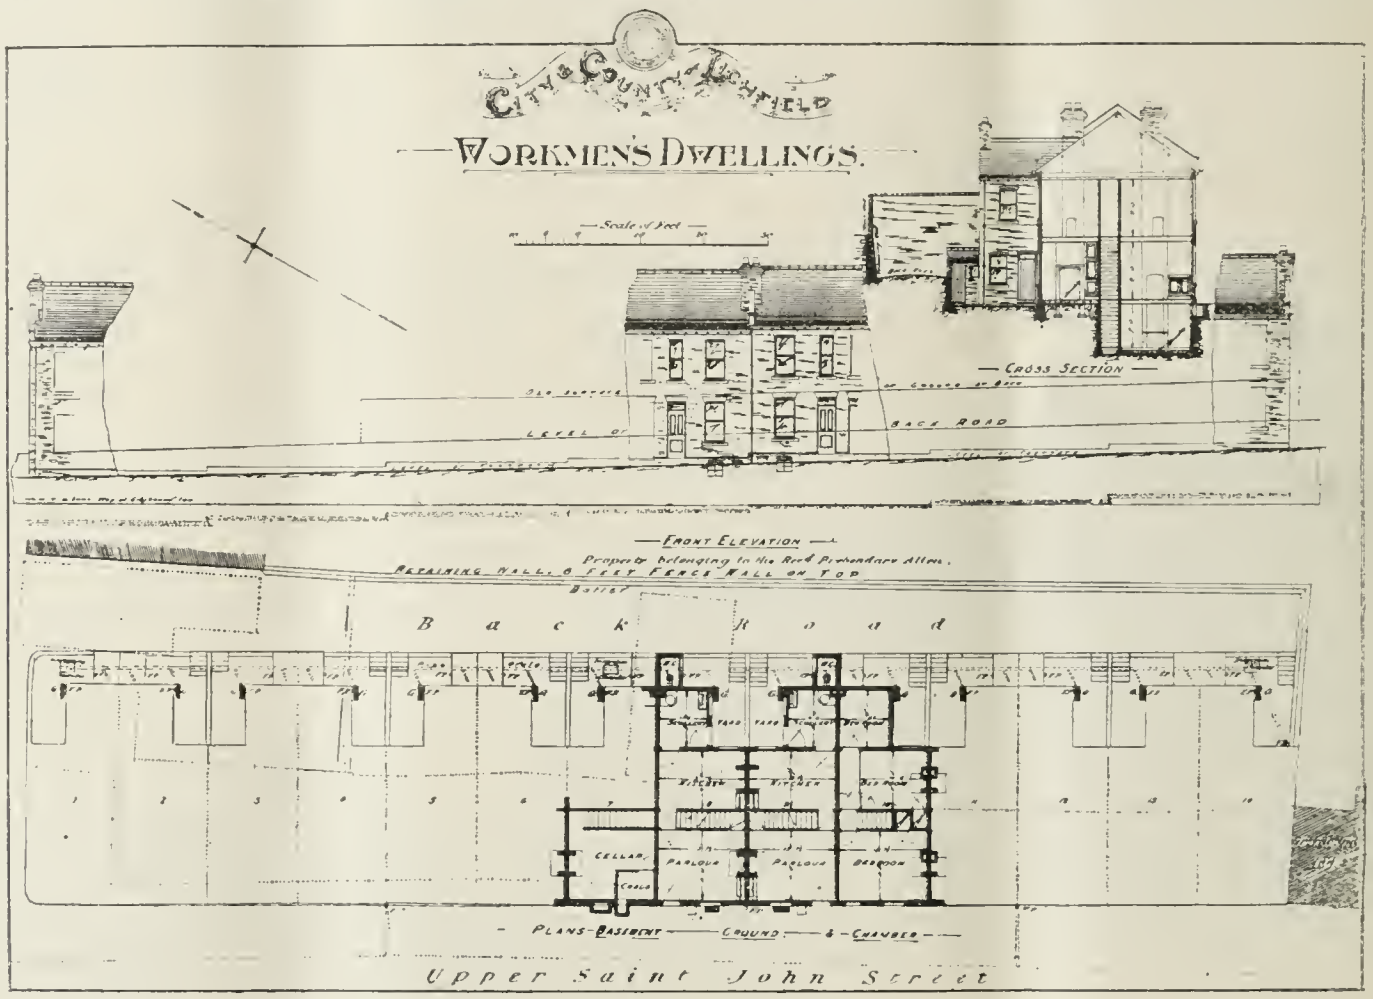
The improvement, which will involve an annual charge on the rates of less than 1d. in the £, is greatly appreciated, and the Council is to be commended in its efforts to improve the sanitary condition of the city.

The ground at the backs of the old houses belonging to another owner, joined up to, and was nearly as high as, the houses themselves; consequently the site has been an awkward one to deal with, requiring a considerable amount of excavation at the backs of the old houses for setting back the new ones, and forming a back road, which on one side has a retaining wall with

a 6ft.-high fence wall on top. This road, being on a somewhat higher level than the yards, is approached therefrom by steps; and the arrangement has considerably lessened the cost than if sunk to the level of the yards, and at the same time it maiutains a straight drive in from the lane.

Each house contains a cellar in the basement, divided for coals and keeping purposes. On the ground floor there are a parlour, 13ft. 7½in. by 11ft.; kitchen, 13ft. 7½in. by 9ft.; and scullery 9ft. by 7ft. 6in., whilst upstairs are three bed-rooms, front one 13ft. 7½in. by 11ft., and two others 10ft. 6in. by 9ft., and 9ft. by 7ft. 6in. respectively. Each house has a separate yard and au outside w.c. Gas and water have been laid on to each house.

The front walls of the houses are built in Leicestershire facing-bricks, with Hollington and York stone dressings; all other walls are in common red bricks; at the backs, windows and door heads and sills are built in best blue bricks. The roofs are covered with best brindled tiles, fiuished with red roll ridges. The kitchen floors are concreted and finished with a rendering of cement. Lichfield being noted as an "ancient aud loyal city," uaturally contains much old property, but quaint and picturesque, cousequently there is a good demand for the class of house of the above description.



HOUSING IN CANADA.

THE Department of Labour of Canada reports that a special investigation by the Department as to the supply of working class housing accommodation in Canadian cities shows that there is a pronounced scarcity of dwellings suitable for occupation by working people.

Out of 30 cities with more thau 10,000 inhabitants from each of which detailed reports were received, only six instances were recorded at which the obtaining of an adequate supply of houses of this class was not a more or less pressing problem.

The Ontario cities, particularly those within a radius of 70 or 80 miles of Toronto, were those in which the conditions were on the whole most unfavourable.

Accompanying this pronounced and general scarcity of houses, there has been a marked upward tendency in rentals during the past five years, the increase having ranged from 15 to 40 per cent., and in the great majority of cases, including Toronto and Montreal, and other of the larger industrial centres, rents are still increasing. Winnipeg perhaps furnishes the example of highest rents paid at present for working men's houses, a six-roomed dwelling with water in central location bringing from £5 4s. 2d. to £6 5s. a mouth, and four-roomed cottages without water in the outskirts being rented at £3 2s. 6d.

"BACK TO BACKS."

KEIGHLEY CORPORATION AND THE BUILDERS.

A CONFLICT has ariseu between the owners of real estate at Keighley aud the municipal authorities. The question at issue is whether or not back-to-back houses shall be raised withiu the borough boundaries. Prior to 1891 blocks of four back-to-back houses, with 10ft. open space at each end, were allowed under the bye-laws. In that year the Keighley Corporation went to Parliament for certain powers with respect to water, parks, and other matters. In granting these powers the Committee of the House of Commons imposed a condition that back-to-back houses should not be allowed in future, and amendments were accordingly made in the Corporation Bill. Since 1891 no back-to-back houses have been built except at each eud of large blocks of "through" houses.

Recently plans of "blocks of four" exclusively back-to-back houses, with 30ft. space at each end, were submitted to the Corporation, and it was contended by the architect that he had kept within the scope of the House of Commons amendments. The Corporation referred the question to the Local Government Board, which considered it necessary that the language of Regulation 23 of the building rules in the Keighley Act of 1872 should be further amended so as to make it clear that the open space must be at the rear aud not at the side of every dwelling-house.

The regulation provides that every building to be erected and used as a dwelling-house shall have in the rear or at one side thereof an open space exclusively belonging thereto. In order to keep faith with the House of Commons Committee, the Keighley Corporation applied for a Provisional Order with a view to eliminating from the regulation the words "or at one side thereof." These words, it was thought, might be reasonably construed as allowing the erectiou of back-to-back property, which would be contrary to the undertaking given by the Council on acquiring its Bill in 1891.

To take evidence for and against the issue of a Provisional Order, Mr. E. P. Burd, an inspector of the Local Government Board, sat at the Keighley Town Hall last week. After taking evidence, the inspector intimated that he would report to the Local Government Board.

ON Tuesday night a meeting took place between the representatives of the Sunderland Corporation, the Sunderland Rural District Council, and the parishes of Bishopwearmouth Without and Fulwell, in connection with the negotiations which are proceeding for the extension of the Sunderland borough boundaries. The matter will be considered by the parishes concerned, and a reply given in due course.

MUNICIPAL RESPONSIBILITY.

A Statesmanlike View of the Present Position of Civic Activity and a Plea for Larger Views. No Toleration of the Unfit. A Badly Governed Town as Great a Failure as a Badly Managed Business.

(By Mr. E. HOWARD, First Mayor of Bexhill.)

IT is as a living organism that a municipality must be regarded, each of its citizens a cell performing a useful function, or, as the government of our towns has been evolved by human experience, it may be likened to a great machine, each one of its citizens a part of its complicated mechanism—a cog, a wheel, a spring, a valve—working together in perfect unity. To get the very best out of our town life this thought of our inter-dependence on each other must be insisted on with more emphasis than it has been. It is for every citizen to feel that town government is a true democracy, that he has as much voice in its affairs as any other citizen, and that, having the power, he ought to accept the full share of his responsibility.

Now, with this idea in mind, what are some of the matters which open before us in the immediate and distant time as claiming our sympathy?

Firstly, the Poor Law must be stripped of some of its absurdities and terrors. National legislation will be necessary, but the impulse which will force it on must come from the councils and boards of guardians, which are brought face to face with the defects of our present system. It is not in the interests of a community that a man who is merely unfortunate in falling ill and losing work should be allowed to slide into the abyss. On grounds of economy alone, outside the humane tie which should bind the municipal organism together, there shonld be some machinery for substantial aid and rescue before absolute destitution commences. What we need is a widening out of the family bond into our official relations with the poor.

Some system of old age pensions, locally administered, will have to be devised. In any case the entire cost of keeping the poor falls upon the locality in which they reside. The only question is the best way of keeping them. We pension the policeman and the soldier long before they cease to be able-bodied, and I approve of granting a pension to them, but I can see no reason why other citizens who work harder than these public officials, who are paid less than these officials, and who make a greater contribution to the increment of capital than they do, should not have a stronger claim than they have to be provided for when old age overtakes them.

Municipal Control of Public Houses.

I look forward to the time, notwithstanding the recent amendments to the Licensing Acts, when the control of public-houses will pass into the hands of the municipal authorities. I am not an abstainer, and I have no personal feeling against the trade, but licences are granted for the benefit of the community—not the private enrichment of the publican and brewer; and public interest must in the end be paramount. Many public-houses are well conducted, but others are a curse and nuisance to a town, and the town authorities should have the absolute control over all licences within its area.

This would not mean prohibition, but it would probably mean the wiping out of many low drinking dens, which are now the fruitful sources of crime and poverty. I believe also that it would mean a revolution in the character of the public-houses. The dirty, stuffy, crowded taverns would make way for real houses of refreshment, decent, sanitary, and attractive, where a respectable citizen would not be ashamed to be seen with his wife and daughter. And some of these might well be under direct municipal control, in which the balance between the sale of intoxicating and non-intoxicating drinks would be at least evenly held.

Municipal Co-operation.

Municipal trading has been greatly abused and misrepresented, but it has taken firm root, and we may be certain that, greatly as it is developed in recent years, it will make even more rapid strides in the time to come. It is limited at present, and rightly limited I think, in this experimental stage to those things which are in universal demand, and which are, as a rule, supplied by monopolist private companies. The municipality rarely enters into competition with the private trader, but it covers ground which the capitalist would otherwise occupy—frequently with great profit to himself. The supply of water, gas, electric light, baths, and in cases where the accommodation is limited, the building of lodging-houses and workmen's dwellings afford the principal scope for corporate trading enterprise.

When we grasp in all its meaning the true communal ideal, the thought of the capitalist exploiting us individually for his private profit will be seen in its ludicrous nakedness. Most of the ferment against municipal trading comes from the large capitalists, who see that in course of time they will be shut out from what have heretofore been very profitable fields of investment, and that the community as capitalist in enterprises in which the community has supreme interests is a dangerous rival to private gain.

In the coming years, with fuller knowledge of the advantages which municipal co-operation offers, its area will be greatly extended. There is sure to be a great development in the provision of public baths and washhouses. Municipal pawn-shops, slaughter-houses, farms—utilising the town sewage—bakeries and dairies will, I believe, be almost universal in the next generation.

Causes of Municipal Adversity.

Your parsimonious town will be a town of mean streets and starved institutions, and no well-to-do people who stndy the comfort of themselves or their children will come near it. No successful community can in these days be organised on the lines of a home of limited means where all the work is done by an underpaid, over-wrought general servant. The aggregate community can obtain by co-operation in its public service a standard of comfort which would be impossible by any individual effort on the part of the poorest section. In this way the comfortable classes do, as they ought to do, bear their share in lessening the burden on townsmen of humble means.

What a town has to decide for itself under its powers of self-government is the class of establishment it is going to keep up. Is it to be the cook-general or a house-parlourmaid, or is it going to blossom forth into keeping a butler and a footman? The character of the municipal establishment will, to a large extent, fix the class of residents and visitors. The badly drained, badly lighted, badly governed town, whatever its natural advantages may be, will be as great a failure as your badly-managed business, and the responsibility for municipal adversity can usually be placed at the door of some insane desire to keep down the rates at a critical moment when some important public improvement is urgently needed.

Officials and their Salaries.

The town should be a model employer of labour, and by this I do not mean that excessive salaries and wages should be paid, but that a fair and full wage should be paid for a fair and full day's work. The public servant does his work in a fierce light of criticism that no private servant is subjected to. Fifty eyes are on him, fifty fault-finders are prepared to level criticism at him, and under these trying conditions only really competent men should be chosen to fill prominent positions. To get the best out of competent public servants, to keep them interested in their work, and their minds free from unsettlement, which would prompt them to look elsewhere for another appointment, they must be well paid. It is the greatest folly to have auy but the best men as public officials. They are often called upon to advise the municipal authority they serve upon matters involving the expenditure of thousands of pounds, and the advice of your cheap official is pretty expensive stuff to handle.

Relentless Administration.

We want more relentlessness in our administration. We want to think less of the jerry builder and more of the little children who are poisoned by defective drains; less of the damage to the reputation of the coal-dealer, who ought to be fined for giving short weight, and more of the poor people who are robbed by him; less of the interests of the butcher who sells diseased meat and more of the people who are condemned to eat it. And in those who control the workings of some of our councils there is too much toleration of the unfit—we have too many square pegs in round holes to get the best out of the machine.

There is always an inclination to give chairmanships and aldermanships to members who occupy prominent positions, and who are the best to do, instead of the best informed and most capable business men.

ENGLISH TECHNICAL EDUCATION.

EXPENDITURE BY LOCAL AUTHORITIES.

THE enormous amount of attention now being paid to technical instrnction by our local authorities is indicated by a Parliamentary Blue Book issued on Wednesday night dealing with the expenditure on technical education during 1902-3.

It states that the total amount thus expended in England and Wales during that period was £1,191,998 3s. This amount is exclusive of the sums allocated to intermediate and technical education under the Welsh Intermediate Education Act, 1889. The amonnt raised by loan on the security of the local rate under the Technical Instruction Acts was £149,665 1s. 6d., the amount of loans (so raised) outstanding was £1,159,941 11s. 7d., and the balance in hand of moneys received and allocated to technical instruction was £598,989 7s. 3d. The total amount of the residue received under the Local Taxation (Customs and Excise) Act by the councils of counties and county boroughs in England (excepting the county of Monmouth) in respect of the financial year 1902-3 was £879,405 5s. 4d., of which £840,253 3s. 4d. was appropriated to educational purposes, and £39,152 2s. to relief of rates, the latter sum including £22,366 11s. 9d. devoted by the London Connty Council to relief of rates. Of the 49 county councils 45 were applying the whole of the residne to technical education, and 3 a part of it to the same purpose. Of the councils of the 64 county boroughs, 61 were devoting the whole, and 3 a part of the residue to technical education.

Further, four county councils and the councils of 31 county boroughs, 101 boroughs, and 211 urban districts in England were making grants out of the rates under the Technical Instruction Acts; and 31 local anthorities were devoting funds to technical education out of the rate levied under the Public Libraries and Museums Acts. Thirty-three local authorities raised sums by loan on the security of the local rate under the Technical Instruction Acts. The total amount of the residue paid to the 13 county councils and the councils of the three county boroughs in Wales and Monmouth was £42,201. These local authorities were devoting the whole of it to intermediate and technical education, chiefly under the Welsh Intermediate Education Act, 1889. In addition, the councils of eight counties, three county boroughs, four boroughs, and eight urban districts were making grants out of the rates under the Technical Instruction Acts. The total amount expended on technical education under the Technical Instruction Acts during the year was £42,781 7s. 1d.

EDUCATIONAL NOTES.

School Holidays and Treats. A School in a Public House. Catching Teachers at Essex and East Riding. Scheme for a New Education Committee at Leeds. Lowestoft and Economy. Who is to Pay for Medical Certificates when Children Stay from School? To Municipalise Education in Scotland. No More Grants in Aid of Local Scholarships!

Bexhill.—It appears that many of the Voluntary schools were closed on the 1st November, because others were used as polling places for the municipal election. The Education Committee informed the managers that unless schools were wanted for election purposes they were not to be closed.

Birkenhead.—On the question of "fair wear and tear," under Sec. 7 of the Education Act, the Board of Education has notified the Education Committee that, speaking generally, and without prejudice, the Board, "as at present advised, is disposed to consider that the liability of the local education authority for 'fair wear and tear,' under Sec. 7 (1) (d) of the Act, extends to the use of any room, whether school-room, class-room, cloak-room, or lavatory inside the building, and does not extend to rooms outside the building, such, for instance, as a lavatory built on the playground."

Blackpool.—The Education Committee has decided to ask the authorities of the Sunday schools to confine their school trips during this year to the two weeks immediately succeeding the 20th June.

Cardiff.—The Education Committee agreed, for this year only, to pay the grant of £20 to the girls' intermediate school. The money was expended upon a Christmas party at the school.

Chatham.—The school attendance officer has reported to the Education Committee that a private school, at which 30 children attended, was conducted at a local beer house, and that he had visited the school on various occasions. The town clerk expressed the opinion that there was nothing illegal in conducting a private adventure school on licensed premises.

Darlington.—The Education Committee has decided to continue the existing arrangements respecting the payment and apportionment of school fees in fee-charging schools until the end of the present educational year.

Derby.—The Education Committee has accepted the offer of the Co-operative Society to award two scholarships at the municipal secondary school, each tenable for three years.

Dudley.—An intimation has been received from the Board of Education, confirming the proposals of the education authority with reference to the upper standard school, namely, that 25 per cent. of the places should be free, and, subject to this condition being made, the fee, annual, and aid grants would be paid on the whole of the scholars attending the school.

Essex.—The county scheme for the training of teachers includes the selection of several students from the secondary schools as pupil teachers. These will receive half-time education during their engagement at secondary schools free, plus travelling expenses, and the following scale of salaries:—Boys (16 years of age), first year £20, second year £22 10s.; girls (16 years), first year £17 10s., second year £20. Selected students must be apprenticed and undertake to serve the county as a teacher for two or four years after having qualified, according as the cost of their education at the secondary school has been wholly or partly borne by the county.

Grimsby.—The vexed question of "wear and tear" has been settled by the Education Committee by an analysis of what is usually needed, and by a specific allocation of work to be done by the education authority and the managers respectively.

Hertfordshire.—The Education Committee has considered the effect of the recent circular (No. 594) on secondary school scholarships. It was resolved to inform the Board of Education that a scholarship scheme had been approved, which involved the training of children intending to become pupil teachers, upon the basis that a grant in aid of scholarships would be continued, under Appendix C of the Secondary School Regulations, 1904.

Hull.—The Education Committee has decided not to allow Roman Catholic students wishing to become teachers to hold bursaries at the Roman Catholic secondary school.

Kent.—The officers of the Education Committee are, in future, to be allowed travelling expenses upon the following scale:—Secretary, 10s. 6d. per day, 21s. per day and night; assistant secretaries, inspector, accountant, and stores superintendent, 5s. and 15s.; other officials, 3s. 6d. and 12s. 6d.

Leeds.—As a result of the November elections, the Liberals, having been returned to power, are arranging for the drafting of a new scheme for the constitution of the Education Committee. The main difference is the entire abolition of the co-opted members, with the exception of the two ladies, whose places are statutorily governed. Instead of 36 members it is proposed to have only 23, 16 councillors, and the two women. The rest may be councillors or not.

London.—The Education Committee resumed its weekly meetings on Wednesday last, when members were confronted with an agenda paper of 180 pages. The County Council will meet, for the first time after the Christmas recess, on the 24th of this month.

Lowestoft.—In view of the increasing expenditure on education, the committee has given instructions for a scheme to be formulated, allocating a definite sum of money to each board of managers for the maintenance, in a state of efficiency, of the individual schools under its management.

Middlesex.—The Education Committee has sanctioned the holding of a course of lectures to teachers on Saturday mornings on the subject of school gardening. The lectures will be given at the County Gardens, Pymm's Park, Edmonton.

Northumberland.—The Education Committee has declined to approve the suggestion that it should defray the cost of medical certificates in the cases of those children absent from school on alleged sickness.

Plymouth.—The Education Committee wrote to the managers of the St. John's Schools stating that they were not complying with the Board of Education requirements in sending the children to church during school hours. The correspondent to the managers says that the children at the school were working under a time table signed by His Majesty's inspector, and that the time table provided distinctly for the children being taken to church.

Scottish Education.—A scheme to municipalise Scottish education, whereby the educational administrational machinery would be placed more directly under the burgh and county councils, thus superseding the school boards, is engaging the attention of a number of educationalists in Scotland, and is shortly to be brought before the Parliamentary Bills Committee of the Glasgow Town Council.

Secondary Schools.—The Board of Education, in its circular (No. 594) notifying the discontinuance of the grants in aid of local Science and Art scholarships on and after 1st January, 1906, caused a great deal of surprise, as many education authorities have been relying upon these grants in the details of their scholarships schemes. The funds which will be released by this decision are to be applied to other purposes in connection with secondary schools.

Somersetshire.—The Education Committee has decided that in those voluntary schools in which managers desire the children to attend service in a place of worship, they shall be required to furnish the County Education Committee with a list of the days which they desire to observe in this way, and that the managers shall be informed that permission will be granted not to open the schools on those days until 9.45 a.m.; provided (1) that the application be for not more than twelve times a year; (2) that it be made in the writing of all the managers; and (3) that a list of the said days be kept permanently and conspicuously affixed in the schoolroom of every school.

Walthamstow.—The Education Committee has given directions that, in future, head teachers are to send at once a copy of all entries in the school log-book which affect assistant teachers to the Committee on School Management, and also to the teacher concerned.

Yarmouth.—The Board of Education has approved the half-time instruction of boy pupil teachers at the grammar school, and the Education Committee is asking for a grant of £4 for each preparatory pupil (girl as well as boy) at the grammar school.

Yorks (East Riding).—The Education Committee is offering 20 scholarships for intending teachers. Every candidate must be under 14 years of age on Aug. 1 this year, and must sign a bond that he or she will become a pupil teacher under the Education Committee of the East Riding. The selected candidates will be sent to an approved secondary school for two years. Afterwards they will become pupil teachers to the education authority, and be attached to an elementary school in the East Riding area. No maintenance allowance is to be paid during attendance at the secondary school.

Yorks (West Riding).—The Education Committee has been considering the returns sent in by the managers showing the time devoted to all religious instruction, and to that distinctive of any particular denomination. It was agreed to make deductions from the head teachers' salaries only, and it was reported that the number of cases was 214, and the total amount of deduction being £983 6s.

NATIONALISATION OF EDUCATION.

A RATEPAYERS' LEAGUE FOUNDED.

AN event of unusual educational interest occurred on Friday evening last, when at a conference of metropolitan ratepayers' associations (adjourned from the 4th November last), held in Toynbee Hall, E.C., it was unanimously resolved to found a national "Ratepayers' League for the Nationalisation of Education."

The chief underlying motive is to bring about the transfer of the cost of education from local authorities to the national exchequer, on the ground that the present incidence of the rate is both unfair and a serious bar to the establishment of that efficient, co-ordinate system of national education demanded by educational experts. Preston and similar towns are held up as examples of this unfairness, for while the levy there is less than a penny in the £, in many districts, particularly round London, it is as high as 3s., and still rapidly mounting. It may be stated that the average rate for the whole country is 1s. 1d.

At the meeting referred to, a provisional committee was appointed to secure the most eminent gentlemen possible as officers, draft the rules, and generally prepare for an intended active propaganda throughout the country. The committee is constituted of two representatives from each ratepayers' association joining the league, under the chairmanship of Mr. G. T. Wood, the chairman of the East Ham Ratepayers' Association, in which borough the movement originated. One of its most ardent adherents is the Ilford Ratepayers' Association.

THE Manchester City Council has appointed a special committee to inquire into the question of the establishment of a municipal works department, under which Corporation enterprises may be carried out directly by the Council, instead of under contract.

QUERIES AND ANSWERS RE SMALL LOANS.

Name of Borough.	Do you borrow money on loan in sums less than £100?	What is the minimum sum and in what multiple?	What form of security do you give?	Have you special powers in this respect?	What rate of interest do you give?
Ashton-under-Lyne	Yes.	£50, or any sum over.	A proper stamped bond.	No.	Half per cent. less than the rate paid for £100 and upwards.
Blackpool	Occasionally.	Not fixed.	Mortgage.	No.	3 per cent. to 3¼ per cent.
Birmingham	Yes.	£10, limit for one person £50.	Modified mortgage.	Authorised by Act of 1883. I am not aware that special powers are necessary.	3 per cent.
Bootle	Yes.	£50, and multiples of £5.	Mortgage, if stamp duty is paid by lender; otherwise a receipt.	No.	3 per cent. for past two years.
Bolton	Yes.	£20 and upwards.	Deposit receipt with 6d. stamp.	No.	3 per cent. to 3¼ per cent.
Colne	Yes.	£10, and multiples of £10.	Deposit note or receipt with 6d. stamp.	No.	3 per cent.
Croydon	Yes.	£10, or any sum over that amount.	Mortgage.	Usual statutory.	3 p.c. until Sept. 29, 1904; after that date, until further notice, 3½ p.c.
Darlington	Yes.	£50.	Ordinary mortgage.	No.	3½ per cent.
Devonport	Yes.	£10, and multiples of £10.	Deposit note.	No.	3 per cent.
Heywood	Yes.	£10, and multiples of £10.	Receipt bearing 1d. stamp	No.	3 per cent. free of income tax.
Middleton	Yes.	£10, and multiples of £10.	Deposit note bearing 1d. stamp.	No.	3 per cent. free of income tax.
St. Helens	Yes.	£20, and in multiples of £10.	Deposit note.	No.	3 per cent. up to £1,000, and 3¼ per cent. over £1,000.
South Shields	Yes.	Any sum from £50	Ordinary mortgage.	No.	3½ per cent.
Stoke-upon-Trent	Yes.	£10, and multiples of £10.	Deposit note.	No.	3 per cent.
Southampton	Yes.	Minimum £20. Maximum £90.	Deposit note bearing 6d. stamp.	No.	3 per cent.
Sunderland	Very rarely.	£50.	Mortgage bond at six months' notice.	No.	3½ per cent.
Warrington	Yes.	£50, and in multiples of £10.	Usual form of mortgage.	No.	3¼ per cent.
West Hartlepool	Yes.	£10 and upwards.	Deposit receipt until the amount reaches £50, when we issue mortgage bond.	No.	3 per cent. to 3½ per cent., according to market conditions.
York	Yes.	£50, and in multiples of £10.	Mortgage deed.	No.	3½ per cent.

Name of Borough.	How and when do you pay the interest?	What is the total amount raised in sums of less than £100?	Do you require additional staff, or is there any additional cost?	Do you consider the result worth the expense and trouble?
Ashton-under-Lyne	By cheque, June 24, and December 24.	£2.232.	No, except stamps for cheques and postage.	No, the result has not come up to expectations.
Blackpool	Half-yearly.	£500.	No.	No.
Birmingham	In cash over the counter. On the anniversary of date of issue, and on production of mortgage for endorsement.	£159.190, of which £54,000 is now outstanding.	More work is involved than is the case with ordinary mortgages.	No.
Bootle	Half-yearly.	—	No.	Yes.
Bolton	Half-yearly.	About £50,000.	No.	Yes, certainly.
Colne	By cheque, April 1 and October 1.	About £6,000.	Not so far, except books and stationery, &c.	Doubtful.
Croydon	By cheque half-yearly.	£596.	No.	Depends entirely on local circumstances.
Darlington	By cheque half-yearly.	A few thousand pounds.	No.	Yes.
Devonport	Yearly.	Scheme only been in operation about two months. Results very satisfactory		Yes.
Heywood	Ordinary warrant, half-yearly.	£600.	Not at present.	Not unless you can raise a large amount.
Middleton	By cheque half-yearly.	£790 since last April.	Not at present.	No.
St. Helens	Half-yearly.	£2,180.	No, except books, &c.	Not under ordinary conditions.
South Shields	By cheque half-yearly.	£4,000.	No.	Yes.
Stoke-upon-Trent	By interest warrants half-yearly.	£1,100.	No.	Not unless a Corporation can obtain Statutory Powers to become a Municipal Savings Bank.
Southampton	By cheque half-yearly.	£135.	No.	No.
Sunderland	Half-yearly.	About £1,500.	Not at present.	No.
Warrington	Half-yearly.	£590.	No.	The experience has been so limited that the expense and trouble have not been felt.
West Hartlepool	Half-yearly.	£2.650.	No.	No.
York	By dividend warrant half-yearly.	Less than £1,000.	No.	Not much trouble, but a convenience to small lenders.

The following boroughs have the subject under consideration:—

Derby, Dudley, Gateshead, Halifax, Huddersfield, Lincoln, Sheffield, Wolverhampton

The boroughs named hereunder have not received loans of less than £100:—

Accrington, Barrow-in-Burness, Bath, Batley, Blackburn, Bradford, Belfast, Birkenhead, Brighton, Bristol, Bournemouth, Burnley, Burton-on-Trent, Carlisle, Cambridge, Chester, Crewe, Darwen, Dewsbury, Eastbourne, East Ham, Eccles, Gloucester, Hanley, Hastings, Harrogate, Hereford, Kingston-on-Hull, Lancaster, Leamington Spa, Leicester, Leeds, Liverpool, Manchester, Middlesbrough, Mossley, Newcastle-on-Tyne, Nelson, Northampton, Norwich, Nottingham, Oldham, Oxford, Preston, Portsmouth, Reading, Richmond, Rochdale, Salford, Scarborough, Stalybridge, Stockport, Southport, Wallasey, West Bromwich, Wednesbury, West Ham, Whitehaven, Wigan, Widnes, Worcester, Yarmouth

Borough Treasurer's Office, Bury.
1st November, 1904.

OFFICIAL & PERSONAL.

BURNLEY TOWN CLERKSHIP.

LAST week the General Purposes Committee of the Burnley Corporation considered the applications for the vacant town clerkship, and selected the following six candidates for further consideration:—

Mr. E. Cooper, solicitor, Blackburn.
Mr. J. W. Halloran, deputy town clerk of Chatham.
Mr. Leonard Hewlett, senior, solicitor, Town Hall, Leeds.
Mr. H. L. Parry, assistant solicitor to the West Riding County Council.
Mr. P. Thomas, town clerk of Leigh; and
Mr. Alfred Varley, town clerk of Colne.

The salary is £700 a year, rising to £900. On Wednesday evening the number was reduced to three—Messrs. Cooper, Parry, and Thomas. The application of Mr. Henry Craven, chief assistant solicitor to the Sheffield Corporation, which arrived late, was also considered.

HORNCASTLE U.D.C. CLERK.

THE Horncastle Urban Council has appointed Mr. R. W. Clitherow, solicitor, Horncastle, as clerk, at a salary of £100 per year, in the place of Mr. H. Tweed, resigned.

FIFTY YEARS OF SERVICE.

MR. H. C. OVERALL, the principal clerk in the Town Clerk's office at the Guildhall, completed on Sunday 50 years' service under the Corporation of the City of London. Mr. Overall is now in his 67th year, but he is hale and hearty, and has no thought of relinquishing the work with which he has been associated since he ceased to be a student at Christ's Hospital, and joined the staff of Serjeant Merewether, then town clerk at the Guildhall.

FREEDOM OF EDINBURGH FOR A LADY.

THE Town Council of Edinburgh on Tuesday considered a special report recommending that the freedom of the city be conferred on certain persons for their "eminent services." It is noteworthy that the list includes a lady—Miss Stevenson, chairman of the city's School Board. The following is the full list:—

H.R.H. the Duke of Connaught.
Lord Reay.
Lord Young, of the Second Division of the Court of Session.
Right Hon. A. J. Balfour.
Miss Flora Stevenson, chairman of the Edinburgh School Board.

The Lord Provost formally moved approval of the recommendations, which, seconded by the senior magistrate, were unanimously adopted.

LORD MONKSWELL'S PORTRAIT.

THE portrait of Lord Monkswell, who was chairman of the London County Council for the year 1903-4, will be presented at the County Hall, Spring Gardens, on Tuesday next, at 2 p.m., by his colleagues, the members of the Council, who, in accordance with their usual custom, have subscribed for the portrait. The portrait is by the Hon. John Collier.

NEW OXFORD MAYOR.

OXFORD City Council on Tuesday elected a mayor to succeed the late Mr. Thomas William Taphouse, the unanimous choice falling upon Alderman Buckill, who has filled the office on three previous occasions.

THE Lords Commissioners of His Majesty's Treasury have just selected Mr. Fred J. Warren (Incorporated Accountant), Borough Accountant, Haverfordwest, to act as a Public Auditor for the purposes of the Friendly Societies' Act, 1896 (59 and 60 Vict., cap. 25), and of the Industrial and Provident Societies' Act, 1893 (56 and 57 Vict., cap. 39).

MAIDSTONE'S NEW TOWN CLERK.

MR. STEPHEN LANCELOT MONCKTON, cousin of the late Sir John Monckton (town clerk of London) has just been appointed town clerk of Maidstone at a salary of £1,000 a year. Out of this sum the new town clerk is to find all offices and staff, but he is at liberty to engage in private practice. Mr. Monckton was educated at Charterhouse, and afterward became a member of the firm of Monckton and Son. For 20 years he has been clerk to the old Maidstone School Board, and for 15 years has acted as deputy town clerk. He was also clerk to the Education Committee, the salary for which appointment—£150 a year—still continues.

DEWSBURY TOWN CLERK'S SALARY.

THE Dewsbury General Purposes Committee had before it on Tuesday an application from the town clerk (Mr. H. Ellis) for an increase of salary. His gross salary is £500 a year, £150 of which comes from his clerkship of the Dewsbury and Heckmondwike Waterworks and the Dewsbury Joint Hospital Board.

It was proposed that the application be adjourned for 12 months, and to that an amendment was moved that an advance of £50 per year be granted. The latter only received three votes, the rest of the committee holding up their hands against it. For the motion about half the members voted, and none against.

THE SCARBOROUGH MEDICAL OFFICERSHIP.

OUT of 43 applicants for the post of Medical Officer of Health for Scarborough, in succession to Dr. F. Dittmar, the following five candidates have been selected to appear before the Sanitary and Lighting Committee to-night (Friday):—

Dr. Duncan Forbes, assistant medical officer of health of Manchester.
Dr. John Knight, assistant medical officer of health of Glasgow.
Dr. J. Spencer Low, medical officer of health of Dewsbury.
Dr. Arthur E. Porter, assistant medical officer of health of Leeds.
Dr. C. Grant Pugh, of London, assistant medical officer of health at the Park Fever Hospital.

The commencing salary of the new medical officer of health will be £350 per annum, increasing by £25 per annum to £400 per annum.

PRESENTATION TO MR. R. H. S. BUTTERWORTH.

MR. R. H. SMETHURST BUTTERWORTH, clerk and solicitor to the Wimbledon Urban District Council, who has resigned his position to practise as a Parliamentary agent (firm, Messrs. Lees and Butterworth, of 87, Palace Chambers, Bridge Street, Westminster), was last (Thursday) evening presented by his colleagues with an illuminated address and service of plate, as a token of their esteem and regard.

The presentation was made by Dr. Evelyn Pocklington, the medical officer of health for the district.

PURITY OF FLOCK BEDS.

THE Home Office is taking up the important subject of the purity of flock beds. At the last meeting of the Health Committee of Glasgow Corporation the town clerk read a letter from the Chief Inspector of Factories to the secretary of that Board, stating that so far the process had not been treated as a dangerous trade, but that in 1897 a departmental committee had gone somewhat fully into the question; that since that date improvements had been effected. The real evil, however, as was subsequently pointed out, arises from the dissemination among the public throughout the country of common flock for bedding and stuffing without the same having been previously washed or disinfected.

SCHOOLS AS SOCIAL CENTRES.

INTERESTING PROPOSAL AT SUNDERLAND.

COUNCILLOR S. M. SWAN is inducing the Sunderland Education Committee to consider the question of utilising the public schools in the evenings as social centres. The idea has been referred to in our columns on more than one occasion, and it is encouraging to see that opinion in its favour is growing.

As some of our readers are aware, a scheme of the kind suggested has already been carried out at Glasgow by the Scottish Christian Social Union, which has for some time been allowed the use of the public schools for this purpose. The work is educational as well as recreative. In each school there is a large room used as a recreation, reading, and smoking room, while smaller class-rooms are used for carrying on the educational part of the work.

A men's club is carried on in these rooms, for the use of which the school authorities make a charge of 15s. per week, 7s. 6d. of which goes to the caretaker for his extra work, the remainder covering the cost of lighting and extra cleaning. To furnish a centre with two billiard tables (half-sized ones were used in this case), bagatelle table, draughts, chess, and dominoes an initial outlay was made of about £50.

At Glasgow it was found that after this was done, where there was a membership of 80 or over, the centre became self-supporting. Two billiard tables yield a revenue of at least 12s. a week (the charge varying from 2d. to 3d. per table for half-an-hour); the subscriptions from 80 members—6d. per month—yield, say, 10s. per week, and an extra shilling or two is generally received from visitors charged at 1d. per visit, while, where successful, Saturday or other evening entertainments are given at a charge of 1d., and an additional income has been secured.

Apart from the 15s. paid to the School Board, the outlay is mostly for newspapers, books, and magazines, the supply of which is largely regulated by the financial and numerical strength of the centre. The education authorities at Glasgow encourage the educational work by undertaking to provide a teacher for any class if not fewer than 12 members enrol. In addition to club membership fees, students pay 1s. per session for one class, 2s. for two classes, and 2s. 6d. for three or more classes; in the last two cases the fee being returned at the end of the session if 90 per cent. of attendances have been made.

Clubs for girls over 15 years of age have also been formed, the fee being 3d. per month, and they are taught sewing, cooking, &c., without extra payment. There are also children's guilds of play, meeting for two hours once a week, and these are also very successfully carried on. Indeed, so successful has been the work in Glasgow that it has been necessary to have an office and paid officials to carry it on. In Nottingham work of a like character is in operation in the public schools, while at Birmingham the use of the schools has been granted, although the work is not yet in progress in them.

Councillor Swan's idea is to make a start in the East End of Sunderland. The cost would be small, and an arrangement might be made for the Education Committee and the Library Committee to defray it, although the cost of equipment might be met by private subscription.

At present in the East End no provision of this kind is made for the people, and the young men can only lounge about the street corners. The cry is, "Close the public-houses," but, says Councillor Swan, until reformers are prepared to provide places for the working men they have no right to close the public-houses, because they are the only places the working men have in many districts. The schools are public buildings and belong to the ratepayers, and if the use of them were granted in the way indicated a most valuable and beneficial work could be carried on.

NOTES AND ANSWERS.

To What Extent Poor Law Guardians may Help the Unemployed. A Justice of the Peace with an Off-Grocer's Licence Cannot Act as a Justice or Preside at the Annual Licensing Session of the Borough. A Councillor and the Advance of Money to his Council. Recovering a General District Rate.

605.—FACTORY ACT, 1901.—Would you kindly answer me the following questions in your valuable paper?—

(1) Does the Factory Act compel all weaving sheds, spinning mills, foundries, or any other workshop to have a drinking supply fitted up?

(2) If not, what steps can my manager take if workpeople are caught carrying water into the workshop?

(3) Can proceedings be taken against the firms which own the premises, or can proceedings be taken against the persons taking the water and the persons whom they have got the water from?—"J. H. W."

(1) There does not appear to be any provision in the Factory Act, 1901, which would require drinking water to be supplied in any of the premises or "factories" specified in this query. A "suitable sanitary drink" is required by the "special rules" applicable to dangerous processes such as lead works, but these would not apply to weaving sheds and such like.

(2) If the local water Act in force embodies, as is usual, the provisions of the Waterworks Clauses Act, 1863, the provisions of Sec. 20 of that Act may be put in force to prevent the unauthorised use of water without any agreement. That section lays down, that, if any person not being supplied with water by the undertakers (that is, the company or the local authority, as the case may be), takes or uses any water from any reservoir, conduit, pipe, &c., containing water belonging to the undertakers, or supplied by them for the use of any consumer, he shall be liable for every such offence to a penalty not exceeding £5.

Water so supplied, and standing in a consumer's pipes, may be the subject of larceny at common law ["Ferens v. O'Brien, 11 Q.B.D. 21 (1883)].

(3) In this case, the provisions of Sec. 18 of the Act above referred to would seem to apply. It is there laid down, in effect, that any person having a supply of water from the undertakers, who uses such supply for purposes other than those provided for in the agreement, shall be liable to a penalty of £2. If, however, the unauthorised use of water by the factory hands and employees is not large in amount, it seems to us that the offence would be regarded as merely nominal, and that probably no penalty would be imposed.

606.—POOR LAW—Power of Guardians to Find Work for the Unemployed.—Will you please inform me through your paper whether the law, as laid down in the following paragraph, has ever been repealed, or quashed, or is it still operative? The point is, are the guardians compelled to find employment for the able-bodied unemployed?—"Mandate issued in 1694 addressed to the overseers of the poor and to the churchwardens for the setting to work of all the poor within your parishes. By virtue of the statute made in the three-and-fortieth year of the reign of our late Sovereign Lady Queen Elizabeth for the relief of the poor: These are to will and require you, whose names are here underwritten, that you, together with the churchwardens of your parish for the time being, do according to the same statute, take order from time to time (for this year to come) for the setting to work all the poor within your parish (as well married as unmarried) that are able to work, and have no means to maintain themselves, nor use no ordinary and daily trade of life to get their living by. And also for the placing out as apprentices all such children within your said parish as are fit to be put forth, whose parents are not able to keep and maintain them. And also for the raising of a convenient stock of flax, hemp, wool, thread, iron, and other necessary ware and stuff in your said parish for that purpose; and also for the providing of necessary relief for all such poor within your said parish, as are lame, old, blind, impotent, and unable to work, wherein if you be found negligent, or shall fail to meet once a month to confer together for the purpose aforesaid, then you are to forfeit 20s. apiece for every month that you shall be found remiss or careless therein. And therefore see that you fail not in these premises at your peril."—"GUARDIAN."

The above "mandate" is based on the famous Poor Relief Act of Queen Elizabeth's reign (43 Eliz., c. 2). The law as here laid down has never been expressly repealed. But it has been practically modified in such an extensive fashion by later statutes and by regulations of the Poor Law Board and the Local Government Board, made pursuant to statutory authority, that the above provisions, except so far as they relate to the old and impotent, and to apprenticing poor children, must be considered as largely obsolete.

Sec. 52 of the Poor Law Amendment Act, 1834, enacts that the relief given to able-bodied paupers and their families out of the workhouse is to be given according to the rules and regulations of the Poor Law Commissioners (now the Local Government Board), and that relief given contrary to such rules and regulations is to be disallowed. The rules so made are very stringent as to the conditions under which outdoor relief shall be given to able-bodied persons. There are two codes of rules in force respecting relief outside the workhouse. The Outdoor Relief Prohibitory Order of 1844 is in force, speaking generally, in rural unions. It practically prohibits outdoor relief, except in cases of "sudden and urgent necessity" and of sickness, also except in a few other cases. The Outdoor Relief Regulation Order of 1852, which applies to a considerable number of urban unions, permits, but regulates, out-door relief in the unions in which it is in force. One-half of such relief must be given in kind, and no relief must be given to any able-bodied male person while he is employed for wages. Every able-bodied male person relieved outside the workhouse must be set to work. The task of work prescribed must be reported to the L.G.B., and must be discontinued if that Board so require.

In cases of exceptional distress in those unions where the Prohibitory Order of 1844 is in force, the L.G.B. has from time to time issued or applied a General Outdoor Relief Test Order, under which the able-bodied poor may be set to work as provided for by the Order of 1852 above mentioned.

607.—JUSTICE OF PEACE—Interested in Grocer's Licence—Disqualified for Acting at Licensing Sessions?—Will you kindly answer the following question in your next issue? I am chief magistrate of a borough town, and hold an off-grocer's licence. Am I in consequence disqualified from presiding at the annual licensing sessions?—"K."

It is clear from the terms of Sec. 60 of the Licensing Act, 1872, that our correspondent is precluded from acting as a justice or presiding at the annual licensing sessions of the borough. That section provides that "no justice shall act for any purposes" under this Act, or under any of the Intoxicating Liquor Licensing Acts—except in cases of charges for drunkenness and such like—who is, or is in partnership with, or holds any share in any company which is a common brewer, distiller, maker of malt for sale, or *retailer* of malt, or of any intoxicating liquor in the licensing district, or in the district or districts adjoining that in which such justice usually acts. The penalty for infringing this enactment is a fine of £100, recoverable by action. If, however, a justice so disqualified sits and takes part in decisions, the proceedings would not be invalid unless it were shown that an actual bias existed.

608.—RECOVERY OF GENERAL DISTRICT RATE Pending Appeal against Assessment.—A. B.'s assessment has been increased from £40 last year to £45 this year. He has appealed against the increased assessment.

(a) Is the collector justified in accepting payment of rates on the old assessment pending the hearing and determination of A. B.'s appeal?

(b) If so, and a period of more than six months elapses between the service of the demand note and the hearing and determination of the appeal, and the assessment is not reduced, can proceedings be instituted against A. B. for recovery of the balance of the rate?

(c) If the collector, on the other hand, is not, in your opinion, justified in accepting payment of rates on the prior assessment, what construction must be placed upon the latter part of Sec. 2 of the Poor Rate Act, 1801, especially as to the phrase "last effective rate?"—"TUDOR."

Sec. 2 of the Poor Rate Act, 1801, provides that notice of appeal against a poor rate by any person rated shall not operate to prevent the rate being levied and recovered by distress, but that until the appeal has been determined no proceedings shall be commenced against such person to recover any greater sum than he shall have been rated to in the "last effective rate." It seems clear that under this provision the collector may accept payment of a portion of the rate demanded equal to that paid under the last preceding rate which has not been appealed against, but that a demand cannot legally be made of the full amount which the appellant has been rated in the last rate. Therefore it would appear that the remedies for the recovery of the balance are not interfered with, nor does time run against the collecting authorities by reason of the acceptance of the amount paid on the basis of the "last effective rate."

This Act applies to the poor rate, and does not appear to govern the collection of the general district rate, which is that referred to by our correspondent.

Dealing with the queries in order—

(a) It seems to us very doubtful whether the collector can safely accept anything less than the full rate demanded, without the risk of finding himself legally precluded, by the lapse of time, from recovering the balance, when (as may happen) the appeal has been decided in favour of the larger amount of assessment.

(b) Proceedings for the recovery of the general district rate must be taken within six months of the demand, by virtue of Sec. 251 of the Public Health Act, 1875, and Sec. 11 of the Summary Jurisdiction Act, 1848, and, as indicated above, it would seem that such proceedings cannot be taken beyond this period, even where the rate demanded is the subject of appeal.

(c) This question does not now arise, having regard to the first paragraph of our reply.

609. — COUNCILLORS PECUNIARILY INTERESTED IN QESTION BEFORE THE COUNCIL—Query No. 587—Urban District Councils.—Re Query No. 587. Will you please inform me if the same applies to urban district councils. The reason I ask this is that our district council is about to replace street lighting by gas by electricity; both are by private companies, two of the councillors are interested in the gas company, and both have been allowed to take part in the discussions, but have not been allowed to vote; but according to your interpretation of the law they were wrong even in discussing it. Why they have been allowed to speak on this question is because the law clerk to the council has interpreted the law to the effect that they can speak and discuss the question, but cannot vote. That means, of course, that by their speaking they can probably influence other members.—"C. B."

We explained, in reply to the query referred to, the law relating to town councillors interested pecuniarily in a contract with their council, so far as the taking part in or voting on any discussion affecting the matter in which they were interested was concerned. The law relating to district councillors is different. Sec. 46 (2) (c) of the Local Government Act, 1894, provides that a person shall not vote at any meeting of the council on any question in which any joint stock company of which he may be a shareholder is interested, but that in the case of a water company or other company established for the carrying

on of works [of a like pnblic natnre (and, no doubt, this wonld inclnde gas and electric light companies), this prohibition may be dispensed with by the connty conncil. The penalty for voting when prohibited under this section is a fine of £20. There would appear, however, to be no provision or regulation which would prevent the district councillors referred to from taking part in the discussion on the gas and electric light question. But clearly it is inexpedient that they should do so, and it seems to us that councillors who value their reputations and are keen on keeping their councils free from suspicion of ulterior motives, will abstain from discussing questions in which they are directly or indirectly interested from a pecuniary point of view.

610.—**CAN A COUNCILLOR ADVANCE MONEY TO HIS COUNCIL?**—Would it be legal to advance money to a Council? If not, kindly quote Acts.—"S. X."

Generally speaking, interest in a contract disqualifies a borough councillor for office as snch, but in this case an express statutory exemption exists. Sec. 12 (2) (b) of the Municipal Corporations Act, 1882, provides that a councillor shall not be disqualified for office by reason only of his having any share or interest in any agreement for the loan of money, or any security for the payment of money only. We have assnmed (from the address our correspondent gives) that his query relates to a borough councillor. A similar regulation, however, is in force as regards the money contracts with their councils of urban and rural district councillors under the provisions of 46 (2) (a) of the Local Government Act, 1894.

611.—**TRACTION ENGINE—Damage to Water Main caused by Engine—Liability of Owner.**—I shall be obliged if you will kindly answer the following:—A traction engine hauled a heavy load of bricks to a new building, and to unload had to draw down a side street; on her way out she was unloaded, but stopped a few miuutes further down the street. Directly it moved on again water was seen coming up through the road, and when examined it proved that the water main was damaged. Can the owner of the traction engine be called on to pay for repairs of the main?—"JIMP."

It is clear in this case that the damage to the water main was caused by the traction engine. Under the circumstances, and even though the traction engine may conform as to size, weight, and loading with the local bye-laws, its owner will be liable for the damage caused by the engine, unless he can prove that the damage was caused through some defect in the main, or throngh the defective state of the road.

612.—**REMOVAL OF DUST REFUSE BY BOROUGH COUNCIL (METROPOLITAN).—Can Council Insist on Dustbin being placed on Pavement by Occupier so as to Facilitate Removal of Refuse?**—The Borough Council of Wandsworth has issued a circular and insists that householders residing in certain areas of Putney and Tooting are to daily place ashbins on the edge of the street kerb. I may say this has greatly incensed a large number of ratepayers, and the Borough Council states that it has issued the circular under the London County Council bye-law of 1893 (see Sec. 16 of Public Health Act, Loudon, 1891). May I ask you to kiudly inform me if Sec. 30 of this Act does not goveru the question, and whether the borough couucil is not bouud to collect from the premises? Not having the 1891 Act by me at the present momeut, I think there is a section near the end which states no bye-law contrary to the provisions of the Act can be valid.—"S."

Sec. 16 of the Public Health (London) Act, 1891, provides (*inter alia*) that the London County Council shall make bye-laws "as to the removal and disposal of refuse, and as to the duties of the occupier of any premises in connection with house refuse, so as to facilitate the removal of it by the scavengers of the sanitary authority." Sec. 30 (1) (a) of the Act lays upon the "sanitary authority"—that is the borough conncil in this case—the dnty of securing the "due removal at proper periods of house refuse from premises, and the due cleansing out and emptying at proper periods of ashpits" (including under this term dust-bins). There does not appear to be any section in the Act which states that no bye-laws contrary to its provisions can be valid. Such a provision is not required, however, as such bye-laws must necessarily be invalid.

It is the duty of the council to undertake the removal of house refuse under Sec. 30 as above cited, bnt the county council is empowered to make bye-laws, subject to confirmation by the Local Government Board, in order to facilitate such removal. It seems to us that the county council has power to pass a bye-law requiring all occupiers of property within the borough to place, or cause to be placed, their dust outside their premises for the purpose of facilitating the collector, provided that no practical inconvenience or obstruction is thereby caused on the highway; and no doubt the bye-law in question has fixed an early hour for placing the bins on the street kerb so as not to interfere with traffic. On the other hand, it is not so clear that the council has power to differentiate as between different parts of its district, and objection might be raised as to the reasonableness of a bye-law which can be applied in so partial a manner. To avoid such an objection, the bye-law should be applied, it seems to us, to the whole of the borough, or else not put in force at all.

Removal of House Refuse by Sanitary Authority (Outside the Metropolis)—Case before the Spelthorne Magistrates.

In connection with the above query, and a recent decision of the Spelthorne magistrates on a summons taken out by an occnpier of property in the district against the local council for the non-removal of house refuse, it will be useful to refer briefly to the provisions of the Public Health Acts on this subject applicable beyond the Metropolis. Sec. 42 of the Public Health Act, 1875, provides that the local authority may, and, when required by the L.G.B., shall, undertake or contract for the removal of house refuse from premises. The Public Health Acts Amendment Act of 1890, (which may be adopted, so far as the provision hereafter referred to is concerned, by both urban and rural authorities) gives the local authority the same powers of making bye-laws to facilitate the work of removing house refuse, in almost precisely the same language as that quoted above in reference to metropolitan sanitary authorities. Many local authorities have availed themselves of these powers, and passed a bye-law—with the approval of the L.G.B.—in the following or similar terms:—

The occupier of any premises on which any house refuse may from time to time accumulate shall, on such days and at such hour of the day as the council shall fix and shall notify by public announcement in the district, deposit on the kerbstone or on the outer edge of the footpath immediately in front of such premises or in a conveniently accessible position on the premises, as the council may prescribe by written notice served upon the occupier, a movable receptacle in which shall be placed for the purposes of removal, by or on behalf of the council, the house refuse which has accumulated on such premises since the preceding collection by or on behalf of the council. In the case referred to above, Mr. George Biddell, a Teddington householder, summoned the Teddington Urban District Council for that it, having undertaken the removal of house refuse in pursuance of Sec. 42 of the Public Health Act, 1875, had failed, without reasonable excnse, after notice in writing from him, to remove within seven days the house refuse from his premises within the council's district. It appeared that the council had last July adopted a system of daily collection of refuse throughout the district, and to facilitate this had required occupiers of premises to provide sanitary bins, and to have these bins placed out in the forecourt of their houses at a specified time. Mr. Biddell contended, and rightly in this case, that the council, having undertaken the collection of house refuse, was bonnd to fetch these bins from their usual place and empty them regularly. The clerk to the conncil pointed out that the council was not bound to collect the refuse, and that it could rescind the previons resolution on the subject and cease to collect it forthwith, leaving the duty in each case on the occupier. After a long consultation, the magistrates decided that the council had acted unlawfnlly, and inflicted a nominal fine. At the same time, they pronounced an opinion that the council's request was reasonable. It may be pointed out, in connection with this case, that the council had not adopted the Public Health Acts Amendment Act, 1890. Had the council done this, it would have had full power, apparently, to require householders to place their dust-bins in front of their houses for collection purposes, and the summons in the case wonld have necessarily failed.

WARRINGTON INQUIRY.

TOWN COUNCIL REFUSES TO PAY THE PRINTING BILL.

THE three commissioners, Messrs. Adam Horrocks, John Pemberton, and S. Norbury Williams, who represented the burgesses at the recent Warrington "Trading" inquiry, have addressed a letter of protest to the Mayor of Warrington, because the Town Council has refused to pay the bill for printing the burgesses' commissioners' report.

"We have," they state, "read with surprise and regret the report of the proceedings of your Council at its last meeting, at which it refused to pay the bill for the printing of our report. The end has come at last, and thoroughly discreditable it is to your Council. The trading inquiry was for the whole town, and not merely for your Council, which is but a small section of it. We three represented the burgesses, the most important portion of the ratepayers. Your Council resisted the inquiry for many months, and only agreed to it at last owing to the overwhelming weight of public opinion in its favour, and the public demand which was too strong for your Council to any longer resist."

The letter concludes:—"And now your Council, which from the first resisted the inquiry, but which printed without demur or comment the report of its three commissioners, refuses to pay our printing bill! This is a paltry affair. It is a piece of calculated meanness, as it seems to us, and is worthy of a body which has played so ignominious a part for the past three years, and has earned the contempt of the public for the way in which it has defended and winked at the members of its own body who have been directly and indirectly trading with your Corporation for a long period.

"We are certainly not wishful to enter upon the undignified course of haggling about the payment of this £22 printing bill with a body which has already, without demur, expended many hundreds of pounds upon the inquiry. In order to make an end of the matter we have, therefore, ourselves paid the bill, and we desire, as commissioners, to wash our hands of any further transactions with your discredited Council."

A LADY CONTRACTOR.

NEW PROFESSION FOR WOMEN.

A NEW profession for women, that of road contractor, has appeared in Ireland.

At the last meeting of the Donegal County Council a gentleman from Strabane appeared before the Council in reference to a contract for road maintenance which had been given by the Strabane Rural District Council to a lady.

He said that a lady road contractor had never been heard of in that or any other county in Ireland, and he asked the Council to reject the proposal.

The Chairman of the Rural District Council said, in reply, that the lady was the widow of a contractor. She had the men, plant, and material for carrying on road maintenance, and he did not see how any objection could be raised, particularly as she had given security for the carrying out of the work.

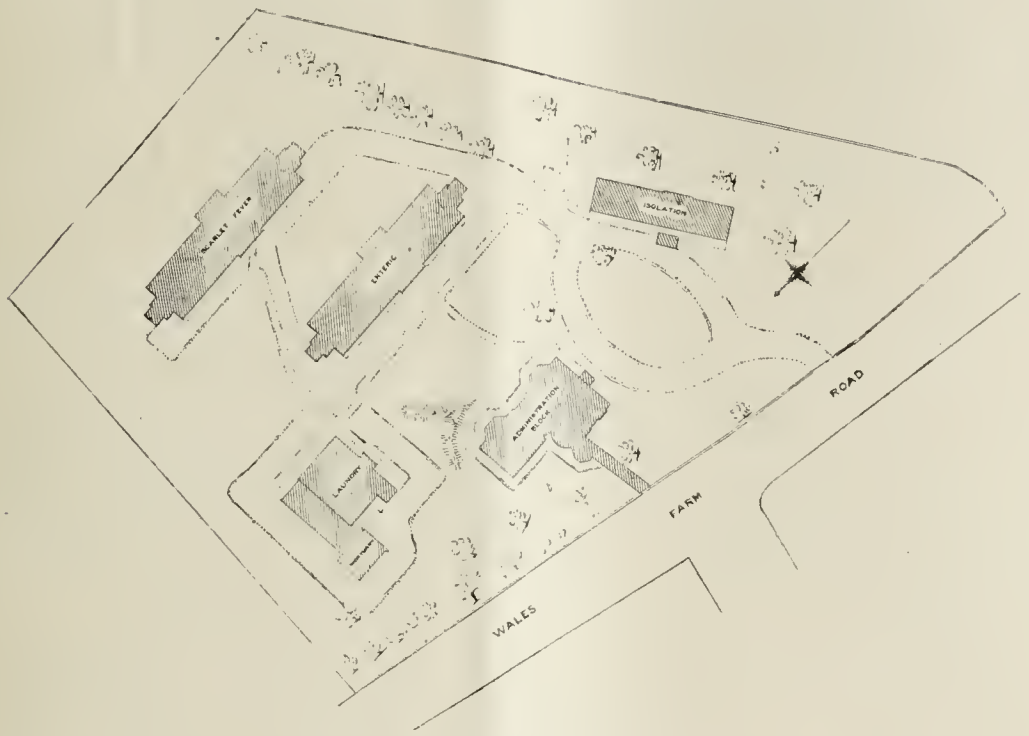
After some discussion, it was agreed to approve of the proposal.

NEW ISOLATION HOSPITAL.

The Acton Urban District Council Opens its First Isolation Hospital. The Danger of Spreading Infectious Diseases in this Great Laundry District. Transforming an Old Mansion into an Administrative Block. Description of the New Buildings.

ON Wednesday the Acton Urban District Council opened a new isolation hospital known as "The Friars," Wales Farm Road.

In a district like Acton, which has been called the Laundrydom of Greater London, it is of particular importance that the machinery for dealing with infectious diseases shonld be kept bright and efficient. There are at least 450 lanndries in the town, employing nearly 5,000 women. If any one of this great army of workers exhibits symptoms of an infectious disease the health of London is endangered by her continuing amongst her fellow-workers or at her daily occupation. Wet or drying clothes are extremely liable to catch and carry infection.



PLAN OF THE NEW BUILDINGS.

Up to this week there has only been one hospital owned by the Council available for the sick amongst the 37,000 people who form the population. This is the Acton Cottage Hospital, Gunsbury Lane, given by Mr. Passmore Edwards, and enlarged last summer. For some time past part of this institution has been used as an isolation hospital, and the remainder as an accident hospital. This is obviously an inconvenient and unsafe division, and after this week the Cottage Hospital will be used for accident cases only.

The Council purchased "The Friars," which is an old mansion, some time ago, and twelve acres of land, for the purposes of this Isolation Hospital. It converted the house into a large administrative block—much larger than is required at present; but, as the Hospital pavilions are added to, the whole of its accommodation will be gradually taken up.

At present the Council has provided two fever pavilions, each with 14 beds, and the necessary sanitary fittings, bath-rooms, nurses' room, &c. It has also provided an observation block, with two wards of two beds each, and one ward with one bed, and the necessary sanitary fittings, nurses' room, &c. The remaining block contains the steam laundry, disinfector mortuary, and coachhouses for the horsed' ambnlance and the horsed vans which convey goods to and from the disinfector.

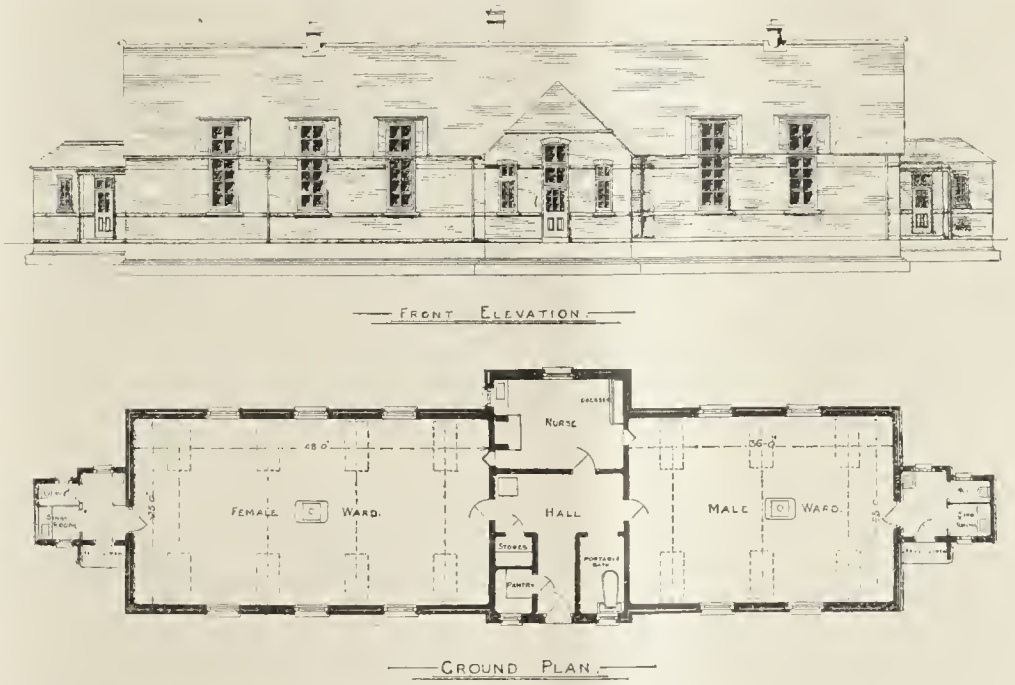
As the illustration on this page shows, there will be room for other pavilions as they may be required, and it is estimated that when the whole of the district is built over, at least 125 beds will be required in the hospital, which is provided for scarlet fever, enteric, &c., and is not to be used for small-pox—other provisions being made for cases of that kind.

In the grounds are high-pressure water mains, with hydrants, for the protection of the buildings from fire, and the grounds and the buildings are lighted by electricity from the Council's distributing works, which have just been completed and are shortly to be formally opened. The machinery in the laundry will also be worked by an electric motor.

The exterior of the buildings has a pleasing effect, being worked in stock brick with red brick dressings. The roofs are tiled and gabled. The total cost of the work, which has been carried out according to the drawings, and under the snpervision of the Council's surveyor, Mr. D. J. Ebbetts, A.R.I.B.A., will be over £13,000.

Messrs. E. Hadley and Son, Old Hill, Staffs, are the general contractors for the whole of the buildings. The wards are heated with large central stoves installed by Messrs. Rosser and Russell, Charing Cross Road. They are known as faience ward stoves, double fire, with ventilating arrangements. They are so arranged that they will burn by night or day without attention. There are no angles to harbour dust, nothing to corrode, and no cleaning required. There is no noise from dropping cinders to canse annoyance to patients, and the ashes may be removed while the fire is in action. The whole of the electrical fittings are by Messrs. Bromley, Batstone, and Kirk, of Holborn and Acton, which firm is carrying out a large number of similar works elsewhere. The electrical installation, together with Nernst lamps, has been made nnder the supervision of Mr. Trentham, Victoria Street, Westminster, who is the consulting engineer of the new generating station. Among the notable sanitary fittings are movable baths made in Doulton's specially hard white vitreous enamel. This gives a very pleasing appearance. They are arranged so that they can be moved from ward to ward, and discharge into sinks let into the floor. Special attention has been given to the sinks for cleansing bed pans, by which handling has been reduced to a minimum. These also have been supplied by Messrs. Doulton, and seem admirably constructed in every way.

Amongst other chief contracting firms are:—Laundry engineering, Messrs. Tullis and Co., 1, Southwark Bridge Road, S.W.; wood block floors, Acme Wood Flooring Company, Gainsborough Road, Victoria Park; opening gear windows, Mr. Leggott, 90-91, High Holborn; laundry steel trusses, Messrs. Handyside and Co., engineers, Derby; patent glazing, Mr. Rendle, Victoria Street, Westminster.



ADMINISTRATIVE BLOCK.

A LONDON LORD MAYOR'S STORY.

LORD MAYORS of London, as a rule, have not earned undying fame as sportsmen; but there has been at least one of these civic functionaries whose exploits will never die.

In former days it was the custom of their lordships to attend in State once a year at the Epping Forest hunt. On one such occasion the then Lord Mayor had evidently not a very clear notion as to the nature of the quarry, for he rode forth clad in a complete suit of the most up-to-date-armour of his day.

Solemnly, and with due seriousness (for in those days a Lord Mayor was somebody, and a dangerous customer to offend), the cavalcade was arranged, with the great man in the best position to see all that went on.

"The hare comes this way, my lord," soon exclaimed one of the servants. His lordship thereupon, pale but brave, drew his sword and heroically declaimed, "Let him come! I thank my God I fear him not!"

AT St. Helens Town Hall last week the new Chief Constable (Mr. A. R. Ellerington) was sworn in. The mayor, who, with five other magistrates, was present, extended a cordial welcome to Mr. Ellerington, who, in return, assured the bench that he would use his utmost endeavours to carry out his duties.

Official Advertisements.

BOROUGH OF SOUTHEND-ON-SEA.

TRAMWAY PASSENGER TICKETS.

THE Corporation invite TENDERS for the privilege of ADVERTISING on the Backs of 5,000,000 Tramway Passenger Tickets required during the year ending 31st March, 1906, or any portion of that number not less than 500,000.

Specimens of Tickets may be seen and full particulars obtained at the Office of the Borough Accountant. Municipal Buildings, Clarence Road. Southend-on-Sea.

Tenders, marked "Advertising on Tickets," must reach the Borough Accountant not later than Wednesday. the 8th February next.

By order.
WILLIAM H. SNOW,
Town Clerk.

Southend-on-Sea.
17th January, 1905.

COUNTY BOROUGH OF WEST HAM.

TENDERS FOR SUPPLIES, &c.

THE Council hereby invite TENDERS for the SUPPLY of
Paving Materials,
Broken Granite and Chippings,
Road Flints,
Tar and Pitch.
Ironmongery, &c.,
Iron Castings.
Chalk, Plaster, Slates, Lime, &c.,
Portland Cement,
Rope and Tarpaulins, &c.,
Hardwood,
House Steam Coal and Coke,
Coal for Pumping Station,
Lead, Zinc, Glass, and Plumbers' Requisites.
Oils, Colours, Painters' Brushes.
Stoneware Pipes, &c.,
Brooms and Brushes,
Charcoal Baskets. Sieves. &c.,
Boots,
Sanitary Articles,
Domestic Articles,
Winding Clocks.

Forms of tender and further particulars may be obtained at the Borough Engineer's Office, Town Hall, Stratford, E.. upon the payment of One Pound for each form of tender, which will be returned upon the receipt of a bona-fide tender.

For the SUPPLY of
Engine Room Stores,
Cable,
Integrating Wattmeters,
Double-Pole House Cut-Out Boxes,
Transformers,
Incandescent Lamps,
Coal.

Forms of tender and further particulars may be obtained, after the 26th inst., at the Borough Electrical Engineer's Office, Central Electricity Station, Tucker Street. Canning Town, upon the payment of One Pound for each form of tender, which will be returned upon the receipt of a bona-fide tender.

For the SUPPLY of
Books,
Printing and Stationery.

Forms of tender and further particulars may be obtained, after the 31st instant (returnable on February 23rd), on application at the Office of the Borough Treasurer, Town Hall. West Ham, upon the payment of One Pound for each form of tender, which will be returned on receipt of a bona-fide tender.

For the SUPPLY of
Newspapers and Periodicals,
New Books, and for
Bookbinding
For the Public Libraries and Technical Institute.

Forms of tender and further particulars may be obtained at the Central Public Library, Water Lane, Stratford ; or the Branch Library. Barking Road. Canning Town, E.

For the SUPPLY of
Meat,
Bread and Flour,
Groceries,
Linen and Cotton Goods, &c.,
For use in the Council's Hospitals.

Forms of tender and further particulars may be obtained of the Medical Superintendent at the Hospital, Samson Street. Plaistow.

Tenders for the whole of the contracts (except Books, Printing, and Stationery) to be enclosed in endorsed envelopes supplied with the forms, and sent to my office not later than 4 o'clock on Thursday, February 9th, 1905.

The tenders will be opened at the Town Hall, West Ham, on Friday, February 10th, 1905, at 3 p.m., and persons tendering may be present if they so desire, but no guarantee is given that any information, beyond the names of persons tendering, will be read out.

The Council do not bind themselves to accept the lowest or any tender. The contractor will be required to enter into a bond with sureties for the due performance of the contract, and no Goods, Materials, &c., will be ordered under any contract until such bond has been duly executed.

The contractor whose tender is accepted, and with whom a contract is entered into, will be required to pay to the whole of his workmen such rate of wages, and observe such hours of labour, as are recognised by the Workmen's Trade Unions and in force at the time of signing the contract. In the event of any breach of such agreement the Council will enforce the penalty clause in its entirety.

By order of the Council.
FRED. E. HILLEARY,
Town Clerk.
Town Hall,
West Ham. E.
January 21st, 1905.

HAMMERSMITH BOROUGH COUNCIL.

ANNUAL CONTRACTS.

THE Borough Council invites TENDERS for SUPPLYING Goods and carrying out Works respectively, as follow, viz. :—

1. Printed Books and Forms.
2. Stationery and Account Books.
3. House Coal and Gas Coke.
4. Broken Granite and Flints.
4a. Hoggin. Ballast and Sand.
5. Lime and Cement.
6. Drain Pipes.
7. Jobbing Works, Masonry, &c.
8. General Stores. Tools, and Implements.
9. Brooms. Brushes, &c.
10. Stable Goods and Utensils.
11. Timber.
12. Oilman's Goods.
13. Hiring of Horses and Men.
14. Tyreing Wheels.
15. Disinfectants.
16. Window Cleaning.
17. Electrical Stores.
18. Electrical Meters.
19. Steam Coal.
20. Bookbinding.

All for the period of Twelve Months ending March 31st, 1906.

The whole of the above-mentioned requirements or works to be supplied, carried out, and performed according to the terms and conditions of the several specifications accompanying the several forms of tender.

The several specifications may be seen, and forms of tender and any further information obtained, on application at the Town Hall, in respect of Contracts Nos. 1, 2, and 16, to the undersigned ; in respect of contracts Nos. 3 to 15, inclusive, to Mr. H. Mair, Borough Surveyor ; in respect of contracts Nos. 17, 18, and 19, to Mr. G. Gilbert Bell, Electrical Engineer, at the Electricity Works, 85, Fulham Palace Road, Hammersmith : and in respect of No. 20, to Mr. S. Martin, Ravenscourt Park Library, between 9 and 5 o'clock daily, Saturdays 9 to 1.

Tenders may be made on printed forms provided by the Council, and must be delivered to the undersigned, not later than 4 p.m. on Wednesday, February 8th, 1905.

The Council does not bind itself to accept the lowest or any tender.

H. THOMPSON.
Town Clerk.
Town Hall. Hammersmith.

MUNICIPAL JOURNAL

FRIDAY, JANUARY 20, 1905.

NOTES AND COMMENTS.

Telephone Tactics.

APPARENTLY the mantle of the *Manchester Courier* has fallen upon the *Western Mail*. Since the former influential organ of public opinion was acquired by the Great Amalgamator it has contained none of those ingenious "special" articles from "special" correspondents who are serving the interests of the Industrial Freedom League and its constituent companies. The new editor is not quite so simple, and whatever criticism of municipal enterprise appears in the *Courier* now will probably be worthy of attention. The *Western Mail*, however, is eager to take the place of the *Manchester Courier*. But it need not have gone out of its way to attack, through the familiar "Correspondent," municipal telephones now that those useful and highly efficient services are in danger of being absorbed by a Government that is anxious to do the best it can for its friends the directors and shareholders of the National Telephone Company before it goes out of office. Not that there is anything in the criticism of the *Western Mail*'s correspondent. All other things being equal, the English public is not going to give up municipal telephones because our Cardiff contemporary talks in this irresponsible fashion:—

> The fact is that the very "cheapness" (of the municipal telephone) is illusory. It is the cheapness of the jerry-built house, of the brown-paper shoes, of the shoddy suit, cheapness that means a big bill later on for the ratepayers. Sir William Preece, than whom there is no one more eminent or independent as an expert, declared that the low figure quoted in a cheap telephone estimate—£19—must be "for something very cheap and nasty," and the trouble will only begin when the Post Office engineers come to appraise the elderly plant that does duty for up-to-date equipment in some municipalities.

We invite the editor of the *Western Mail* to take a trip to Brighton and compare the telephonic facilities of the Corporation with those of the company. If he will only do so he will blush every time he remembers that he once allowed such an absurd statement as that we have quoted to appear in his paper. It is, of course, to the interests of private speculators and others to decry cheap telephones, because they mean less profits, and, perhaps, smaller fees. But the public want cheap telephones, and as the municipalities have demonstrated their ability to provide them, they should be allowed to do so. The question of efficiency can be easily tested, and we hope the editor of the *Western Mail* will accept our invitation.

Municipalisation at Paris.

IT is reported that Paris is about to municipalise its gas, "electrical," and omnibus services. *Commercial Intelligence* tells us that the subject is causing considerable anxiety in industrial and commercial circles, which we can well believe. In a very short time all the concessions for the exploitation of the services named will expire:—

> The majority of the present Municipal Council is distinctly Socialist, and proposals are already before the Council to substitute municipal exploitation for private enterprise. All is doubt and uncertainty. For the last six months there has been a veritable slump in the electrical appliances trade. The present concessionaires for the supply of electric light and power have become scared. They have exploited the better part, the most profitable part, of their respective concessions, but whole districts which might have yielded a good return have been left severely alone. This has caused a most profound depression in the trade—a trade whose very existence depends on "push" and enterprise.

The contributor to *Commercial Intelligence* is refreshingly candid. "Whole districts which might have yielded a good return have been left severely alone." This is the usual company policy—policy that, even from the standpoint of private interests, is narrow and short-sighted. The Omnibus Company's concession expires in five years, and the company in the meantime is building no more omnibuses. The companies cannot, of course, be blamed for waiting now. As the correspondent says, "They have exploited the better part, the most profitable part;" and it is perhaps only natural that the residents of Paris, who do not happen to live in that part, should feel aggrieved. The same experience has been had in London, and, indeed, throughout the whole of this country. The companies usually go for the "better" parts; the others are left to take care of themselves.

London Tramways.

A CORRESPONDENT has written asking us whether it is a fact that the London County Council is "complaining" because the omnibus companies are running, and are about to run, "motors." We do not think it is a fact, but we gather from our correspondent's letter that there is something in his question that does not appear on the surface. Our correspondent really wishes to raise the subject of whether motor omnibuses are likely to affect the London County Council tramway receipts. Our reply is: "Certainly not, provided that the County Council possesses the same facilities for running its tramways as the companies possess in regard to their 'buses." The County Council, for instance, cannot be expected to provide so satisfactory a tramway service as the companies do 'bus services if it is compelled to stop at Westminster Bridge while the companies are able to run over it. Let us have as many and as efficient travelling facilities as it is possible to get, but do not allow the omnibus traffic to be favoured at the expense of the tramway traffic. We are only just beginning to deal with the traffic problem in London, and under these circumstances we do not think the apprehensions of our correspondent are justified. The County Council's cars will always find passengers, and the Council itself might do worse than establish motor 'bus services along thoroughfares which are unsuitable for tramways. Like the electricity concessionaires at Paris, companies will only tap the most profitable parts of a city, leaving all the others neglected. We should not advocate the County Council going into the 'bus business if existing agencies performed their duties satisfactorily. But they do not. They have postponed the introduction of motor traction until the latest possible moment; they have condemned their passengers to stuffy and uncomfortable vehicles until sheer financial necessity has made them look about for new designs; and they have neglected to take advantage of splendid opportunities for opening up new lines of communication. On the top of all these sins, they have harrassed the London County Council in its efforts to improve the existing state of affairs. London has nothing to thank the 'bus companies for, and it will be well advised to study its own convenience, and not their interests.

Liverpool and Federation.

SO far as the Liverpool City Council is concerned, the Mersey Federation scheme is dropped for the present. The Council, on Wednesday, by 50 votes to 41, defeated the following recommendation from the Special Parliamentary Committee:—

> That the committee, being of opinion that it might be to the mutual advantage of the city of Liverpool and the boroughs of Bootle and Birkenhead, and the adjacent districts, if they could be federated for local government purposes, recommend the Council to authorise the committee to confer with the councils of such boroughs and districts, with the view of ascertaining whether they would be willing to co-operate in formulating a scheme for the purpose, and report the result to the Council.

The vote, as will be seen, was an exceedingly close one, and in the interests of all parties concerned we hope that an early effort will be made to rescind it.

Municipal Trading Relieves Rates.

THE Association of Municipal Corporations ought to pass a hearty vote of thanks to the borough treasurer of Preston for his "Trading and Rates" return, which has silenced for the time being the Industrial Freedom League, and made the Liberty and Property Defence League a laughing stock. Mr. R. N. McDougall, of the latter organisation, is still writing letters to the newspapers attempting to prove that income is expenditure. We do not think it necessary to again expose the hollowness of Mr. McDougall's contentions, as we are sure no thinking ratepayer is deluded by his special pleading on behalf of vested interests. Mr. McDougall winds up his letter with the following peroration:—

> It sometimes happens in private affairs that the consciousness of an independent income leads to extravagance and insolvency; that the youth with his own living to get passes in the race of life another favoured by indulgent relatives.
>
> And if this is sometimes so in private life, where people spend their own money and manage their own affairs, can we expect anything very different as a general rule in the case of town councillors, who spend other people's money, who, owing to the system of election, have no continuous responsibility, and are elected not so much because of their business capacity as because of their wealth, their power of speech, their religion, or their politics.

The best comment upon this verbiage is that if Mr. McDougall had his way he would substitute for the present "system of election" one in which property, and not the person, would be the basis of the vote That may be good policy for the Liberty and Property Defence League, which represents property, but it is no use for the general body of citizens. The Liberty and Property Defence League cannot be blamed for promulgating its peculiar principles, but the general body of citizens would be worse than foolish if they listened to them. A hundred years ago the League might have had a chance; to-day it is merely the remuant of a worn-out political ecouomy.

Municipal Borrowings.

MR. J. M. FELLS has been giving his views on the subject of muuicipal savings banks, to which we referred last week in reference to the report from the Bury Borough Treasurer. Mr. Fells should know something of what he is talking, and his opinions are entitled to a hearing. Incidentally Mr. Fells points out that "the *Municipal Journal*, which usually views the speculative experiments of municipalities with the utmost complacency, evidently regards with some little auxiety the latest iucursion into the domain of commerce. 'We have previously pointed out,' it states, 'that the great drawback of municipal savings bank schemes up to the present has beeu that they do not provide for the consequences of a run of withdrawals,' but suggests that this difficulty could be overcome by making the bonds or securities 'payable to bearer,' and thus negotiable." Mr. Fells is quite accurate in his statement of our case, but he should readily see that our position is not one of opposition to municipal savings banks, but that, on the contrary, we favour the development of the system in a new direction. If the bonds or securities were made "payable to bearer" all the difficulties and objections to the plan would in our opinion disappear. Liverpool is applying for powers to carry out this suggestion, which, as a correspoudent points out, has already been adopted at Glasgow.

OUR PRIZE ESSAY.

Several Candidates in our Prize Essay Competition have written this week asking when the awards are to be announced. Their anxiety is natural, and we have pleasure in stating that the publication of the results will not be delayed for more than a week or two. But the gentlemen who so kindly consented to act as adjudicators are having a very difficult task. Fifteen of the papers are of a very high order of merit and there are only three prizes. The fifteen were this week reduced to five, and it is hoped to arrive at the final decision this (Friday) evening. It is possible, however, that Sir Albert Rollit's opinion as umpire may have to be obtained.

Mr. Fells' Objections.

MR. FELLS' objections to municipal savings banks caunot fail to be interesting. He says:—

> If many of the local authorities add to their trading undertakings by establishing municipal savings banks, and offer to depositors a high rate of interest, their incursion into the domain of banking must inevitably result in competition between the State and the municipalities, and in depleting the accumulated deposits at the Post Office Savings Banks. This would react to the disadvantage of those municipalities which continued to borrow from the Public Works Loan Commissioners. Already the Treasury has been obliged to make an all-round advance in the rates which the Commissioners charge, and the Chancellor of the Exchequer, in his Budget speech last April, declared that "the State cannot continue to provide money with as lavish a hand as, in recent years, now that money is dear, and the savings banks no longer afford us as large resources as formerly."

We do not think Mr. Fells in this paragraph produces any cogent reason for the abolition of the small municipal loans system. He has yet to show that competition with the State, or the depletion of the accumulated deposits in the Post Office, would be to the disadvantage either of the State or the depositor. As to the latter, we know it would not be, as the rate of interest is usually higher, and the security just as good. The advance in the rate of interest on loans granted by the Public Works Loan Commissioners was not caused by municipal borrowing, as Mr. Fells well knows, but by the general tightness of the Money Market. Mr. Fells further says:—

> But this is not the only serious aspect. The smaller the deposits at the banks become, the less money bankers will have to advance to their customers for ordinary commercial enterprises, and the higher the rate of interest traders will have to pay for their advances. The easy flow of capital, which is the life-blood of commerce, will be checked, and trade, as carried on by individual ratepayers, will suffer accordingly.

An economic fallacy underlies this contention. If the money is used for public works which, in other circumstances, would have been carried out by private enterprise, it will not be needed by the "commercial interests." In other words, these works have only to be done once, and if they are performed by the muuicipal authorities they will not be carried out by private traders. But the money is spent in either case, so that "the easy flow of capital, which is the life-blood of commerce," will not be checked. It will simply flow, as we think, in healthier channels.

A Parable.

THE correspoudent who wrote us regarding our criticisms of Sir Robert Giffen's article in the *Contemporary Review* replies to our comments upon his letter with a parable illustrating, in his opinion, "the way local government is mainly carried on now." He likens it to the sad case of a certain ruler of the people:—

> The ruler said to a body of poor thrifty men, "come with me to the tailor, and I will have made for you all new suits of clothes of the best black cloth, lined with silk and finished with the best trimmings. Don't worry about payment. You will have to pay the bill, but I can arrange a loan. Let us sup together and be of a light heart." But the poor thrifty men made answer, "Good master, it sounds good, *but as we have to pay*, and as we are only poor, we cannot afford such extravagance. We pray you, study the weight of our purse for we are poor, and the burden will be heavy, and we would abide in the ways of plainness and thrift."

The parable is very interesting, and we should like to meet the plain and thrifty men who would refuse so handsome an offer from so accommodating a ruler. But the illustration does not really represent the position. What occurs is this. These plain and thrifty men themselves elect their ruler, called a Government, which says that the plain and thrifty men are to wear clothes of a certain cut, colour, and substance. But in order that the clothes shall suit their means, the Government tells the plain aud thrifty men to choose from their number a body of delegates or deputies, whose duty it is to see that the plain and thrifty men's desires are carried out within the limits already imposed by the superior authority. The plain aud thrifty men have the opportunity—in the provinces every year, and in London every three years—of dispensing with delegates who do uot perform their duties satisfactorily. They also have the opportunity of periodically changing their ruler, and consequently their liues of general policy, if they so desire. If they change none of these bodies they have no logical right to grumble when the bill comes in. This, as our correspondeut will see, is a very different position to that represented by his parable, where the ruler is assumed to be irremovable. We are afraid that our correspondeut has been listeniug to the arguments of companies of those "plain and thrifty" men who say that if the work of making these clothes were only taken away from municipal authorities and given to them (the compauies), they would be able to perform it so much better and cheaper. But that way has been tried and found wanting.

Cheap Electricity.

OUR coutemporary, *Everyday Electricity*, is not satisfied with our answer to its defence of the Yorkshire Electric Power Company. We did not expect that it would be. The paper says that "To state that the 'Yorkshire Power Company is preventing public bodies from running a public service in the public interests' proves nothing at all. As it stands, it is merely the jargon of a party which has blindly pledged itself to support any aud every municipal project on the principle that 'the King can do no wrong.'" *Everyday Electricity* has not done us the honour of reading our note carefully. We not only made the statement referred to, but we proved it from the speech of the chairman of the company himself, which is quite a different matter. As to the denial of the paper that municipal bodies do not supply electricity cheaper than companies, we can only refer to the official figures, which prove that they do.

POOR LAW OUTLOOK.

Our Inflexible Poor Law System and Chorlton's Abortive Attempt to Introduce Change. The Need for Combination in Dealing with the Unemployed. Movement in Several Cities, and an Encouragement from Mr. Charles Booth. Starving Edmonton and the Well-Paid Clerk to the Union. Serious Allegation at Tendring.

Poor Law and its Present Needs.

THE Chorlton Board of Guardians has been unsnccessful in its appeal to the Local Government Board to relax the requirements of Article 10 of the Outdoor Relief Regulation Order, so that it conld deal more readily with the able-bodied poor seeking aid without the infliction of a labour test. In the fifty-two years that have elapsed since Article 10 was issned considerable changes have taken place in the general conditions of the life of the poorer classes and in the qualification for the office of a guardian. The Chorlton Guardians therefore considered that the time had come for a full revision of the Orders of the Local Government Board, so that guardians might possess the power to deal with the poor who sought their aid in a manner in keeping with the spirit of the present age. They also expressed the view that it was unreasonable to require a report to be sent to London of every case in which relief (neither sudden nor urgent) was granted to able-bodied poor without the infliction of a labour test. Though anything that makes for indiscriminate relief is bad, there is a growing discontent to-day among Poor Law reformers with the inflexible nature of our English Poor Law system. We need a more classified system of relief snch as Denmark adopted a few years ago with such striking results.

❦ ❦ ❦

Central Committee and Fulham.

SOME stringent criticisms on the work of Mr. Long's Central Committee on the unemployed were recently passed by Battersea. Fulham has now found voice, but not the voice of censure. At the last meeting of the Board of Guardians a report of a special committee on the qnestion of the unemployed was presented. It was to the effect that the committee agreed that, in the event of able-bodied men requiring relief, the Relief Committee should be recommended to divide applicants into three classes—viz.: (1) single men; (2) married men of good character; (3) married men of indifferent character. The first class is to be offered the workhouse; the second class is to be first referred to the Borongh Council for work, or failing the Council, the Central Committee of the London Unemployed Fund, and failing this, to be relieved by the guardians according to necessity, but for the present, withont setting them to work; sanction to the expenditure on this class to be obtained from the Local Government Board at the close of the half-year. The third class to be relieved by the guardians according to necessities, but men required to work (break stone) whilst receiving relief.

❦ ❦ ❦

Comparison with other Boroughs.

IT appears that up to the present 30 Fulham men have been set to work by the Central Committee, and it is expected that employment will be found for 39 other men. The chairman of the Fulham Board of Guardians (the Rev. P. S. G. Propert, M.A.), one of the stalwart Poor Law statesmen, said this number was a very good proportion of the total number dealt with. Fulham, compared with other boroughs, had been very well treated. But Mr. Propert fears that the labours of the committee will not be so satisfactory as it wishes. The committee has already got through nearly £22,000, money which had been expended to provide work—not relief given in money—for a large number of London's unemployed. It is plain that the £42,000, the amount for disposal, will soon be swallowed up.

Schemes for Emigrating State Children.

MR. KINLOCK COOKE'S scheme for emigrating State children to South Africa and to other countries, outlined some time ago in our columns, has got the support of the Wandsworth Guardians. At the last meeting of the board it was resolved that the guardians are in favour of the emigration of children to the colonies under the auspices of an officially recognised committee, rather than, as at present, under the care of charitable agencies, and to their being empowered to contribute towards the support of snch children in training homes in the colonies. Meanwhile, Mrs. Close's scheme for emigrating children to Canada is being matured. There is to be a Mansion House meeting at the end of this month, at which the scheme will be definitely put before the conntry.

❦ ❦ ❦

Social Reform and the S.A.

WE know from the correspondence which took place in the *Times* last October and November that the Charity Organisation Society is not in love with the social methods of the Salvation Army. It thinks indeed that the S.A. night shelters do more harm than good. Not so Mr. Charles Booth. The great social worker and author of "Life and Labour of the People of London" has now declared himself by sending a donation of £250 to the Salvation Army's relief fund. He also expresses his confidence in the administration of the Salvation Army in so many words.

❦ ❦ ❦

The Great Need for Co-operation.

THE advice he gives the Salvation Army in sending this draft is that which has been expressed more than once in these columns, and cannot be urged too strongly. He would he says:—

> Only urge upon you the pressing importance, in this matter of lack of employment, of co-operation with other charitable agencies—including, of course, the Poor Law. The existing circumstances offer an opportunity in this direction, which I trust may not be let slip. Distress, which springs from widespread lack of employment, cannot, I feel, be successfully dealt with except in combination, and the organisation now provided by the action of the Local Government Board seems to me to establish a system which may be generally accepted, and which would be gradually perfected in use.

Widespread evils require widespread remedies. Mr. Charles Booth has also this week enclosed a draft for £250 to the Church Army, with a similar message urging the need of combination.

❦ ❦ ❦

Movements towards Centralisation.

OTHER large cities besides London are waking up to the advantages of co-operation and centralisation in dealing with the unemployed. Last week we spoke of the action of the various local authorities in and around Glasgow, and since that time Manchester has taken an important step in the formation of an executive committee, which includes members of all political parties. This committee is empowered to draft a Parliamentary Bill for the purpose of establishing labour bureaux to be administered by local authorities, and otherwise to make provision for dealing with the unemployed problem. The city surveyor of Manchester (Mr. T. de Courcy Meade), in a report on the progress of the works started for the relief of the unemployed by the City Council, states that employment is being found for about 412 men each day. He says that the cost of some of the works is excessive, but he believes that much depends upon the intelligence and ability of the gangers who supervise the work. This is true also of work in labour colonies.

Lancashire and Labour Colonies.

BOLTON also gives signs of moving in the direction of the establishment of labour colonies. We understand from official sources that the guardians of the union have decided to convene a conference of the guardians of the Blackburn, Bury, Chorley, Haslingden, Leigh, and Wigan unions to consider an offer made by Mr. Joseph Fels of a loan, for three years, of a quantity of land for a labour colony. The conference is fixed for the 3rd of February next. Mr. Fels' offer is on the same lines as the one he made to, and was accepted by, the Poplar Union. Mr. Fels has promised to attend the conference. Latest reports from the Poplar Labour Colony at Laindon show that work is going on steadily, and that there is little or no insubordination or desire to "shirk."

❦ ❦ ❦

A Contrast.

A SPECIAL appeal is issued on behalf of Edmonton. This points out that Edmonton is entirely an ill-paid working-class district, a nursery and school for the children of, and dormitory for, London workers, and when loss of employment, illness, or old age overtakes them they can only rely upon the charities or poor rate of a district whose resources are already strained to breaking point. It is impossible to suppress the thought in reading this appeal of how the Edmonton Union is spending its money. The clerical staff is costing the poor ratepayers a "fine penny." Mr. F. Shelton is getting £1,050 per annum as clerk to the Board, to include some assistants; £150 for assessment work; £450 as clerk to the Assessment Committee; £350 as superintendent registrar; and £25 as returning officer's fees at guardians' election. This makes a grand total of £2,025 per annum, on the whole of which he will get superannuation. In addition to this, the guardians recently decided to pay a first assistant clerk not less than £170, and a second assistant clerk not less than £120 per annum. These figures carry their own conclusion.

❦ ❦ ❦

Poorest in England.

DESPITE all this, one of the members of the Edmonton Board of Guardians, at its last meeting, said that no one could name any district in England to-day that would be found to be poorer than Edmonton. He said he had mentioned the cases of several families where the children had been crying with cold and hunger until he called the attention of the relieving officer to them, and there was hardly a bit of furniture in the houses. In one case the father became an inmate of the house on the morning and the mother gave birth to her ninth child in the evening. He had a list of 283 men out of work with 883 children depending upon them. From this appeal, which is put forward by the Edmonton Urban District Council Special Relief Committee, we learn that it is estimated that at least 3,000 men are to-day out of work out of a population of only 12,000 adult males. A considerable number of these are not of the unemployable class, but were last year regular workers in London, and yet in times of distress they are excluded from all forms of relief. Locally, as much as possible has been done, and the Urban District Council has just formed, with representatives of all religious bodies, trade union societies, Socialists and unemployed committees, one large committee, which meets daily at the Town Hall. Tottenham, we know, is no better, or even worse, and it has been asserted that there are there to-day no less than 25,000 starving. This, no doubt, is exaggerated, but the amount of distress is certainly lamentably great.

❦ ❦ ❦

Serious Charges.

SOME very serious allegations have been made against the administration of relief in the Tendring Union. They are to the effect that a distressing case remained unrelieved for a considerable time after being brought under the notice of the relieving officer and overseers. To make the position clear, the words of Miss Lock, of St. Albans Road, Clacton-on-Sea, to

the President of the Local Government Board shall be given:—

> The man had an abscess, and was covered with sores (caused through lack of nourishment), and the discharge from which the doctor said was contagious, and therefore dangerous to the wife and five children. The man has been removed to-day (Sunday) within 48 hours after my letter appeared in print, although the wife had been given to understand by the relieving officer a fortnight ago that no relief whatever could be given them until next Thursday (the day after the Board of Guardians meeting at Tendring).

This, if true, is red tape of the very worst kind. But that appears not to be all. When this poor overburdened wife first went to the relieving officer with the order she had absolutely nothing in the house, and she and her husband were starving. Now, English Poor Laws have many critics, but it has always been held a fundamental tenet that no one shall starve. And yet, if the statements be true. this man and his wife obtained no relief.

Overworked Relieving Officer.

FROM the internal evidence of this letter to the President of the Local Government Board, it would seem that the couple were in this condition for a good many days, though how bodies and souls were kept together does not appear. At last the princely allowance of 4s. 6d.—presumably per week—was given, but only "after two of the overseers had, at my request, written to the relieving officer." The writer of the letter apparently does not wish to be hard on the official, for—

> I am told the officer has a large district, and only visits Clacton every Thursday for a few hours, in spite of the large amount Clacton contributes to the poor rate. If he is unable to give more time here surely he should have assistance given him.

Taking these allegations as true, what a splendid case is made out for strong relieving staffs. We have more than once pointed ont that money spent in this direction is more than money saved.

A "Starving Family."

BUT a second case almost as distressing is brought before the notice of the Local Government Board. The husband of Mrs. —— ran away from her seven months ago leaving her with five children, the eldest a girl of 14 years—

> Until lately she has managed to keep them clothed and fed (with the help of her mother, who is a nurse), but says they are starving now. The woman herself looks very bad indeed. She has been to the relieving officer twice, but he has granted her no relief, but told her that she must go to the police-station and get an order for her husband's arrest (which may mean some time, as nobody knows his whereabouts).

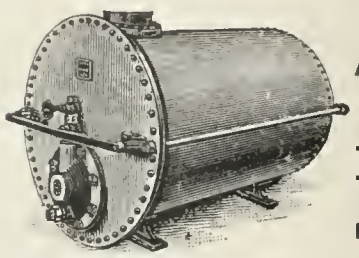
It is impossible for an outsider to judge the merits of the cases, but it appears that at the last meeting of the Board the almost unanimous opinion of the guardians present was that there was really no substantial basis for the allegations made.

HEATING OF BUILDINGS & HOT WATER SUPPLY

FROM LIVE OR EXHAUST STEAM.

The Latest and Best Appliance is

ROW'S PATENT CALORIFIER



Storage Calorifier for Baths.

Combined with AUTOMATIC STEAM CONTROL (Royles' Patent)

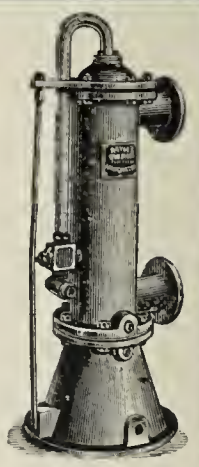
Adopted by the Metropolitan Asylums Board, London County Council, Manchester, Liverpool, Glasgow, Edinburgh Corporations, and others, for Bath Supply.

COPIOUS SUPPLY, UNIFORM TEMPERATURE.

ROYLES LIMITED, IRLAM, near Manchester.

ALSO MANUFACTURERS OF

Feed Water Heaters, Condensers, Evaporators, Steam and Gas Kettles, Syphonia Steam Traps, Reducing Valves, Oil Separators, Exhaust Heads, Boiler Mountings, &c., &c. Price and full particulars on application.



Vertical Calorifier for Hot Water Circulatiou.

DIALITE

THE STANDARD CABLE FOR ALL PURPOSES.

THE ST. HELENS CABLE CO., Ltd., WARRINGTON.

IN PREPARATION.

Demy 8vo., cloth gilt, 3s. 6d. Post free, 3s. 11d.

THE MUNICIPAL YEAR BOOK For 1905.

COMPLETELY REVISED.

The new issue has been brought UP-TO-DATE

AND CONTAINS

MANY NEW FEATURES.

It is undoubtedly the

MOST VALUABLE MUNICIPAL WORK of REFERENCE published.

Comprising a Budget of information on municipal matters not elsewhere available.

ELECTRICITY SUPPLY.

Lessons on the Bradford Breakdown and the Necessity for Periodical Testing. Where Fuses can be Safely Fixed. Comments on the Board of Trade's Report. A Year's Work at Chester and Bury. The Electrical Profession and Public Bodies as Masters.

THE electricity accounts of the county borough of Bury are among those which do not leave much room for criticism, except, perhaps, the absence of a reserve fund may be the subject for some adverse comment. The results from a technical point of view are a credit to the management of the committee and the skill of their technical adviser. The revenue account includes amongst the items of expenditure bank interest and bad debts. The former we have extracted and included in the sums usually presented in the nett revenue account, and the latter in the second and third statements below have been deducted from the receipts and excluded from the costs. The accounts show that for the year ended the 31st of March last:—

The revenue derived from sales of current, &c., amounted to	£8,105
And the working expenditure to	3,857
Leaving a gross profit of	£4,268
Out of this sum the following requirements were met:—	
Interest on mortgage debt... ... .. £1,464	
Bank interest 773	
Sinking fund and repayments 1,465	
Total of capital charges ... ...——	3,702
Surplus for year	£566

Moderate Rates at Bury.

THE public lighting consists of 34 arc and 18 incandescent lamps. The current consumed by these was 54,664 units, yielding in the aggregate £600, and the expense incurred in maintenance was £104. The receipts were obtained from the following sources:—

BURY.	Units.	Yielding.	Per uuit.
Private consumers took ...	550,617	£6,577	=2·867d.
Public lamps consumed ...	54,664	600	=2·634d.
First interim total ...	605,281	£7,177	=2·846d.
Traction sales amounted to	67,630	422	=1·498d.
Second interim total	672,911	£7,599	=2·710d.
Meter rentals	—	159	= ·057d.
Motor hiring	—	236	= ·122d.
Work done	—	106	
Total revenue	672,911	£8,100	=2·889d.
Used on works	15,675		
Total accounted for ...	688,586	(The Maximum load was 487 kilowatts, equal to a 15·78 per cent. load factor.)	
Utilised on distribution ...	42,597		
Total units generated ...	731,183		

The load factor being only 15·78 per cent., the works cost of under ¾d. per unit is very satisfactory, and the total cost, including street lighting maintenance at 1·367d., is equally so, while the capital charges at 1·32d. are below the average, and will be still further reduced as the traction output is increased. The Midland Corporations generally set a very good example in the direction of moderate rates, which usually result in an average per unit of something between 2d. and 3d. per unit. In the case of Bury the costs incurred are about equally divided between production and capital charges, 1·3d. each, leaving about ·2d. per uuit surplus, as the receipts are about 2·8d. per unit.

	Amount.	Per unit.
Works cost	£2,066 = ·736d.	
Rates, taxes, and management	1,662 = ·594d.	
Total cost	£3,728 = 1·330d.	
Public lamp maintenance ...	104 = ·037d.	
Gross cost	£3,832 = 1·367d.	
Interest charges...	2,237 = ·798d.	1·320d.
Sinking fund charges	1,465 = ·522d.	
Total actual cost of units sold	£7,534 = 2·687d.	
Surplus for year...	566 = ·202d.	
Total revenue	£8,100 = 2·889d.	

Chester.

THE results of the Chester Corporation electricity supply have improved considerably with the addition of a traction load, and those for last year are auspicious for the future. With the balance brought forward there is a total surplus of £2,200, and this has been placed to reserve, making the amount in hand £8,404 to meet any extraordinary calls. The first table shows the general features of the revenue and nett revenue accounts, including the balance brought forward and bad debts. The provision made to meet bad debts is anticipatory, and should this amount not be required it will appear as a credit balance in the next accounts. The accounts to March 25th, 1904, show that—

The revenue derived from sales of current, &c., amounted to	£16,585
And the working expenditure to	8,126
Leaving a gross profit of	£8,459
To which was added the balance brought forward from the previous year	98
Making a total of...	£8,557
Out of this sum the following requirements were met:—	
Interest on mortgage debt £3,224	
Sinking fund and repayments 3,026	
Provision for bad debts 107	
Total of capital and special charges ...——	6,357
Surplus for year, including balance ...	£2,200

Surplus for the Year.

THE private supply rates are 4½d. and 2½d. per unit; street lighting works out at 2½d., and the traction supply at 1¾d. Owing to the large public lighting and traction load, which together amount to 654,180 units, as compared with 619,033 units sold to private consumers, the load factor is high, 19·15 per cent., and the capital charges are correspondingly low, 1·178d. per unit. The street lighting consists of 211 arc and 485 incandescent lamps, which is a fair showing for a town of the size of Chester. The receipts work out as follows:—

CHESTER.	Units.	Yielding.	Per unit.
Private consumers took...	619,033	£9,954	= 3·850d.
Public lamps consumed...	415,108	4,334	= 2·506d.
First interim total ...	1,034,141	£14,288	= 3·316d.
Traction sales amounted to	239,072	1,743	= 1·750d.
Second interim total..	1,273,213	£16,031	= 3·022d.
Meter rentals	—	389	= ·073d.
Motor hire	—	6	= ·011d.
Work done and goods sold	—	52	
Revenue in all ...	1,273,213	£16,478	= 3·106d.
Used on works	149,921		
Total accounted for ..	1,423,134	(The maximum load was 759 kilowatts, representing a load factor of 19·15 per cent.)	
Utilised on distribution	109,902		
Total units generated.	1,533,036		

The nett surplus for the year, excluding the balance brought forward and retaining the provision for bad debts in the current year, amounted to £2,102, the allocation of the total receipts being shown in the following table:—

	Amount.	Per unit.	
Works cost	£4,989	= ·940d.	
Rates, taxes, and management	1,808	= ·341d.	
Total cost	£6,797	= 1·281d.	
Public lamp maintenance...	1,329	= ·251d.	
Gross cost	£8,126	= 1·532d.	
Interest charges	3,224	= ·608d.	1·178d.
Sinking fund...	3,026	= ·570d.	
Total actual cost of uuits sold £14,376		= 2·710d.	
Nett surplus for year ...	2,102	= ·396d.	
Revenue in all	£16,478	= 3·106d.	

Comparison of Capital Invested.

THE capital invested in the two undertakings referred to above was covered by the items now given:—

Local Authority ...	BURY.	CHESTER.
Lands	£2,383	—
Buildings	11,702	£15,937
Machinery	26,353	35,228
Accumulators	2,143	2,505
Mains and services ...	21,647	36,065
Meters	2,860	4,768
Motors	3,047	—
Electrical instruments...	324	494
Public lamps	1,009	10,994
Various	2,021	338
Total capital	£73,489	£106,329

The Bradford Breakdown.

THE Board of Trade report upon the Bradford breakdown in supply, is a timely reminder that electricity mains may be laid down and put out of sight—perchance ignored and almost forgotten; but if they are not treated as all engineering appliances ought to be, and periodically tested, it is only a matter of time ere trouble comes. The great difference between the generating and distributing plant of a central station system is that the former can be duplicated, and is always available for inspection; whereas the latter is (except in the matter of feeders) not provided with "spares," and cannot be readily examined. The causes of the trouble at Bradford are stated to be want of electrical continuity of the lead-sheathing across the joint-boxes and leakage of current; in other words, electrolytic action has been going on. This seems to have destroyed the lead sheathing and exposed the insulation to damp. The Board of Trade rules have always insisted upon the necessity for electrical continuity throughout the distributing system. This can only be ensured by proper bonding wherever the sheathing is cut, as at boxes. Next in importance to this comes efficient earthing of all parts not intended to carry current. These requirements are universally mentioned in specifications, but contractors do not yet appear to fully realise the importance of carrying them out in the spirit as well as the letter, and it remains for engineers to see that the stipulations made are fully complied with. Perhaps the reliance which has been placed on "box compound" has something to do with the difficulty. This is used to make a watertight seal with the box-body in the cheaper class of these appliances, although nothing less than a plumber's wiped joint can generally be regarded as satisfactory.

Fuses and their Position.

ANOTHER point mentioned in the report is the absence of fuses, and of arrangements for preventing an extensive stoppage of supply. Fuses are a relic of a barbarous age, but it is not an easy matter to find a substitute except on switchboards. Engineers have argued the question over and over again as to whether fuses should be provided in street boxes on the route of mains, and no decision has been arrived at which can be said to be final. Without them the district—affected by a failure on the network of mains—is necessarily a large one. When they are introduced they sometimes bring with them a new set of troubles of their own. It would appear, however, that to limit the interference with the supply which follows a fault on the cable system a reasonable number of weak links (such as fuses) should be introduced, but that their position should be carefully decided, and they should be frequently inspected. The inconvenience attending the below-street level box has led to the sectioning pillar making its appearance on most lighting systems, following its general adoption on tramway lines, and although these obstacles on the public footway are a source of annoyance to borough engineers, there can be no doubt that they are now indispensable adjuncts to the electrical engineer, who finds in them accessible points at which to test and split his cables, and can safely fix fuses and instruments above ground which would be inoperative in a pit. By keeping the feeding and distributing portions of the cable system apart and supplying the sections of the latter through fuses in such pillars, the risk of a general disturbance to supply is so greatly minimised that it may be said to be removed from the realm of probability.

Municipal Employment.

WHEN time hangs heavily upon the hands of the electrical engineer his pet hobby appears to be the concocting of a letter to one of our electrical contemporaries. The favourite subject for the moment is the hardship of municipal employment, yet there is no dearth of applicants for any vacant post, nor does the stream of applications seeking "the next vacancy" dwindle. The form in which such complaints are couched varies. One writer

may cite his grievance that municipal electrical engineers do not reply to every letter seeking for advice or a position. Another, that electricity committees follow private employers in reserving to themselves the right to fix, and to vary when they consider it necessary, the conditions under which their officers carry out their duties. Actions, which in the case of a private firm or company would pass unnoticed, are regarded as hardships by the municipal servant in many instances, and he flies to the Press to ventilate his grievance. Yet we find that the permanency attaching to a municipal office, the chance of promotion, and the freedom from petty tyranny which is the great advantage in public life, continue to attract some of the best men in the profession. When it is said that the electrical profession is rapidly deteriorating, we fancy the seat of the trouble lies in the grumblers themselves. There are, of course, public bodies which with a certain constitution may be hard taskmasters, and there are officers who anticipate a career of more than ordinarily rapid progress; but, on the whole, we are convinced that for the self-respecting, skilled engineer the holding of an office in the electricity undertaking of a local authority is a stepping-stone to a professional position, yielding reasonable emoluments, and affording an outlet for the highest technical attainments.

DERBY ELECTRICITY UNDERTAKING.

GRADUALLY INCREASING PROFITS.

THE returns for the tenth year's work in connection with the Derby Corporation electricity undertaking show that substantial progress has been made. For the first few years there were large deficits in this department, but during recent years the prospects have brightened, and the latest figures show a useful profit.

The increased demand for electricity and the gradual reduction of cost during the past three years is illustrated by the following:—Year 1901-2, consumers 870, lamps 75,972, number of units sold 1,081,487, total cost per unit 2·07d.; 1902-3, consumers 1,002, lamps 87,502, number of units sold 1,287,619, total cost per unit 1·561.; 1903-4, number of consumers 1,240, lamps 106,790, number of units sold 1,490,611, total cost per unit 1·451.

The amount of loan sanctioned was £196,048. Of this £159,369 has been borrowed at the rate of 3 per cent. The amount repaid is £28,836. The capital expenditure at the ends of the ninth and tenth year was respectively £159,657 and £189,386; revenue from electricity supply, £17,137 and £18,950; revenue from meter rents and other sources, £1,319 and £1,504; total revenue, 1902-3, £18,456; 1903-4, £20,454; total costs, £8,389, £8,986; gross profit, £10,067 and £11,468; percentage of gross profit to average capital, 6·50 per cent. and 6·57 per cent.; interest on loans, less interest receivable, £4,430, £4,937; sinking fund, £5,040, £4,814; percentage of ditto to average capital, 3·25 per cent., 2·76 per cent.; financial result after providing for interest and sinking fund, surplus, 1902-3, £597; 1903-4, £1,717.

MUNICIPAL SMALL LOANS.

To the Editor.

SIR,—With regard to your note on the above subject, in issue of January 13th, in which you quote from the *Globe* that the municipalities are offering more favourable terms than the banks can afford, and describes this as "most unfair and illegitimate competition," why, I would ask, is the "competition unfair and illegitimate"? Looking to the half-yearly accounts of banks throughout the country, recently published, it seems to me that institutions which pay from 12 to 20 per cent. may well stand a little competition, with great advantage to the general public who are not holders of bank shares.—Yours, &c,

L. R. E.

A CURIOUS CORPORATION.

THE "TWELVE CAPITAL BURGESSES OF SHEFFIELD."

IN the Chancery Division on Saturday Mr. Justice Joyce had before him a petition presented by the Sheffield Corporation for the investment in land of £12,000 belonging to the "Twelve Capital Burgesses of Sheffield."

Mr. Hughes, K.C., in support of the petition, said the Twelve Capital Burgesses of Sheffield was a corporation formed under letters patent of Queen Mary.

Mr. Justice Joyce asked what they did with their income.

Mr. Hughes said it was devoted partly towards Church purposes and partly for certain secular purposes in connection with the maintenance of bridges under a scheme. The money had been paid into court under certain sales by the Corporation of Sheffield and by the Great Central Railway under the Lands Clauses Act. It was proposed to invest £12,000 in purchasing freehold lands in Sheffield.

His Lordship sanctioned the investment.

MUNICIPAL FOREMEN.

ANNUAL DINNER.

THE third annual dinner of the Provident Institution of Municipal and Allied Foremen was held on Saturday evening at the Holborn Restaurant.

Mr. W. Dawson, the engineer and surveyor to the Leyton Urban District Council, presided. He said the usefulness of the institution was now recognised by all thrifty municipal and allied foremen. They had a membership of 256, and there had been a 10 per cent. increase during the past year.

One widow had 7s. per week, and two members 10s. each per week. As much as £42 had also been paid in assistance in addition, and they had a balance in the bank of £320.

TRAMWAY TOPICS.

Enormous Increase in Passengers and Receipts at Liverpool. Progress of a Notable Work in North Wales. Discarding Steam for Electric Power. The Present Position at Heywood and Rochdale and the Running Conditions Laid Down. Glasgow and its Extending System.

SIR CHARLES PETRIE, presiding at a meeting of the Liverpool Tramways Committee last week, said that during the past year there had been an increase in passengers and receipts, although it was not so great as that of 1903 over 1902. They could not now anticipate increases by leaps and bounds, but they were still forging ahead, and if they could get new lines and the extension which the committee recently sought, he thought the increase would be much larger. There was room in Liverpool and district for considerable extension of the system, and he hoped that before long the City Council and the public would be able to see eye to eye with the committee, not only in regard to the extension of the passenger system, but also in regard to the transmission of merchandise. The following table was submitted of the returns for 1904 and for seven preceding years:—

Year.	Mileage.	Passengers.	Receipts. £	Increase in Receipts.
1897 ...	6,013,180	... 38,409,084	... 290,743	... —
1898 ...	6,279,758	... 41,772,034	... 314,207	... £23,464
1899 ...	7,600,545	... 63,771,450	... 359,929	... 45,722
1900 ...	9,100,866	... 82,367,958	... 417,574	... 57,645
1901 ...	10,970,063	... 101,108,780	... 468,383	... 50,809
1902 ...	11,790,815	... 109,315,585	... 506,626	... 33,243
1903 ...	11,734,838	... 113,057,234	... 524,509	... 17,883
1904 ...	12,166,419	... 116,642,663	... 540,916	... 16,407

The increase for the year 1904 over 1903 has been as follows:—Mileage, 3·68 per cent.; passengers, 3·17 per cent.; and receipts, 3·13 per cent. The increase for 1904 over 1897, the last year of the company's control, is as follows:—Mileage, 102·33 per cent.; passengers, 203·68 per cent.; and receipts, 86·05 per cent.

❦ ❦ ❦

Electrifying Snowdonia.

THE task of electrifying the Snowdonian valleys is progressing, and before the advent of summer there will be laid a network of electric wires and cables through some of the prettiest bits of scenery in North Wales. For months past quite an army of navvies, generalled by a staff of engineers, electrical and otherwise, have been at work, with the result that the power station at Llyn Llydaw, where the motive power is to be obtained, has been nearly completed. The machinery has been delivered, and hundreds of tons of cables, and when the tunnels through the pretty Pass of Aberglaslyn have been completed the line will be practically ready, so that there will be a direct communication from Carnarvon via Dinas and Beddgelert to Portmadoc. The narrow gauge railway is being electrified; the overhead wires are being laid, and the whole of the new rolling stock is on order. The power lines have been laid not only along the route of the railway, but through the Nantlle valleys. Many of the quarries, both here and in Festiniog, will be worked by electricity, for the owners, having been convinced that they will be able to save at least 25 per cent. in the working of the hauling and pumping, will discard steam and order electric power. So far no progress has been made with the railway from Dinas to Carnarvon, and before the Bettws-y-Coed line can be taken in hand the Order will have to be confirmed.

❦ ❦ ❦

Leith and the Lowest Tender.

A REQUISITION was presented by four members of Leith Town Council calling a meeting of the Council for Monday to consider the action of the Tramways Committee in accepting an offer by the Brush Electrical Company for the supply of cars for the new electric system of tramways in the burgh at £19,228, when it had a lower offer before it, upon which, it is stated, the Council's engineer had favourably reported. It is understood that the committee acted with powers, and the acceptance of the offer was carried by eight votes to seven, there being three members absent, but official intimation of the fact, it is believed, had not been made to the company, so that it will not be binding on the Corporation.

❦ ❦ ❦

Kirkaldy and Dysart.

THE proposal to extend the Kirkaldy Corporation tramways to Dysart is taking practical shape, and is likely to be carried through without much delay. The estimated initial cost of the undertaking is £9,000, and with a fifteen minutes' car service it is calculated that a weekly drawing of £35, or £5 a day for seven days, would meet expenses. The total length of the extension is 1¼ miles, and the cost of running works out at about 8½d. per car mile. Several guarantees against loss have been forthcoming, one of £100 for ten years from Sir Michael Nairn, Bart.

❦ ❦ ❦

Covered Cars for Newcastle.

TWO covered-in double-deck cars will shortly be placed on the tram lines of Newcastle as an experiment. The Mayor of Newcastle, who was lately in Leeds, has been making inquiries regarding similar cars that are being run in that city, and has been informed that these cars are each making 30s. a day more than the other cars.

❦ ❦ ❦

Glasgow Employees' Social.

THE annual social gathering of the employees of the Glasgow Corporation Tramways Department was held on Friday night in the City Hall. Sir John Ure Primrose, Bart., the Hon. the Lord Provost, presided, and among others on the platform were Bailies Taggart and Steven, Councillors Hugh Alexander, Alston, Boreland, Boyd, Breeze, Burgess, Dallas, Finlay, Harvey, Henderson, King, Montgomery, and Paxton, and Mr. James Dalrymple, the general manager. After tea, the Lord Provost delivered an address. At the outset he made reference to the severance of ex-Bailie Paton's long connection with the department, and to the excellent work he accomplished as convener of the Tramways Committee. After expressing regret at the departure of Mr. John Young for London, his lordship gave some interesting details regarding the working of the tramway system. They were now, he said, operating 72½ miles of road. It was estimated that this year there would be an increase of about £30,000 in the revenue. The record weekly income had been reached last week, when the drawings amounted to over £17,000. The staff numbered 4,030, of whom 3,200 were members of the Friendly Society.

❦ ❦ ❦

Other Details.

THE Corporation was applying for power to make further extensions, and these when completed would add 20 miles of road to the system. In the workshops they were putting top covers on 100 cars, and they were building 100 additional cars. Since last year the motormen who had been free from accidents had been getting a bonus. The superannuation fund was growing steadily, the invested funds now amounting to £9,500. The present annual car mileage was 16,500,000 miles, and the number of passengers carried was 200,000,000. The estimated revenue for this year was £750,000. The weekly wages bill was £5,400. In the further course of his speech the Lord Provost alluded to the growth of suburban localities as the result of the facilities for transit now provided, and in this connection he urged the importance of the enlargement of the taxable area of the city. In concluding, his lordship commended the conductors of the cars for their courtesy to the public, and expressed his satisfaction with the extent to which the employees were taking advantage of the provident scheme connected with the department. An interesting concert followed.

Another "Test Case."

THE Sunderland magistrates last week fined a passenger £1, including costs, for obstructing a tramcar inspector. The evidence was that the defendant paid the fares of himself and two companions, and when asked by the inspector to show the tickets, produced these torn up, so that the inspector could only find the number of one of them. The defendant, it was stated, admitted that he tore up the tickets purposely, "as he wished to have a test case." The Bench described his conduct as most unreasonable.

Tramways and Light Railways Association.

THE members of the Tramways and Light Railways Association on Monday afternoon availed themselves of the opportunity of visiting the huge power-house and repairing sheds of the Central London Railway at Shepherd's Bush, the western terminus of the line. The journey was very successful, for the depot contains much that is highly interesting to all who are concerned with the subject of electric traction. The party inspected the various houses in which work is carried on, proceeding from the cellars—in which the coal, which is almost entirely "smokeless Welsh washed peas," is stored and separated from the dust—to the engine-house, where the current to operate the system is generated at 5,000 volts, and is sent out to transforming stations placed along the route for reduction to 550 volts direct. The long car-sheds for the storage and overhauling of the trams were also visited, one of the six steel-framed cars which were made at Birmingham about eighteen months ago being examined. These cars have been running very satisfactorily for some time, their chief advantages over the old wooden description being the increased lightness, the less likelihood of taking fire, and the greater internal space, owing to the walls being so much thinner. An interesting point mentioned by Mr. Granville Cuningham, the general manager, who arranged the visit, is that a greater number of the men employed at Shepherd's Bush are sailors and marine engineers, it being found that they have not only acquired a certain knowledge of electrical work before coming to the depot, but that they are better disciplined and more reliable than other employees.

Heywood Deadlock.

THERE was a long discussion at the meeting of the Heywood Town Council last week on the negotiations which have been proceeding between the Tramway Committees of the Heywood and Rochdale Corporations for the temporary running of the Heywood steam trams into Rochdale borough as far as Sudden, where the Rochdale electric cars now run. The Rochdale committee is prepared to allow the Heywood cars to run, but lays down a number of conditions. Among them is one binding the Heywood Corporation not to attempt to obtain at any time in the future powers to run its cars into Rochdale borough. Other conditions require Heywood to put the track and road into repair, and provide for the stoppage of the trams at seven days' notice. The Heywood committee struck out some of the proposals, and submitted an alternative agreement, in which it offered to repair the road and the track, to bear all responsibility for any damages which might arise, and to cease running the cars at any time Rochdale desired it on receipt of a few days' notice. The committee, however, declined to bind itself not to seek for running powers into Rochdale in the future. Correspondence which had taken place between the respective boroughs was ready, including a letter from the Rochdale town clerk, intimating that the Tramway Committee could not agree to the alterations suggested by the Heywood Tramway Committee. In the discussion which followed it was pointed out that the advantage to Roch-

dale by having the connection would be as great. if not greater, than to Heywood. Regret was expressed that an agreement had not been arrived at, but it was urged that Heywood had gone as far as was reasonable, and could not accept the conditions laid down by Rochdale.

From Conductor to Traffic Superintendent.

THE traffic superintendent of the Edinburgh and District Tramways Company was, a days ago, presented with a handsome gold watch for his services in connection with the Tramway Employees' Widows and Orphans Fund, which he founded in October, 1903. The company's employees entertained him to dinuer, the general manager (Mr. J. E. Pitcairn) presiding. No contributions towards the fund are taken from the men, the proceeds of concerts, which are held annually, and a donation from the directors, forming the sum total of the capital account. Since the fund was inaugurated £90 has been paid away in relief to widows and orphans, there being five of the former and 15 of the latter receiving from 7s. 6d. to 10s. a week. In making the presentation. the chairman spoke of Mr. Shepherd's great service to the fund, and alluded to the striking fact that he commenced his tramway experience as a conductor in the service of the Manchester tramways 20 years ago. Annual simultaneous concerts at two of the city halls were held in the evening. At both entertainments the items in the programmes were the same, the artistes driving from the one hall to the other between their "turns."

Dublin Tramways.

THE report to be presented on Tuesday next of the Dublin United Tramways Company (1896), Limited, shows that the amount available for division is £50,313, out of which dividends for the half-year are recommended at the rate of 6 per cent. per annum on the preference shares, and at the rate of 6 per cent. per annum, free of income tax, on the ordinary shares. It is proposed to write off £3,365, the balance of the cost of electric welding, to place £4,000 to reserve fund. and £1,000 to accident insurance fund. These dividends and the sums set aside will absorb £43,465, leaving £6,847 to be carried forward. A special meeting will be held after the ordinary meeting to consider a Bill promoted in Parliament for the transfer of the undertakings of the Dublin United Tramways Company and the Dublin Southern District Tramways Company to the Dublin United Tramways Company (1896), Limited.

West Ham Tramway Employees' "Social."

A SOCIAL evening and dance in connection with the West Ham Corporation Tramways Social and Athletic Club was recently held in the Warwick Room of the Alexandra Hotel, Stratford, when there was an excellent attendance of employees and friends. The tramways manager (Mr. H. E. Blain), presided, and amongst others present were the chairman of the Tramways Committee and Mrs. Ivey, Councillor Littler, and Mrs. Blain. An excellent programme of vocal and instrumental music, interspersed with dancing, and including a short dramatic sketch, was rendered, and the whole function was very successful. The room was tastefully decorated with coloured lights, flags, and plants. During an interval, short speeches were made by Alderman Ivey and the tramways manager.

Nottingham Tramways Employees En Fete.

THE first of three gatherings in connnection with the Nottingham Corporation Tramways employees' annual dinner took place on Tuesday evening, when Mr. John Aldworth, general manager, presided. The dinner is held on three successive nights, so as to enable as many of the employees as possible to participate without interfering with the convenience of the travelling public. The Mayor (Alderman J. Bright, J.P.), Councillor J. Houston, the electrical engineer (Mr. Talbot), and the city engineer (Mr. Brown), supported the president; while the Tramways Department staff was represented by the car superintendent (Mr. W. Boot), the cashier (Mr. J. Husbands), the chief clerk (Mr. A. Jackson), the chief inspector (Mr. H. Morley), and the traffic clerk (Mr. C. Brown). The number of toasts was wisely limited, and a lengthy and excellent musical and dramatic programme provided.

PUBLIC HEALTH CONGRESS.

IMPORTANT JULY FIXTURE.

TO the London Congress of the Royal Institute of Public Health, fixed to take place from the 19th to 25th July next, in King's College, Strand, London, delegates from the whole of the municipal and educational authorities of the United Kingdom have been invited, in addition to the universities, medical corporations, and learned societies, and a large attendance is expected. The congress will be conducted in the following nine sections:—(a) Preventive Medicine, (b) Municipal and Educational Administration, (c) Child Study and School Hygiene, (d) Engineering and Building Construction—(1) Municipal, (2) Educational; (e) Bacteriology and Chemistry, (f) Veterinary Hygiene, (g) Tropical Hygiene, (h) Naval and Military, (i) Ladies' Section.

RAND WATER BOARD.

AWARD OF THE ARBITRATION COURT.

A WATER BOARD arbitration has been proceeding at Johannesburg as well as in London, and the *Times* correspondent was on Monday able to announce the result. The Rand Water Board was formed with the object of consolidating the existing systems of water supply on the Rand, in order to improve and cheapen that supply. Under the ordinance, which was passed last session by the Legislative Council, the Johannesburg and other municipalities of the Witwatersrand and the mines divide between them the representation on the board, while security for the issue of stock loans raised is provided by means of a dormant rate. The scheme entailed the expropriation of three water companies.

The Arbitration Court, presided over by Mr. Worsley Taylor, which has been sitting at Johannesburg during the last two months, has given the following award:—The Waterworks Company claimed £4 299,900, and is awarded £1,281,185; the Vierfontein Syndicate, which claimed £546,805, is awarded £477,754, and the Braamfontein Company, which claimed £160,875, is awarded £45,450. It is estimated that the other liabilities devolving on the board will bring the total amount paid for expropriation up to £2,224,000. This figure should allow the present water rate to the ordinary consumer to be reduced from 10*s.* to 5*s.* a thousand gallons within a reasonable period, while still providing interest on the sinking fund for the necessary loan. Any loan raised by the Water Board has such exceptional security that no anxiety need be felt with regard to its reception.

PROPOSED MUNICIPALISATION AT SUNDERLAND.

SUNDERLAND Town Council last week passed a resolution in favour of the municipalisation of the water supply, and appointed a committee to act in the matter. The resolution was in the following terms:—

> That this Council regrets the action of the Sunderland and South Shields Water Company in increasing the water rate in various parts of the borough, more particularly in cases where no increased assessment of property has taken place. And, further, that in our opinion the time has arrived when the whole question of the water supply of the borough should be thoroughly gone into, and, with a view to that end, a special committee is hereby appointed, such committee to consist of a representative from each ward in the borough, as also four aldermen. The duty of such committee shall be to gather information as to the desirability or otherwise of municipalising such water supply, either separately or in conjunction with the other authorities interested in so far as the scope of the above company is concerned, and to take such other steps as the committee may think proper in order to enable them to present a full and complete report to this Council. The committee to present a preliminary report not later than six months from this date.

Councillor Summerbell, who proposed the resolution, said he had received an intimation from the company stating that, in consequence of the re-valuation of his property by the Assessment Committee, his water rate would be raised a shilling per annum. As a matter of fact, his house had not been re-valued or re-assessed; it was rated now the same as it had been for several years. Therefore, no such demand ought to have been made. Legally, however, the company had the right to make the demand, though it was wrong to say it was due to increased assessment.

Councillor Summerbell gave some striking facts concerning the company. In 1846 a handful of men was allowed to get the natural rights of the people of Sunderland in regard to the water supply with a bill for £35,000. Since then the company had gone on adding to its capital without opposition, and next session it intended to ask Parliament for power to borrow £750,000 more.

There was practically no discussion on the subject, and, on a vote being taken, 35 voted for the resolution, one against, and 15 did not not vote.

PROPOSED PURCHASE OF SCALBY WATERWORKS.

THE Local Government Board has sanctioned the application of the Scalby Urban Council to borrow £3,000 for the purchase of the Scalby Water Company's property and undertaking, the repayment to be within 20 years. Before granting permission to borrow £500 for the extension of the waterworks, the Board desires to be furnished with the Council's remarks on the claim of the Scarborough Corporation to the exclusive right of supplying water within a portion of the Scalby urban district. This matter will be discussed at the next meeting of the Scalby Council.

WELSH WATER FOR RUNCORN.

THE Runcorn Urban District Council has resolved to apply to the Local Government Board for sanction to a loan of £6,000, to be repaid in sixty years, for the purpose of laying a 12in. main from the Liverpool-Vyrnwy main at Norton Tower to the Runcorn Reservoir. Mr. Pritchard, who is chairman of the Water Committee, explained that this scheme would add 5d. in the £ to the general district rate. The soft water would be a great boon to the manufacturers of the district.

THE GARDEN CITY.

PROGRESS OF THE MOVEMENT.

"IDEALISTS must not push forward their ideals too fast," was the advice which Mr. Ebenezer Howard, founder of the movement, pressed on the members of the Garden City Association in London on Tuesday. If a single drop of alcohol were sold in the Garden City, he had been told, the place would not be worthy of its name. There must be no butchers' shops, no open fires, no street noises, no motor cars. "Pray let us be practical," he urged, "and we shall succeed."

The Garden City was undoubtedly smaller in size than the city he first projected, but this was not without its advantages, and the essential features of the plan would be in a large measure preserved. The city would be as nearly as possible in the centre of the area selected; there would be a zone or belt of open land within the town, sites for public buildings would be selected, and, above all, ample provision would be made against overcrowding, by not permitting more than 12 cottages to one acre of land.

Even if the first garden city were not the paradise on earth that some had designed, the first result of the experiment would, he believed, be that the number of people who favoured the scheme would be increased a thousand-fold, and the glorious task which an insignificant minority could not compass would be found quite easy by the majority of the nation. "Let us," he said, "bend all our energies to the successful carrying out of this enterprise, assured that by our efforts we are preparing the way for one of the greatest national movements of modern times."

In the report to the annual meeting, over which Mr. Herbert Warren presided, the committee remarked that one of the most conspicuous features of the year's work was the extension of the propaganda to other countries. Another marked feature had been the successful efforts made to arouse interest in the movement among the various sections of co-operators. Early in the year a desire was expressed by the council for more intimate relationship with the first Garden City Company, which owed its formation to the work of the association, and as a result a joint committee had been formed to discuss subjects of common interest, with a view to the maintenance of the ideals of the association in the development of the city.

THE foundation stones of the new Quarter Sessions Court, Police Buildings, and Fire Station at Sunderland were laid on Wednesday afternoon by the Mayor (Councillor Fred Foster) and the Chairman of the Watch Committee (Councillor J. G. Kirtley).

ABOUT BOOKS.

THE FEEDING OF BABIES.

OF late years several of our municipalities have evinced a tendency to increase their responsibilities by opening depôts for the supply of specially prepared milk for infants. Depôts of this kind have already been established by about a dozen municipalities, and there are indications that others are about to take similar action. Although the ratepayer has to furnish the necessary funds for these institutions it is not easy for him to inform himself as to their *raison d'être*, for the information relating to their history and objects is buried either in inaccessible official reports or in books too technical for the ordinary reader.

We are interested to note, therefore, that Messrs. P. S. King and Son will shortly publish a book on "Infantile Mortality and Infants' Milk Depôts," by Dr. G. F. McCleary, the Medical Officer of Health of Battersea, in which district a municipal milk depôt has been engaged in feeding babies for over two years. The writer discusses the various causes of infantile mortality, and indicates the lines on which preventive action should move; and in order to emphasise the importance of his subject, he devotes a chapter to the consideration of the decline of the birth-rate in this country and in the colonies.

The importance of improper feeding as a factor in infantile mortality is fully explained, and an account is given of the history and practical working of the infants' milk depôts in this country and in America, and of the similar institutions — the "Consultation de Nourrissons" and the "Goutte de Lait"—in France. Full particulars are given as to the cost of the various appliances, &c., necessary for the work of a milk depôt, and these should be helpful to members of the medical profession, and of local authorities which wish for information on the subject. The book is copiously illustrated by original photographs of various depôts in Europe and America.

BUILDING CONSTRUCTION.

LONGMANS' Practical Elementary Science Series are a well-known and highly appreciated series of students' manuals, and are written in that lucid style that is so helpful to the beginner.

The latest addition is entitled "Elementary Practical Building Construction,"* Stage I., by Frank Wm. Booker, F.S.I. It is based on the notes for a series of lectures to students delivered by Mr. Booker at the University College, Nottingham. Throughout the syllabus of the Board of Education has been kept in view, but some of the concluding chapters wisely carry the student a little further than is absolutely necessary for these examinations. At the end of the work—by permission—are printed the questions given by the Board of Education at the many examinations.

The book is printed in clear type, with a copious index, and contains over 700 illustrations, which serve to explain the technical points in the text.

THE NEW CROYDON DIRECTORY.

WE have received from Mr. Jesse W. Ward, *Croydon Advertiser* Offices, the 1905 edition of his comprehensive and well-arranged Croydon Directory. Several improvements are noticeable, and among the new features an interesting dissection of the Croydon census returns deserves special mention. It is elucidated by diagrams, and comprises a most useful set of statistics. A calendar of the principal local events in 1903 and 1904 is given, together with brief sketches of the town, the remarkable growth of which is again demonstrated by this substantial volume of nearly 750 pages.

THE Local Government Board has just issued an order empowering the Croydon, Kingston, and Richmond Union to combine for the purpose of the erection of a workhouse or workhouses for the reception and treatment of epileptics and feeble-minded.

BOROUGH OF HORNSEY.

TO PRINTERS AND STATIONERS.

THE Town Council of the Borough of Hornsey are prepared to receive TENDERS for PRINTING and the SUPPLY of STATIONERY for a term of One Year or Three Years, commencing on the 1st day of April, 1905.

Samples, &c., may be seen, and forms of tender and all information obtained, at the Office mentioned below, on any morning, between the hours of 10 and 12 o'clock, after a sum of two pounds has been deposited with the Town Clerk, which sum will be retained by the Council and deemed to be forfeited if a bona-fide tender is not made by the depositor. If a tender is made which is not accepted, the sum deposited will be returned, and, if a tender is accepted, such sum will be retained by the Council until the contract has been executed by the depositor, and will be forfeited in the event of his, or his sureties, failing or neglecting to execute such contract, or the bond accompanying it, within seven days after he or they respectively shall have been requested to execute the contract or bond respectively.

No tender will be considered except on the prescribed form.

Sealed and endorsed tenders are to be delivered or sent by post so as to be deposited in the tender box in the Town Clerk's Office not later than 4 o'clock p.m. on Monday, the 20th of February proximo.

The Council reserve to themselves the right to decline all, or any, or any portion of the tenders so sent in.

F. D. ASKEY,
Town Clerk.

Town Clerk's Office,
99, Southwood Lane, Highgate, N.,
16th January, 1905.

PARISH OF WILLESDEN.

ASSISTANT MASTER.

THE Guardians of the above-named parish require the services of an ASSISTANT MASTER at the Workhouse Infirmary, Acton Lane, Willesden.

Salary £40 per annum, rising to £50 by annual increments of £5, with furnished apartments, rations, and washing.

Candidates must have had experience in a similar situation, and be competent to receive, take charge of, and issue stores, &c., and keep all books, forms, and accounts of the Workhouse Infirmary.

The appointment will be subject to the provisions of the Poor Law Officers' Superannuation Act.

Forms of application may be obtained by sending stamped addressed foolscap envelop to my Office as below, and must be returned to me not later than Saturday, the 4th day of February, 1905.

By order.

METROPOLITAN BOROUGH OF WOOLWICH.

SUPPLY OF ROAD MATERIAL, FORAGE, STORES, &c.

THE Council of the Metropolitan Borough of Woolwich are prepared to receive TENDERS for the SUPPLY of the undermentioned ROAD MATERIAL, Stores, &c., within the Borough, from the 1st April, 1905, to the 31st March, 1906, and for Forage for Six Months from the 1st April, 1905 :—

1. Ballast, Sand, &c.
2. Brooms, Brushes, &c.
3. Cement.
4. Chandlery.
5. Disinfectants.
6. Drain Pipes.
7. Forage (for six months only from 1st April, 1905).
8. Harness.
9. Ironmongery.
10. Road Material.
11. Sewer Boots.
12. Sewer Iron Work.
13. Timber.
14. Veterinary Attendance.

The persons or firms whose tenders are accepted will in the case of all workmen to be employed by them be required to pay such rates of wages and to observe such hours of labour as are in accordance with the Standing Orders of the Council, a copy of which can be seen on application.

Forms of tender and any information can be obtained at the office of Mr. Frank Sumner, Borough Engineer, Maxey Road, Plumstead.

The persons or firms whose tenders are accepted will be required to enter into formal contracts.

The Council do not bind themselves to accept the lowest or any tender.

Sealed tenders, properly filled in, must be sent, addressed to me at the Town Hall, Woolwich, not later than 12 o'clock noon on Thursday, the 9th February, 1905, in envelope endorsed "Tender for ———."

Any samples which may be sent are to be delivered to the Borough Engineer, Council's Offices, Maxey Road, Plumstead.

By order. ARTHUR E[illegible]RYCESON,
Town Clerk.

Town Hall, Woolwich,
23rd January, 1905.

COUNTY BOROUGH OF SUNDERLAND

THE Corporation are prepared to receive LOANS of £50 and upwards on security of the Rates of the Borough, at six months' notice or for a fixed period.

For further particulars apply to Ernest Brown, Borough Accountant and Treasurer.

NORTHAMPTONSHIRE COUNTY COUNCIL.

RECORD AND STATIONERY CLERK.

WANTED, in the Office of the Clerk of the County Council a RECORD AND STATIONERY CLERK.

A practical experience in dealing with stationery and printing matters; also with the arrangement and filing of records and documents is essential, and experience in county or borough local government offices is very desirable.

A detailed list of duties and form of application may be obtained on request (accompanied by a stamped and addressed envelope) from the undersigned, and applicants are advised to deal in their application with their qualifications to carry out the particular duties specified.

The appointment will be terminable by one month's notice; the commencing salary will be £120.

Applications must reach the undersigned not later than the 6th February, 1905, together with copies of not more than three recent testimonials.

By order.
H. A. MILLINGTON,
Clerk of the County Council.
County Hall, Northampton.
16th January, 1905.

METROPOLITAN BOROUGH OF DEPTFORD.

TO VAN AND CART BUILDERS.

THE Council of the above borough invite TENDERS for Constructing and Supplying TWO VANS for conveying infected articles and returning disinfected articles.

The specifications of the vans and forms of tender can be obtained at the Borough Surveyor's Offices, 493, New Cross Road, between 10 and 4 o'clock (on Saturdays between 10 and 12).

Sealed tenders, which must be endorsed outside "Tender for disinfecting vans," must be sent to the undersigned, at the Municipal Offices, 20, Tanners Hill, Deptford, before 4 p.m. on Monday, the 13th of February, 1905.

It will be a condition attaching to the contract that the contractor shall pay such wages and observe such conditions of labour as have been agreed upon as fair by the representative organisations of the employers and of the operatives, and the contractor will be bound to observe, fulfil, and keep all and singular the stipulations contained in such condition, and for each and every breach thereof will have to pay as liquidated damages the sum of £5.

The Council does not bind itself to accept the lowest or any tender.

(Signed) VIVIAN ORCHARD,
Town Clerk.

THE MUNICIPAL JOURNAL
ESTABLISHED AS "LONDON" THIRTEENTH YEAR OF ISSUE.

No. 626.—Vol. XIV. JANUARY 27, 1905.

MUNICIPAL ACTIVITY ABROAD.

Adelaide is the Third Largest Municipality in Australasia, and is Setting a Splendid Example to Municipalities Abroad in Regard to Local Government and Civic Enterprise. Its Growth and Progress. Sanitary Condition. Municipal Music—a Comparison.

ADELAIDE, the third largest municipality in Australasia, and the capital of South Australia, may be described as a mushroom city. So far from being a collection of jerry-built shanties, however, it is, as our illustrations show, a handsome, well-laid-out city, and has most of the things which make for a full civic life. And these have all come in the sixty-five years that have elapsed since the land on which it now stands was marked out by survey boundary pegs.

How all this work has been accomplished without incurring an indebtedness of more than £60,900—for those were the official figures in November last—is worthy of attention even in England's up-to-date municipalities.

But before plunging into lessons from Adelaide it is necessary to give some idea of the present size and importance of the city. The area is 3,700 acres, including 1,751 acres of public parks, and 549 acres which are devoted to various ornamental purposes. There are fifty-nine acres of "squares" or boulevards, tastefully planted with trees, and embellished with statuary. In January, 1904, the population was estimated by the Registrar-General to be 39,625. Six years previously the population was 38,913, and during those half-dozen years, though the population has been slowly but surely increasing, the birth rate, it is a little curious to observe, has been slowly but surely decreasing, being 1,079 in 1898-99 and only 886 in 1903-4. But at the same time there has been an almost continuous decline of the total death rate since 1898-9. The rate for the past year is the lowest on record, and stands at 15·77, as against 17·95, the average of the preceding five years.

This low death rate is partly to be accounted for by the fact that the hygenic conditions of Adelaide are considered of the highest importance. For years past it has been and is by far the best drained and cleanest city in the southern hemisphere. Systematic sanitary inspection of a house-to-house character is made throughout the city. Special duties are also carried out, such as house disinfection, smoke observation, milk and food

KING WILLIAM STREET, ADELAIDE.
(The towered building on the left is the Town Hall; that on the right is the General Post Office.)

nsp ection, noxious trades supervision, inspection of lodging and boarding-houses, restaurants, markets, &c.

But there is one point in this connection on which the Corporation is open to criticism. The disposal of refuse removed from private premises continues to be by means of "tips" in various parts of the park lands. These are dealt with in a systematic manner under the supervision of the city surveyor, and the refuse is thoroughly covered every day with earth. Further, the picking of rags, &c., at the tips has been prohibited, and steps are taken to destroy all the rats at the tips. But such a method of treating refuse in a city, even under the best management, is, as the medical officer of health (Mr. T. Borthwick, M.D.), in his last report, readily admits, an unsatisfactory one, and a menace to health, both in the present and the future. A destructor must be looked upon as an essential part of the sanitary equipment of the city, and this is now being fully realised. But while a destructor is under consideration, it would be of great advantage to the public health to provide properly constructed carts for the removal of house refuse.

The terrible fire at the Alhambra Theatre in Chicago has stirred Australian local authorities as it stirred English. An inspection of the Adelaide Theatre Royal was made in July last by members of the City Council, the Fire Brigades Board, the officers of the Council, and Messrs. Chapman and Pollock. Every portion of the theatre was inspected — exits, entrances, stage, dressing-rooms, flies, cellars, stalls, dress circle, and gallery. The Council and the Fire Brigades Board were astonished at what they saw. There were wooden stairs to the dress circle, and a spirit store under the dress circle staircase; a cellar under the stalls, containing rubbish and inflammable matter; rubbish and old scenery under the stage, and naked lights under the stage. The stage had wooden supports; the proscenium was wooden instead of stone, and highly inflammable; the dome of the theatre was all wood, and inflammable; there was rubbish and old discarded stage properties up in the flies, and the dressing-rooms were constructed of wood, with no proper exit. The Adelaide Corporation felt, however, that before asking the owners of places of public amusement to effect alterations it should first put its town hall in proper condition. It has, therefore, incurred considerable expense in alterations to the town hall, which is now in the best condition as regards public safety that could be desired by the most arbitrary inspector.

ADELAIDE MUNICIPAL BUILDINGS.

During the past year the Corporation carried out this work of putting its Town Hall in order. In case of fire it would have been a veritable death-trap. The southern exit from the main hall, which was originally designed as an outlet from the kitchens, has been reconstructed, at a cost of £260. An old winding staircase has been demolished, which gives place to a new nine-feet straight stairway, with landings at intervals.

The amount of insurance on all Corporation properties, it may be added, is £58,011, which is distributed amongst various offices, for there is not there, as here, a municipal insurance system.

During last year the Corporation decided to cause an assessment to be made of all gas and electric light mains within the city. The Town Clerk (Mr. T. Geo. Ellery) had reported on the advisability of this course being taken, and a special committee carefully considered the matter, which was also pressed forward by the city solicitors. It was found that substantial contributions to the municipal treasuries are made in respect to rates from such sources in Melbourne and Sydney—where litigation resulted in favour of the municipal corporations—in Brisbane, and in the cities of Wellington, Auckland, and Christchurch in New Zealand. In Perth, West Australia, negotiations are in progress between the Municipal Council and the gas company as to the basis of assessment as the outcome of a Supreme Court decision.

Band concerts are now recognised as legitimate undertakings by municipalities in Australia. The Adelaide Corporation during the year has given free organ recitals and band concerts. The extent of this movement for municipal music is shown by a report recently issued by the town clerk of Wellington, New Zealand. In Melbourne, during the last four or five years, band performances in the various parks and gardens have been given, the expense being borne by the mayors. Indoor concerts are also given in the town hall at nominal charges for admission thereto, the entire proceeds being devoted to charity. At these indoor concerts bands or orchestras have been leading features. In Sydney, organ recitals are given in the town hall at small charges, and vocalists are engaged to assist. Free recitals are also given, but band performances have not, so far, been undertaken, although various proposals have been considered. In Brisbane, bands have played in the parks, under subsidy from the municipal body, at intervals since 1901. In Perth, the local authority has subsidised bands by inviting tenders annually for the service for the various parks. Not less than 20 performances are accepted, and the cost of each performance is about £6. In New Zealand, the city of Christchurch has, since 1902, had a subsidised band service, open-air concerts being given in the band rotundas. For the year ended March 31st, 1903, two bands were paid £50 each, and last year four bands were paid the same amount each, and the town clerk states that the concerts are largely attended and highly appreciated. Some 52 performances are given during the season. In Dunedin local bands are encouraged by the Corporation to play in the city reserves, and allowed to make collections for their support. Members of the bands are permitted, on these occasions, to travel on the tram cars without charge. The bands hold a combined fete in the Botanic Gardens once a year, and are allowed to charge the public for admission. In Auckland, the Corporation has not entered into any arrangement with regard to municipal music. The practice in Wellington has been that band-stands are provided, and local bands may use them upon notification to the Council, which also undertakes to advertise the programmes.

Considerable attention has been paid in Adelaide to the dust nuisance and its prevention. Westrumite—the properties of which are known to our readers—phenolic, and oil, as dust-layer, has each received consideration. The town clerk has also obtained particulars from the cities of Sydney, Melbourne, Newcastle, N.S.W., Brisbane, and Perth, W.A., as to the use of salt water for street watering purposes, and while there seems to be a concensus of opinion that it has a much greater capacity for laying dust than fresh water, he reports that there are many objections to it, amongst which are that it corrodes the water-vans and spreaders; drivers of motor-cars do not like it; it has a harmful effect on bright metal goods; and it is said to cause a "plucking up" of the road surface under certain conditions of the atmosphere, whereby the small particles of grit which bind the stones together and fill up the interstices are carried away, thus damaging the road.

For much of the information contained in this article we gladly acknowledge the valuable reports which have reached us from the Mayor of Adelaide (Mr. Lewis Cohen, M.P.) and Mr. T. G. Ellery, who have been worthy pioneers of municipal reform in South Australia.

LABOUR COLONIES.

What they May be Expected to Do, and How they May be Started. Large Colonies the Most Efficient. Graded, they Would Allow Ample Scope for Classification. How to Begin. Fifteen Colonies for England and Wales.

[FROM A CORRESPONDENT.]*

THERE are three things which may be reasonably expected from labour colonies when well organised and well equipped, namely, cure for many men, amelioration and greater economy for others, and necessary restriction for some. Cure, of course, in this case, means the drunkard turned to sobriety, the lazy man to industry, and the dependent to self-support. The amelioration and economy would come in cases too mentally weak to make their way outside an institution, but too good to be shut up in idleness within four walls. For these, and others of a poorer moral type, there would be the necessary restriction which would come from well-organised and efficient control. This would prevent them propagating their kind, from preying upon other classes of the community, and from being used by unscrupulous people for bad ends.

Which are the Best Colonies?

Views are various as to the best type of colony, and the most reasonable conditions. There are people who favour large State institutions, while others lean to small voluntary undertakings. There are those who want a graded system of colonies, with the State at one end and the voluntary institution at the other, and probably a board of guardians in between. The writer is in favour of groups of graded colonies run by State funds, under State control, but worked by philanthropic bodies. He is not in favour of colonies, such as those which are just now coming into existence in various parts of the country, under separate boards of guardians.

For the working of these colonies the State ought to find all the money necessary, under the strictest safeguards, and the religious bodies should find the workers. Charitable bodies should not be allowed to squander public funds, and they might do so unless it were well understood that their expenditure would be looked into with a lynx eye, and that foolish extravagance might lead to their being displaced. Having once settled this question of funds and supervision, the State should refrain from meddling with details. For the best results to be obtained, the management should have the freest hand. A sound principle is, "Get the right man, and then trust him." What the State may reasonably ask in return for its money is a good standard of management and results.

The work will not be a pleasant work. Only those who have tried it know the wear and tear which comes from a continual wrestle with inefficiency. Dealing with inefficients is not so trying if one is content for them to remain inefficient. The strain comes when an attempt is made to lift them into efficiency.

The point has been raised as to the religious difficulty—how can a Protestant body deal with Roman Catholics, or *vice versâ*. The answer is, "Let those who are willing do the work." The work is not so attractive as to draw men unless they have their heart in it; except the State should be so foolish as to offer bribes in the way of large salaries.

Grading.

Large colonies and graded colonies will allow ample scope for classification. It is difficult to give an exact list of the people who should be sent to labour colonies. The simplest thing is to begin with a few well-defined classes, and to add others as occasion serves. Here are some suggestions:—

GRADE THREE.

Some first offenders.

Some criminals other than first offenders. (Prison experts would best define these.)

Men sent to a colony as a sequel to imprisonment.

Some tramps.

Refractories from other colonies—including lazy people.

Prison conditions as to quarters and fare. Power to put in solitary cells, and to give bread and water diet. No liberty.

GRADE TWO.

Some tramps, not sufficiently bad to be sent to grade three.

Some first offenders, ditto.

Colonists on promotion from grade three, or degraded from grade one.

Deficients, either too old, or lacking in character or intellect. (Not imbeciles: these should be provided for elsewhere.) This class would be happier and more useful here than in a workhouse, and safer than outside.

Food and conditions simple. Life as pleasant as it can be made, with due regard to the good of the inmates.

GRADE ONE.

Men promoted from two and three.

Inebriates with some hope of reform.

Able-bodied, intelligent men, temporarily unemployed.

Probably, in a separate block, youths under 21 years of age.

Food and conditions as upon the present voluntary colonies. No better. A hearty, healthy, hopeful life.

It has been suggested that there should be a kind of inter-working control over these triple colonies, in which the lowest should be run by prison authorities, and the highest by voluntary bodies, with boards of guardians' colonies between. This would be chaos, and would admit the very bad principle that the ablest men should do the easiest work.

The triple colony should be on a spacious area—there is, at present, a good deal of unproductive land in the country, which could be utilised. Situation is also a factor in success; low, damp places militating against good results, especially with inebriates. The buildings should be simple, but good. Jerry building does not pay, and worries administrators. There should be one single unit of authority for each group of three, and the most should be made both of recreation and religion.

The classification in these three grades might be fairly elastic at first, and gradually allowed to stereotype itself according to experience. And the period of detention in any one grade should depend entirely on conduct and aptitude, and should never be for a fixed time; so that a man might feel the rapidity of his rise or fall to be entirely dependent on his own efforts.

The conditions in the middle grade colonies might be made sufficiently good for the "permanents," of whom there would be many, to continue there without hardship, but without luxury; and for them, as well as for others, the door of hope would always be open if they were able to avail themselves of it.

To all these colonies men might come as now, or be committed on a magistrate's order, and in no case should a man be permitted to leave unless the authorities were satisfied that he had a prospect before him.

How to Begin.

I.—Define the classes to be dealt with. Others may be added as experience dictates.)

II.—Make as complete a census as possible of these classes.

III.—Begin with about five or six centres. Where these might be advantageously situated is set forth below.

IV.—Pass any necessary legislation to make the law fit the new conditions.

Belgium, with a population of nearly seven millions, has five colonies, two at Bruges, for women; and three near Antwerp, for men—practically two groups, on the three-grade basis suggested above. In England and Wales—and the suggestion is merely tentative—the country might be mapped out into five districts, each district having its group of three colonies, no provision being made for women. London, Bristol, Birmingham, Liverpool and York would serve as convenient centres for the following groups of counties.—London: Norfolk, Suffolk, Essex, Cambridge, Hunts, Beds, Bucks, Oxon, Berks, Hants, Surrey, Sussex, Middlesex, Kent, Herts, and London. Bristol: Cornwall, Devon, Dorset, Somerset, Wilts, Gloucester, Hereford, Monmouth, Brecon, Radnor, Cardigan, Pembroke, Caermarthen, and Glamorgan. Birmingham: Shropshire, Stafford, Worcestershire, Warwickshire, Northamptonshire, Rutland, Leicestershire, and Derbyshire. Liverpool: Anglesey, Merioneth, Montgomery, Carnarvon, Denbigh, Flint, Cheshire, Lancashire, Westmoreland, and Cumberland. York: Nottinghamshire, Lincolnshire, Yorkshire, Durham, and Northumberland. The colonies need not be within 20 or 30 miles of the towns indicated. They are simply named as natural centres for their respective districts, and many advantages arise from proximity to a large town; railways converge upon them, thus making the colony accessible to the district; supplies can be easily and cheaply obtained, while a large proportion of the colony inmates would be drawn from these large centres.

As to this grouping being upon a population basis, as well as geographically, the following table will show:—

	Population.	Paupers.	Per cent.
London district	11,500,000	329.400	·0286
Bristol ,,	4,250,000	135,000	·0317
Birmingham district	4,250,000	108,500	·0255
York ,,	6,500,000	142,400	·0219
Liverpool ,,	6,000,000	129,800	·0216

It will thus be seen that the area attached to London, so far as population and panperism are concerned, is equal to two districts, and the nucleus for its necessary two groups of colonies already exists at Hadleigh and Lingfield. As to the other four districts, the population and pauperism in each instance is sufficient to justify a group of colonies. It is worth notice, in passing, that as far as the percentage of pauperism to population is concerned there is not much variation, but it is highest in the west.

If Hadleigh and Lingfield were utilised as the London centres, the whole national scheme might be put into operation by the founding of four new groups of colonies, and these, with State assistance, the Salvation Army, Christian Social Service Union, and Church Army might be prepared to undertake.

Conclusions.

I.—Labour colonies offer a more intelligent and less wasteful method of dealing with many distressed classes of the community than those at present in vogue.

II.—They may be made an important factor in the settlement of the tramp question.

III.—They offer a more hopeful and economical means of dealing with lads who have never had a chance, and with men who have missed their chances.

IV.—The State should find the funds, and not be stingy, but there should be a rigorous check on extravagance.

V.—The State should not interfere in details, but should be content with righteousness and results.

VI.—The more elastic the system the higher the results.

VII.—The absolute need of religion and ideals.

VIII.—The State is best able to deal with money; their religious agents with men.

IX.—The great value of grouped and graded colonies, under one head, as a means of discipline and an incentive.

X.—The great need of the right men as administrators.

The best results will be obtained where the work is done on the highest level. Do not let the colonists be talked of, or thought of, as pariahs and wastrels. Let them be thought of as brothers, and treated as men. Let Christians give themselves to this work with a great redemptive purpose, and in the spirit of their Master!

* The writer has made a study of this question for some time, and has been actively engaged in the management of a labour colony for the last three years.

EDUCATIONAL NOTES.

Compromise at Bradford. Essex and Teachers' Houses. Report on Irish Education. Teachers' Agreements at Plymouth. Married Mistresses at Plymouth and Tipton. Rural Education. Whitehall Appointment. Slough and its Evening Classes. Labour Certificates at Stafford. Higher Elementary Education and School Desks. Yorkshire Wisdom in Secondary Education.

Bradford.—An effort is being made in Bradford to effect a compromise on the qnestion of the Roman Catholic pupil teachers' centre on lines which have found acceptance in Leeds and Birmingham. At a meeting of chairmen of education sub-committees a scheme was drawn up proposing that the centre should be controlled by a sub-committee of six, four of the members to be appointed by the Education Committee and two by the trustees of the centre. An arrangement of this sort has proved satisfactory to the Roman Catholics of Leeds and Birmingham, and it is hoped by this means to find a way out of an unpleasant situation.

Essex.—The Education Committee has further considered the question of the rents to be paid in respect of teachers' houses, and has now settled the amounts it considers fair. In a large number of cases the committee's proposals have been agreed to; negotiations are pending in other cases. The committee has endeavoured to settle each case in such a way as to balance fairly the claims of all parties in the light of (1) the salary attaching to each appointment; (2) the accommodation afforded; and (3) the value of house accommodation in the locality.

Irish Education.—The National Board of Commissioners has jnst issued the seventieth annual report upon elementary education (c.d. 2,230), price 4½d.

Leyton.—The Education Committee has arranged for the distribution of free breakfasts and dinners to a number of poor children attending the schools, and has authorised the use of the school corridors and rooms for these meals to be given, under the supervision of the teachers.

Lowestoft.—The Education Committee has considered the question of fixing an educational year as required by Regulation 1, Schedule 3 of the Code; also the advisability of altering the school year to correspond therewith, and recommended that a uniform educational and school year be fixed for the whole of the elementary schools in the borough, and that application be made to the Board of Education to approve 1st September for the commencement of such respective years.

Maidstone.—The Education Committee has agreed to abolish all fees in the public elementary schools.

Norfolk.—The Education Committee has decided that instead of sending the cheques for all teachers' salaries in the same school to the correspondent or chairman of managers for distribution, they be sent to the head teacher of each school in all cases in which the managers specifically ask for this procedure to be adopted.

Plymouth.—The terms of the agreement which have been accepted by the Education Committee for teachers in non-provided schools are similar to those embodied in the agreement which applies to teachers in the provided schools, and include a clause that those who accept service under it shall not be required to perform any duties except such as are connected with the work of the school, or to abstain outside the school hours from any occupations which do not interfere with the due performance of their duties as teachers of the public elementary schools. The education authority having decided that the marriage of a woman teacher should terminate her engagement at three months' notice, the Education Committee has declined to accede to a request of the foundation managers of Crompton School to be allowed to retain the services of an assistant teacher under the condition stated. The Education Committee has decided to consult the head teachers of the schools with respect to the practicability of incorporating hygiene and temperance in the school time-table.

Rural Education.—The President of the Board of Education has appointed Mr. T. S. Dymond (principal lecturer at Chelmsford Technical Laboratories) as an inspector, and to act as special adviser in matters of rural education.

Slough.—Owing to the small numbers attending the evening classes, the Stoke Road classes have had to be closed. By an order of the County Education Committee a school must be closed if the average attendance falls below a certain number, or else the master is fined every time the attendance fails to come up to the regulation.

Staffordshire.—The Board of Education has stated, in reply, that an education committee is entitled to withdraw a certificate entitling a child to partial and total exemption from school attendance if satisfied that the child is not beneficially employed.

Surrey.—It is calculated that the county education fund will benefit to the extent of £10,000 a year, solely due to the raising of the percentage of average attendance in the schools to 90. At the present time the attendance has risen from 80 to 86 per cent.

Southampton.—The Education Committee has passed the following resolution:—"That, in the opinion of this committee, the time has arrived when the local education authority should proceed to further co-ordinate education by taking advantage of the provisions of the code as to higher elementary schools; and that the Works and General Purposes Sub-committee be requested to bring up a report on the subject."

Swansea.—Dr. Rice Morgan, the medical officer of the Education Committee, emphasises the importance of a desk and seat being so constructed that the scholar should be able to sit comfortably with a back rest as support for the spine. The height of the desk should correspond with the size of the scholar. In many a class-room scholars are obliged to place the desks in such a position that they have to sit with their backs to the windows, and from this there necessarily follows a greater strain upon the eyes, where, if there is any tendency to disease, a serious danger results. The best position of light should be sideways, and preferably from the left.

Tipton.—A communication was read at the Education Committee from the Board of Education, sanctioning the appointment of married women as teachers where there was a dearth of teachers, owing to their experience in dealing with children, and the probability of their continuing longer in the profession.

Wiltshire.—The Education Committee has agreed that managers are to be held responsible for expenses as follows:—Repairs or alterations to structure required by the committee; upkeep of fabric of school; all external repairs, including repairs to walls, fences, chimneys, playgrounds, paths, yard-gates or doors, roofs and drains; all external painting and pointing; repairs to ventilators and bell turrets; water and gas meters.

Yorks (West Riding).—The Education Committee has expressed its concurrence with the following resolution of the agricultural council:—That this council does not view favourably the proposal to establish a secondary school specially for intending farmers; that it is of opinion that the best preparation for the agricultural courses at Leeds and Garforth is the ordinary general education at good secondary schools, and that it thinks that the question of the provision of secondary schools, and the means to be adopted to secure the attendance of the sons of farmers, should receive the careful attention of the local education authorities.

PAVING WORKS.

HOW THEY SHOULD BE PAID FOR.

THE method of paying for paving works is being fully discussed just now in municipal circles. The London County Council recently circularised the metropolitan boroughs on the subject. and now the Finance Committee of the Westminster City Council has drawn up an interesting report.

It seems to be clear (says the committee) that the expenditure which has to be incurred yearly for the necessary upkeep of roads is more in the nature of a charge that should be borne by revenue account, notwithstanding that it has hitherto been the practice to regard the cost of paving work as capital expenditure to be spread over a period of years, and that borrowing for the large expenditure recurring annually is expensive to the extent of the interest on the outstanding loans, without any compensating advantage accruing.

In Westminster, at the present time, the average annual cost of new paving and renewal of worn pavements, exclusive of repairs, equals the annual instalments paid in reduction of existing paving loans, exclusive of interest thereon. Thus, while on the one hand the Council is paying off paving loans at the rate of some £30,000 a year, it is, on the other hand, borrowing a like sum for paving purposes. In addition. the Council has to pay interest on these loans amounting to between £4,000 and £5,000 a year, which in practice has become a permanent charge upon the rates for which there is absolutely no return whatever. The result is that for every £100 worth of paving work defrayed by loan the Council is paying, in round figures, from £110 to £120, according to the period over which the repayment of the loan extends, and the rate of interest, which in the past has varied from 2¾ to 3¾ per cent. per annum.

If the principle of paying for paving works out of revenue were adopted, and a method could be devised by which the charge for relaying carriageways would be approximately equal annually, the ratepayer of one year would not be prejudiced to a greater extent than the ratepayer of another year, except that for a period following the change of system the ratepayers would have to bear the charges in relation to paving work previously executed in addition to the cost of new work, until the loans were repaid.

In the past, the annual expenditure on paving works has varied widely, but it might be equalised by forming a paving renewal fund, to which a sum representing the average annual cost of paving works, other than repairs, would be transferred annually. This fund would be debited with the cost of new paving and renewal of old paving. Any surplus would be carried forward to the fund the following year, and in the meantime would bear interest. Any deficiency could be made up out of the current rate, either directly or by appropriating sums provided but not required under other heads, or by debiting the fund in the following year. The adoption of the system of equalising would be facilitated if it could be so arranged that the repaving of the most important and costly streets, such as Whitehall, the Strand, and Piccadilly, should recur in rotation, so that not more than one of those streets should be repaved in any one year.

After summarising the County Council's letter, which has been already dealt with in our columns, the committee recommends:—

> That the principle of dispensing with loans for paving works, and of providing in the estimates year by year an approximately equal sum for such works, be approved, and that we be authorised to form a paving renewal fund, and to take such steps as may be necessary to give effect to the scheme.

"IT'S an ill wind," &c. It seems that the L.C.C. electric tramcars benefited considerably by the fog in London a few days before Christmas. Mr. Allen Baker, chairman of the Highways Committee, told the Council on Tuesday that during the two worst days, when there was a virtual suspension of general street traffic, the cars took in passenger fares as much as £2,500.

HOUSING PROGRESS.

The Official Monthly Record of the National Housing Reform Council. Local Authorities and Their Duties in Regard to Slums. How They have Performed them. The Varying Methods of Slum Clearance. What Might be Done.

FOR many years Birmingham reformers have been asking for the clearance of what is admittedly the worst slum area in the city—the Floodgate Street area. The population of this area is nearly 7,000 (of whom more than 2,500 are in receipt of charitable relief or are the subjects of the attention of public authorities in the city). The death rate (1902) was 32 per 1,000 as against 18 per 1,000 for the whole of the city, and the infant mortality rate was 250 per 1,000, or 1 in 4 of all the children born in the area.

In asking for action in regard to this area, Dr. Robertson, the Birmingham medical officer of health, is, therefore, only fulfilling his duty as an efficient and zealous guardian of the public health, and it is to be earnestly hoped that the Birmingham City Council will now decide to take the vigorous action for which Dr. Robertson rightly pleads.

The subject of the best methods of slum clearance is one which is of interest to housing reformers all over the kingdom, and in response to the wish kindly expressed by the editor of *The Municipal Journal* I venture to give the following brief outline of the powers already possessed, and a series of suggestions as to their usage.

The Duty of Local Authorities.

It will not be too much to say that if local authorities in the United Kingdom had, during the last ten years, performed the duty laid upon them in Sec. 32 of the Housing Act of 1890, the slums which burden our towns and villages would have completely disappeared.

The section is as follows:—

> 32.—(1) It shall be the duty of every local authority to cause to be made from time to time inspections of their district, with a view to ascertaining whether any dwelling-house therein is in a state so dangerous or injurious to health as to be unfit for human habitation, and, if on the representation of the medical officer, or of any officer of such authority, or information given, any dwelling-house appears to them to be in such state, to forthwith take proceedings against the owner or occupier for closing the dwelling-house under the enactments set out in the third schedule to this Act.

No loophole is left for inactive local authorities to excuse themselves. It will be noticed that the first words are, "It shall be the duty," &c.. &c.

Sec. 30 of the same Act definitely places equal responsibility on the medical officer of health:—

> 30.—It shall be the duty of the medical officer of health of every district to represent to the local authority of that district any dwelling-house which appears to him to be in a state so injurious to health as to be unfit for human habitation.

The Performance of These Duties.

Have these duties been adequately performed? There can only be one answer to this question, viz., that in probably the majority of cases local authorities regard the work as optional, and not as a duty at all. How many local authorities, for instance, have even prepared a list of the insanitary houses within the areas under their control? How many local authorities maintain a sanitary staff sufficiently large to enable the statutory duties devolving upon them to be properly performed? It is not enough that any complaint should be speedily investigated, or that a few houses here and there should be closed. Every council should possess a map in which every slum area should be marked down for clearance, and every slum house for destruction—sooner or later.

To adequately perform the duties imposed under the two sections of the Housing Act already quoted, two lines of action are absolutely essential:—

(1) A periodical inspection of all the houses in a council area should be made.

(2) Councils should prepare and publish a clear statement of the number and position of all houses below a right sanitary standard.

In many rural districts an inspection of all the houses would involve a very great increase in the sanitary staff, but for every shilling expended in this way, pounds would be saved in doctors' bills to poor and rich people alike, and in the cost of infectious disease hospitals—a cost which has to be borne by the ratepayers for "locking the stable door when someone has stolen the horse."

As it is, questions of drainage and water supply are neglected until an epidemic of disease calls public attention to the need for better sanitation; houses are overcrowded and rapidly degenerate into slums without any adequate attempt being made to administer existing bye-laws or to frame more efficient bye-laws; new houses are built under building bye-laws which insist on the performance of some trivial details and overlook such vital matters as the provision of adequate garden space and the insistence on a proper and well-organised water supply.

In the large towns also these primary duties are neglected, except in some honourable instances, of which Liverpool is one.

House to House Inspection at Liverpool.

Quite recently the Housing Committee of the Liverpool Corporation gave instructions to the Corporation officials to make a street-to-street inspection of the whole city. It was then found that, despite the fact that the Corporation had demolished about 8,000 houses under the Liverpool Sanitary Amendment Act of 1864, the number of "structurally insanitary" houses still remaining to be dealt with was about 9,900. "These structurally insanitary houses are generally back-to-back"—says Mr. Turton, the deputy-surveyor—"without any through ventilation or yard space whatever, and, being placed in courts, there is an entire absence of a circulation of air, and usually only one convenience for about five dwellings."

When the committee realised the enormous extent of the work to be done, it decided to deal with the problem at the rate of about 700 houses per year.

Every council in the kingdom should likewise possess a record of all the slum houses to be dealt with, and should, moreover, after full deliberation, prepare a scheme for the gradual "wiping out" of these centres of human wretchedness and disease.

Rival Methods of Slum Clearance.

When the members of councils have made up their minds to clear slum areas or to secure the destruction of insanitary houses two rival methods of procedure present themselves.

(1) The preparation of a scheme for dealing with an unhealthy area under Part I. of the Housing Act.

(2) Application for closing orders against the owners of the property.

The first method of procedure is much the more costly of the two. In practice it means that the council concerned purchases all the land and houses in the area, and then, after demolishing the houses, erects accommodation for the dishoused people. Some millions of public money have been spent on schemes under Part I. of the Housing Act or under similar powers granted to Corporations in special Acts of Parliament. It is probable, however, that, despite the large expenditure involved, the results have more than justified it. If it be a good piece of public work to build a fever hospital to cure people of disease, it is an even better piece of public work to destroy a slum and prevent the spread of epidemic disease. Nevertheless, the cost of administering Part I. of the Act is so great that the second line of procedure now finds increasing favour.

The most valuable example of slum clearance by means of closing orders is undoubtedly that of Hull. From June, 1898, to May, 1902, no less than 1,425 houses, in about fifty different streets, were "represented" under Part II. of the Housing Act as unfit for human habitation, and the magistrates of Hull were asked to issue closing orders against the owners. Dr. J. W. Mason, the medical officer of health, was able by this procedure to secure the actual closing of no less than 362 houses.

The great drawback to procedure under Part II. is that the decision as to the "fitness of houses" for "human habitation" is left to the bench of magistrates. It is entirely within their discretion as to whether a closing order shall be issued or not. The local authority has no power to appeal against the decision of the magistrates, although the owner of the property has a power of appeal to Quarter Sessions against a closing order when it has been granted. In many cases the magistrates have permitted the owners of property to make some small structural alterations in their property, and have then granted it a new lease of life. In the majority of cases magistrates certainly show a great reluctance to issue orders for the destruction of insanitary property. Many of them seem to forget that the health and immunity from disease of the poorest tenant should be regarded as of far greater importance than the property in bricks and mortar of the slum landlord.

Some Practical Suggestions.

Probably the worst practical line of action for local authorities to take is that of combining the procedure of Parts I. and II.

Wherever a large area has to be dealt with, it should be secured by the Corporation under Part I, and every attempt made to keep down the cost of purchase. Sec. 21 directs the arbitrator to base his estimate of the compensation on the "rental which would have been obtainable if the dwelling-house was occupied for legal purposes, and only by the number of persons whom the dwelling-house was under all the circumstances of the case fitted to accommodate without such overcrowding as is injurious to the health of the inmates."

The payment of compensation must be regarded as the price the present generation has to pay for the municipal neglect of earlier generations. The lesson in social economy will be cheap at the price if ratepayers will learn the much-needed lesson that all new housing areas should be properly planned.

Small groups of slum houses should be dealt with under Part II., and a regular series of applications for the closing of these houses should be made to the bench of magistrates.

Some town councils, e.g., Newcastle-on-Tyne, Darlington, and Paisley, have power under special Acts to issue closing orders, and to throw the onus of appeal to the bench of magistrates upon the owner of the condemned property. Such a power should be granted to every local authority, and probably will be given before many years have passed.

Meanwhile the present powers should be more efficiently used, and a healthy public opinion brought to bear upon those magistrates who place the "rights of property" before the "rights of healthy life."

In the above brief statement of the methods of slum clearance no attempt has been made to discuss the vexed question as to whether the people dishoused should be rehoused on the cleared area, or whether accommodation should be provided at the borders of the town.

This important point will be dealt with in a later article.

I have endeavoured to show that the powers already possessed by councils are far more important than many councillors imagine, and also that Parliament has clearly imposed the duty of slum clearance on the health authority for each area. It will, therefore, be only fair to say that the average citizen is equally to blame. Under Sec. 5 of the Housing Act, 12 ratepayers have power to make a representation to the medical officer of health asking for an inquiry into the condition of any area, and on the receipt of such a representation the medical officer must make such inquiry, and report upon it.

Probably there are not more than a dozen towns in England in which ratepayers have availed themselves of this power to stimulate action. I may add that the National Housing Reform Council has prepared special forms to be signed by ratepayers asking for these inquiries, and copies of these will be gladly sent to those who desire them, on application by post, to 432, West Strand, London, W.C.

HENRY R. ALDRIDGE.

OFFICIAL & PERSONAL.

A SOUTHEND FAREWELL.
THE NEW ACTON ACCOUNTANT.

A FAREWELL to Mr. Samuel Lord, the new accountant to the Acton Urban District Council, was given by the officials of the Southend-on-Sea Corporation, at a smoking-concert held on Thursday, 12th instant—Mr. Charles E. Tweedale, borough accountant, in the chair—supported by the town clerk, borough surveyor, medical officer of health, electrical engineer, piermaster, clerk to the justices, and the district rate collector.

An excellent programme was provided, and the evening's enjoyment enhanced by the presentation to Mr. Lord of a beautiful silver tea and coffee service, with a tray suitably inscribed, by his brother officers, as a mark of their esteem and regard.

The Chairman, in making the presentation, said that Mr. Lord had been assistant borough accountant for seven years, bringing with him from Rochdale an excellent reputation, and now he was leaving with an even more brilliant one. When Mr. Lord came to Southend the staff in his (the Chairman's) department numbered five, but it had increased to eighteen at the present time, and the work had increased in proportion. There could be no question as to Mr. Lord's ability, and his work had been not only very hard, but exceptionally so. Mr. Lord was one of those gentlemen who were not satisfied with ordinary distinction, for last year when he sat at the final examination of the Society of Accountants and Auditors he obtained a high place on the honours list. Nothing that he (the speaker) could say could prove more conclusively the esteem in which Mr. Lord was held than the manner in which the officials had subscribed to the testimonial—in fact, he might tell them that the amount contributed constituted a record for a presentation to a Corporation official. It was impossible to say too much in praise of Mr. Lord. He had exceptional ability, which was sufficient warrant for anything that ought to be said in his favour. He hoped that Mr. and Mrs. Lord would live long to prove the utility of the present, and would remember the givers, and that the days he had spent in Southend would not be the least pleasant days of his life.

The Town Clerk and the other chief officials also spoke eulogistically of Mr. Lord and his work.

Mr. Lord on rising to reply was received with loud cheers. He thanked them most heartily, he said, for the presentation. He should prize the gift not only for the value itself, but also for the sentiment it embodied. He was pleased to be able to say that he thought he could lay claim to the goodwill and good fellowship of all those present. He could not have done what he had done without the assistance of a loyal staff and the other borough officials. He had always been shown the greatest consideration by everyone. He knew for a fact that there was not another borough in the kingdom where better fellowship prevailed among the officials than in Southend, and he hoped that wherever he went he might find such happy relations amongst his colleagues. He assured those present that he would welcome them most heartily if they should ever visit him at Acton.

Mr. and Mrs. Lord's health was then drunk with great enthusiasm, musical honours being accorded.

Votes of thanks to the chairman for so ably presiding and to the artistes for so kindly contributing to the evening's entertainment brought the proceedings to a close.

PRESTON MAGISTRATES' CLERK'S SALARY.

A FEW weeks ago Mr. Thomas Dodd was appointed clerk to the Preston borough magistrates, in succession to his brother, and the justices recommended that his salary should be £1,000 a year.

Exception was taken at the last meeting of the Town Council to the salary being paid, and the fixing of the amount was referred to the Finance Committee. This body has now decided to recommend the payment of £800 per year.

BURNLEY TOWN CLERKSHIP.

THIS week the General Purposes Committee of the Burnley Corporation unanimously decided to recommend the appointment of Mr. Peregrine Thomas, now town clerk of Leigh, to be town clerk of Burnley, in succession to Mr. Steele Sheldon, who, as our readers know, has been appointed town clerk at Wimbledon. The salary of the post is £700 a year, rising to £900. Mr. Thomas, who is 41 years of age, is a duly admitted solicitor. He was appointed town clerk of Leigh in 1897, and his present salary is £600 per annum. His articles were served with Mr. J. Davies Williams, town clerk of Southport.

With the exception of one year, which he spent in the office of Mr. J. Aeron Thomas, solicitor, Swansea, he has been engaged exclusively in municipal work. In 1882 he was appointed by the Milford Haven urban sanitary authority, out of a large number of applicants, as its clerk. The town was governed under a series of local Acts, together with the Public Health Acts and Commissioners Clauses Act, and the Council consisted of fifteen members. There were six standing committees, all of whose meetings he personally attended. The Milford Haven Council owned the gasworks, waterworks, cemetery, landing stages, toll bridges, and a ferry.

The making of valuation lists conveyancing, and the levying of the rates formed part of his duties. During his term of office the Milford Docks were constructed, which necessitated the laying of a new main sewer, the

MR. PEREGRINE THOMAS
(Burnley New Town Clerk).

stopping up of old roads, &c. The interests of the town and those of the Milford Docks Company frequently came into conflict, and it became necessary to oppose the company's Parliamentary Bills, and in this connection, as well as owing to the confirmation of some of the Council's Provisional Orders being opposed in Parliament, he acquired a valuable experience in parliamentary practice. On resigning his office in 1891, Mr. Thomas was made the recipient at the hands of the Council of an illuminated valedictory address and a purse of gold.

In 1891 he was selected, out of some 80 applicants, as assistant to the town clerk of Southport, and subsequently became assistant solicitor to the Corporation. It would be impossible in the space at our disposal even to outline the work he accomplished in this exceptionally progressive town. Amongst other duties, he took a full share of the routine work of the town clerk's office, municipal registration, the preparation of the burgess list of voters, the conduct of elections, and the preparation of numerous legal reports on a vast variety of matters. He had, from the first, sole charge of the preparation of the police-court, magisterial, and county-court work, and regularly acted as committee clerk from the beginning of his service under the Corporation. He also amplified his experience in Parliamentary practice. Out of 24 applicants he was selected to his present position.

This week the choice of the committee lay between Mr. Thomas, Mr. H. L. Parry, assistant solicitor to the West Riding County Council, and Mr. Cooper, solicitor, Blackburn.

SCARBOROUGH'S NEW MEDICAL OFFICER.

AT a meeting of the Sanitary Committee of the Scarborough Town Council last week, Dr. John Knight, M.D., Glasgow, D.C.L., Cambridge, assistant medical officer of health, Glasgow, was appointed medical officer of health for Scarborough, at a commencing salary of £350 per annum, which increases by annual increments of £25 to £400.

Dr. Knight is 31 years of age. He was appointed assistant medical officer of health, Glasgow, in 1900, and in August, 1903, he discovered an outbreak of enteric fever associated with shellfish, and was appointed special commissioner by the Local Government Board to investigate and report upon it.

There were originally 43 applications for the Scarborough post, and the full committee interviewed five, viz., Dr. Duncan Forbes, assistant medical officer of health, Manchester; Dr. Knight, the successful candidate; Dr. Spencer J. Low, medical officer of health, Dewsbury; Dr. Arthur E. Porter, assistant medical officer of Leeds; and Dr. C. Grant Pugh, assistant medical officer of health at the Park Fever Hospital, London. The final vote rested between Dr. Knight and Dr. Porter, of Leeds.

BRIGHTON TELEPHONES.
An Inaugural Conversazione.

The Brighton Corporation telephone department, at the end of its most successful first year of life, held an inaugural conversazione at the Old Ship Assembly Rooms, under the auspices of his worship the Mayor (Mr. Alderman F. Blaker), on the 13th inst.

It is not to be wondered at that the staff which has been instrumental in giving to Brighton one of the finest telephone services in the kingdom acted up to its reputation in providing a most enjoyable programme. In addition to the many enjoyable dances and some high-class talent, an attractive conjuring exhibition was provided, while several prominent artistes from the Grand Theatre pantomime kindly gave their services.

Naturally, the telephone undertaking itself was brought into requisition in adding to the attraction of the evening, as, by the kind permission of Mr. Councillor Beryl, the proprietor of the Theatre Royal, and also a member of the Telephone Committee, the music of "The Girl from Kays" could be heard on the electrophone, and was much requisitioned and appreciated.

Mr. D. J. Barnes, the very popular manager of the telephone undertaking, with Mrs. Barnes, very ably did the honours of the evening in receiving the guests, &c.

DOVER OFFICIALS DINE.

THE fourth annual dinner and re-union of the Dover Corporation officials took place on Thursday evening last at the Esplanade Hotel, when about 45 sat down to a capital spread.

The Mayor (Sir William H. Crundall, J.P.) occupied the chair, and was supported by the borough coroner (Mr. Sydenham Payn), the borough treasurer (Mr. G. Lloyd), the borough engineer (Mr. H. E. Stilgoe), Mr. R. E. Knocker, Drs. Ormsby, Cheale, and Elliot, Messrs. East, Woodman, Worsfold, Birch, Sutton, Carden, and others. The programme of the smoking concert which followed was of the best character, and was taken part in by Messrs. J. R. Eaton, Sutton, Young, Rubie, W. H. Green, and Edgar Berte, who rendered their selections in pleasing and efficient manner.

The toasts of "The King," "The Mayor and Corporation," and "The Officials" were given and suitably responded to. The borough engineer, in proposing "The Mayor and Corporation," touched lightly on a subject of great importance to all municipal officials throughout the country, namely, superannuation. He casually mentioned that in the neighbouring town of Folkestone they were drawing up a scheme to present to the Town Council, without waiting for the proposed Bill being brought before Parliament.

He claimed that if contributions from each official were taken, and something added thereto by the Corporation, it could be made self-supporting, besides making the officials stay longer in their situations without looking out for better-paid appointments. These remarks were loudly punctuated by applause during their delivery.

NOTES AND ANSWERS.

Procedure of Local Authorities in Taking Over Private Streets, and the Effect of the Act of 1892. The Watch Committee is on the Same Footing as other Committees of Corporations in Respect to the Exclusion or Non-Exclusion of General Councillors. How a General District Rate is Assessed, Made, and Levied.

Extract from a letter received this week:—"The great care that is manifestly exercised in replying to the queries sent to the MUNICIPAL JOURNAL is in marked contrast to the curt manner in which many of the queries in other local government papers are answered."

613.—**WEIGHTS AND MEASURES ACTS—Local Authority under—Qualification for Inspectorship.**—Will you kindly inform me what local authorities are responsible for the carrying out of the Weights and Measures Acts, by whom inspectors under the Acts are appointed, and what are the qualifications for office?—"NEMO."

The local authorities under these Acts are county councils in the case of counties, and in the case of boroughs having a population of 10,000 or over, the councils of boroughs having a separate Court of Quarter Sessions, and in other boroughs the town council, where a resolution is passed to this effect, local standards are provided and inspectors appointed. (See Sec. 50 of the Weights and Measures Act, 1878, and Sec. 39 of the Local Government Act, 1888.) The question of how to qualify for these inspectorships, and as to the examination conducted by the Board of Trade in connection therewith, was dealt with in the "Notes and Answers" column of our issue of the 13th inst. We should add to the reply there given that by virtue of the Weights and Measures Act passed last session, the Board of Trade is required to provide for the examination of applicants for these inspectorships who have actually been *nominated* by the local authority under the Acts, and that such persons may not be *appointed* unless they have previously obtained the Board of Trade certificate that they have satisfactorily passed such examination.

614.—**PRIVATE STREET WORKS ACTS—Liability of Corporation to Take Over.**—In the event of roads being made up under the Private Streets Works Act, are local authorities compelled to take same over, and maintain at the expense of the ratepayers? The corporation of the borough of B—— proposed to make up certain roads, the paths of which were to be tar-paved, the owners objected, and the magistrates deleted the tar-paving: the corporation decided it would not proceed with the work, but at the request of many of the owners it decided to proceed, but before doing so it sent a circular to all owners stating that the roads would not be considered to be made up to its satisfaction unless the footpaths were tar-paved: the corporation now refuses to take the roads over in accordance with the circular issued: the owners meanwhile contend, that as the council carried out the work under the supervision of its surveyor, it is bound to take them over. Is this so?—"W. E. H."

Briefly, the procedure under the Private Street Works Act of 1892 should be as follows:—We assume that the Act has been duly adopted by the Corporation in substitution for the corresponding provisions of the Public Health Act, 1875, which have often proved to be inconvenient in several ways. The Corporation passes a resolution that a certain street in the borough should be made up (sewered, levelled, paved, metalled, &c.) to its satisfaction. Thereupon the borough surveyor prepares a specification of the private street works referred to in the resolution, with plans and sections, an estimate of the cost, and a provisional apportionment of the estimated expenses among the premises liable to contribute. The specification, estimate, and provisional apportionment are then submitted to the council, and the resolution approving the same is duly advertised, and the approved plans, &c., are deposited for inspection at the council's offices for one month. During that month the owner of any premises liable to contribute may object to the proposals of the council by written notice on any one or more of several grounds of objection set out in the Act (Sec. 7). Amongst other grounds, he may object "that the proposed works are insufficient or *unreasonable*, or that the estimated expenses are excessive." Under this heading would properly come any objection to the private street in question being paved with tar instead of with some cheaper substance. The council, after the expiration of the prescribed month from the date of advertising the resolution, may apply to a court of summary jurisdiction to appoint a time for determining the matter of all objections, and due notice thereof shall be given. The magistrates have thereupon power to quash in whole or in part, or to amend, the resolution, plans, sections, estimates, and provisional apportionments, on the application either of the objector or the council (Sec. 8). The council may subsequently amend the specification, plans, estimates, and apportionment; but if the total amount of the estimate be increased, the procedure above indicated must be repeated, and the right granted to frontagers to object again arises. When the proposed street works have been completed, and the expense thereof ascertained, the surveyor makes a final apportionment on a basis prescribed in the Act, and such final apportionment is conclusive for all purposes, except that the frontagers have still certain powers of objecting, on the ground, for example, that the expenses have exceeded the estimate by over 15 per cent., or that there has been an unreasonable departure from the specification. On these street works being completed, and the street being paved, levelled, metalled, &c., to the satisfaction of the corporation, then, on application in writing of the greater part in value of the owners of the houses and land in such street, the corporation shall within three months, by notice put up in the street, declare the same to be a highway, repairable by the inhabitants at large; and thereupon it becomes a public street or highway which must be maintained at the cost of the rates. We are not clear from our correspondent's query what exactly has occurred in the case submitted, and have, therefore, set out the effect of the Act of 1892, so far as it bears on the case. Our correspondent will be able to apply it to the circumstances. It is clear, however, that the magistrates have power to amend the specification as to tar-paving, and that if this be done the council is not empowered to require the street to be tar-paved, and that once the street is made up in accordance with the advertised plans and specifications, the council can be compelled to take it over.

615.—**ALDERMEN—Qualification for Election—Metropolitan Municipal Franchise—Lodgers and Aliens.**—May I ask you to reply to a few questions in your next Friday's issue of the *Municipal Journal*? Can a town or borough council elect as alderman any man, including one outside the council, or must he be elected from the elected councillors? Are lodgers in London on the municipal register to vote for councillors, and what is their qualification? Are any aliens—householders or lodgers—on the municipal register in London?—"W. K."

Aldermen "shall be fit persons elected by the council," and "a person shall not be qualified to be elected or to be an alderman unless he is a councillor, or *qualified to be a councillor.*" (See Municipal Corporations Act, 1882, Sec. 14, and the London Government Act, 1899, Sec. 2.) An alderman, therefore, need not be a councillor, but he must have the qualifications required in the case of councillors, and this rule applies alike in metropolitan and provincial boroughs. Aliens, unless granted letters of naturalisation or designation, are precluded from being registered as municipal, county, or parliamentary electors, even though they may be householders or lodgers. Lodgers, being naturalised British subjects, are entitled to be included in the register of electors for borough and county purposes in London, if they have been in occupation and residence for twelve months previous to the 15th of July in any year of rooms of the value of £10 per annum unfurnished, in one house in the borough.

616.—**RATING—Is Property Unoccupied for Part of the Year Liable to the Borough Rate?**—A is yearly tenant of a lock-up shop, but actually occupies the premises from 1st April till 1st October only, and during the winter months honestly endeavours to sub-let, but without avail.

Is A legally entitled to have his borough rates apportioned for the time he actually occupies the shop, or is he considered to be beneficially occupying the premises by virtue of his continuing the tenancy from year to year, and on that account not entitled to relief?

B is yearly tenant under the same circumstances as A, but gives up his premises on 1st October. Is he entitled to relief?

C is yearly tenant under the same circumstances as A and B, but renews his tenancy every year by new agreement. Is he entitled to relief?—"HARASSED."

The question here does not appear to be affected by the terms of the tenancy. In each case, if the house is unfurnished and to let, it is not liable to pay rates in respect of the period during which it is unoccupied and to let. As long as an owner or lessee of property "leaves it vacant he is not rateable for it as an occupier" (per Lush, J., in R. v. St. Pancras, Z., Q.B.D. 581). Where, however, the premises are furnished and ready for occupation, rates must, apparently, be paid for the whole year in case A. In the second and third cases there can be no liability on B or C to pay rates in respect of the latter half of the year during which they are neither tenants nor owners of the premises concerned.

617.—**WATCH COMMITTEE.—Can Councillors not Members of Committee attend its Meetings?**—Until quite recently the practice here was that any councillor could, and, in fact, many did, attend (but not vote) at Watch Committee meetings. Now we are told that that was only allowed by sufferance, and not as a right, although the Watch Committee is elected into being by those members of the council thus refused. What statutory powers has a county borough watch committee? Can it legally prevent those members who are not on the Watch Committee from attending its meetings if such members desire to do so?—"OLD SUBSCRIBER."

The watch committee of a town council appoints and pays borough constables, frames regulations for their efficiency, and suspends or dismisses them. It should send quarterly to the Home Secretary a copy of the rules for the regulation and guidance of borough constables. The mayor is an *ex officio* member of the committee. The members must not exceed one-third of the councillors, and three will constitute a quorum. The acts of this committee, unlike those of other committees, are not required, apparently, to be submitted to the council for its approval.

These are the chief powers and duties of a watch committee. This committee is on the same footing as any other committee of the council in respect of the exclusion or non-exclusion of other councillors. There would appear to be no statutory or other authority enabling a committee of the town council to exclude non-members, being councillors, from its meetings. In the absence of any such authority, it seems to us that a committee cannot lawfully exclude other councillors from being present at its meetings, though they may be restrained, of course, from taking part in any way in its proceedings. The council, however, may properly make rules on the subject, either admitting or excluding such councillors. Reference may be made here to the practice of Parliament in the matter. The Lords have a Standing Order that any peer may attend a Select Committee of the House, but may not vote or take part in its proceedings unless a member thereof. In the Commons the rule, based on usage, seems to be that members cannot be excluded from a Committee to which they do not belong by the authority of such Committee. The rule is different in both cases where the Committee is a secret one. Presumably similar principles will apply in the case of committees of a town council.

618.—**WATER MAINS—Liability for Damage.**—Water mains belonging to my council as the water authority are laid through the district of an adjoining borough. Considerable damage has recently been caused to certain of the pipes owing to a heavy locomotive and waggons loaded with bricks passing along the highway under which the pipes are laid. It is assumed that the water authority has a good right of action against the proprietor of the locomotive if they can prove that the weight taken over the pipes was excessive. Not being the highway authority for the district, they cannot take action for extraordinary traffic. What course do you recommend should be taken? Can you refer me to any decided similar case?—"L. C."

It is clear that the council has a right of action in the matter. The proper course would

seem to be for the council to make a claim on the owner of the locomotive for the cost of repairing the water main and incidental expenses involved, and if the latter declines to recoup the council for the damage done by the locomotive, to initiate proceedings against him by civil action in the ordinary way. We do not know of any decided case exactly in point, but will make further search and insert a note in next week's issue should any case turn up.

619.—**NON-ASSESSMENT OF OCCUPIED PROPERTY—Loss to Rates—Objection Raised before District Auditor.**—A correspondent sends us a copy of the following communication addressed by him to the Local Goverument Board:—

"Sir,—At the recent audit of the accounts of the X—— Council, I appealed to the district auditor respecting two shops that have been occupied during the last and present years, but are not yet assessed for the payment of rates and taxes. I have now received a letter from the district auditor in which he informs me that 'he considers the matter is serious,' but that, in his opinion, he has no power to deal with it. I am aware that if this related to the poor rate the remedy would be to appeal to Special Sessions, uuder the Statute 6 and 7, Will. IV., c. 96. I am under the impression that the object of the audit is to see that the accounts of the council were properly kept, and that all moneys due to them were duly brought to account. In this case there has been a serious loss to the district rate which is levied by the council. I am desirous of knowiug whether your Board do not consider my appeal as a ratepayer in the borough should have been dealt with by the district auditor in the usual manner;"

Our correspondent writes respectiug this as follows:—"I have received a letter from the Local Governmeut Board in answer to my appeal againct the auditor's decision. In this it is stated 'the Board do not clearly gather what action you wish the auditor to take in the matter, but in any case they do not consider that they have any power to interfere in the matter in its present form.' My reply was to the effect that 'having drawn the auditor's attention to the irregularities, and he haviug upheld my contention, by stating in a letter to me that "he considered the case serious," I had reason to believe that it would rest with him to deal with the matter as is usual in such cases.'"

The general district rate is assessed, made, and levied on the full nett annual value of all kinds of property for the time being by law assessable to any rate for the relief of the poor, as ascertained by the valuation list for the time being in force, subject to certain exceptions in the case of land, &c. This valuation list is prepared and signed by the overseers, and passed by the assessment committee of the guardians. Any objections to it should be made to the assessment committee in the first instance.

Sec. 247 (7) of the Public Health Act, 1875, requires the district auditor to charge against any person accounting—that is, of course, where the accounts, as in this case, are subject to his audit—the amount of any deficiency or loss incurred by the negligence or misconduct of that person, or of any sum which ought to have been, but is not, brought into account by that person. It will be readily admitted that a difficulty here arises in directly attaching to any one or more persons responsibility under the above provision for loss to the district rate. The matter is not simplified by the fact that the valuation list is made out primarily for poor rate purposes, and that only incidentally, as it were, is it used for district rate purposes. Perhaps a surcharge might be made in the case of poor rates lost through occupied property not being included in the valuation list on the overseers or assistant overseers, who are primarily responsible for such list, provided negligence on their part be shown. But it seems doubtful whether this could lawfully be done where the loss arises in the district rate. In any case, the L.G.B. does not appear to have any direct jurisdiction in the matter. If the overseers' accounts have not been audited yet, we suggest that our correspondent might raise the question at their audit. In any event, the matter should be brought officially before the council.

THE Blackpool Corporation is making arrangements for the forthcoming speed trials on the Promenade in June. The track on the occasion of the last motor trials was said to be equal to anything in the country. This year it is said it will be the best in Europe, for it is to be extended a thousand yards, thus giving a greater length for the motors to get up speed.

RATING SITE VALUES.

ACTION BY THE LONDON COUNTY COUNCIL.

THE following letter has been addressed to all the metropolitan Members of the House of Commons by the clerk to the London County Council (Mr. G. Lawrence Gomme):—

County Hall, Spring Gardens, S.W.,
January 18, 1905.

Sir,—The question of the rating of site values was first considered by the Council soon after its constitution in 1889, and the Council has since seen no reason to alter the opinion which it then formed that the owners of sites should be rated for the purposes of the local government of London. In 1892 the Council requested the Government to so amend the Valuation (Metropolis) Act, 1869, as to provide, inter alia, for the value of land being stated in the valuation lists separately from the value of buildings. Three years later, viz, on December 1, 1892, the Council passed the resolution:—"That it is imperative that the relief of the occupying ratepayers of London from the increase of charge should be secured in the next session by the provision of some new source of revenue; and that, in the opinion of the Council, the most equitable method of securing this relief is by the taxing of ground values in London."

Evidence in support of this proposal was given on behalf of the Council before the Royal Commission on Local Taxation. The Council promoted in the session of 1901 a Bill to provide for the rating of ground values, but the Bill failed to reach second reading in the House of Commons. The proposal in the Bill, however, received valuable support from the publication in the same year of the final report of the Royal Commission on Local Taxation, to which was appended a report by five of the Commissioners, in which they expressed the opinion that a moderate rate, proportionate to the site value, ought to be imposed as part of any scheme for the readjustment of the burden of local taxation in urban districts. The question of again introducing a Bill dealing with the matter was considered by the Council in 1902, but the Council at that time contented itself with passing a resolution reaffirming the opinion which it had previously expressed.

The subject has since been considered at a conference of representatives of municipal and other rating authorities convened by the Glasgow Corporation; and at a meeting of this conference on 7th October, 1904, several resolutions were passed, the principal being—(1) "That this conference of representatives of municipal and other rating authorities reaffirms its opinion that, on the ground of justice to existing ratepayers, for the better housing of the people, and in order to reduce the burden of municipal improvements, there is urgent need for legislation to provide for the taxation of land values; and, having heard the report of the various steps of procedure that have been taken by its committee since the last meeting of the conference, held in London on 9th March last, approves thereof. The conference further records its satisfaction at the substantial progress which this organisation of municipal and other rating authorities has made, and the influence it has had on public opinion, as evidenced by the second reading of Mr. Trevelyan's Bill being carried by a majority of 67 votes in the House of Commons on 11th March last, but expresses regret that no facilities were afforded by the Government for further consideration of the measure."

The Corporation of Glasgow having asked the Council whether it would co-operate in an endeavour to secure that the principles for which the conference was contending should be placed on the statute-book, the Council, on November 22 last, passed a resolution reaffirming its opinion in favour of the direct rating of site values. With a view of assisting the conference in its efforts to bring about this desirable reform of the system of local taxation, I have been directed to ask you, as a member of Parliament representing a London constituency, whether you are willing to ballot at the beginning of the session of 1905 for a place for a Bill, and, in the event of your securing a place, to introduce a Bill on the lines of that put forward by Mr. Trevelyan last session, and which, you will no doubt remember, was read a second time.

For convenience of reference I set out below the main provisions of Mr. Trevelyan's Bill:—

(1) To provide for the assessment of the annual value of land in a separate column of the valuation list.

(2) To fix 3 per cent. of the amount for which the land could be sold as by a willing seller to a willing buyer as its annual value.

(3) To secure that rateable value shall in no case be less than the annual value of the land so defined.

(4) To compel the payment of rates in respect of all unoccupied hereditaments upon the annual value of the land comprised in each.

(5) To allow the occupier under any future lease or agreement to deduct from his rent so much of any rate as is based on the amount of land value.

(6) To limit the statutory deductions for repairs, &c., to the difference between gross value and land value, such difference being taken as approximately representing the value of the building.

SMALL HOLDINGS MOVEMENT.

TWENTY YEARS' WORK.

AN interesting record of twenty years' work in restoring the rural population to direct connection with the soil was presented at the annual meeting of the Allotments and Small Holdings Association held on Thursday in Birmingham.

Sir Walter Foster, M.P., who presided, said they were cheered to find that the association had directly or indirectly been instrumental in giving allotments to over 50,000 rural labourers. They had also the satisfaction of knowing that the only purely agricultural district in which the process of depopulation had been checked was a county division (the southern part of Hollandshire) in Lincolnshire, where allotments and small holdings had been most extensively provided.

They must agitate for giving parish councils powers for compulsory hiring of land for small holdings and for housing purposes. Such land, when obtained, could be leased again for the erection of cottages. Each locality was the best judge of its requirements as regards building bye-laws, and they should be freed from the rigid, inelastic red-tape of the Local Government Board.

In order to house the rural population decently there was much work for the Association to do, and in conjunction with this they must associate the further development of small holdings and the wiser administration of local charities.

Sir W. Foster was re-elected president, Sir John Brunner treasurer, and Messrs. J. Crouch, Arnold Harris, F. Impey, R. L. Impey, Herbert New, H. S. Smith, John Morgan, and C. C. Smith were appointed the committee for the coming year.

DIRECTORS' COMPENSATION

IN LONDON WATER BOARD PURCHASE.

IN connection with the London Water purchase, the following are the awards made by the arbitrator in the case of the compensation to directors of six of the companies taken over by the Board:—

Company.	Directors.	Claim.	Award.
		£	£
Chelsea	8 ...	18,000 ...	13,692
Grand Junction	9 ...	23,330 ...	18,206
Kent Company	6 ...	21,000 ...	19,097
Lambeth	8 ...	33,917 ...	22,054
Southwark and Vauxhall	7 ...	27,262 ...	18,789
West Middlesex	11 ...	44,487 ...	33,110

The total amount of the claims was £280,831, and the amount of the awards £201,868.

THE negotiations between the Corporation of Accrington and the Urban District Council of Clayton-le-Moors for the amalgamation of the two districts, in order to form a county borough, have been carried a step further this week.

Official Advertisements.

BOROUGH OF SOUTHEND-ON-SEA.

TRAMWAY PASSENGER TICKETS.

THE Corporation invite TENDERS for the privilege of ADVERTISING on the Backs of 5,000,000 Tramway Passenger Tickets required during the year ending 31st March, 1906, or any portion of that number not less than 500,000.

Specimens of Tickets may be seen and full particulars obtained at the Office of the Borough Accountant, Municipal Buildings, Clarence Road, Southend-on-Sea.

Tenders, marked "Advertising on Tickets," must reach the Borough Accountant not later than Wednesday, the 8th February next.

By order.

WILLIAM H. SNOW,
Town Clerk.

Southend-on-Sea.
17th January, 1905.

COUNTY BOROUGH OF WEST HAM.

TENDERS FOR SUPPLIES, &c.

THE Council hereby invite TENDERS for the SUPPLY of

Paving Materials,
Broken Granite and Chippings,
Road Flints,
Tar and Pitch,
Ironmongery, &c.,
Iron Castings,
Chalk, Plaster, Slates, Lime, &c.,

ST. PANCRAS BOROUGH COUNCIL.

CONTRACTS.

THE Highways, Sewers, and Public Works Committee of the Council of the Borough of St. Pancras will meet at the Town Hall, Pancras Road, on Monday, the 6th February, 1905, at 5 o'clock p.m., to receive TENDERS from persons willing to execute Contracts for one year, viz:—

1. Removal of Road Sweepings, Gully Soil, and Snow.
2. Horsing Water Vans.
3. Horsing Road Sweeping and other Machines.
4. Cartage.
5. Horsing Dust Vans.
6. Removal of House Refuse.
7. Supply of Timber and Joinery Materials.
8. Barrows, Trucks, Handles, &c.
9. Supply of Paints.
10. Suppy of Oils.
11. Supply of Candles and other Chandlery.
12. Smiths' and Founders' Works.
13. General Ironmongery.
14. Tools and other Hardware Goods.
15. Supply of York Flags, Granite Setts, Kerbs, Broken Granite, and Kentish Rag.
16. Supply of Gravel and other Roadway Materials.
17. Supply of sundry Materials (Lime, Cement, Bricks, Stoneware Pipes, and other Glazed Goods).
18. Supply of Bass Brooms, Hemp and Rubber Goods, Pitch, Creosote Oil, Carbolic Powder, Coke, &c.

No tender will be received unless made out on one of the printed forms, without any alteration thereof, which, with any further particulars, can be obtained on application to Mr. Wm. Nisbet Blair, M.Inst.C.E., Borough Engineer and Surveyor, not later than 12 o'clock noon of the said Monday, the 6th February, 1905.

Sealed tenders to be delivered, signed by the intending contractor, with the names and descriptions of two sufficient sureties for the due performance of the several contracts, at the Office of the Department of Works (No. 4, first floor) by 5 o'clock precisely in the afternoon of the said Monday, the 6th February, 1905.

The Council do not bind themselves to accept the lowest or any tender.

Intending contractors are not required to attend the Committee.

By order.

C. H. F. BARRETT,
Town Clerk.

Town Hall,
Pancras Road, N.W.
21st January, 1905.

URBAN DISTRICT COUNCIL OF CHISWICK.

TO CONTRACTORS, MERCHANTS, AND OTHERS.

PERSONS desirous of TENDERING for the Execution of WORKS and SUPPLY of STORES (separately), as under:—

For One Year, commencing 1st April, 1905:—

1. For hire of horses and drivers, with or without carts.
2. Oils, &c.
3. Ironmongery, &c.
4. Disinfectants.
5. Clay Cross (or Buxton) and Grey Lime.
6. Coal and Coke.
7. Aluminoferric.
8. Cement.
9. Kentish Pit Flints and Blue Guernsey Granite.
10. Stationery.
11. Printing.
12. Winding and Repairing Clock.
13. Forage.
14. Horsing of the Fire Brigade.
15. Pipes, Gullies, &c.

may obtain forms of tender on application to Mr. John Barclay, Surveyor of the Council, at the Town Hall, Chiswick, where specimens of the goods and forms of contract and bond may be inspected after the 21st instant, between the hours of 9 and 10 a.m., or at any other time by appointment.

Tenders to be made on the prescribed forms, and delivered in sealed envelopes to the undersigned, not later than 5 p.m. on Thursday, the 9th day of February, 1905.

By order.

ERNEST F. COLLINS,
Clerk of the Council.

Town Hall, Chiswick, W.
18th January, 1905.

Official Advertisements.

BOROUGH OF PLYMOUTH.

TENDERS FOR SUPPLY OF GOODS AND MATERIALS.

TENDERS are invited for the SUPPLY of the following GOODS and MATERIALS for One Year from 1st April, 1905:—

Schedule A—Creosote.
" D—Paint and Linseed Oil.
" F—Road Metal.
" H—Ironwork.
" K—Petroleum Oil.
" L—Broom Heads.
" M—Refilling Machine Revolving Brooms.
" P—Iron, Steel, Bolts and Nuts.
" S—Carbolic Powder and Sanitary Fluid.
" T—Portland Cement.
" U—Lubricating Oil.
" W—Tar and Pitch.
" X—Painters' Brushes.
" Y—Explosives.
" AA—Glass, Painters' Tools, &c.
" DD—Soap.

Tenders must be based on the whole of a schedule, and not on any particular item contained therein.

Schedules may be obtained on payment of a deposit of £1 in cash for each schedule (cheques will not be received), which will be returned on receipt of a bona-fide tender. Should the contractor withdraw his tender or fail to send in one, the amount of his deposit will be forfeited, and the contractor who applies for the schedules must do so on the distinct understanding that he is willing to abide by the terms of the advertisement.

Persons tendering must bind themselves to pay the standard rate of wages, and adopt the standard hours of labour considered fair in the district of the Three Towns.

The lowest or any tender will not necessarily be accepted.

Tenders to be delivered not later than the 18th February, addressed to the undersigned, with the exception of Schedule "DD" (Soap), which must be addressed to the Medical Officer of Health, 19, Whimple Street, Plymouth.

JAMES PATON,
Borough Engineer and Surveyor.
Municipal Offices.
16th January, 1905.

BATTERSEA BOROUGH COUNCIL.

TO CONTRACTORS AND OTHERS.

1. Horse Hire.
2. Circular Bass Brooms.
3. Scavengers' Bass Brooms.
4. Veterinary Attendance, &c., upon Horses.
5. Removal of Manure.
6. Disinfectants.
7. Bricks, Cement, Lime, Slates, &c.
8. Granite and Stone.
9. Gravel and Flints.
10. Harness Materials and Fittings.
11. Ironmongery, &c.
12. Iron Bars, &c., for Blacksmiths' Work.
13. Paints, Oils, &c.
14. Varnish.
15. Side Entrance Covers and other Castings.
16. Stoneware Pipes.
17. Timber and other Materials for Carpenters' Work.
18. Timber and other Materials for Wheelwrights' Work.
19. Tools.
20. York Paving, &c.
21. Coal and Coke.
22. Soaps, Oils, &c.

Forms of tender, containing full particulars, may be obtained at the Town Hall, between 10 and 4 (Saturdays 10 and 1), and no tender will be considered unless on the official form.

Tenders, in separate envelopes, sealed, and marked on the outside, "Tender for ——," must be delivered to me by 3 p.m. on Wednesday, 8th February, together in the cases of items 3, 8, 9, 16, and 20 with samples, carriage paid.

W. MARCUS WILKINS,
Town Clerk.
Town Hall,
Battersea.
23rd January, 1905.

METROPOLITAN BOROUGH OF STEPNEY.

CONTRACTS.

THE Council of the Metropolitan Borough of Stepney hereby invite TENDERS for CONTRACTS for One Year, from 31st March, 1905, as follows, namely:—

1. Supply and delivery of Brooms, Brushes, &c.
2. Supply and delivery of Tools, Implements, &c.
3. Sharpening of Tools.
4. Shoeing and Roughing of Council's Horses.
5. Supply and delivery of Cast Iron Work.
6. Supply and delivery of Portland Cement.
7. Supply and delivery of Bricks, Lime, and Fire-Clay.
8. Supply of and Repairs to Harness.
9. Supply and delivery of Drainage Materials.
10. Supply and delivery of Timber.
11. Supply and delivery of Colours, Varnishes, Oils, and Sundries.
12. Supply and delivery of Oilman's Goods.
13. Supply and delivery of Wheelwright's and other Materials for Repairs to Carts, Vans, &c.
14. Squaring and Redressing old Paving Materials.
15. Supply and delivery of Disinfectants.
16. Removal of Dead Bodies to Mortuary.
17. Supply and delivery of Uniform Clothing.

Also Tenders for Contracts for the period from 31st March, 1905, to 31st March, 1908, as follows, namely:—

18. Hire of Horses, Driver and Carts, and Cartage of Rubbish, &c.
19. Supply and Delivery of Ballast, Sand, Shingle, &c.
20. Supply and Delivery of Paving Materials.

Also tenders for contracts for the period from 25th March, 1905, to 29th September, 1905, as follows, namely:—

21. Supply and delivery of Steam Coal.
22. Supply and delivery of House Coal.
23. Supply and delivery of Coke.

Persons tendering must submit the names and addresses of two substantial persons willing to be jointly and severally bound with them for the due and proper performance of their several contracts.

Contractors will be required at all times during the existence of their contracts to pay the trade union rates of wages as agreed to by the employers' association and trade unions, and as in practice obtain.

Contractors will also be prohibited from assigning or underletting their contracts without the written consent of the Council previously obtained.

Forms of tender, specifications, stipulations, and other conditions for items Nos. 1 to 14 inclusive, and items Nos. 18, 19, and 20, may be obtained on application to the Borough Engineer (Mr. M. W. Jameson), and forms of tender and specifications for items Nos. 15, 16, 17, 21, 22, and 23, upon application to the undersigned, at the temporary Municipal Offices, 15, Great Alie Street, Whitechapel, E., between the hours of 10 and 12 a.m., upon deposit of a £5 Bank of England note.

The deposit of £5 will be repaid upon receipt of a bona-fide tender, and return of the documents issued.

Tenders must be endorsed with a short description of the articles tendered for, and sent to the undersigned on or before noon on Saturday, 11th February, 1905.

The Council do not bind themselves to accept the lowest or any tender, and will not accept the tender of any person or firm who shall on any previous occasion have withdrawn a tender after the same has been opened, unless the reasons for the withdrawal were at the time satisfactory to the Council.

By order.
GEO. W. CLARKE,
Town Clerk.
Municipal Offices (Temporary),
15, Great Alie Street,
Whitechapel, E.
25th January, 1905.

Municipal Robe Makers and Court Tailors.

PRICE LIST ON APPLICATION.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
In making, use LESS QUANTITY, it being so much stronger than ORDINARY COFFEE.

THE
SEPTIC TANK SYSTEM (PATENT) IS THE BEST for SEWAGE DISPOSAL.

300 INSTALLATIONS.

The System as now laid down embodies all the Improvements suggested by EIGHT YEARS' PRACTICAL EXPERIENCE.

In this System the Purification of Sewage is WHOLLY EFFECTED BY BACTERIA.

THE SEPTIC TANK COMPANY, LIMITED,

WESTMINSTER: 1, Victoria Street.
EXETER: 7, Bedford Circus.
LEEDS: Standard Buildings.

An admirable Food of the
EPPS'S COCOA
Finest quality and flavour.
Nutritious and Economical.

MUNICIPAL JOURNAL
FRIDAY, JANUARY 27, 1905.

NOTES AND COMMENTS.

Municipal Milk Supplies.

WE see that the Health Committee of the Birmingham City Council is inquiring into the question of municipal milk depôts, with the object of establishing one of these useful institutions in the Midland capital. We have not one word to say against these depôts, which have done, and are doing, a vital work, but we suggest to the Birmingham City Council, and all other public bodies which have this matter under consideration, that they should at the same time take every opportunity of—and, if necessary, make opportunities for—impressing upon mothers the advantages of natural feeding. After all, every mother who avails herself of the municipal milk depôt is adopting a system of unnatural feeding for her child, and side-by-side of the municipal institution for the supply of pure milk should go the educational propaganda of the sanitary staff, which should—as it does at Birmingham, we believe—include lady health visitors, whose duty it is to show the mothers that the greatest safety lies along the path of nature. We are constrained to make these remarks after reading the report of a recent address at Paris by Mons. Variot, of the French Academy of Medicine, and an eminent specialist on the diseases of children. Mons. Variot challenged the general assumption that rates of infant mortality must of necessity be greater in industrial towns and villages than in rural districts, but he did not advise municipal milk depôts as the reforming agency:—

> It was true that the statistics prepared by Dr. Rhodes, of Manchester, showed that while the infant mortality rate per 1,000 varies from 79 to 100 in English rural districts, and in the industrial districts from 175 to 180, nevertheless the great success achieved at Le Creusot, in Central France, in regard to the reduction of infant mortality gave a striking proof that the rate could be very greatly reduced.
>
> The average rate of infantile mortality for ten years, 1893-1903, has been 110 per 1,000. The rate is steadily decreasing, and has even fallen below 90 per 1,000—the average rate of infant mortality for Norway and Sweden.
>
> For the whole of France the average is 160 per 1,000. In some industrial districts in the North of France the rate is as high as 200 to 250 per 1,000.

Mons. Variot attributed the small infantile mortality rate at Le Creusot to—

(1) The general improvement in hygienic conditions.

(2) The increase in wages to workmen employed at the gun-making works of Messrs. Schneider Brothers. This has secured the proper feeding of the mothers, and has enabled them to fulfil their maternal duties.

(3) The granting of gratuitous medical assistance.

(4) Better conditions of housing, and the provision of parks, &c.

"The essential cause for the low rate," said Mons. Variot, "is, however, to be found in the fact that in the great Le Creusot factory, which in its several branches employs in all 25,000 workmen, only 18 married women are employed." Mons. Variot further declared that "under similar conditions of life and labour to those obtaining at Le Creusot, it should be possible to cut down by half the rates of infantile mortality in the industrial centres."

Municipal Creches.

A REACTIONARY, not to say stick-in-the-mud, L.G.B. may cry no "precedent," but that does not deter local governing bodies from initiating new schemes for the welfare of their people. The attempt to introduce into England, at Acton, the much-needed municipal crêche was followed by a splendid example of Governmental restriction and red-tape. Acton failed, but the Urban District Councils Association has taken up the matter, and with a quite unanimous voice, at a quarterly meeting of the executive a few days ago, it decided—

> That the Local Government Board be requested to introduce legislation by means of an adoptive Act, whereby local authorities may establish and maintain, or contribute to the establishment and maintenance of, crêches, or day nurseries.

The Council is to be congratulated on making this decided stand for progress, and to Councillor Hunt, the mover of the resolution and the piloter of the movement in Acton, especial praise is due.

Plymouth and Depreciation.

THE report of the Plymouth professional auditor (Mr. William Luxon) upon the borough accounts illustrates the absurdity of conferring upon these excellent officials the wide powers regarding depreciation and obsolescence provisions recommended by the Joint Select Committee on Municipal Trading. Mr. Luxon refers specially to the question of depreciation, and, being an auditor, and not an engineer, finds himself in a fix in dealing with it. He says:—

> Special attention should be directed to the fact that depreciation has been limited to the point of view of dealing with the wear and tear of machinery, but as regards obsolescence of plant, no allowance has been made by an apportionment from reserve fund.
>
> The above points raise a controversial subject, as the essence of the whole question depends upon whether the policy of the Corporation is to hand over an undertaking, when the present loan debt has been extinguished, in full working order, and in addition, with a sufficient reserve to admit of its being placed in its original state of efficiency, or alternatively for the provision of more up-to-date methods.
>
> For the purpose of this report, however, I think it may be taken that, apart from a statutory obligation to provide sinking funds, an opinion is desired on the one hand as to the proper charge to the respective trading accounts for actual wear and tear during the period, and on the other hand for the provision of possible obsolescence and for dealing with the cost of the undertaking—in reality, goodwill.
>
> I have already dealt with the first men-

ticned, and with regard to the latter, I am of opinion that a further amount should be provided out of the nett profit to the extent of. say, 2½ per cent. on the total capital outlay.

The undertakings in question are those of the tramways and electricity supply. Now. it is manifestly unreasonable to expect from an auditor, however good an accountant he may be, a considered opinion upon such a technical question as the sufficiency of wear and tear, and obsolescence provisions. The plant of both these enterprises must have been maintained in a condition which, for all practical purposes, is equal to the original, or it would not have been able to carry on the undertakings. If it were not so maintained, both the tramways and electricity supplies would have collapsed. The wear and tear under these circumstances must have been of a very slight nature, but in any case an accountant could not be expected to estimate it. Similarly, no auditor can be expected to gauge the degree to which a particular plant has become obsolete during a given year. He has no standard to apply, and engineers themselves are unable to estimate it. The auditor's estimate is governed by the particular opinions he holds concerning the subject in general—in other words, his policy governs his estimate. But policy has to be decided and controlled by the Council,—not by the auditor.

Municipal Loans in America.

DETAILS now to hand of municipal loans in the United States last year show, as we foretold a few weeks ago, an unprecedented total. The full amount is £50.119,500, as against £30.456.200 in 1903, or an average of £4.176 600 per month. This is without including purely floating debt, which represents a further £29.731,000. The great increase is partly explained by the unwillingness of the public to invest much in the previous year, there being throughout 1903 considerable dullness and depression generally in America as well as in this country. The market for municipal bonds in 1904 was quite steady, and many of the sales were made on a good basis, the average also being an improvement on that of 1903. The activity of the municipalities as represented by loans was general all over the States, and is a proof of the steady growth of the civic spirit in that country. The money was chiefly required for various public works, and the average rate of interest offered was about 4 per cent., a somewhat higher amount than we are willing to pay here. New York was responsible altogether last year for issues amounting to £17,317,900, equal to over 34 per cent. of the aggregate bond sales of the country, and besides this issued general fund bonds to the extent of another £2,000,000, which, being in the nature of a conversion operation, are not included in the general total. Compared with this, London's loans in 1904, representing an addition of about £6.500,000 to the permanent and £2,000,000 to the floating debt, seem excessively modest.

"How Municipal Profits 'Raise' Rates."

WE cannot help admiring the pertinacity with which the Liberty and Property Defence League pursues a forlorn hope. The Industrial Freedom League should take lessons from this new-comer into the trading controversy arena. The League has "discovered another way of showing how municipal trading and profit-making raise rates," and it is "to compare the rates levied some years back in certain towns with those levied now." Now, obviously the only way of proving that municipal trading increases rates is to show that municipal trading enterprises, taken in the bulk, have produced losses which have to be made good out of the rates. This, however, is not the League's method. The official explanation of how it is done, forwarded to us in an unsigned letter on Wednesday, is too good to miss :—

> In the latest of the annual returns on rates issued by Mr. James Carter, borough treasurer of Preston, 10 towns are given which earn 1s. or more in the £ from municipal undertakings. It will be a fair test if we compare the rates and "profits" for the year 1898-9 with the corresponding figures for the year 1903-4. In the statistics which follow, the first item in the case of each town is the total rate for 1903-4; the second the profit earned in the same year; the third the total rate for 1898-9; and the fourth the profit earned in that year:—Carlisle 6s., 1s. 8d., 4s. 9d., 1s. 8d.; Darlington 5s. 6d., 1s. 7¾d., 4s. 6d., 1s. 9d.; Bolton 7s., 1s. 1½d., not given, not given: Dewsbury 8s. 1d., 1s. 1d., 8s. 8d., 2¼d.; Leeds 8s., 1s., 7s. 2d., 2⅝d.; Liverpool 7s. 4½d., 1s., 6s. 3¾d., not given; Macclesfield 7s. 6d., 1s. 4d., 7s., 5 1-10d.; Nottingham 7s. 4d., 1s. 1½d., 6s. 11½d., 1s. 1d.; Wigan 6s. 2d., 1s. 6d., 5s. 4d., not given; Warrington 7s. 10d., 1s. 0⅝d., 6s., 3½d.
>
> It will be seen that in every case, with the exception of Dewsbury, the rates are higher now than they were in 1898-9, and that in every case but two, viz., Darlington and Dewsbury, the profits have risen also. If space permitted, towns which earn from 6d. to 1s. could be given, showing a similar phenomenon. But the ten towns selected, not arbitrarily, but on the fixed principle of earning 1s. or more in the £, ought to be sufficient to establish the proposition that municipal trading and profit-making raises rates, and that just in proportion as profits rise so do rates.

Let us see how far this ingenious contention holds good.

Rates that Would Have Been Higher.

ACCORDING to the Liberty and Property Defence League's own figures, the rates of the towns quoted were as follows during 1898 9 :—

	s.	d.
Carlisle	4	9
Darlington	4	6
Dewsbury	8	8
Leeds	7	2
Macclesfield	7	0
Nottingham	6	11½
Warrington	6	0

Had these rates not been reduced by the profits from municipal enterprise, they would—again taking the League's figures — have stood at the following amounts :—

	s.	d.
Carlisle	6	5
Darlington	6	3
Dewsbury	8	10¼
Leeds	7	4⅞
Macclesfield	7	5 1-10
Nottingham	7	1½
Warrington	6	3½

These are the plain facts of the case, and how in the world they prove that these profits increased, and not reduced, the rates, it passes our comprehension to discover. The League has simply shown —and everybody knows that—that the rates are increasing. What the League cannot see, apparently, is that these rates would be so much higher in every case were it not for the profits derived from municipal trading. All poor Mr. Carter did was to show the amounts by which it has been possible to make these reductions. We have proved from the official figures time after time that the rates are increased by services—such as sanitary, Poor Law, and educational services—that have nothing whatever to do with trading. But it is equally incontrovertible that trading enterprises produce profits by which rates are reduced. Consequently we are justified in contending that one way to reduce rates is to establish more municipal trading undertakings.

Poor Relief and Disfranchisement.

DURING the last twelve months a board of guardians here and there in England has passed a resolution favouring the prevention of disfranchisement following on Poor Law relief. Trade unions, as everyone knows, feel very strongly on this question, and have passed quite a number of resolutions of protests. At last stronger action is to be taken. Mr. Sydney Buxton, M.P., has forwarded to the Local Government Board a memorandum urging early legislation to prevent the recipients of temporary relief losing their rights of citizenship. Viewed calmly, and without bias, it is easy to see that injustice is being done in a great many cases. An honest man gets out of employment. His best efforts to find work are unavailing. The guardians, having no alternative to offer, are obliged to give him, after due inquiry, out-door relief in order to enable him to tide over the period of unemployment, and to save his home and keep his family from starvation. Honest poverty, we are more and more coming to realise, is largely the result of social advancement, enigmatical as it may sound. In London, the wealthiest city of the world, there is worse and more widespread poverty than in any other present-day city. Mr. Long, M.P., within the present week has spoken of his fellow-countrymen "who suffer so much in patience and almost in silence." Why should they have added to those sufferings one pang by denying them the common rights of citizenship? We must be careful, however, to extend the privilege only to temporary distress, and this is a point that Mr. Sydney Buxton does not overlook in his praiseworthy memorandum.

A Banker's Lament.

MR. ARTHUR KEEN, the chairman of the London, City, and Midland Bank, did not quite accurately state the position of corporations in regard to short loans at the meeting of his shareholders the other day. He said that:—

> Formerly corporations used to apply to the public for subscriptions to large loans for long periods at low rates of interest. Latterly they had come into competition with the banks, and had asked for loans for short periods at high rates.

Mr. Keen probably knows that the new method is bringing money to the corporations at a lower rate of interest than would be the case if they went to the open market. From the municipal standpoint, the new system is cheaper than the old one under the present circumstances. The bankers, who threatened to cut off supplies if the local authorities did not desist from trading enterprises, have no right to complain if the money has been obtained elsewhere. The result of their action may not be to their liking, but they have brought it upon themselves entirely. Municipalities have other people besides bankers to consider—the general body of ratepayers, for instance, whose public services cannot be endangered because the bankers do not approve of them.

POOR LAW OUTLOOK.

Foreshadows of the Approaching Central Poor Law Conference and Some Discussion of the Discussions. Should the State Provide Labour Colonies or Interfere in the Problem of the Unemployed? Stone-Breaking as a Labour Test.

Central Poor Law Conference.

SOME important subjects are to be discussed at the forthcoming Central Poor Law Conference for 1905, to be held on the 21st and 22nd prox. in the council chamber of the Guildhall of the City of London, under the presidency of Sir Edward Fry (late Lord Justice of the Court of Appeal). But none will be listened to with more rapt attention than that on "The Position of the Poor Law in the Problem of Poverty," introduced by the two stalwart champions of Poor Law reforms, Mr. F. H. Bentham, chairman of the Bradford Board of Guardians, and Mr. George Lansbury, of Poplar, councillor and guardian. Poplar's first Poor Law labour colony at Laindon is a standing witness that guardians are seeking for more flexibility in the treatment of poverty. There should be other alternatives possible than mere in-door or out-door relief. Some of the more advanced leaders in the Poor Law world are losing confidence in stone-breaking or oakum-picking as labour tests. Selected as offering the least competition with other labour, the work presses hardly upon the skilled artisan. Access to the land in the form of labour colonies gives more hope of success. But for the many classes of poverty which exist greater classification in relief of all kinds is most urgently needed.

❦ ❦ ❦

Mental Defectives.

NO one in this country can speak with greater authority on the treatment of the mentally defective under the Poor Law than Dr. J. Milson Rhodes (chairman of the Chorlton and Manchester Asylums Board, &c.), and he is chosen to introduce the subject. Long before the appointment, last year, of the Royal Commission on the feeble-minded we advocated the combination of boards of guardians for the purpose of the proper treatment of these unfortunate classes—a view which Dr. Rhodes may be expected to put strongly at this conference. It was he who was largely instrumental in bringing into being the splendid epileptic colony at Warford in Cheshire, known as the David Lewis Manchester Epileptic Colony. Our readers already know that the Chorlton and Manchester Boards of Guardians combined for the purpose and are now building a colony asylum at Blackburn. Mr. A. F. Vulliamy (Ipswich) will open the discussion of his favourite subject, important enough in all truth—"The Treatment of Vagrants."

❦ ❦ ❦

State Labour Colonies.

AS showing how the eyes of Poor Law reformers are turning to Labour Colonies as a "way out" of many of the problems of the day, it is significant that each of these subjects before the Central Poor Law Conference will involve the consideration of Labour Colonies. On another page of this issne will be found some interesting suggestions on this subject by a correspondent. But the writer seems entirely to ignore the *locus standi* of Poor Law Guardians in this matter, and urges that for the working of the colonies the State ought to find all the money necessary, under the strictest safeguards, and the religious bodies should find the workers. We entirely agree that large and graded colonies are needed, and not even the largest unions could afford to carry out what is required in this respect. But there is no reason in the world why boards of guardians should not combine for the purpose of carrying them out. It may sound well perhaps to say that "the State should not interfere in details, but should be content with righteonsness and results," bnt it is hardly business. Who pays should control and manage. If the State pay for these colonies, the local authorities, in the form of boards of guardians, should at the very least be given control.

Stone-Breaking.

ANOTHER illustration of the difficulties attending stone-breaking as a labour test is to hand this week from the Battersea and Wandsworth Union. Only a few weeks ago one of the unions in the South of England had a strike amongst its workers in the stone yard. Matters had not gone so far in this London union. It appears that difficnlties have arisen through inadequate supervision. A lengthy report was snbmitted by the Stone Yard Committee at the last meeting of the Board. It stated that it had considered the question of the supervision of the men, and found that the staff was inadequate to supervise such a large number, and the master of the workhouse was accordingly instructed to at once engage three additional assistant superintendents of the yard at wages of 30s. per week each, to see that the men carry out the tasks. With regard to the time of commencing work, the committee considered that the hours, nine to 12, and one to 4.30, were less than the ordinary working man would do, and it accordingly fixed the times for working from 7.30 to 12, and one to five. By this arrangement longer time will be given for the men to execute the tasks, it being understood that in the event of men completing their tasks before five o'clock they are to receive their allowances of relief, and to be allowed to leave. The committee, it was further stated, was informed that several men had been reported to the relieving officers for not carrying out their tasks, but, so far as could be ascertained, only three cases had been brought before the guardians, and, with a view of keeping the men up to their work, the master was directed in future to at once report any case direct to the clerk.

❦ ❦ ❦

The Attitude of the L.G.B.

OF course, the Local Government Board does not recognise that the day of the stone-yard is passing, and that of the labour colony coming in. It raised all sorts of objections to the Laindon colony of the Poplar guardians, and it is now urging that the Wandsworth Union should open a second labour-yard. A letter from the Local Government Board to this effect has been received, but the Stone-yard Committee has instructed the clerk to inform the Local Government Board that the guardians consider it would be a great mistake to open another yard at the present time, but that additional officers have been engaged so as to better supervise the yard. Attention having been drawn to the fact that men had been given orders for the yard who were living with children earning sufficient to maintain both themselves and the parents, the committee thought it desirable that special attention should be drawn to this fact by the various chairmen at the weekly relief committees. A long discussion followed, chiefly as to the advisability of lengthening the hours of the men. It seems generally to be felt that the stone-yard was being abused, men going there and not doing the work, and that stricter regulations were necessary. One guardian—a lady—however, exclaimed bitterly, "We put sick and weakly men to wheel those huge barrows; we are a very humane Board."

❦ ❦ ❦

Relief Half in Kind.

OWING to the resolntion adopted at a recent meeting of the Manchester Board of Guardians that married men with families be compelled to take half the relief in kind in bread and oatmeal, there has been a large increase in the amonnt of these two articles distributed. The weight of bread given out last week was 9,267lb. against 5,600lb. in the preceding week, the respective figures for oatmeal being five loads 123lb. and one load 96lb. Sugar and tea showed a corresponding increase. This is some indication that the distress in Manchester is widespread. As our readers know, it was alleged a few weeks ago that the Manchester Lord Mayor's Fund was going to people who were getting relief from the guardians. The member who raised the matter (Mr. Russell) remarked at the last meeting of the Board that there had been no reflection intended on the administration of the Lord Mayor's Fund at all.

❦ ❦ ❦

Liverpool and Labour Colonies.

AS the outcome of a resolution passed at a recent Town Hall conference at Liverpool with regard to the unemployed, the members of a special committee appointed to consider the establishment of a farm colony in the neighbourhood of Liverpool met a few days ago at the Town Hall, under the presidency of the Lord Mayor. The Lord Mayor's secretary, in explaining the constitution of the special committee, said the Corporation of Bootle had made no nomination, and the secretary of the Dock Board had written to the effect that the board did not think it necessary to make a nomination, as the scheme did not seem to be within their province. Subsequently it was resolved, with one dissentient, that the difficulties in the way of establishing a farm colony in the neighbourhood of Liverpool were such that the committee could not see its way at present to recommend the adoption of a scheme. This demonstrates more clearly than before that it is the duty of Poor Law guardians to carry out this reform.

❦ ❦ ❦

The State and the Unemployed.

THE Liberty and Property Defence League, lest we forget, is pointing the moral of the State interference with the unemployed in Paris in 1848 in establishing public workshops. These are the effects which it tabulates in a small pamphlet that reaches us:—

> The stoppage of private trade.
> The demoralisation of workmen.
> Government reduced to the verge of bankruptcy, and the national workshops consequently abandoned.

There is some point in the warning the league issues of the danger to-day of our returning to the system, or lack of system, of indiscriminate out-relief such as obtained before the reform of the Poor Law in 1834. The words "out-relief" are not, however, mentioned.

❦ ❦ ❦

Danger of Retrogression.

"A STATE of things," it says, "existed in England which vague, unreasoning, sentimental, misdirected philanthropy bids fair again to bring about." We agree that—

> Surely everything [*sic*] points now to the necessity of a further inquiry into the state of the poor and the present Poor Law administration, and whether or no any changes should be made in the law or in the method of its administration, if we do not wish to see brought about a state of things such as existed in 1834, and is so vividly set forth in the Royal Commission's report.

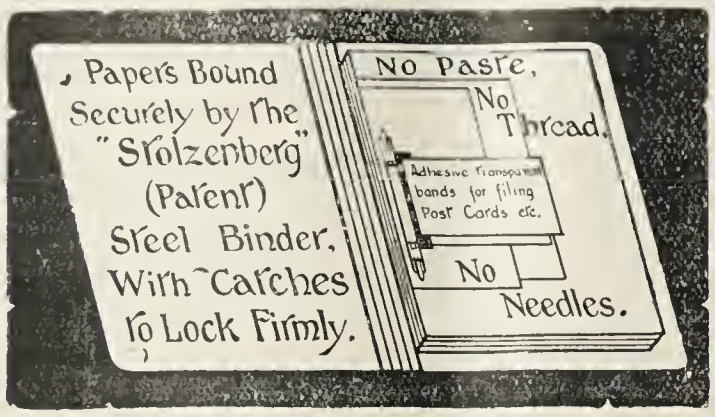
The word "everything" is used somewhat elliptically, but it is mere exaggeration to add to this, as does the League, that such inquiry is more needed because the Benefit Societies Bill was got through last Parliamentary session.

❦ ❦ ❦

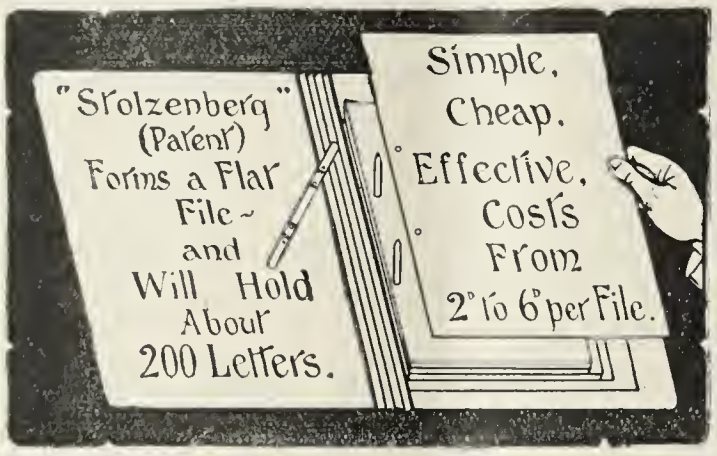
Why?

WITH the one short sentence of explanation—*i.e.*, that the Bill completely alters the principle on which out-door relief is to be in future given—it leaves to the reader's imagination why this Bill is so pernicious. The Bill in reality only introduces the sound principle that members of Friendly Societies are to reap some advantage from their thrift when they come before the guardians. The connection between this part of the subject and the action of the State in Paris in 1848 is a little difficult to follow. The pamphlet is less than four pages in length, which limitation might have been expected to prevent wandering. Already on this Poor Law page some reasons have been given why we do not favour the State taking up such matters as labour colonies for the unemployed. But it was not because we feared an insurrection snch as followed the closing of the French national workshops in 1848.

THE STOLZENBERG SYSTEM OF FILING



Papers Bound Securely by the "Stolzenberg" (Patent) Steel Binder, With Catches to Lock Firmly.
No Paste,
No Thread.
Adhesive Transparent bands for filing Post Cards etc.
No Needles.



EXTENSIVELY USED BY

Government Departments, Borough Corporations,
County Councils, Boards of Guardians,
Education Authorities, Technical Instruction Committees,
and the Largest Private Business Houses.

The Stolzenberg Filing System stands alone. It is admitted by authorities on business method to be the best. You can start with one simple unit to-day, as shown in the illustration, and by orderly, logical expansion build it up to a filing system adequate for the work of a large government office.

Note the unique features.—One file for each client or subject. Every letter or paper filed in the order of its receipt. Less space, less time. less expense. At your finger ends there is a complete record of the memoranda on any one subject in one compact file—not in six or a dozen bulky volumes.

Sample Set of Six Files and Slit Perforator, 3s. post free.

ELECTRICITY SUPPLY.

Meter Rents and "Minimum Charge." The Public has yet to be Generally Educated in the Elementary Principles of Electricity Supply. Interesting Lessons from a Year's Work at Beckenham, Carlisle, and Barnes. Retarded Undertakings.

IT is not given to all undertakings to earn a profit, but those which do not have usually some good explanation to offer why the accounts show a deficiency. This week the summaries presented to our readers display the reverse of the usual story which is taught by municipal electricity supply, but they are none the less interesting, as they depict what, after all, are merely the early stages in the growth of systems which eventually will show as satisfactory a yield as their neighbours similarly situated. After all, the deficiency at Barnes is only 150 odd pounds; Carlisle is selling at a very low rate, and its loss is but little more; while Beckenham is one of those hybrid undertakings in which it is difficult to say whether the company or corporation element has exercised the greater influence. A loss of £1,585 is a serious matter with an output of under 300,000 units, but the capital charges are unduly heavy, and everything goes to show that it is merely a dearth of custom that retards this undertaking. The previous Beckenham accounts showed the smaller deficit of £696. How has it snddenly increased to more than twice this sum? The increase in revenue was £2,038 and in expenditure £1,363, leaving the gross profit more by £675. But the capital and special charges are now £4,076 instead of £2,512, an increase of £1 564; the difference between this and the extra gross profit or £889 accounts for the larger deficiency. Had the undertaking been profit-earning previously, it is quite probable that in the first year of extensions it would have turned backwards and recorded a loss: as it was not so, the retrograde movement has inevitably caused a larger loss.

❦ ❦ ❦

The Position at Beckenham.

FROM the printed accounts, the results were as follow:—

The revenue derived from sales of current, &c., amounted to	£6,682
And the working expenditure to	4,191
Leaving a gross profit of	£2,491
Out of this sum the followiug requirements should have been met:—	
Interest on mortgage debt	£1,811
Instalments of capital repaid	2,245
Bad debts	20
Total of capital and special charges ...	4,076
Less gross profit as above	2,491
Deficiency for year 1903-4	1,585

The increase in units sold was 98,573, and the average price dropped slightly by ·221d. per unit. The reduction in the expenditure on production, &c., was only ·026 l., while capital charges increased by ·244d., leaving a balance adverse to the undertaking of ·439d., which raised the previous figure of ·837d. to 1·276d. per unit. It must be admitted that even for an alternating system in a residential district the works cost is high, being over 2¼d. per unit. Curiously enough, the ratio of production cost to capital charges is much the same as is met with elsewhere.

❦ ❦ ❦

Receipts.

THE receipts were obtained from the following sources:—

BECKENHAM.	Units.	Yielding.	Per unit.
Private consumers took...	276,458	£5,416 =	4·702d.
Public lamps consumed...	21.576	340 =	3·782d.
Interim total ...	298,034	£5,756 =	4·636d.
Meter rentals	—	876 =	·705d.
Sundry receipts ...	—	30 =	·024d.
Total revenue	298,034	£6,662 =	5·365d.
Units used on works ...	39,684		
Total accounted for ..	337,718	(The maximum load was 256 kilowatts,	
Utilised on distribution	117,786	representing a load factor of 13·29 per	
Total units generated.	455,504	cent.)	

From the figures, and particularly the large number of units not directly accounted for, it might be surmised that the meters are sluggish and bad starters, causing a loss of revenue through non-registered consumption. We do not know whose manufactures are to be found in the district, so the suggestion is quite an impartial one, and in any case, whatever type be employed, if meters are not periodically overhauled they will run slow. The other point which suggests itself is that the transformers take a large magnetising current. In the event of critics desiring to refute these suggestions, we would reply with the Irishman's question, "How, then, is a 25 per cent. loss of units generated to be explained?"

❦ ❦ ❦

Other Figures.

THE allocation of the receipts over the items of expenditure was as follows:—

	Amount.	Per unit.	
Works cost	£3,324 =	2·677d.	
Rates, taxes, and management	729 =	1·413d.	
Total cost	£4,053 =	3·264d.	
Public lamp maintenauce...	138 =	·111d.	
Gross cost	£4,191 =	3·375d.	
Interest charges	1,811 =	1·458d.	3·266d.
Sinking fund charges ...	2,245 =	1·808d.	
Total actual cost of units sold	£8,247 =	6·641d.	
Less deficiency on year's working	1,585 =	1·276d.	
Revenue in all	£6,662 =	5·365d.	

The difference between the revenue in the last two and the first table is accounted for by deducting the bad debts from the receipts, instead of treating it as an item of the costs.

❦ ❦ ❦

Carlisle.

THE electricity works of the Corporation of Carlisle supply the traction system in addition to lighting, the units sold being 362,202 for the former, and therefore in the year ended 31st March last were considerably in excess of the private output, which reached 224,640 units.

The revenue derived from sales of current, &c., amounted to	£7,627
And the working expenditure to	4,831
Leaving a gross profit of..	£2,796
Out of this sum the following requirements should have been met:—	
Interest on mortgage debt	£1,117
Bank interest	663
Sinking fund and instalments repaid ...	1,199
Total of capital charges.	£2,979
Less gross profit as above	2,796
Deficiency for year	£183

The receipts were obtained from the following sources, Corporation departments beiug supplied at 2d. per unit:—

CARLISLE.	Units.	Yielding.	Per unit.
Private consumers and traction took	586,842	£6,325	=2·587d.
Public lamps consnmed ...	74,120	1,127	=3·649d.
Interim total	660,962	£7,452	=2·706d.
Snndry receipts	—	175	= ·063d.
Total revenue	660,962	£7,627	=2·769d.
Used on works	164,171		
Total accounted for ...	825,133	(The Maximum load was 521 kilo-	
Utilised on distribution ...	8.912	watts, equal to a load factor of	
Total units generated ...	834,045	14·48 per cent.)	

The maximum load for lighting was 296 kilowatts, and for traction 225 kilowatts, from which the benefit of the latter can be readily seen, as from this source the units were more than one and a half times those disposed of on the general supply.

The receipts were spread over the following items of expenditure:—

	Amonnt.	Per unit.	
Works cost	£3,440 =	1·249d.	
Rates, taxes, and management	1,132 =	·411d.	
Total cost	£4,572 =	1·660d.	
Public lamp maintenance ...	259 =	·094d.	
Gross cost	£4,831 =	1·754d.	
Interest charges	1,780 =	·647d.	1·082d.
Sinking fund charges	1,199 =	·435d.	
Total actual cost of nnits sold	£7,810 =	2·836d.	
Less deficiency for year ...	183 =	·067d.	
Total revenne	£7,627 =	2·769d.	

❦ ❦ ❦

Barnes.

THE Barnes Urban District Council may be congratulated upon the character of the changes in the accounts for the last financial year. They show a rapid movement towards profit yielding, and indicate that as the business extends the system will be quite able to hold its own in comparison with the other extra-metropolitan undertakings. The output has nearly doubled; from 123,060 it has been increased to 227,476 units, corresponding to a revenue of £4,016, instead of £2,352. This rise of £1,664 in the receipts has been accompanied by extra costs amounting to only £722, whereby the gross profit is better off by £942. The capital charges are greater by only £316, which has left £626 to reduce the previous deficiency of £778 to £152, and this during the current year may be expected to be wiped out, and a substantial surplus remain over. The rates charged are 5d. per unit for lighting and 3d. for power and heat, which are not out of the way for a system dependent upon lighting for the major portion of its business, and situated close to London, where fuel and labour are important elements in the costs sheet.

The accounts for 1903-4 show that the revenne derived from sales of current, &c., amounted to		£4 016
And the working expenditure to		1,962
Leaving a gross profit of		£2,054
Out of this sum the following requirements should have been met:—		
Interest on mortgage debt...	£1,225	
Instalments of capital repaid	981	
Total of capital charges	£2,206	
Less gross profit as above	2,054	
Deficiency for year	£152	

The receipts were obtained in the following proportion:—

BARNES.	Units.	Yielding.	Per unit.
Private consumers took ...	138,797	£2,855 =	4·937d.
Public lamps consumed ...	88,679	924 =	2·501d.
Interim total	227,476	£3,779 =	3·987d.
Meter rentals	—	112 =	·118d.
Service fees	—	116 =	·132d.
Snndry receipts	—	9	
Total revenne	227,476	£4,016 =	4·237d.
Used on works	23,718		
Total accounted for... ...	251,194	(The maximum	
Utilised on distribution ...	12.222	load was 155 kilowatts, equal to a	
Total units generated...	263,416	load factor of 16·75 per cent.)	

❦ ❦ ❦

Total Revenue.

THE rate charged for lighting is so nearly approached in the average that the power load must be inappreciable in amount. It is therefore all the more surprising to find a high load factor. The average price received has fallen ·350d. per unit, being almost equal to the reduction in costs, 349d. per unit; but the largest alteration is in the capital charges, which were 3·686 l., and are now 2·328d., 1·358d. less than before, consequently the deficiency has come down by 1·357d. per unit from 1·517d. to ·160d. per unit.

The amount received was taken up and appropriated thus:—

	Amount.	Per unit.	
Works cost	£1,147 =	1·210d.	
Rates, taxes, and management	605 =	·640d.	
Total cost	£1,753 =	1·850d.	
Public lamp maintenance ...	209 =	·219d.	
Gross cost	£1,962 =	2·069d.	
Interest charges	1,225 =	1,293d.	2·328d.
Sinking fund charges ...	981 =	1·035d.	
Total actual cost of units sold	£4,168 =	4·397d.	
Less deficiency for year ...	152 =	·160d.	
Revenue in all ...	£4,016 =	4·237d.	

Interesting Comparisons.

THE street lighting at Carlisle comprises 48 lamps, at Beckenham 17 arc and 34 incandescent lamps, and at Barnes 200 single Nernst and one arc lamp. Assuming this to be equivalent to 223 single Nernst lamps, the cost was £716 for current and £209 for maintenance and repairs, at the rate of £3 4s. approximately per lamp per annum for current and about 18s. for maintenance, or a total of about £4 3s. each. How this compares with the *average* results of incandescent gas mantles would be an interesting fact if data were available. The capital invested in these undertakings was covered by the items set out below:—

	Beckenham.	Carlisle.	Barnes.
Lands	£2,048	—	£212
Buildings	12,089	—	6,150
Machinery	15,892	—	11,278
Accumulators	—	—	962
Mains and services	29,736	—	15,489
Transformers, motors, &c.	2,245	—	—
Meters	—	—	1,178
Electrical instruments	1,390	—	21
Various	11,945	—	1,837
Total expended.	£75,345	£53,415	£37,127

❦ ❦ ❦

Mster Rsnts and Correspondents.

THE correspondence in the daily Press gives a good idea of the grievances nnder which the public thinks it labours, bnt at the same time it displays the ignorance of many of the writers, especially when they venture to treat of technical questions. A correspondent in one of the dailies last week ventilated his views of the "unjustifiable" meter rents charged by electric lighting authorities. The argument used was that to charge a meter rent is as indefensible as for a tradesman to charge for the use of scales on which he weighs the goods sold. This can easily be disproved, for the tradesman does not keep a separate pair of scales for each of his customers: if he had to do so we fancy he would reimburse himself either directly or indirectly for the heavy capitalisation. And we have heard of such things as weighing out tin-foil and paper as part of the goods sold. If this is not directly charging for packing and weighing, we do not know how to characterise it. There are such fees as booking charges, and those who travel on the Continent know what "seat tickets" are. The fact is, meter rents are akin to programme fees in a theatre; when they are charged they are looked upon as an imposition, bnt little gratitude is given to those who abolish them. The same correspondent had a tilt at the "minimum charge," and voices the opinion that he pays his 10s. 6d. per quarter in the summer "absolutely for nothing." Were he to go to the works he would find plant retained against the occasion when he called for his maximum demand; this is what he pays for. It is a sort of "refresher" or retainer, by the payment of which he recoups the undertakers in some measure for the inevitable loss in the light-load season of the year, and did he not do so the average rate charged would necessarily be increased. It is evident that the public have yet to be generally educated in the elementary principles of electricity supply.

BRADFORD ELECTRICITY.

AN EXPERT INQUIRY.

AT a recent meeting of the Bradford City Council there was not a little criticism of the management of the Electricity Works, and a considerable opinion was expressed that an expert shonld be consulted in connection with the expenditure of a large amount of money on a new scheme of distribution which the Electricity Committee recommended.

The matter engaged the attention of the committee last week, and Alderman G. H. Robinson, the chairman, made a statement pointing out the difficulties which the manager had had to contend against, and said that, as the engineer had their confidence, it was necessary that steps should be taken to vindicate both him and themselves. He therefore moved that the committee, with the concurrence of the engineer, recommend that an expert (consulting electrical engineer) be called in for the purpose of reporting to the Council as soon as possible.

It was stated that the reason an expert was asked for was not because of lack of faith in the present manager, but merely to be certain that the present policy was right.

The resolution was carried.

It was afterwards decided to call in Mr. Burstall, of the firm of Burstall and Monkhouse, Westminster, who is consulting engineer to the London Electric Supply Corporation and others.

ELECTRICAL ENGINEERS INJURED.

ACCIDENT AT BURNLEY GENERATING STATION.

THE staff at the works and members of the Electricity Committee of the Corporation were assembled at the Burnley generating station on Friday to see the trial of an electrically-driven air-compressor. This had been running on a wood floor for some little time, when a proposal was made to move it in order that it should be attached to one of the dynamos.

The engine driver and switchboard attendant accordingly approached the machine, but as soon as the former put his foot on the metal floor-plate he was instantly thrown down, his head striking the floor violently. Mr. Birkett, the electrical engineer, ran to his assistance, and while so engaged his hands came in contact with the metal drawbar of the compressor, and immediately he, too, was violently flung to the ground.

The whole of the current for tramway traction purposes was passing through the compressor, and Mr. Birkett was unable to loosen his hold of the drawbar. He finally became unconscious. An assistant rushed to the switchboard, broke the circuit, and Mr. Birkett was released.

The switchboard attendant and the engine driver both received a severe shock, but Mr. Birkett was the more seriously hurt. Holes were burnt through his clothes, and his knee was seriously injured in consequence of the violence with which he was flung down.

The accident is attributed to an armoured tnbe attached to the compressor accidentally coming in contact with one of the terminals of the motor.

ELECTRICITY FOR LYTHAM.

AN agreement has been come to between the Lytham District Council and Messrs. Foote and Milne, electrical engineers, of London, whereby the latter will produce, store, and supply electricity for all public and private purposes within the urban district of Lytham. The Lytham electric lighting order was allowed to lapse last year, but terms have now been secured from the company referred to, with powers of purchase at the end of 10 or 20 years.

ACTON'S ELECTRICAL UNDERTAKING.

THE first use of electricity in Acton, under the District Council's undertaking, has been made at the new Isolation Hospital, the opening ceremony in connection with which was noticed by the *Municipal Journal* last week. To-day (Saturday) the light will be switched on to the new Central Schools, and next week it is hoped to extend the current to the arc lamps in the principal thoroughfares.

The Council's Electric Lighting Provisional Order was obtained in 1891 by the then local board, and remained in practical absyance until 1903, when other applications to the Board of Trade almost resulted in a revocation of the Order. Upon a definite undertaking by the Council to establish works for the supply of current, the Board consented to its Order remaining in force for a furthsr twelve months. After much discussion as to whether the Council should erect its own generating plant, it was eventually decided to enter into an agreement with the Metropolitan Electric Supply Company, Limited, for a supply of electricity in bulk from its works in North Acton to a transforming station erected by the Council.

The work carried out by the Council during the past six months has entailed a cost of about £50,000, contracts being entered into with the Lancashire Dynamo Company. Messrs. Cowans, Limited, St. Helens Cable Company, the Electric Storage Company, and Messrs. J. Hitchen and Sons. The whole has been superintended by the Council's engineer, Mr. W. H. Trentham, and just recently Mr. J. Martin Blair was appointed resident electric engineer. The latter will have a residence at the Council's works, which are situate at Willesden Lane, near the new Isolation Hospital. The prices for the snpply of current have been fixed by the Council as follows:—Lighting, private cousumers, 5d. per unit; churches and chapels, 4d.; power (subject to special arrangement), 2d. No rent is charged for meters. There appears every prospect of the light being in great demand.

TRAMWAY TOPICS.

Where the Dolter Surface-Contact System is on Trial, and a Glance at the Principle of its Construction. A Handsome Nett Profit on First Year's Working at Walsall. The Value of Tramway Depots Under the Auctioneer's Hammer.

THE Dolter surface-contact system for electric tramways has engaged some little attention in this country. Early next month it is to be introduced into Torquay. The system has been working in Paris for more than three years, and a trial line is working at Dresden. During the present week a working model of the system is being exhibited in Birmingham. It consists of a long iron skate or runner, so suspended from the underpart of the car that it just touches the surface of a number of iron blocks embedded in the road, which slightly project above the general surface. Each of these blocks or studs forms the upper part of a small water-tight contact-box or chamber, in which is suspended a bell crank lever. The upper part of this lever, which is of iron, is capable of being magnetically attracted when the surface-contact piece, which is about 6in. by 4in., is magnetised from the skate carried under the car. The lower arm of the lever carries a carbon piece so arranged that it is brought into contact with a fixed carbon piece which is connected permanently to the underground cable. When the car passes over any surface-contact block the magnetism of the skate, acting through the iron surface block, attracts the lever, and so brings the two carbon contact pieces together, completing an electric circuit. As the car passes along the skate successively magnetises the blocks as it comes to them, and so keeps up a connection with the cable. The blocks cease to be magnetised as the skate leaves them, and the levers in consequence fall, cutting off the surface blocks from all connection with the cable.

How the Danger is Overcome.

IT is claimed for this surface-contact system that there is practically no possibility of the contact between the surface plate and the cable being maintained after the passage of the car. As soon as the magnetised skate ceases to exert its influence the magnetised action of the lever ceases, and the contact piece falls by gravity, being suspended very loosely in order to ensure the necessary freedom. To provide, however, against the possibility of the lever failing to fall and break the connection as the car leaves any of the contact boxes, a very efficient and simple device is made use of. At each end of the car is a small separate skate connected directly through the framework of the car with the wheels and rails. In the event of the contact being maintained after the passage of the magnetised skate, the small skate gives a short circuit action by directly connecting the underground conductor and the rails, and, by blowing the fuse provided in the contact boxes, the faulty box is cut off from all connection with the cable, thereby preventing it from acting until the fuse has been restored. The life of each skate is about seven years, and as only a small part of the contact block is exposed to wear, the cost of maintenance is small. The initial cost of the system is not much greater than that of the overhead system, and the cars can be so constructed as to run in connection with a trolley system route. This is being done at present in Paris.

Walsall's First Year.

WALSALL Corporation's Tramway Committee has this week issued its first annual report. It is for the year ended December 31st last, and the result is very striking. After payment of all charges, including interest and sinking fund, there remains a nett profit of £2,269 3s. 9d. The Corporation owns and works the overhead system in the borough, and the adjoining districts of Walsall Wood, Willenhall, and Great Barr. It took over the working on the 1st January, 1904. The total length of route is 12 miles 7 furlongs 5·90 chain—single track, 10 miles 6 furlongs 2·10 chains; double track, 2 miles 1 furlong 38·0 chains. Five miles of the track were purchased from the South Staffordshire Tramways Company; the remainder is all new track, constructed under the powers of the Walsall Corporation Act, 1900. The Corporation also owns 5 furlongs 9·80 chains of single and 4 furlongs 6·6 chains of double track in an outlying part of the borough, which it has leased to the South Staffordshire Tramways (Lessee) Company, Limited. The number of cars is 28, all being new stock. The current for working the tramways is supplied by the Electric Lighting Committee of the Corporation. The Corporation is authorised to construct some four more miles of tramways.

Some Figures.

THE following are last year's principal figures:—

Year ended December 31st, 1904.

	Average per mile.	£	s.	d.
Total capital expenditure to 31st December, 1904		149,774	1	4
Total loan capital, at same date		141,630	0	0
Traffic revenue	9·46	24,923	17	5
Total revenue	9·52	25,089	18	0
Working expenses (excluding power cost)	4·54	11,967	5	4
Working expenses (including power cost)	6·51	17,157	15	6
Average traffic revenue per mile of single track		1,558	0	0
Car miles run		632,368		
Passengers carried		4,514,471		
Total number of units used	1·11	707,654		
Average number of cars in use for 13 hours per day		17		
Average speed per hour		7 miles.		
Average car hours per day		13		
Average number of passengers per mile	7·0			

Disposing of the Balance.

WITH respect to the appropriation of the nett profit of £2,269 3s. 9d., the committee strongly recommends that it should all be carried to the reserve fund, as it considers it will be sound policy to build up that fund at as early a date as possible to the maximum amount allowed by the Walsall Corporation Act, 1900, so as to provide for any possible contingency which may arise. There are weighty reasons why this course should be adopted. Amongst others, this year's profit is to some extent exceptional, as the cost of maintenance of the newly-constructed lines, and the repairs to cars and equipment, has been very small, and it would certainly be unwise not to expect a considerable increase of expense under these items, and, moreover, the charge for interest must be considerably increased next year, as interest on the whole of the capital which has been raised will have to be paid, whereas for part of last year the whole capital had not been expended. Then it is only by an ample reserve fund that depreciation of rolling stock and plant can be adequately provided for, as the provisions of the Walsall Corporation Act, 1900, do not admit of a separate depreciation account being provided independent of the reserve fund. The committee trusts that the result of the first year's working of this new municipal undertaking will be satisfactory to the Council and the burgesses generally, who have been able to secure a more punctual, quicker, and cleaner tramway service than formerly obtained, while the opening up of the outlying districts and the consequent bringing into the town for business purposes of many thousands of people must have been a great benefit to shopkeepers and tradesmen.

Edinburgh Tramways.

YESTERDAY (Thursday) at the eleventh annual general meeting of the share holders of the Edinburgh and District Tramways Company, Limited, the statement of accounts and balance-sheet showed that there has been an increase of profit for the year 1904 over 1903 of £4,263 7s. 10d., and an increase of £11,795 10s. in total receipts. The total receipts during 1904 were £239,499 3s. 10d., and the profit £16,042 19s. 9d., as against £227,793 7s. 10d., and £11,779 11s. 11d. during 1903. The total expenses, including £84,749 1s. 2d. Coporation charges, were £223,456 4s. 1d., as against £216,013 15s. 11d. last year. On 3rd October last the directors inaugurated a new system of parcel express delivery.

Glasgow Soiree.

THE second and concluding portion of the annual gathering in connection with the Gasgow Corporation Tramway department was held in the City Hall a few days ago. Councillor Robert Graham presided, and there was a large attendance. The chairman made references to the departure of Mr. John Young, who, as manager of the department, had raised the Glasgow tramway system to such eminence. In Mr. Dalrymple, however, they had a man in whom the committee had thorough confidence, and in whom, he believed, the employees also had confidence. He was glad that they were able to provide work for 100 unemployed men at this time in getting on with the work of tramway extension, for which Parliament had granted them powers last year.

Glasgow's High Position.

SINCE he had met them last year, the Chairman said, he had had the pleasure of comparing the tramway system of Glasgow with that of three other great cities of Europe, namely, Vienna, Budapest, and Munich, and he was bound to say that the Glasgow system was infinitely superior and more economically worked than any of them. Referring to the difficulties which Edinburgh had experienced with the cable system, which had been adopted there, in order that the city might not be disfigured by the erection of overhead wires, Mr. Graham said that in Vienna the overhead system was adopted outside the city, while inside its boundaries the conduit system was in use. He thought that they had a much better set of men than the cities which he had mentioned, and the wages on the whole for the best men were about two-thirds lower than those paid in Glasgow, while the working hours were longer. He would like to see a more general display of courtesy on the part of the conductors of Glasgow. The motormen, he thought, accomplished their task, which was not an easy one, very well, especially when it was remembered that out of about 18 million persons carried there had hitherto been only one fatal accident.

Newcastle Managership.

THE Newcastle Tramway Committee met last week end and reduced the list of 10 candidates for the tramway managership to five, from whom a final selection will be made by the City Council. The following are the five candidates selected:—Mr. H. E. Yerbury, 34, chief engineer and deputy manager of Sheffield Corporation tramways; Mr. C. J. Spencer, 29, general manager of Bradford tramways; Mr. C. W. Mallins, 43, superintendent and deputy manager Liverpool tramways; Mr. Ernest Hatton, general manager Salford tramways; Mr. G. Conaty, 43, Birmingham.

Tramway Depots in the Market.

AT Manchester, this week, three tramway depots, recently owned by the Bury, Rochdale, and Oldham Tramway Company, were sold by auction. Under the terms of the purchase of the system they had passed into the possession of the local authorities of Rochdale, Bury, Heywood, Whitefield, Royton, Littleborough, &c. The first lot offered was the Rochdale depot, with the land—containing

7,239 4-9 square yards—buildings, and two dwelling-houses. The first bid was £250, and the property was sold for £400. The ground rent is £101 3s. 4d. The second lot offered was the Bury depot, including 3,600 square yards of land and the tramway buildings. The ground rent is £150, and the land is held under lease for 983 years from October, 1898. Adjoining the property is the Drill Hall of the 1st V.B.L.F., and the volunteers offered £5 for the lot. Eventually, after some parleying, £50 was offered from the same quarters, and the property was knocked down for that sum. The Royton depot, including 5,057 square yards and the buildings—ground rent £42 4s. 6d.—was sold for £130.

❦ ❦ ❦

Greenock and the Company.

IN the arbitration case between Greenock Corporation and the Tramways Company, the Board of Trade, it is understood, has awarded the sum of £602 18s. 9d. as the proportion of profits due to the Corporation, while the company is to account for two sums of £75 set aside for maintenance and £1,500 placed to depreciation.

❦ ❦ ❦

Municipal Tramways Amateur Football League.

	Plyd.	Won.	Lost.	Drn.	Goals For.	Agst.	Pts.
Manchester	4	3	1	0	13	7	6
Liverpool	5	2	2	1	8	10	5
Sheffield	2	1	0	1	6	3	3
Wigan	6	1	3	2	8	10	2*
Southport	3	1	2	0	5	10	2

* Two points deducted by order of League Committee, January 17, 1905.

Result of Match played January 19, 1905:—Liverpool, 2; Wigan, 1.

❦ ❦ ❦

Exeter and Heavitree.

IT was mentioned at a meeting this week of the Heavitree Urban District Council that the Exeter City Council had realised its responsibility in connection with the extension of the tramway through Heavitree, and acknowledged that it had given an undertaking to serve Heavitree when it applied for Parliamentary powers. "After what had been said," one of the members observed, "he was pleased to notice that the City Council had acknowledged its mistake."

❦ ❦ ❦

Glasgow Employees' Wages.

THE Tramways Committee of the Glasgow Corporation recommends that the maximum wages of motormen, conductors, and car cleaners be increased 1s. per week. This will make the wages of motormen and conductors who have qualified as motormen range from 24s. to 31s. per week, of conductors who have not qualified as motormen from 24s. to 29s., and of car cleaners from 22s. to 27s.

❦ ❦ ❦

Lancaster Electric Trams.

IT was reported at a meeting of the Lancaster Town Council on Wednesday that inquiries were being made respecting motor 'buses for routes not served by the present trams. The tramway traffic was again more satisfactory, the total passengers carried during the month being 102,304, the receipts being £373 11s. 3d., an increase of 30,871 passengers and £89 10s. 4d. compared with the corresponding month last year.

HOLBORN TOWN CLERK.

A CONFESSION AND A CHARGE.

AT Bow Street, London, on Wednesday, Henry Corbett Jones, town clerk of Holborn, was charged on his confession with stealing, between March and August, 1903, £10,000, the property of the Holborn Borough Council. The accused, looking careworn and distressed, burst into tears upon entering the dock. He is 45 years of age.

Inspector Dew said that at half-past one that afternoon he saw the accused in the office of Superintendent Cole at Bow Street. The superintendent had previously spoken to the witness and handed him a letter. The accused said, "I wish to give myself up for stealing the money mentioned in that letter. It is quite true I have been very ill, but I am perfectly sane, and know what I am talking about. I thought it would be better to come and give myself up." Later he was charged on his own confession with stealing £10,049.

The accused's medical man stated that he (Jones) had been in bed for a fortnight and only got up that morning. The witness came with him to Bow Street. When the accused explained the object of the visit to him he thought it was a hallucination.

The accused was remanded, and was taken to Brixton in a cab.

The Matter Before the Council.

At a meeting of the Holborn Borough Council, on Wednesday night, the Mayor made a statement with regard to the defalcations of the town clerk. He said the Government auditor had reported to him that his audit of the borough accounts disclosed facts of so serious a nature that he thought it his duty to report without delay. The town clerk could not account for various sums received in respect of services rendered to parochial and vestry bodies, in regard to financial adjustments, Saffron Hill property, &c. The loss in banker's interest on these sums amounted to £350. There was a guarantee policy amounting to over £2,000. Altogether the sums involved exceeded £11,000. It was not impossible that other matters of a serious nature had yet to be brought to light. At this point the reporters were asked to retire. When they were re-admitted the Chairman of the Finance Committee said the balance at the bank was good, and there need be no trouble or anxiety about the finances of the committee.—The Mayor announced that the Council had appointed a special committee to inquire into the matter.

SOMETHING NEW.

L.G.B. AND MOTOR WAGONS.

AN ENTERPRISING FIRM.

THE Local Government Board is altering its requirements for the regulation of motor waggons. The maximum weight allowed for each wagon is being increased from three to five tons. To the non-technical mind the significance of this alteration may not be appreciated, but its effect is likely to be very great on the motor industry. It was a sheer impossibility to construct a really satisfactory motor waggon of only three tons weight, but the two additional tons allowed will give the widest scope for improvements. Already small local authorities are giving attention to the advisability of introdncing services of motor waggons for carrying produce, &c., in places where there are no light railways.

The St. Pancras Iron Work Company, Limited, has been smart enough to seize the present moment for turning out a patent steam motor wagon specially designed to meet the new requirements. There are several noteworthy features about the new vehicle.

Everyone who has had the smallest experience with steam vehicles knows that the boiler is the most important and the most troublesome part. Inability to keep steam, want of durability and consequent necessity of frequent repairs, are a few of the common defects of the majority of boilers fitted to steam wagons. After exhaustive trials the firm has adopted a steam generator which has none of these drawbacks.

The engine is of the two-cylinder compound type, and is fitted with a bye-pass valve to facilitate starting. The high pressure cylinder has a piston valve fitted with Lancaster's patent packing rings. Link motion reversing gear is employed. The cranks are balanced to secure freedom from vibration. All bearing and other wearing surfaces are of ample proportions to ensure durability, and will run for long periods without requiring adjustments. The whole of the gearing and engine runs in a dnst-proof and oil-tight casing, with automatic lubrication to all parts of the mechanism. Great attention has been paid to the necessity of providing ready means of access to all the working parts.

The frame is of strong channel section steel. suitably braced and tied, the front end being carried by the firm's patent fore-carriage, which allows of rough ground being traversed without distortion or straining of the frame. This is a very important improvement, as it reduces the wear and tear very considerably. The axles are forged from special steel of high tensile strength, giving great strength without unnecessary weight.

The steering is on the improved Ackerman system, with case-hardened joints and spins. The management of operating handle and levers has been carefully studied in order to give the driver complete control of the vehicle without moving from the steering wheel.

The bunker capacity is sufficient for a full day's run, and the water tanks hold enough for a run of from 15 to 20 miles, according to the nature of the roads traversed. A water lifter and 25ft. of hose pipe provide a ready means of replenishing the tanks from any roadside pond or stream.

The vehicle is designed to carry a load of 5 tons, and to be capable of drawing a trailer with a further load of 4 tons. Two speeds of three miles per hour and six miles per hour are provided.

As to the great question of cost, it may be stated that for short distances, snch as 15 or 20 miles, the cost per mile per ton is less than railway carriage; and, considering that there is no cost for trans-shipment, this means very considerable saving, speaking generally. By carrying 4 tons on the trailer, the firm has been able to reduce the cost of working to 1½d. per ton mile. The consumption of gas coke is 1cwt. for 10 miles, with 5-ton load.

CITY OF WESTMINSTER.

TENDER FOR SEWER WORKS.

THE Westminster City Council invite TENDERS for the CONSTRUCTION of 210 Lineal Yards of 3ft. 9in. by 2ft. 6in. BRICK and CONCRETE SEWER in Arlington Street, Bennett Street, and St. James' Street.

Plans, specifications, and conditions of contract can be seen, and copies of the bills of quantities, with form of tender, can be obtained on and after Thursday, the 2nd February, 1905, at the Works Department, Westminster City Hall, Charing Cross Road, W.C., between the hours of 10 a.m. and 4 p.m. (Saturdays 10 a.m. and 1 p.m.)

The contractors will be bound by the contract in the case of all workmen employed by them to pay wages at not less and to observe hours of labour not greater than the rates and hours recognised by the associations of employers and employees, and in practice obtained in the district where the works are to be executed, and they must undertake, with two sureties, to enter into a bond for the due and satisfactory completion of the works.

The contractors are prohibited from directly or indirectly canvassing members or officials of the Council in support of their tenders, and the tender of any contractor who does so canvass will be rejected.

Each tender, on the official form supplied, is to be delivered at the City Hall, in a sealed cover, addressed to the Town Clerk, Westminster City Hall, Charing Cross Road, W.C., and marked "Tender for Sewer Works. Contract No. 59."

No tender will be received after 12 noon on Friday, the 10th February, 1905,

The Council do not bind themselves to accept the lowest or any tender.

JOHN HUNT,
Town Clerk.

Westminster City Hall,
Charing Cross Road, W.C.
1st February, 1905.

BOROUGH OF HORNSEY.

TO PRINTERS AND STATIONERS.

THE Town Council of the Borough of Hornsey are prepared to receive TENDERS for PRINTING and the SUPPLY of STATIONERY for a term of One Year or Three Years, commencing on the 1st day of April, 1905.

Samples, &c., may be seen, and forms of tender and all information obtained, at the Office mentioned below, on any morning, between the hours of 10 and 12 o'clock, after a sum of two pounds has been deposited with the Town Clerk, which sum will be retained by the Council and deemed to be forfeited if a bona-fide tender is not made by the depositor. If a tender is made which is not accepted, the sum deposited will be returned, and, if a tender is accepted, such sum will be retained by the Council until the contract has been executed by the depositor, and will be forfeited in the event of his, or his sureties, failing or neglecting to execute such contract, or the bond accompanying it, within seven days after he or they respectively shall have been requested to execute the contract or bond respectively.

No tender will be considered except on the prescribed form.

Sealed and endorsed tenders are to be delivered or sent by post so as to be deposited in the tender box in the Town Clerk's Office not later than 4 o'clock p.m. on Monday the 20th of February proximo.

The Council reserve to themselves the right to decline all, or any, or any portion of the tenders so sent in.

THE MUNICIPAL JOURNAL
ESTABLISHED AS "LONDON" THIRTEENTH YEAR OF ISSUE

No. 627.—Vol. XIV. FEBRUARY 3, 1905.

GARDEN VILLAGES.

A Valuable Lesson in Housing and Kindred Problems is Given by Mr. Joseph Rowntree's New Garden Village near York. The Houses are not to Occupy more than One-Fourth of the Sites on which they are Built. How a Healthy Democratic Village Life will be Possible.

FOR the past five years the "Mecca" of British housing reformers has been "Beautiful Bournville." With the creation of the Earswick Garden Village Trust another centre of education in the right methods of developing a housing estate has, however, been provided, and Mr. George Cadbury and Mr. Joseph Rowntree—both members of the Society of Friends—will henceforth divide the honour of leading the way in regard to the planning and development of housing areas on hygienic and artistic lines.

The main features of the trust deed under which Mr. Joseph Rowntree has vested the ownership of 120 acres of land at Earswick, near York, 43 cottages already erected, and a large sum of invested capital, in the hands of a body of trustees, closely resembles that under which the Bournville Trust was established. The income from the houses already built, added to the revenue from invested capital, will be used year by year to add to the number of cottages, and will be sufficient to build from 20 to 30 yearly. The present trustees are Messrs. Joseph Rowntree (the founder), B. Seebohm Rowntree, J. Wilhelm Rowntree, J. Stephenson Rowntree, Oscar F. Rowntree, and Arnold S. Rowntree. In the election of future trustees the Society of Friends will play a large part.

That the village will be truly a garden village can be seen from the following provisions of the trust deed:—(1) Not less than one-tenth of the property of the trust, exclusive of roads, shall be laid out and used as parks, recreation grounds, and open spaces. (2) The houses are not to occupy more than one-fourth of the sites on which they are built.

Up to the present, two types of houses have been built, viz., "cottage" houses and "parlour" houses. The cottage houses are let at 4s. 6d. per week, exclusive of rates. The accommodation given in return for the rent of 4s. 6d. is as follows:—On the ground floor is a large living room (12ft. 6in. by 20ft. 6in.), with a bay window, and plenty of cupboard accommodation, a small pantry, and a scullery fitted with a copper, bath, and sink. The copper is fitted with a patent exhaust to carry the steam direct into the flues, thus preventing the discomfort which often arises in small houses on washing days. The bath is fitted with a drop-down lid, forming a table when the bath is not in use. Upstairs there are three bedrooms, each fitted with a fire-place, and there is a large wardrobe on the landing. The walls are plastered internally with adamant cement, which dries very quickly, and assumes a smooth hard surface, and is thus more sanitary than the ordinary plaster. All the rooms are fitted with picture mouldings. Gas is supplied throughout the house, and city water is laid on.

[*Photo by* D. S. Crichton.]
COTTAGE HOUSES, EARSWICK ESTATE.

[*Photo by* D. S. Crichton.]
"PARLOUR" HOUSES, EARSWICK ESTATE.

It will be noticed that no sitting room or parlour is provided in this class of house. The living room is, however, exceptionally large, and the provision of a scullery, containing copper, sink, and an admirably-arranged bath, will enable the housewives fortunate enough to obtain the tenancy of these houses to make and keep the living room practically a comfortable parlour as well. The accompanying illustration of this class of house shows several other good features in the planning of the estate, which has been in the hands of Messrs. Unwin and Parker, the architects of the Garden City at Letchworth.

Grass plots extend from the dwarf railings to the roadway, and trees have been planted at intervals on these grass plots. The houses are built in blocks of four, and, so far, most of them have been provided with about 350 square yards of garden ground. The design adopted is very pleasing to the eye. Next summer pilgrims, coming from great towns like Sheffield and Leeds in search of housing lessons, will find that the red tiles of the roofs, the white fronts of the houses, and the green

of the grass, make together a striking contrast to the dull brick and stone to which they have been accustomed.

It would, of course, have been possible to make these houses much more elaborate and costly. The founder has, however, from the first realised the need for demonstrating that the housing of the people under right conditions can be secured at rents not greater than those already paid by workmen. He has, therefore, "plotted and planned" to build a cottage which can be let at 4s. 6d. a week and give a nett return of between 3 and 4 per cent. He has succeeded admirably, and, in his success, has placed housing reformers in the north of England under a deep debt of gratitude. Henceforward, when the cry "it can't be done" is raised, an excursion to Earswick will be recommended. Councillors will certainly return from York repentant and determined to "go and do likewise."

The estate is not wholly devoted to "cottage" houses. Some "parlour" houses have been erected (*vide* illustration). These contain a parlour in addition to the living room on the ground floor, and are let at a rent of 5s. 9d. per week. The "parlour" houses make delightful little homes, and will probably attract many better-paid artisans, clerks, and shop assistants from the neighbouring city of York to the restful quiet and pure air of a garden village.

The valuable example of Bournville in establishing a village council has been followed. This council will at Earswick consist of 13 members, and the tenants will elect seven of these, whilst the trustees will nominate the minority of six. The civic responsibility of the tenants will be further ensured by their payment of the rates, which are equal to about 8d. per week. In these days of "hard knocks" for rural local authorities, it is pleasant to learn that the Flaxton Rural District Council has cordially welcomed the scheme, and has helped, and not hindered, its development.

A large part of the success attained at Bournville is due to the kindness and courtesy shown by Mr. John H. Barlow, the secretary to the trust. Mr. Rowntree has made an equally good choice by appointing Miss Harlock as agent. Miss Harlock rendered invaluable service in the preparation of Mr. Seebohm Rowntree's well-known book on "Poverty." She is a certificated sanitary inspector, is a member of the York Board of Guardians, and has the right combination of genuine sympathy and common sense. The tenants have already started a club, and as the estate grows other features of a healthy democratic village life will undoubtedly be added. That residence in the village is not in any way specially reserved for the workers at the great chocolate factory of Messrs. Rowntree at Haxby is shown by the fact that a large number of the occupants of the houses already built find employment in various industries at York, which is only a couple of miles distant.

The members of the Society of Friends have always championed political and religious liberty, and it is therefore almost needless to say that the trust deed clearly provides for the administration of the trust on non-sectarian and non-political lines. "Paternalism" is to be conspicuous by its absence. In one of the buildings in the village a Church of England clergyman preaches in the afternoon and a Wesleyan minister in the evening.

Compared with the housing needs of only one of the great towns of England, this garden village estate seems very small. Thus a city like Sheffield would need a dozen of them before the housing problem could be regarded as adequately solved. The great value of Earswick Garden Village rests, however, in the example it affords of the right way to house the people. Opponents of housing reform can no longer plead that the ugly working-class street is the only thing possible "at the price." Municipalities have in Earswick and Bournville examples to copy and improve upon. It will probably be many years before the lesson is fully learned. Much water will flow under the bridges of Tyne, Wear, and Tees before the municipalities in the prosperous North realise the importance of their health and housing responsibilities. With the establishment of this Garden Village Trust at the threshold of the great Northern industrial districts Mr. Rowntree has, however, provided that "ounce of example" which is "worth a ton of theory." It is the task of North of England housing reformers to see that the housing lessons of Earswick are taught and understood in every village and town within a hundred miles of York.

THE fifth conference of the Street Noise Abatement Committee was held at 2, Harrington Gardens, South Kensington, on Monday evening, when the following resolution, proposed by Captain Murray-Cookesley, and seconded by Mr. Felix Moscheles, was adopted:—"That in view of the unsatisfactory character of the existing bye-laws respecting street noises, and the unreasonableness of expecting private individuals to put the same into force, the London County Council, the Corporation of the City of London, and the borough councils be requested to appoint noise inspectors, whose duties would be to inquire into, and suppress by legal measures, all unnecessary and objectionable noises in the streets and public thoroughfares of the metropolis."

WATER SUPPLIES IN TENEMENT HOUSES.

IMPORTANT TEST CASE.

OF far-reaching importance is the decision in a case brought by the Woolwich Metropolitan Borough Council respecting the supply of water from a tap in the yard. It was held by the magistrate that this was not a proper and sufficient supply within the meaning of Sec. 48 of the Public Health (London) Act, 1891, and he made an order to abate the nuisance, and ordered the defendant to pay £5 5s. costs. The town clerk (Mr. Bryceson) appeared for the Borough Council, and Mr. Watkins represented the defendant. Mr. Bryceson stated that the premises on the 13th of December, 1904, were occupied by five families, nine persons. In July the lady inspector found eleven persons. There were three floors and an unoccupied basement. The only water supply was from a stand pipe in the yard, which was approached down three steps from the lowest occupied floor. There were 34 steps from top floor to yard. There was a dilapidated, unusable copper under a lean-to roof in the yard. No other provision was made for water, sink, scullery, or washhouse for washing articles of any kind. The tenants of the upper floors carried water up and stored in open pails. Water cannot be kept clean in this way, and may communicate germs of infectious disease.

Dr. Sidney Davies, medical officer of health (Woolwich); Dr. E. G. Aunis, medical officer of health (Greenwich); and Dr. Hamer, lecturer on public health, St. Bartholomew's, and assistant medical officer for the London County Council, gave evidence as to the insufficiency of the water supply. On behalf of the tenant it was represented that it was not practicable to affix a tap and sink on the stairs, but it was shown that there would be no difficulty in this respect.

There are many such houses with a single tap, and now that the decision in this test case is on the side of enlightenment sweeping reforms may be expected to follow in London. The London County Council has this week decided to call the attention of Metropolitan Borough Councils to the decision, expressing the hope that they will take all possible steps to secure the provision of a proper and sufficient supply of water for the tenants of every floor of a tenement house.

The Public Health Committee of the London County Council has had the matter of water supply to tenement houses before it for some time. It was doubtful whether the provisions of the Act were sufficient to enable sanitary authorities to require a supply of water to the tenants of each floor in tenement houses, and on 14th June, 1904, the Council decided to promote legislation on the subject, but its resolution was subsequently rescinded on 6th December, 1904, as the Parliamentary Committee reported that it was advised that it was by no means clear that the present law was insufficient to meet the case, and as the Public Health Committee was endeavouring to get the matter tested at the instance of one of the metropolitan borough councils.

CELLAR LIVING-ROOMS.

THE QUESTION OF DAYLIGHT—IMPORTANT DECISION.

ANOTHER case—also the first of its kind, decided favourably to public health—was fought out in the Woolwich Police-court, Mr. Rupert Kettle being the presiding magistrate. A man was summoned for failure to comply with a notice served under Sec. 2 of the Public Health (London) Act ("any premises in such a state as to be a nuisance, or dangerous, or injurious to health") requiring him to provide sufficient light to a basement room. The Town Clerk (Mr. Bryceson) represented the Borough Council, and Mr. Sampson defended. It appeared from the evidence that the house was occupied by two families, four persons. The front basement was used as a kitchen and living room, and the back basement as a laundry. The room in question, which was used by three persons, was very dark, and an oil lamp had to be burnt in the day-time. The ceiling was below the level of the ground.

If separately occupied, this room would come under Sec. 96 of the Act, and the window would have to be 1-10th of floor area; the ceiling would also have to be 3ft. above the level of the ground, and this would practically necessitate the top of the window being 2ft. above the level of the ground. Under the Building Act there are stringent regulations for securing light to habitable rooms.

The room in question was so dark that large print could not be read in the middle of the room at three o'clock in the afternoon. On behalf of the defendant it was stated that the present occupant of the room had lived in the house for seventy years, and had had nine children, all living.

For this sin against the light the defendant was ordered to abate the nuisance in one month, and pay £1 3s. costs. The efforts of the Woolwich Borough Council in bringing forward these two important cases is highly praiseworthy.

DEPUTATION EXPENSES.

PRACTICE IN VARIOUS CITIES.

THE controversy on the question of allowances to cover the expenses of members or officials of local authorities when on corporation business is one of long standing. In some towns it is the practice to allow a fixed sum per day—in addition to first class railway fare—to cover their out-of-pocket payments. Others do not pay any fixed sums. It is not easy to arrive at what may be considered "a reasonable sum per day," for it must not, of course, be such a sum as, under the guise of an allowance for expenses, would really amount to a remuneration for the time engaged. The practice at the present time adopted in the large cities and boroughs of England should be of interest to all corporations. We have compiled the following interesting information from a return which the town clerk of Hull (Mr. E. Laverack) has got together with the purpose of helping his council in the matter:—

Bolton.—To members of the Council when in London £1 11s. 6d. per day is paid, with first class railway and cab fares; any other place £1 5s., with first class railway and cabs. Officials £1 1s., with first class railway and cabs. In long distances, such as London, Edinbro', Glasgow, &c., the day of going and returning counts two days; to other places the day of going and returning counts one day. Where a journey out and home again on the same day is made the sum of 10s. 6d. per day, with first class railway and cab fares, is paid.

Bradford.—Members and officials proceeding on journeys out of Bradford, and not having occasion to remain away from the city overnight, are allowed their railway fares, carriage hire, and a reasonable sum, not exceeding 10s., for meals. Members and officials engaged away from the city, and having to remain away overnight, are allowed the expences incurred by them, to an amount of not more than £1 per night in the provinces, and £1 10s. per night in London, in addition to their railway fares and carriage hire. The amount is reckoned according to the nights away.

Cardiff.—Members and chief officials are allowed £1 1s. per day hotel expenses. First class railway fares and cab fares are charged in addition. The days of travelling from and returning to Cardiff are paid for as two separate days. Where a journey out and home again on the same day is made personal expenses only are allowed.

Leeds.—The sum of 25s. per day is allowed to both members of the Corporation and officials to cover expenses, in addition to first class fares and cab fares. The days of travelling from and returning to the town are paid for as two separate days. Where a journey out and home again on the same day is made out-of-pocket expenses only are allowed.

Liverpool.—Two guineas per day are allowed to members of the Corporation. To officials a varying amount is allowed, according to rank in the service. This does not include first-class railway and cab fares. Day of departure and day of return are treated as separate days. Where a journey out and home again on the same day is made railway and cab fares are allowed.

Manchester.—As far as practicable, members charge the amount actnally expended, but in no case does the amount allowed exceed a snm ascertained at the rate of one guinea and a half per day and night, in addition to travelling expenses. Officers are paid out-of-pocket expenses, as certified by the chairman of the committee interested. First class railway fares are included in the term "travelling expenses." Cab fares are allowed to and from stations. The time occupied from leaving Manchester to returning to Manchester is allowed. Where a journey out and home again on the same day is made actual expenditure is allowed.

Nottingham.—The Corporation does not pay any fixed sum per day. Some years ago a scale was made, but it has never been acted upon. It seems to be an understood thing that for a journey to London and home again the same day a charge of £3 3s. should be made. This has become an established custom.

Salford.—Members are allowed £1 11s. 6d. per day and night, in addition to first class railway fares and cab fares. Officers' expenses out-of-pocket as certified by the chairman of the committee interested. The Mayor, when absent from home all night on Corporation business, is allowed £2 2s. per day, in addition to first class railway fares and cab fares. The number of days are reckoned according to the nights away. Where a journey out and home again on the same day is made expenses out-of-pocket are allowed.

At Birmingham, Bristol, Leicester, Newcastle-on-Tyne, Portsmouth, and Sheffield there is no fixed scale, but actual expenses are allowed. At Sheffield the town clerk, by the terms of his appointment, is allowed, if detained for the night, £2 2s., and first-class railway fares and cab fares.

TO OUR READERS.

ENLARGEMENT OF THE MUNICIPAL JOURNAL.

COMMENCING with the issue of March 3, the MUNICIPAL JOURNAL will be enlarged to 36 pages. The expansion has become necessary for several reasons, the principal of which is the striking development of local government during the past several years. Concurrently with that development, we have been obliged to introduce many new features which we are conscious have not received adequate treatment, owing to lack of space. Education is one large new subject to which our columns have been opened, and the Poor Law problem is another. We are constantly receiving letters from our readers asking for more information on particular problems than we have hitherto been able to give, and the authoritative position now occupied by our periodical makes it necessary that these requests shall be complied with.

Our future programme will proceed on the lines of extending our present features, and introducing as many new ones as possible. It also provides for the publication of more of those informative articles on particular subjects which readers throughout the Kingdom—whether councillors or officials—have assured us have been highly useful to them.

These developments will involve an increase in the price of the JOURNAL to 2d.—with a special discount to subscribers. The paper will still, considering the quantity and value of the information and news which it gives, be the cheapest weekly journal of its kind.

The first number of the new series will be arranged upon a novel plan, and will constitute a survey of the present position of municipal enterprise in all its branches. We are arranging for articles by well-known experts, whose names will be announced in the course of a week or two.

Several new features will be introduced which we hope will make the JOURNAL a more effective vehicle for the interchange of opinions and information among all branches of the local government service, and in the meantime we shall be glad to receive helpful suggestions from readers.

DESTRUCTORS AND ELECTRICITY.

To the Editor.

SIR,—Owing partly to the publication of a very instructive paper, read by Mr. W. P. Adams before the Institution of Electrical Engineers, public interest in the above question has been considerably stimnlated. I think, therefore, that it may not be ont of place to point out, with your kind permission, some misconceptions which may arise.

There is a tendency in some quarters to estimate the efficiency of any particular destructor by the number of electrical units per ton of refuse which are produced in the works where such destructor is in use.

The number of units which are produced per ton of refuse burnt depends chiefly on the following factors:—

(1) The calorific value of the refnse.

(2) The conditions as to day and night load, which determine whether all the refnse is used for steam raising, or whether the destructor is working at full power, while the electricity plant is practically idle.

(3) The efficiency of the electrical generating plant, which may require more or less steam per unit generated.

(4) The efficiency of the destructor plant with its boilers and flues.

(5) Last, but not least, the efficiency of the management.

It is, therefore, absurd to attribute to the destructor, either the whole credit for a good result in units per ton, or the whole blame for a poor result, and this is demonstrated by the fact that you will find one destructor of a given make giving a very high figure, and another destructor of the same make, but under different conditions, giving a low figure.

One of the most important factors in the efficiency of a destructor, the cost of labour, is usually ignored when dealing with steam-raising results. In any destructor, increased steam-raising results can usually be obtained by putting on increased labour, and "stoking in spoonfuls." From the steam-raising point of view, the all-important question is, what is the cost of a ton of steam produced by the destructor in ordinary every-day work? Under the heading "Steam from Refuse and its Cost," the *Electrical Magazine*, published on April 26th, 1904, some interesting figures showing the cost of labour per ton of steam, as well as the evaporation per pound of refuse, at a number of combined stations. It was shown that those stations where the highest evaporative results are obtained are not always the most economical, owing to the large expenditure in labour, and it is noteworthy that among those stations where utilisation of steam is complete, the best result came from Fulham.

If the destructor produces a supply of steam at a reasonable cost for labour, it is for the electrical department to utilise that steam, and the credit for good results and the blame for bad results belong by rights to the engineers, who are responsible for the construction and management of the whole combined works, and not to the maker of any particular part of the installation. I think that if the above facts were more generally recognised it would be in the interest alike of electrical engineers, destructor builders, and the public, and would tend to discount a good deal of humbug.—Yours, &c.,

F. L. WATSON,
Assoc.M Inst.C.E.
The Horsfall Destructor Co., Ltd., Leeds.

THE Gas Committee of the Bradford Corporation has decided to extend the system at present in use at the Birkshill Gasworks for the extraction of cyanogen from gas to the gasworks in Thornton Road and Valley Road. The plant, which is patented by a London syndicate, was installed at the Birkshill Works some nine months ago, and has proved so successful in the purifying both of the gas and effluent from the works that the engineers recommended the extension. The plant is worked by the Corporation, the patentees reserving the right of purchasing all cyanogen extracted at a price which ultimately covers the initial cost of installing the plant.

EDUCATIONAL NOTES.

Recreative Evening Classes at Bradford. Teachers' Houses—a Parochial Charge. Gloucester Restricts its Education Committee. Hornsey Arranges to Inspect the Religious Instruction. Montgomery Adopts the Model Bye Law. Surrey's Suggestions for School Attendance Prosecutions. Warwickshire Protests against Local Charge of Training Pupil Teachers. Wiltshire and Nature-Study.

Bradford.—The deputation of the Education Committee, appointed to inquire into the working of recreative evening classes in other parts of the country, has presented its report. The deputation visited Nottingham, London, Newcastle, and Glasgow, and recommended that arrangements be made for instituting municipal concerts in Bradford. It also recommended that the Lilycroft and St. James's evening schools be reorganised on the lines of the Nottingham Leen Side School, and that a recreative evening school on similar lines be opened at Dudley Hill. The latter school to be for boys and girls, each section meeting three evenings a week. The Nottingham school, says the report, is situated in the poorest part of Nottingham, and is open on Tuesday and Thursday evenings from 7.15 to 9.20. The following is the time-table of the school:—Tuesday, 7.15 to 8, recreation; 8 to 9, reading and letter-writing, sewing, and dressmaking; 9 to 9.20, recreation. Thursday, 7.15 to 8, recreation; 8 to 9, sewing and dressmaking; 9 to 9.20, recreation. The recreation includes games, occasional lantern lectures, singing, and recreative competitions, &c.

British University Colleges.—The Board of Education has published (cd. 2,366, 11d.) reports from the fourteen colleges which participated, during the year ended March 31, 1904, in the annual grant, amounting to £27,000, made by Parliament for "University Colleges in Great Britain," and from the three colleges in Wales, which receive a grant of £4,000 each.

Derbyshire.—The Education Committee has decided to offer exhibitions to promising candidates for the teaching profession (especially girls who have had a secondary school education), to enable them to receive practical training in certain schools without the necessity of becoming pupil teachers. The exhibitions are of the value of the fee for training, an allowance of 10s. per week for board and lodgings (when necessary), and railway fare to and from the training school. The period of training will usually be for three months.

East Suffolk.—The Education Committee has asked the Local Government Board whether, in the event of the County Council erecting a teachers' residence, it will be entitled to charge a portion of the cost upon the area for which the school supplies accommodation under Sec. 18 (1) (*c*) of the Education Act, 1902. The Local Government Board's reply is as follows:—"It appears to the Board that Sec. 18 (1) (*c*) of the Education Act, 1902, applies to expenses incurred by the County Council in respect to capital expenditure or rent on account of the provision of a dwelling-house for the teacher at a provided school."

Essex.—The Education Committee has informed the advisory committees that they have full discretion as regards salaries, provided they keep within the Code staffing of the schools, with from 15 to 20 per cent. added, and within the scale of salaries adopted by the county committee.

Gloucestershire.—The County Council has unanimously resolved:—"That the Education Committee do prepare and submit to the Finance Committee of the County Council at its April meeting in each year an estimate of the receipts and expenditure of the committee for the ensuing financial year, inclusive of any arrears unprovided for in the preceding year, provided that at the expiration of the first six months of such financial year the Education Committee may, if they find it necessary to do so, prepare and submit to the County Council a revised estimate of such receipts and expenditure. That no expenditure shall be incurred by the committee which will or is likely to involve any substantial excess in the expenditure shown in such estimate, until proposals therefor have been submitted to and approved by the Council. That the powers hitherto delegated to the committee be restricted as far as may be necessary to give effect to this resolution."

Hornsey. — The Education Committee agreed to recommend the Town Council to appoint Rev. Henry Laurence and Rev. Alexander Ramsay to make during the present year visits of inspection to the Council's schools at the time set apart for religious observances and religious instruction, and to report to the Education Committee as to the manner in which this instruction is being given, and also to hold, if required, a written examination in Scripture knowledge of scholars in Standard V. and upwards in the Council's schools; and that the sum of £25 be paid to each of these gentlemen for his services.

Montgomery. — The Education Committee has agreed that the parent of every child of not less than five nor more than fourteen should cause such child to attend school unless there be a reasonable excuse for non-attendance, a reasonable excuse being: (a) that the child was under efficient instruction in some other manner; (b) sickness or other unavoidable cause; and (c) the absence of a public elementary school within reasonable distance. The model bye-law of the Board of Education was, after considerable discussion, adopted.

Northamptonshire. — The Education Committee reported that, with a view to uniformity, the day on which the diocesan inspection of a school took place should be one of the 10 days in the year which the district sub-committee was authorised, on the application of school managers, to allow as school holidays. The district sub-committee was not authorised by this regulation to refuse at its discretion such applications in the case of non-provided schools, as by Sec. 76 of the Elementary Education Act, 1870, school managers were empowered to fix not more than two days in the year for this purpose.

Staffordshire.—The Education Committee, with a view to carrying out the regulations of the Board of Education, has decided, in place of establishing preparatory classes in connection with the pupil teacher centres, to offer 100 additional exhibitions for intending pupil teachers at the county scholarship examination next April, in addition to the 100 already announced.

Surrey.—The Education Committee has drawn up a memorandum directing the attention of the Standing Joint Committee to the importance of a policy of uniformity throughout the different stages of school attendance prosecutions. The memorandum is being considered by the justices of the various petty sessional divisions. It is suggested that there should be uniformity in (1) the procedure of practice in the courts of petty sessions; (2) the standard of attendance necessary for a conviction; (3) the "reasonable excuse" allowed for a dismissal; and (4) the amount of the fines inflicted. The committee expresses the opinion that suitable fines would be 5s. for the first offence, 7s. 6d. to 10s. for the second, and the maximum of £1 for each subsequent offence; and points out that Parliament has recognised the increasing importance of school attendance by raising the maximum penalty from 5s. in 1870 to £1 in 1900.

Warwickshire.—At the Education Committee a resolution calling the attention of the Board of Education to the heavy charges for the training of pupil teachers was carried. The cost, it was stated, would not be covered by a halfpenny rate this year, and next year a penny rate would not be sufficient. Some counties were shirking their duties in this respect, and paying a little higher salaries to attract teachers trained at the cost of counties like their own. The cost of training a pupil teacher was £10 or £12 a year, whilst the highest Government grant was only £7, and the lowest 50s.

Wiltshire. — The Education Committee, with a view to encouraging a closer attention to the facts and phenomena of Nature on the part of elementary school children under the authority, appointed a sub-committee to deal with the question. This sub-committee now recommends: (a) That, where possible, a school garden (not necessarily for the teaching of horticulture as a subject) be attached to every elementary school of which the head teacher is qualified by attendance at the classes in Nature study and horticulture to teach such subjects; (b) that the General Education Committee assist the establishment of school gardens by paying the rent of the land, and by providing seeds, manures, and all necessary tools and appliances; (c) that every effort be made to induce teachers to qualify, by attendance at the county classes, in Nature study and kindred subjects; (d) that the General Education Committee, when confirming the appointments of new head teachers, should have regard to their capacity to teach Nature subjects or their willingness to qualify in the same.

LIVERPOOL ELECTRICITY.

INCREASED OUTPUT.

MR. A. B. HOLMES, consulting electrical engineer to the Liverpool Corporation, in a report dealing with the estimates of expenditure for the current year, says the electrical output for 1904 exceeded that for 1903 by—for lighting 12 per cent., for power 33 per cent., and for tramways 11 per cent., the output in Board of Trade units being 10,354,490 units for lighting and power, against 8,972,311 the previous year, and 18,979,133 units for tramways, against 17,042,751 in 1903; total 29,333,623 units for 1904, against 26,015,062 for 1903. Expressed as the equivalent number of 16-candle power lamps, the output represented 291,715 lamps on December 31st last, against 262,906 lamps on December 31st, 1903.

The maximum output for lighting and power on any one day was 90,226 units on December 23rd, 1904, as compared with 66,881 units, the maximum output on December 23rd, 1903. The maximum output for tramways was 73,812 units on December 24th, 1904, as compared with 64,236 units on December 24th, 1903. On the occasion of the King's visit to Liverpool on July 18th last, the output for tramways was 70,844 units.

The maximum observed output at any one time for lighting and power was at the rate of 19,900 units per hour on December 22nd, 1904, and for tramways at the rate of 7,200 units per hour on July 18th, 1904.

MUNICIPAL MILK.

THE RESULTS AT BRADFORD.

THE working of Bradford's municipal milk depot during the year ended September 30th last has resulted in a loss of £95 15s., the total income being £1,158 1s. 3d. The sales totalled 1,200 pint bottles of sterilised milk, and 3,800 various-sized bottles of humanised milk. The sales in eggs averaged about £2 per week.

In a report upon the depot, Dr. Evans (medical officer of health) states that if the committee contemplates any further great change in the supply of milk, it should consider whether it would be wise to establish a dairy farm on the lines of those in Denmark. To produce the amount of milk now passed through the depot it would be necessary to keep about forty cows.

MOTOR-CAR TRAMS.

A Novel Suggestion for Abolishing Horse Tramcars in North London and Substituting Motor-Car Trams. A Simple Solution of the Problems of Locomotion. Advantages Claimed of both the Conduit and Overhead Systems without their Special Disadvantages. Avoiding Heavy Expense and Public Inconvenience.

*By Dr. MANSFIELD ROBINSON, Clerk to the Shoreditch Borough Council.**

IN view of the deadlock that has occurred between the London County Council and the local authorities, as well as the North Metropolitan Tramway Company (which also has a voice in this matter, as I believe it would have to pay a percentage of the capital outlay), upon the question whether the North Metropolitan Tramways system should be electrified on the overhead or conduit system, either of which will involve a huge capital outlay, I venture, as a student for some years of the problems of locomotion, to suggest a simple solution of this difficulty, which I believe will have all the advantages of both the conduit and overhead systems without their special disadvantages, and effect a very large saving of the ratepayers' money, as well as benefit the travelling public.

This suggestion is that the present system of tram rails should be left unaltered, and motor car trams used in the place of the present horsed vehicles.

In Use on Railways.

This system has already been introduced on railways by the North-Eastern Railway Company, which has had two rail motors in service for some months past with good results. Those motors were driven by Wolseley petrol engines, which drove a dynamo upon the car generating electricity for its propulsion, but this transformation of power causes a waste, which is obviated by a direct-driven petrol car so common on the ordinary motor cars on roads. For some months past the Great Northern Railway Company has beeu running a light car of this kind, having two four-cylinder petrol engines of the Daimler type, 72-horse power, capable of seating 32 passengers, which ran successfully from Doncaster to London in September last, aud since the 20th September, 1904, it has been making experimental trips on the branch line between Hatfield and Hertford. Some small difficulties in detail have been overcome, and the motor is now running regularly and most successfully on this nine-mile branch line, making four trips each way daily. The machinery for this car weighs only two tons, and is about one-third the total weight of the steam-driven or petrol electric car, and, there being no fire to light or boiler to heat, it can start for a special run at a moment's notice if kept in good order.

Motor Omnibuses.

Motor omnibuses driven by petrol, which are running in a number of places most successfully, are a more important object-lesson still, and these will convey passengers as fast as the 2d. Tube Railway for short distances at just half the price, and I have noticed no disagreeable smells in these omnibuses. Indeed, in some of the steam-driven motor omnibuses petrol is used for fuel. I understand the London Road Car Company is largely increasing this type of car, which, although heavily handicapped by the cost of rubber tyres—which is the chief cost of motor cars—nevertheless pays its way, and promises to run all the other means of locomotion off the road.

When it is remembered that the cost of petrol for an ordinary car is about ½d. per mile run, whilst the cost of rubber tyres is about 1d. for each mile, and that it is a well-established scientific fact that the same power can pull thirty times more weight on a pair of rails than on the ordinary road, it is not difficult to foresee what a great future lies before this form of locomotion when put on rails and relieved of the heavy cost of rubber tyres. The enormous development of ordinary petrol motor cars running on the roads shows that any danger from fire to passengers is so easily avoided as to be practically negligible, whilst such cars are very much easier to control than horses.

* From a report to the Shoreditch Borough Council.

The present depots and repairing shops would go a long way towards storing the motor cars, and I have it on the authority of one of the best tramway managers in this country that the expenses of running the motor cars will not, so far as he can see, be appreciably higher than the electrically-driven system, as they are, of course, driving motors and gear on the latter system.

Avoiding Loss and Inconvenience.

The great advantage of such a system, if applied to the trams of London, would be:—

(1) Complete avoidance of the immense public inconvenience, loss to tradesmen *en route*, and general congestion of traffic caused by breaking up the tramways to lay in the conduit system which is proposed for the larger portion of Shoreditch, and similar (if less) road obstructions and loss by erecting the overhead system. Of course, where the present rails are worn out or insufficiently strong, they would have to be replaced under any possible system. The experience of the boroughs south of the Thames shows what an enormous loss and inconvenience fell on the ratepayers by the length of time the traffic was obstructed during the construction of the conduit system.

(2) Avoidance of the inconvenience of every car being stopped and rendered completely helpless by any breakdown of the current or accident at the central generating station in the case of the conduit or overhead system. Each petrol motor tram being self-contained, is independent of every other car, and if one ceases to work the next car can push it on to the nearest depot or repairing shop without the other traffic being stopped.

Cost of the Proposed System.

(3) Saving of the immense cost of converting the tramways for the conduit or overhead system. The actual cost of the conduit system in South London worked out enormously greater than the engineer's estimate. According to Mr. McKinnon Wood, the total cost is now estimated at £17,000 per mile, including bridge work, of which £13,500 per mile is for track work, and if the whole 56 miles of the Northern tramways were laid on this system, it would cost £952,000, and even on the overhead system it would cost £448,000 to convert. Added to this is the capital cost of the generating station, which is only just being erected by the L.C.C., at an estimated cost of £900,000 for 1,600 cars, or proportionately, with the mains, about £337,000 for the 600 cars proposed for the Northern system. Thus, on a rough approximate estimate, the generating station and the conversion of the tramway for the conduit system will cost altogether £1,289,000, or for the overhead system £785,800.

I learn on the best authority that petrol tram cars would cost about £1,300 each, whilst electric cars cost about half that amount; therefore, the cost of the 600 petrol cars required for the north of the Thames would be about £390,000 more than the electric cars, and adding £10,000 for extra repairing shops, say £400,000 in all, thus showing an approximate saving over the conduit system of £889,000, and over the overhead system of £385,000. Of course, if the present rolling stock could be used as trailers, or fitted with motors, a further large saving would ensue, but I understand the present cars would have to be discarded shortly.

A Possible Alternative.

The vital importance of saving capital outlay governs not only the profit likely to accrne to the ratepayers from the tramway system and the cost of travelling to the public, bnt is also the main factor in the question of competition from other systems: for if the North Metropolitan Tramway Company were bought out it could establish a competitive system of petrol omnibuses like those running so well between Shepherds Bush and Oxford Circus, and owing to the greater speed obtainable when not confined to a pair of rails, such competition might (especially as the present special cost of rubber tyres is likely to be reduced) prove a very serious affair to the ratepayers' great undertaking, overloaded as it would be with a much heavier capital expenditure than a company would incur, and a consequent inability to cut fares down to the lowest figure. Moreover, there would be the saving to the company, when using the road, of the repair and upkeep of the tramway track, which is put by Mr. Seamen, in a recent estimate on the matter, at over 2d. per car mile for capital charges and maintenance on the conduit system, which would more than neutralise the extra cost of rubber tyres for the vehicles driven on the road. Indeed, if it be found that the present rails are worn out, it is worth very careful consideration whether they should be re-laid at all, and whether a motor-driven omnibus system running on the road should not be substituted, as fixed rails are always a great obstruction to other traffic, and on the Continent they have been dispensed with even on the overhead electric traction system for tramcars.

(4) Avoidance of the great loss to tradesmen and inconvenience to the public, and periodical obstruction to the traffic caused by the repairs of the conduit system, and the resulting cost of maintaining the extra rails or mains. As far as I can ascertain, the repair of a conduit rail stops the whole traffic on that route, as temporary rails cannot be laid at the side of the road as is now done when the existing tram lines are being repaired. This is a very serious factor, to which special attention should be given, as it is likely in future to be a source of immense loss and inconvenience to the public.

In the case of the overhead trolley system, there are the objections of great unsightliness and danger to traffic from collision with the wires and posts, besides danger to the public of electric shock or injury from wires breaking and falling in the road, which would be obviated by automobile tramcars.

Shoreditch Council's Attitude.

Since the above was written, the London Road Car Company has become so satisfied with its experience with motor omnibuses that it has ordered 50 more such motors to be delivered by the end of May. Some of these new vehicles will be driven by petrol motors of 24 horse power, of the Darkopp and Germain types, to carry 32 passengers, whilst others will be driven by steam (generated by the combustion of crude petroleum) of 16-horse power, by Clarkson of Chelmsford, carrying 14 or 15 passengers. The speed of these vehicles will be 50 per cent. greater than that of the horse cars, and two motor cars will do the work of three horse cars, whilst the 50 new omnibuses will enable 600 or 700 horses to be dispensed with, and a great saving of space in depots and stables will be effected. The cost of maintenance and running the new cars is said to be re-assuring, especially as to the cost of tyres, which, in view of guarantees given by the manufacturers, is working out at a reasonable figure.

The recent issue of £103,000, extra capital by the London General Omnibus Company, to enable it to build 70 motor omnibuses estimated to earn a profit of £4 10s. per week, which would yield much more than 10 per cent. on the capital involved, affords a further demonstration of the important future attributed to this form of locomotion in commercial circles.

The Shoreditch Borough Council has adopted the following resolutions on the snbject:—

> That the London County Council, the borough councils north of the Thames, and the North Metropolitan Tramway Company be requested to consider the possibility of adopting a system of automobile tramcars, driven by petrol or other engines, with a view to avoiding the heavy expense and immense public inconvenience and loss which will be caused by the construction of a conduit or overhead electrical system.
>
> That the London County Council be requested to arrange with the North Metropolitan Tramway Company for the trial of an experimental petrol or other motor tramcar concurrently with the horse trams.

OFFICIAL & PERSONAL.

THE MUNICIPAL CLUB.

DINNER TO SIR WM. J. COLLINS, M.D., D.L., J.P.

THE Municipal and County Club entertained Sir Wm. J. Collins, M.D., D.L., J.P. (Chairman of the Education Committee, L.C.C.), to a house dinner at its headquarters, Whitehall Court, London, S.W., on Friday evening. The president of the club (Mr. G. Laurence Gomme, F.S.A.) occupied the chair, and among those present were :—

Vice-chairman L.C.C., Mr. E. A. Cornwall; Mayor of Fulham, Councillor Wm. Robert Sayer; Mayor of Hornsey, Alderman F. W. Lawson; Recorder of Folkestone, Mr. J. C. Lewis Coward, K.C., M.A.; Recorder of Deal; Chief Officer Public Control, L.C.C., Mr. A. Spencer; Dr. R. P. Middlemist; Governor H.M. Prison, Pentonville, Capt. Johnson; Deputy Coroner Central London, Mr. Schroder; Town Clerk of Fulham, Mr. R. M. Prescott; Town Clerk of Hornsey, Mr. F. D. Askey; General Manager District Railway, Mr. J. Young, M.Inst.C.E., late Tramways Manager Glasgow Corporation; Assistant Comptroller Education, L.C.C., Mr. G. Attenborough; Agent-General for Australia.

Municipal workers get many opportunities to hear and to make speeches without turning their social gatherings into debating fixtures. There were but two toasts, "His Majesty, the King," and "The Club Guest," and the speeches were short. Both toasts were, of course, proposed from the chair, the chairman voicing the general feeling of his hearers in his hearty welcome to their guest, judged by the constant punctuating applause. Sir William Collins, he said, was known to all Londoners, and, indeed, to all municipal workers, as a distinguished graduate at the university, as a distinguished member of the London County Council, as one of its ablest chairmen, and it was a distinction to that club to welcome him as a guest. (Applause.) If it should happen among the political fortunes of the future that Sir William Collins should transfer his sphere of action to another place he felt quite certain that that "other place" would feel his influence. Proceeding to allude to the needs of London, he said one thing which was to be cleared out was ignorance, and Sir William Collins had come to the front as chairman of the Education Committee. He thought the feeling of the London *gamin* that the policeman was his enemy should be educated out of him, and that he should be taught to regard him rather as a protector. He (the speaker) thought that was a matter for the Municipal Association and for municipal bodies generally. It had been his good fortune to serve in a body where public men—he would not say they were above the average of public men, for that would not be quite fair—but where public men of London had come to the front, and there was nothing of which he was more conscious than the power which resided in the members of the County Council when they came to a new subject, and dealt with it, he would venture to say, so brilliantly. Sir W. Collins was chairman of the Education Committee, and he (the speaker) sometimes asked himself what was the attitude with which he approached the work. Some words of Matthew Arnold might indicate that attitude—

"Weary of myself, and sick of asking what
I am, and what I ought to be,
At this vessel's prow I stand, which bears
me forwards, forwards."

It was the "forwards, forwards" which really marked the ambitions of Sir Wm. Collins. (Applause.)

Sir Wm. Collins, in responding, spoke of his proud satisfaction at being their guest that night. He was a hearty believer in a sound system of local government. Parliament was sometimes paralysed with the volume of work which it endeavoured, more or less, to undertake to conduct, and so they went more and more to local government for the performance of work. It had always been in the history of England "some village Hampden" who had led the way. Mr. Gomme had alluded to the fact that the local government of London had been undergoing certain important changes at the hands of his Majesty's Government. They did not always get what they wanted from the Government. It had been said that the way the Government regarded the London County Council was that of the mother who said, "Go and see what the children are doing at home, and tell them they mustn't." (Laughter.) They (the members of the London County Council) asked the Government for water, and it gave them education—(laughter)—and they were endeavouring to make the best of the subject entrusted to their hands. The Council had yet its spurs to win in regard to education. Some people had criticised them because of the constitution of the Education Committee. Personally he had never been in favour of what was called the *ad hoc* body. He objected to a system under which it was impossible to fix responsibility. He had heard it said that the relations between permanent officials and the representative element should be like that between man and wife. (Laughter.) He was not sure they could be carried so far. (Renewed laughter.) He had also heard it suggested that the relations should be as between mind and matter—(more laughter)—but it was delicate ground to suggest which was which. (Loud laughter.)

An excellent musical programme was rendered during the evening.

TORQUAY EMPLOYEES DINE.

AT the Town Hall, St. Marychurch, Torquay, last week, the Corporation employees and others, to the number of seventy, sat down to their twelfth annual dinner. Mr. H. A. Garratt, the borough surveyor, presided, and was supported by Dr. Dunlop (medical officer of health), Mr. C. MacMahon (chief sanitary inspector), Mr. J. Walton (assistant surveyor), Mr. C. Easterbrook (piermaster), and Messrs. Kendal, Sawyer, and Melhuish (foreman).

Mr. C. MacMahon gave "The Corporation of Torquay.' 'Through all his experience of nearly 50 years in various parts of the country he had found no town to compare with Torquay for beauty. The only thing that remained was to make the place entertaining. He believed Torquay had a great future as a summer resort, and could rival Bonrnemouth, Brighton, and other watering place. In proposing "The Health of the Mayor and Corporation," the chairman said they were doing their utmost to make the town one of the most famous in England, and, such being the case, they should have united support. Mr. Walton proposed "The other Departments of the Corporation," and Mr. Fox (Water Department) replied.

Mr. Kendall proposed "The Chairman," amid enthusiasm.

Replying, the Chairman said it was the twelfth occasion he had presided over similar functions. There had been very little sickness amongst the men, and the club that had been formed had proved highly beneficial. There were 120 members out of a staff of 230; but there should be more.

Mr. Hooper proposed "The Committee Responsible for the Arrangements of the Dinner," and Mr. Walton responded.

Those contributing to the evening's musical fare were Messrs. Shepherd, Windeatt, Steer, jun., Fox, W. J. Hugo, A. S. Watson, W. Payne, F. Callard, Sawyer, Lang, and Dawe. Mr. A. S. Watson proved an admirable accompanist.

BEQUESTS TO OLDHAM.

IT is reported from Oldham that the late Mr. Abraham Crompton, a former mayor of the town, left the following bequests to Oldham institutions:—The Oldham Infirmary, £5,000; the Oldham Lyceum, £2,000; Home Teaching Society for the Blind, £250; Workshops for the Blind, Oldham, £250; Oldham Deaf and Dumb Society, £250; and the Oldham Mission, £250; all free from death duties.

NEW ELECTRIC ENGINEER AT WAKEFIELD.

AT the meeting of the Wakefield City Council, last Tuesday, the Electric Lighting Committee recommended the appointment of Mr. Harry Anderton Neville, first assistant electrical engineer at the Corporation works, as electrical engineer from the 1st of April, at a commencing salary of £300 per annum, rising by annual increments of £25 to £400 per annum. The Council was also asked to apply to the Local Government Board for sanction to borrow a further sum of £18,000 for the purposes of extensions in connection with the electricity undertaking.

A HAMMERSMITH PRESENTATION.

AT the meeting of the Hammersmith Borough Council last week, the Mayor (Councillor J. M. Levy, J.P.) presented to his predecessor in office (Alderman Charles Pascall) an illuminated address containing the following inscription:—

> The Council hereby records its sincere thanks to Alderman Charles Pascall for his invaluable services as Mayor of the Borough during the past year, and especially for his uniform courtesy and impartiality when presiding over the meetings of the Council. The Council records its high appreciation of his untiring efforts in the cause of charity and of his active interest in all matters affecting the well-being of the Borough during his mayoralty.
>
> The Council also hereby cordially thanks the Mayoress, Mrs. Charles Pascall, for the kind and gracious manner in which she assisted the Mayor in the performance of the important public and social duties of his position during his year of office.

The address was illuminated with the Royal monogram, "E.R.," the borough arms, the Town Hall, the Hammersmith Bridge, the St. George's Cross (emblematic of hospital work), a life buoy (emblematic of life-boat fund), the Golden Heart (emblematic of charity), the Jewel of a Past Master of Freemasons, the Union Jack, with oak leaves and acorns intertwined, and the seal of the Council.

"HOW TO GROW BABIES."

A MAYOR'S LECTURE.

THE Mayor of Huddersfield (Mr. Broadbent), who has offered a preminm for all children born in his native parish during his year of office, lectnred on Wednesday evening in Wakefield Mechanics' Institute, under the auspices of the Wakefield Sanitary Aid Society, on "How to Grow Babies."

The Bishop of Wakefield, who presided, urged the great need to raise the ordinary intelligence of parents on the question of rearing their children.

Mr. Broadbent said that was the first time he had ever posed as a lecturer, and he only did so on this occasion on account of the importance he attached to the subject. He was struck by the fact that out of 200,000 children born 50,000 died before they attained the age of one year. He did not believe that compulsory education had tended to reduce this terrible mortality in the slightest degree, for in 1874 the rate was 144 per 1,000, whereas at present it was 149.

He dwelt upon the privileges of motherhood, and pleaded for the better education of present and potential mothers in the common-sense ways of rearing their offspring.

PROPOSED EXTENSION OF DURHAM CITY BOUNDARIES.

A LOCAL Government Board inquiry was held on Wednesday at Durham into an application by the Corporation for the extension of the city boundaries by the inclusion of several outlying areas having an area of 1,052 acres, a population of 3,515, and a rateable value of £14,282, excluding two collieries.

At present the city has an area of 884 acres, a population of 14,650, and an assessable valne for general district rate of £53,317, and £56,299 for the poor rate. Should the boundaries be extended, it is proposed that instead of the existing four wards there shall be six, each ward being represented by three councillors and one alderman.

The estimated annual extra cost to the city by the inclusion of all the proposed new area is £2 302. The rates in the outlying area average about 6s. in the £, while the estimated rates for the city are 7s. 1d. in the £.

"OPEN" OR "CLOSED" LIBRARIES?

Consensus of Opinion from English Towns as to the Best System of Issuing Books from Free Libraries to the Public. "Open or Free Access," or "Indicator." Light on a Notable Controversy. Remarkable Statement from New York. Thousands of Books Missing.

THE fact that the Lambeth Borough Council has decided to introduce the open access system at the new Carnegie Library at Herne Hill has once again raised a vigorous controversy among librarians. The merits and demerits of the "open access" as compared with the indicator system have been discussed and re-discussed at librarians' conferences and in librarians' journals for many years, and now Lambeth has lighted the fires once more.

Some time ago a systematic attempt was made to discover what the lessons of experience on the subject were, and circulars were issued to librarians throughout the country, directing their attention to the controversy. The answers showed that the great majority of towns do not approve of all the borrowers having free access to the shelves. The list of exceptions is worth enumerating. To the question, "Do you approve of all the borrowers having free access to the shelves?" Darlaston wrote, "Yes, where practicable"; Falmouth, "Present accommodation too limited"; Chelsea, "Yes, if local circumstances admit"; Newington, "Yes, but not to fiction and juvenile books in this library"; Maidstone, "Undecided as yet"; Middlewich, "Not in a small library like this"; Nelson, "Modified approval"; Peterborough, "Yes, but not to fiction shelves"; Penzance, "Yes"; Watford, "Yes, with proper supervision"; Wick, "Not to all borrowers"; Wood Green, "Free access is hazardous." One or two other towns, whose names are withheld, have replied in the affirmative.

Towns Adopting the Indicator System.

The following libraries, among others, have adopted the "indicator" system:—Airdrie, Alloa, Arbroath, Aston Manor, Ayr, Barking, Batley, Belfast, Bethnal Green, Bingley, Bishopsgate, Bodmin, Bolton, Bo'ness, Boston, Bournville, Brechin, Briton Ferry, Bromley (Bow), Burton-on-Trent, Bury, Buxton, Canterbury, Carlisle, Castle Douglas, Chatham, Chester, Chorley, Clapham, Clitheroe, Coatbridge, Colchester, Cork, Crieff, Dulwich, Dumfries, Dumfermline, East Ham, Falkirk, Folkestone, Forfar, Fulham, Greenock, Guildford, Hammersmith, Hampstead, Handsworth, Hartlepool (East), Hawich, Hucknal, Ilkeston, Inverness, Ipswich, Kensal Rise, Kilmarnock, King's Lynn, Kirkcaldy, Launceston, Leamington, Leeds Institute, Limehonse, Limerick, Lincoln, Liskeard, Llandudno, Lockerbie, Lossiemouth, Merthyr Tydvil, Mile End, Millom, Minet (Joint Lambeth and Camberwell), Moffat, Moreton Hampstead, Motherwell, New Cross, Newark-on-Trent, Newport, Nuneaton, Oakengates, Oldham, Oswestry, Otley, Paddington, Penge, Peterhead, Pntney, Rochester, Rotherham, St. Giles, St. Ives, St. Martin-in-the-Fields, Salisbury, Shrewsbury, Stirling, Stoke Newington, Stratford-on-Avon, Sutton-in-Ashfield, Swindon, Tonbridge, Tooting, Tottenham, Twickenham, Walney Island, Walsall, Walthamstow, Waterford, West Calder, Whitchurch, Willesden Green, Winchester, Winsford, Woolwich, Worksop, Worthing, and York. Several of the above towns have more than one public library.

In addition to the above list, many continental, American, and colonial libraries use the indicator.

Where Open Access is Given.

The following libraries have adopted "open access" for all or most of the books:—Bournemouth, Clerkenwell, Croydon, Hornsey, Blackpool, Darwen, Kingston, Worcester, Northampton, Hnddersfield, Kettering, Bromley, and Exeter, while Brighton and Southport have adopted the "indicator" for fiction, and "open access" for other classes. In addition, there are a few village and other simliar libraries. We are informed that another small library is about to adopt "open access," as against some twenty large and small libraries which have recently decided to join the great majority of "indicator" libraries.

The following figures are taken from the New York Librarian's report, 1902-3:—"The losses due to theft from open shelves are still large. The number of books reported missing at the monthly inventories was 5,496, against 3,480 reported last year. Of this number, 996 were from branches that were acqnired during the year; but this still leaves 4,500 to be charged against the older branches, an increased loss of 1,000 books. During the year, 494 books previously reported missing were reported recovered, so that the nett loss from all branches has been 5,002."

Increased Danger of Infection.

Several other well-known librarians strongly ppoosed the adoption of "open access" in public libraries for many reasons—one important consideration being the effect it would have in preventing the use of good annotated or analytical catalogues, which, it was contended, were better guides to books on the shelves, and the only ones to books that were out and therefore unavailable. Some of these gentlemen had tried the "open access" system, with disastrous results as regards losses of books, misplacements, and extra cost of binding and new copies, owing to the increased handling of the books. Attention was also called to the greatly increased danger of infection where each borrower was allowed to handle an unlimited number of volumes.

It is worthy of note that after several years' very strenuous advocacy of the system of "open access," not 3 per cent. of the municipal libraries have adopted it, and those which have are, with two or three exceptions, very small and unimportant, the total number of readers in the whole of them not equalling that of one such town as Birmingham or Manchester, which has not adopted this system. On the other hand, some even of this limited number, including one very important library, have, after a trial, abolished the system, and adopted one more conducive to the safety of the books and the interests of the *whole* of the readers. In giving the above figures, libraries which merely allow access to small or special collections are excluded. Almost every library allows free access to directories, railway gnides, and similar publications, while in many all the books on any given subject, in either lending or reference departments, will be procured by the staff for the reader's examination in a convenient room, under perfect supervision. This the readers cannot do for themselves so satisfactorily in an "open access" library, and although it does not give promiscuous access to the shelves to everyone, it gives what is far better, access to all the books in comfort and quiet, which is far more useful and convenient to studious readers, for whose particular use "open access" is chiefly advocated. By this method loss and misplacement of books are entirely prevented.

The following table, which is typical, is suggestive:—

ANNUAL REPORTS, 1903.

Name and Character of Library.	Issue of Books.		Percentage of fiction according to last report.	Period dealt with.
	Several years ago.	Last year.		
OPEN ACCESS.				
Blackpool	93,208	135,800	76·2	Five years.
Bournemouth	143,281	200,606	75·5	Six years.
Clerkenwell	150,124	111,910	67·2	Five years.
Croydon	293,700	406,233	57·8	Six years.
Gloucester	107,119	133,030	82·5	Three years.
Kingston-upon-Thames ...	52,165	75,473	78·3	Five years.
Worcester	165,043	166,741	53·3	Three years.
INDICATOR.				
Battersea	272,159	405,971	63·2	Six years.
Birmingham	1,226,410	1,343,510	48·6	Four years.
Blackburn	115,403	165,270	54·4	Five years.
Cardiff	222,101	397,885	53·7	Six years (not including school libraries)
Leeds	943,406	1,176,295	53·8	Five years.
Nottingham	382,130	418,732	49·5	Five years.
Shoreditch	101,509	159,910	61·2	Six years.

N.B.—For want of the necessary reports, the periods dealt with could not be kept to the same number of years in every case, but this does not affect the value of the comparison.

INLAND SALT-WATER BATHS.

A SCHEME FOR SALFORD.

SALFORD is about to proceed with an ambitious scheme for the provision of a set of salt-water baths. The site of the building will embrace about 2,000 square yards, and the total cost is estimated at £20,000.

The bnilding will be detached, containing a second class swimming-bath, 75ft. by 32ft., a first-class bath, 65ft. by 25ft., with six first-class and twelve second-class men and women's slipper-baths. Provision will be made for a storage reservoir of salt water not less than 100ft. in leugth by 40ft. in width and 10ft. in depth, the holding capacity being 250,000 gallons of sea water.

The reservoir will be close to the embankment of the Ship Canal at the Salford Sewage Works, to receive salt water and facilitate the emptying of the steamer by her own pumps. The cost of land, excavations, making the reservoir, and other incidentals will reach £2,000.

The other details of the scheme show a fnll suite of baths, with pipes for fresh water service in case sea water fell short or failed altogether.

AMONG the firms which at this time of the year are busy preparing for contracts to supply boards of guardians and similar bodies with their requirements for the year or half-year, Messrs. D. Stewart and Co., the wholesale warehousemen and contractors, are one of the best known. They are now fairly settled in their new and commodious premises at 16, Staining Lane, Gresham Street, fnlly prepared for an access of business to any amount.

WE have received from the Trinidad Lake Asphalt Paving Company, Limited, one of their calendars for 1905. This is worthy a place above any office desk, for it is artistic in design and neat in execution. Each page contains a calendar for the month in clear type, nnderneath which appears a picturesque view of a locality which has been paved with Mastic Asphalt. The calendar can be obtained by sending a postcard to the firm at their offices, 7, Laurence Pounteney Hill, E.C.

NOTES AND ANSWERS.

What Borough Auditors May and May Not Do. Paying Police Pensions Out of the Borough Fund and Rate. More about Private Street Works and the Liability of Corporations to Take Over. Atte pt to Influence Voters Regarded as a Common Law Misdemeanour. Contracting with Pari-h Councils and the Question of Disqualification.

620. — **MUNICIPAL EMPLOYEES AND POLICE PENSIONS.**—With reference to Sec. 13, sub-section 2, of the Police Act, 1890, I shall feel much obliged if you will kindly inform me whether a pensioned police officer employed in municipal undertakings, such as markets, tramways, electric light, telephone, gas, waterworks, &c. (whether remunerative or unremunerative) is entitled to draw full pension if his pay and pension combined exceed one and a half times his remuneration of the office in respect of which the pension was awarded. If he is drawing full pension illegally, who are the persons to move for the abuse to be rectified?—"RATEPAYER."

Sec. 13 (2) of the Police Act, 1890, provides that, "if a constable in receipt of a pension under this Act is appointed to an office remunerated ont of money provided by Parliament, or ont of a county or borongh rate or fund, he shall not, while holding that office, receive more of the pension than, together with the remuneration of that office, is equal to one and a half times the remuneration of the office in respect of which the pension was awarded." Generally speaking, the expenses of a tramway undertaking are payable out of the borough fund and rate, and, subject to the special provisions of the particular local Act applicable in each case, the expenses of the other undertakings referred to in the above query would ordinarily be payable out of the general district fnnd and rate. It is clear, therefore, that the rule laid down in the snbsection quoted, limiting an ex-police officer's pension, would apply in the case of ex-pensioned constable drawing remnneratiou as a municipal employee. We are not aware of any ruling or decision extending the terms of the sub-section to cases where the pensioned officer is paid out of rates other than the borough rate, and it seems to us, therefore, that in the other instances mentioned by our correspondent — that is, where an ex-constable is employed in connection with municipal markets, electric lighting undertakings, telephones, gas and waterworks, Sec. 13 (2) of the Police Act, 1890, would not apply—assuming, of course, that the expenses of these undertakings are provided for under the local Acts (where such exist) out of the borough fund and rate. If in the circumstances indicated a mnnicipal servant is drawing a full pension, in excess of that which he is legally entitled to, the matter might properly be reported to the borough council, or, if the local police force is under the control of the county, to the county council. The Secretary of State for Home Affairs wonld also be interested in the matter.

621.—**ELECTIVE AUDITOR—Duties and Rights—Emoluments.**—Is it legal for a town council to give the elective auditors notice that they will only be paid a small fee for their work in that capacity. I need hardly point out that it is practically impossible for the two auditors to complete the work in less than a fortnight each half-year, but the council, having appointed a professional auditor, has come to the conclusion that the elective auditors will be got rid of in this way. I know that, according to the Act of 1882, the council cannot do away with elective auditors, and also, according to the Public Health Act, 1875, the fee payable is two guineas a day; but I would like to know, if possible, what chance we have to compel the council to pay the fees if we persist in doing all work which we are elected to do. Kiudly state also if we can claim to do all the Corporation accounts, including muuicipal undertakings, such as gas and water, electric lighting, &c. What bearing on our case has the Devonport appeal? Did the elective auditors in that e actually do the work required by the Acts?—"ELECTIVE AUDITOR."

Sec. 246 of the Public Health Act, 1875, provides that "Each of such auditors (*i.e.*, the auditors of the borongh) shall, in respect of each audit (of the accounts of the borongh under the Public Health Act, 1875), be paid such reasonable remuneration, *not being less than two guineas for every day in which they are employed in such audit*, as such authority (*i.e.*, the Council) from time to time appoint." Clearly, then, the Council cannot require the auditors to take a sum less than two guineas a day each for their services in respect of the audit of the accounts of sanitary receipts and expenditure. The borough anditors are not, however, entitled to demand remuneration for their services in auditing the accounts of the borough in respect of receipts and expenditure other than under the Public Health Act. The decision of the Court of Appeal in the leading case of "Thomas v. Devonport Corporation" (63 J.P. 740 C.A.), referred to by our correspondent, emphasised this provision; and the Court there held also that the duties of the auditors in auditing the accounts of the council as an urban sanitary authority are not confined to a mere examination of vouchers in respect of items for which the council claims credit, but that they must make a reasonable examination to see that the payments made are legal and proper. There was some discussion in this case as to what was a reasonable amonnt of time to spend on the audit, and the court held that an auditor was only entitled to remuneration for such time or number of days as a business man would reasonably take to andit such accounts. Where the borough is not very large and the accounts are not heavy, we do not think that more than a few days would be regarded as a reasonable time to spend on the audit of the accounts under the Public Health Act, 1875.

The borough auditors seem to have a wide commission under Sec. 246 of the Public Health Act, 1875, to andit the accounts of the borough as a sanitary authority, but in respect of the accounts of the borough as a municipal corporation they are only authorised to audit the treasurer's accounts. Sec. 27 (1) of the Municipal Corporations Act, 1882, provides that, "the treasurer shall within one month from the date to which he is required to make up his accounts in each half year, submit them, with the necessary vouchers and papers, to the borough auditors, and they shall audit them." It seems to us that the auditor's jurisdiction will not extend to the audit of the separate accounts of the undertakings of the council carried out under local Acts. In respect of these, his functions will, apparently, be confined to auditing the receipts and payments passed throngh the treasurer's account.

We may add that the receipts and expenditure of borough councils under the Edncation Act, 1902, are now subject to audit by the district auditor appointed by the Local Government Board.

622.—**PRIVATE STREET WORKS ACT—Liability of Corporation to Take Over Private Streets.**—We have received the followiug communication from a correspondeut iu reference to Query No. 614 in our issue of last Friday. This query related to the liability of the corporation to take over private streets under the Private Street Works Act, 1892. As the facts coincide with a case which has occurred in this borough, I have no doubt that that is the one in poiut:—"I should be glad if you would kindly refer to the question again, and the concluding part of your reply, as it does not appear quite clear. The question being: Is the council bound to take over a street in a certain event, when the work is carried out under the supervision of its surveyor? And your reply to that is: That once the street is made up 'in accordance with the advertised plans and specifications' the council can be compelled to take it over. Does not this beg the question? But I submit that in this case the street has not been made up in accordance with the advertised plans and specifications, as the justices, having struck out that portion relating to tar paving, accordingly no tar paving works have been executed, and Sec. 20 of the Act provides that the local authority shall only be bound to take over the street when *all* the works specified in the Act have been executed, although by Sec. 19 it is permissible for them to do so if they are of opinion that the street ought to become a highway. I do not think the fact of the magistrates having amended the specification as to tar paving alters the effect of Sec. 20, and therefore the council will not be bound to take over the street until all the works are carried out. Perhaps you would kindly reconsider the matter, and let me have your further opinion on the subject."

We are pleased to receive from our correspondent this further commnnication respecting query No. 614, elucidating as it does the point there raised, but we regret that we are unable to agree with the conclusion indicated therein. Sec. 20 of the Private Street Works Act, 1892, provides, that, "if any street is now or shall hereafter be sewered, levelled, paved, metalled, flagged, channelled, and made good (all such works being done to the satisfaction of the urban authority), then, on the application in writing of the greater part in value of the owners of the houses and land in snch street, the nrban anthority shall, within three months from the time of such application, by notice pnt up in snch street, declare the same to be a highway repairable by the inhabitants at large, and thereupon such street shall become a highway repairable by the inhabitants at large." We do not know of any decision of the courts on the exact point now raised, and therefore must base our opinion entirely on the text of the Act. The section reqnires the local authority to take over a private street when it has been made up to the satisfaction of such anthority, on application of the greater part in value of the owners of the houses and land in the street. Presumably this application has been made. Construing the section with the Act as a whole, it seems to us that the council wonld not be justified in requiring the street to be made up for the purposes of this enactment in a manner which would entail unusual and heavy expense on the owners, when the street could be properly and efficiently made up in a less expensive manner. In other words, the requirements of the local authority must be reasonable, and the cost must not be excessive. The power to decide any question arising on these gronnds seems to be entrusted by the Act to a Conrt of summary jurisdiction. Under Sec. 7 of the Act, amongst other objections which may be raised to the requirements of the urban authority as to making up a private street, is the objection "that the proposed works are . . . unreasonable, or that the estimated expenses are excessive." This provision enables the parties to decide as to what works may properly be required by the local anthority, and it seems to us that when the street in question had been sewered, levelled, paved, and otherwise made good, in accordance with the plans and specifications of the conncil, bnt subject to the modifications in such plans and specifications imposed by the justices under the power conferred on them by Secs. 7 and 8 of the Act, and those works, in accordance with the plans, &c., *as modified*, are done to the satisfaction of the council, then the council will be legally bound, on receiving an application from the greater part in value of the owners of the houses and lands in the street, to declare the same a public highway.

623.—**EXAMINATIONS FOR SANITARY INSPECTORSHIPS.**—Can a person whose age is over thirty sit at any of the examinations for a sanitary inspector? Is there an age limit? and what is the fee?—"CLARIONETTE."

Yes; persons over thirty years of age can sit at any or all of the examinations of the Royal Sanitary Institnte. That body conducts examinations for inspectors of nuisances under the Public Health Acts, and for inspectors of meat and other foods, and also in practical sanitary science, and in hygiene for school teachers. The idea of these examinations is to select and grant certificates of qnalifications to persons suitable for certain public appointments, with a view to facilitatin

the choice of proper officers by local authorities, for the purpose of the carrying out of certain provisions of the Public Health and other Acts. Hence no upward age limit is fixed. In some cases, however, as in the case of examinations for inspectors of meat, and of nuisances, the Institute requires examinees to be at least 21 years of age before a certificate can be granted. The fee in the case of either of these examinations is £3 3s. For any further information and details our correspondent should apply to the Registrar of the Institute, Parkes Museum, Margaret Street, London, W.

624.—**LIGHTING AND WATCHING ACT—Attempt to Influence Voters against the Adoption of the Act.**—We have had an unsuccessful parish meeting and poll for the adoption of the Lighting and Watching Act, 1833. Would any landlord or his agent who visited his tenants and threatened them with an increase of rent over and above the amount of the lighting rent, if the Act were adopted, be liable under the Corrupt Practices Act or any later Act, such as the Municipal Act, 1884?—"CONSTANT READER."

It seems to us that the conduct of the landlord or his agent complained of in this case, being an attempt to interfere with the statutory right of a parochial elector to exercise his discretion in voting for or against the proposal to adopt the Lighting and Watching Act for the parish, would be regarded as a common law misdemeanour, and therefore indictable as such.

625.—**CONTRACTING—Rural District Councillor and Guardian not Disqualified because of Interest in Contract with Parish Council.**—Can a rural district councillor and guardian contract for work given out by the local parish council, of which he is not a member?—"CONSTANT READER."

A rural district councillor and guardian, who is not a parish councillor, is not disqualified for sitting and acting as a councillor or guardian by reason of being interested pecuniarily in a contract with the parish council. It would be different if he were also a parish councillor. He would then be expressly disqualified by such interest in pursuance of the provisions of Sec. 46 (1) (e) of the Local Government Act, 1894.

ACTON COTTAGE HOSPITAL.

WE are requested to state that the Acton Cottage Hospital, incidentally referred to in an illustrated article on the new Isolation Hospital recently opened in the Urban District, is not owned by the Council. It was given and enlarged by Mr. Passmore Edwards and Lord and Mr. Leopold de Rothschild. With the exception of a very few enteric cases, received in the private wards, which are harmless enough, no infectious case of any kind has ever been admitted to the Cottage Hospital. It will remain open as heretofore, not for accidents only, but for the treatment and relief of the sick poor in Acton, both as in-patients and as out-patients, and both for sickness and accident, and for the provision of district nurses, and special dinners for invalids who are not in a position to provide them. The population of Acton is 52,358, and not, as stated, 37,000.

COUNCILLORS AND CONGRESSES.

EXPENSES DISALLOWED.

THE Local Government Board auditor has disallowed expenses incurred by the Tottenham District Council in sending deputations to the Sanitary Congress and the Congress of the Institute of Public Health.

Another item in respect of a commemorative marble tablet, bearing the names of the councillors and officers, placed in a new fire brigade station, was also disallowed, the auditor pointing out that it could not be regarded as furniture.

UNIFICATION OF RATES.

The Need for Re-arrangement of London's Rates. What the Ratepayers of the Poorer Metropolitan Boroughs would Stand to Gain. An Average Rate Throughout London, Based on the Rates for 1903-4, would be 7 1·5d. in the Pound. Centralisation of Administration.

(By Mr. A. GRIFFITHS, Borough Accountant, Camberwell.)

THE complex question of levying a uniform rate throughout London is again occupying the attention of statesmen and others interested in local government. Much relief is already afforded the poorer boroughs of the Metropolis, under the provisions of the Metropolitan Poor Act, 1867, and Amending Acts (under which the Metropolitan Common Poor Fund was established) and the London (Equalisation of Rates) Act, 1894. London also benefits by a sum exceeding £1,236,900 per annum, which represents a rate of about 7½d. in the £, payable out of the local taxation account by the Imperial Government.

Metropolitan Common Poor Fund.

The operations of the Metropolitan Common Poor Fund relieved the poorer unions of the Metropolis during the year ended Lady Day, 1903, of an expenditure of £368,772. The fund is administered by the Local Government Board, certain specified items of the poor rate expenditure being distributed equally over the whole metropolitan area on the basis of rateable value. The items of expenditure so chargeable include the maintenance of in-door paupers, pauper children, insane poor, expenses of the Houseless Poor Acts (Vagrants), medical relief, officers' salaries, registration fees, vaccination fees, maintenance of small-pox, fever, and diphtheria patients, and ambulance expenses. Since the fund was established the aggregate sum actually paid to unions which had been recipients out of the fund up to Lady Day, 1903, amounted to £7,747,898.

The London (Equalisation of Rates) Act, 1894.

The equalisation fund provided under the above Act is created by calculating a rate of sixpence in the £ from each parish on its assessable value, and re-distributing the same amongst the several sanitary districts in proportion to their population, for the purposes of defraying their expenses under the Public Health (London) Act, 1891, and in respect of lighting and street expenses. During the present financial year Camberwell has received the sum of £26,177 9s. 2d. out of the above fund.

I have extended a table prepared by the Statistical Department of the London County Council, by adding a column showing what the nett rate would be in each parish if such enactments were not operative. It will be seen, on reference, that the City of London would enjoy a rate of 5s. 2·76d., whilst St. George-in-the-East would require to levy a rate of 13s. 2·27d.

Should any scheme be formulated and passed into law to unify the rates throughout London, the enactments providing the Metropolitan Common Poor Fund and the equalisation fund previously quoted would no doubt be repealed or amended. The comparative statement of rates levied by the City of London and the metropolitan borough councils shows that an average rate throughout London, based on the rates levied for the year 1903-4, would be 7s. 1·5d. in the £. The rate in Camberwell for the same year was 8s. 1d.

It would appear that with a uniform rate throughout London, the control of expenditure of boroughs, districts, or parishes might mean the centralisation of administration, in the same way as the expenses of the guardians are at present controlled by the Local Government Board. Otherwise it will readily be seen that, with a uniform rate, authorities desiring that the district under their administration should be the best throughout the whole area, might incur expenditure which otherwise they could not afford. The question of the present indebtedness of the several parishes would also have to be taken into consideration, as probably each parish would have to provide for the redemption of its existing debt. Financial adjustments with the various boroughs owning electricity works, cemeteries, housing property, &c., would also have to be made. There seems little doubt, however, that whatever re-arrangements are made, the ratepayers of the poorer London boroughs would stand to gain under any scheme of unification.

There is no reason why the expenditure upon public libraries and museums, public baths and washhouses, and public parks and gardens should not at once become a central charge.

AVERAGE RATES RAISED IN THE CITY OF LONDON AND IN EACH METROPOLITAN BOROUGH FOR THE YEAR 1903-4.

BOROUGH OF SOUTHWARK.

CONTRACTS.

TENDERS are invited for the following CONTRACTS from the 1st day of April, 1905, to the 31st day of March, 1906 :—

1. Asphalte, Bitumen, Pitch, &c.
2. Ballast, Sand, &c.
3. Brooms and Brushes.
4. Coach Ironmongery.
5. Coals and Coke.
6. Disinfectants.
7. English Timber.
8. Foreign Timber.
9. Fodder (three months).
10. Granite (Broken).
11. Harness Materials.
12. Horse Hire.
13. Lime, Cement, and Bricks.
14. Linen Goods, &c.
15. Oils and Colours.
16. Packing Rope, &c.
17. Pitching and Paving.
18. Pipes.
19. Printing.
20. Sewer Ironwork.
21. Soaps and Soda.
22. Stationery.
23. Tools, Steel and Iron, &c.
24. Wheels, Tyres, &c.
25. Wood Blocks (Jarrah).

According to specifications, to be seen at the Town Hall, Walworth Road, S.E., any day between the hours of 10 a.m. and 4 p.m.

Tenders, duly signed, must be sent under cover, and endorsed "Tender for ——," and addressed to the Town Clerk, not later than 12 noon on Wednesday, February 15th, 1905.

The Council do not bind themselves to accept the lowest or any tender.

J. A. JOHNSON,
Town Clerk.

Town Hall,
Walworth Road, S.E.
27th January, 1905.

METROPOLITAN BOROUGH OF FINSBURY

CONTRACTS FOR SUPPLIES.

THE Finsbury Borough Council invite TENDERS for the SUPPLY of the undermentioned WORKS and ARTICLES :—

(1) FOR TWELVE MONTHS, FROM 31ST MARCH NEXT.

(a) Ballast, Sand, &c.
Brushes
Chandlery
Clothing, Boots, &c.
Disinfectants
Gasfitters' Materials
Lime and Cement
Paving Materials and Broken Granite
Sewer Ironwork
Smiths' Work
Stoneware Goods
Timber

(b) General Stores
Machine Broom Refills
Scavengers' Brooms

(2) FOR SIX MONTHS, FROM 31ST MARCH NEXT.
Fodder.

Particulars of the articles, &c., required, and forms of tender, may be had any Saturday from 10 to 12, and on any other day from 10 to 4, on application at the Borough Surveyor's Department, at the Town Hall, Rosebury Avenue, E.C, in respect of the articles specified in Paragraph No. 1 (a), and at the Superintendent's Office, 26, Wharf Road, in respect of those in Paragraphs Nos. 1 (b) and 2.

Tenders, marked on the outside "Ballast," or as the case may require, must be delivered to me, at this Office, not later than noon on the 6th February prox.

Only those tenders made upon the official form, and properly filled up and signed, and confined to the articles specified therein, will be entertained.

GEORGE WHITEHEAD PRESTON,
Town Clerk.

Finsbury Town Hall,
Rosebury Avenue, E.C.
21st January, 1905.

AGENTS REQUIRED in unrepresented districts for the Imperial Accident, Live Stock, and General Insurance Co., Ltd. Estd. 1878. Departments : — Personal Accidents, Carriage and Drivers' Accidents. Horse and Cattle Insurance. Claims paid £300,000. Address Mr. B. S. Essex, Manager, 17, Pall Mall East, London, S.W.

CLEAR WATER. — To be SOLD cheap, Bell's Improved Water Filter. Capacity 18 000 gallons per hour. Perfect order and condition, and can be seen working. Jas. Smith and Sons, Calder Wharfe Dyeworks. Dewsbury.

NOTES AND COMMENTS.

Paris and the Gas Supply.

THE Paris Municipal Council has decided to municipalise its gas supply at the expiration of the concession of the Paris Gas Light and Coke Company, which expires on the last day of this year. The proposal to convert the supply into a municipal service has passed the Chamber of Deputies, and a law authorising the city to borrow 120,000,000 francs for that purpose has been voted. The Senatorial Committee on the Bill, however, whilst admitting the principle of municipalisation, is opposed to the direct working by the city itself. The report of the committee says:—

> We are of opinion that the city should not be authorised to adopt the "Regie Directe" or direct management of the gas-works by the municipal authority scheme. Such a system, if adopted, must, in the case of certain administrations, become an instrument of political influence and electoral corruption, and this growing spirit of officialdom in everything will, if allowed to develop unchecked, kill what remains in us of civic strength and independence. Waste seems to be inherent to all undertakings which are directly managed by publicly elected bodies. This waste is almost invariably the consequence of neglectful management and irresponsibility, and this always results both in the public being indifferently served and in an increase of the cost of working.

The committee was evidently reporting at random when it made these remarks. It could not have studied the Board of Trade returns relating to undertakings in this country, which prove, not only that municipal gas is cheaper than company gas, but that the management is more efficient and economical. No complaints have yet been made that municipal gas enterprise in this country has become an "instrument of political influence and electoral corruption"; on the other hand, we find that this danger is much greater when the undertakings are in the hands of private companies. The other accusation—that of waste—is completely disproved by the official figures to which we have referred. The Paris Municipal Council estimates that by directly managing its own gas works it would turn over an annual nett profit of £720,000. The Senatorial report on the Bill denies this, and asserts that, as a consequence of the recent vote in the Chamber, and of the calculations of the chief gas engineer, the city could not expect to derive a larger profit than £424,000 per annum. The report goes on to say that the sum of 120,000,000 francs would be insufficient to carry out the city scheme, which comprises an all-round reduction in the price of gas to the consumer. It is therefore proposed that the city shall be allowed to borrow a sum of 100,000,000 francs only, so as to enable it to acquire the company's gas works and material, and that, having once acquired the works, it shall be for the city to decide whether it is best to farm out the supply for a number of years, or whether it shall come to an arrangement with the existing company whereby the latter should lease the municipal works on a concession which should comprise a decrease in the price of gas and remunerative payments to the city. The question that will at once strike those familiar with the unqualified success of municipal gas enterprise in this country is: why should not all these benefits be directly conferred by the municipality, which would thereby save the profits that would have to be got out of the transaction by the company?

Municipal Creches.

A CORRESPONDENT of an evening contemporary, who evidently thinks that a needed reform has only to be asked for, and it is conceded, writes as follows:—

> Why does not one of the borough councils take the "bull by the horns" and establish a municipal crêche, instead of wasting many words in expatiating on the benefits of such a step?
>
> Surely it is obvious that municipal crêches would make the domestic cares of poor, hard-working mothers much lighter, and would, doubtless, check the great infantile mortality in the metropolis.
>
> The L.C.C. has expressed itself in favour of the movement, so why are the borough councils lackadaisical?

The answer is a very simple one. The borough councils have not powers to establish municipal crêches, and when the Acton District Council applied for powers it was met by the Local Government Board with the cry of "No precedent," and its application was defeated. There is a precedent, however, at Glasgow, but it is not sufficiently on "all fours" to satisfy this particular Government Department. What is needed is legislation empowering local authorities generally to establish these institutions, if they so desire. It might take the form of an Adoptive Act, and there would then be no excuse for inactivity. As we pointed out last week, the Urban District Councils Association is pressing the subject upon the attention of the Government, and we hope that other associations will do likewise.

Works Departments.

MUNICIPAL Works Departments, and especially that existing under the London County Council, have not now the bad name that formerly attached to these concerns. Under the new management the L.C.C. institution is doing famously, and its success has impressed the most pronounced of its former opponents among the members of the Moderate party. The opponents of the Works Department at West Ham, too, have just received more than they bargained for in a report that has been prepared showing the results of the working of the Department since its commencement in 1901. The official figures constitute a complete vindication of the Department, and show that during the three years of its existence, so far from being a burden upon the rates, it has been the means of a saving of £3,332 17s. 6d. The figures may be summarised as follows:—

Architect's valuation of work completed.	Actual cost.	Difference of cost.	
		Below final valuation.	Above final valuation.
£167,530 2 8	£164,197 5 2	£5,392 15 10	£2,059 18 4
164,197 5 2		2,059 18 4	
£3,332 17 6		£3,332 17 6	

During the same period jobbing works, &c., have been executed to the extent of £113,771 17s. 8d., and upon this also a considerable saving must have been effected.

Tramways versus Railways.

IT is the fashion nowadays for railway directors to make complaints about the competition of tramways with railways; and this week we have had quite an avalanche of these lamentations. Curiously enough, it is not the tramways, as such, that are objected to; but the fact that local authorities own these tramways. How public ownership makes the position worse we are not quite able to see, for whether municipal authorities or private companies run tramways, the result is the same—a decline in the railway receipts and a consequent reduction in dividends. As business men, railway directors ought to prefer municipal tramways to company concerns, because in a great many cases the former produce profits which result in the reduction of rates. This so far from being a cause of complaint should be a source of satisfaction to the railways, which are constantly grumbling, like all persons in a similar position, at the large amount of rates they have to pay. Lord Claud Hamilton, the chairman of the Great Eastern Railway Company, who adds to his other activities that of membership of the Industrial Freedom League—an organisation originally formed, by-the-bye, for the purpose of pushing the interests of a tramway Trust—introduced

a transparent fallacy into the speech on this subject which he made on Tuesday. He said—

> As sensible men, we can find no fault with such tramways when they are promoted by public companies, but what we do complain of is the competition of municipal tramways, supported by the rates, to which the company is the chief contributor as a ratepayer.

Lord Claud Hamilton has evidently not studied with that care and attention he bestows upon his own railway figures the latest statistics concerning municipally-owned tramways. If he had, he would have found that in the majority of cases these tramways, so far from being supported by the rates, themselves reduce the rates.

How Tramways Reduce Rates.

LET us pursue this question a little more closely. Take first of all London, which we suppose is the principal criminal, though how the activities of the County Council unduly affect the traffic receipts of the Great Eastern is not quite clear. London during the six years ended March 1902 3, paid over to the rates from tramway profits £293,592. In addition to that, the Council reduced the debt to the extent of £246,591, exclusive of interest. Out of the proceeds from the sale of various property, such as horses, rolling stock, &c, it handed over £93,376 more towards debt reduction. Last year, owing to reconstruction and the consequent disorganisation of the system on the south side, the Council paid over nothing towards the reduction of rates, but it carried forward a credit balance to this year's account of £18,656. The Council has on the south side a renewals fund of £30,772. The concession of halfpenny fares means a clear gift of £100,000 a year to the passengers, and the additional labour advantages represent another £30,000 annually. It is evident that Lord Claud's argument does not apply to London. Now, at West Ham, where the Great Eastern Company is the largest ratepayer, the rates are already reduced this year by 1¾d. in the £ from tramway profits. So that the company is actually receiving an enormous financial benefit from that very competition against which its chairman complains. Had this enterprise been in the hands of the British Electric Traction Company, which founded the League Lord Claud Hamilton takes so much interest in, the £8,000 represented by the 1¾d. rate relief would have gone into the pockets of the B.E.T. Co. directors and shareholders, and the railway company would have received no benefit whatever. At East Ham the tramway profits in 1901-2 were £985; in 1902 3, £1,788; and in 1903-4, £1,948. Another municipal tramway operating in the Great Eastern sphere of influence is that at Lowestoft. It has only been open since July, 1903, and yet the accounts for the first 14 months show a gross profit of nearly £5,000; and, after all charges were met, there was a substantial balance to carry forward. No rate-aided tramways here, at any rate! The Yarmouth municipal tramways showed a deficit last year of £215, but as there was a profit of £534 the previous year there is not much to complain of. In each of these cases the profit is the nett profit, arrived at after the payment of capital charges—payments which the railway companies never have to make before distributing their dividends. Instead of indulging in fulminations against local authorities, railway directors should recognise the position. The tramways and other methods of street traction are going to monopolise the local traffic, and the railways will have to concentrate their attention upon the long-distance traffic. The man in the street is not going to hurry to a station and be bound by a time-table when his tramcar passes him every few minutes and conveys him cheaply and expeditiously to his destination. Railway companies should accept modern developments and prepare for them. There is plenty of room and opportunity for improved transit facilities yet.

League Gymnastics.

THE mental gymnastics of the writers of the Liberty and Property Defence League do not appear to have favourably impressed our readers. "It is surely simple common sense," writes a correspondent from Barrow-in-Furness, "that if you tap new sources of income, and make profits, you can relieve rates or provide other public benefits." The fact is apparently too obvious for the Liberty and Property Defence League. Another correspondent, writing from St. Helens, tests the question in an even more simple manner:—

> To the "man in the street," the fact that the rates of Liverpool are 7s. 4½d., and that 1s. in the £ has been provided out of the profits on the trading departments (trams, &c.), it will appear that but for the profits he would have had to pay 8s. 4½d. in the £, or that some of the benefits of policing (and this for the protection more especially of the life and property of the direct ratepayer), of sewering, of lighting the streets, providing baths, parks, reading rooms, and art galleries, &c., would have had to be dispensed with.

Our correspondent then very pertinently proceeds to ask whether the Liberty and Property Defence League advocates the abolition of any or of all of these things. "If so, the rates could be kept down, but he will never keep down the rates by abolishing municipal trading. The profits from trading help to pay for the unremunerative departments, besides the fact that the lot of the tram employees has improved very much under the Corporation. Give us plenty of municipal trading, and there need be no rates at all." Evidently Mr. McDougall's curious point of view is not generally appreciated. Still less is it shared, as, so far as we have been able to discover, not even the Industrial Freedom League is sympathetic.

Shall Companies Vote?

WE are glad that the London local authorities are declining to support the retrogressive action of the borough Council of Holborn in regard to companies and the right to vote. The Holborn authority, as our readers remember, wants to give companies votes in proportion to their rateable value—a proposal which we have shown would produce all kinds of undesirable complications in our local government system. The Battersea and Camberwell Councils have emphatically pronounced against the idea, and the Bethnal Green Law and General Purposes Committee similarly expresses itself in these terms—

> That the Council strongly dissent from the proposal of the Holborn Borough Council relative to the voting powers and rating of limited liability companies, &c., and express the opinion that there is no need to legislate for the object suggested by the Holborn Borough Council.

We hope the other borough councils will be equally decided on the question, as we understand that upon their attitude certain Parliamentary action may depend.

Official Advertisements.

METROPOLITAN BOROUGH OF STEPNEY.

CONTRACTS.

THE Council of the Metropolitan Borough of Stepney hereby invite TENDERS for CONTRACTS for One Year, from 31st March, 1905, as follows, namely:—

1. Supply and delivery of Brooms, Brushes, &c.
2. Supply and delivery of Tools, Implements, &c.
3. Sharpening of Tools.
4. Shoeing and Roughing of Council's Horses.
5. Supply and delivery of Cast Iron Work
6. Supply and delivery of Portland Cement.
7. Supply and delivery of Bricks, Lime, and Fire-Clay.
8. Supply of and Repairs to Harness.
9. Supply and delivery of Drainage Materials.
10. Supply and delivery of Timber.
11. Supply and delivery of Colours, Varnishes, Oils, and Sundries.
12. Supply and delivery of Oilman's Goods.
13. Supply and delivery of Wheelwright's and other Materials for Repairs to Carts, Vans, &c.
14. Squaring and Redressing old Paving Materials.
15. Supply and delivery of Disinfectants.
16. Removal of Dead Bodies to Mortuary.
17. Supply and delivery of Uniform Clothing.

Also Tenders for Contracts for the period from 31st March, 1905, to 31st March, 1908, as follows, namely:—

18. Hire of Horses, Driver and Carts, and Cartage of Rubbish, &c.
19. Supply and Delivery of Ballast, Sand, Shingle, &c.
20. Supply and Delivery of Paving Materials.

Also tenders for contracts for the period from 25th March, 1905, to 29th September, 1905, as follows, namely:—

21. Supply and delivery of Steam Coal.
22. Supply and delivery of House Coal.
23. Supply and delivery of Coke.

Persons tendering must submit the names and addresses of two substantial persons willing to be jointly and severally bound with them for the due and proper performance of their several contracts.

Contractors will be required at all times during the existence of their contracts to pay the trade union rates of wages as agreed to by the employers' association and trade unions, and as in practice obtain.

Contractors will also be prohibited from assigning or underletting their contracts without the written consent of the Council previously obtained.

Forms of tender, specifications, stipulations, and other conditions for items Nos. 1 to 14 inclusive, and items Nos. 18, 19, and 20, may be obtained on application to the Borough Engineer (Mr. M. W. Jameson), and forms of tender and specifications for items Nos. 15, 16, 17, 21, 22, and 23, upon application to the undersigned, at the temporary Municipal Offices, 15, Great Alie Street, Whitechapel, E., between the hours of 10 and 12 a.m., upon deposit of a £5 Bank of England note.

The deposit of £5 will be repaid upon receipt of a bona-fide tender, and return of the documents issued.

Tenders must be endorsed with a short description of the articles tendered for, and sent to the undersigned on or before noon on Saturday, 11th February, 1905.

The Council do not bind themselves to accept the lowest or any tender, and will not accept the tender of any person or firm who shall on any previous occasion have withdrawn a tender after the same has been opened, unless the reasons for the withdrawal were at the time satisfactory to the Council.

By order.

POOR LAW OUTLOOK.

Charges of Lax Administration have from Time to Time been made Against St. George's Union, Hanover Square. Special Inquiry and a Reply. Various Schemes for Emigrating Poor Law Children. Work Yet to be Done at Home.

Charge of Lax Administration.

FOR the last year or two the writer of the *Times* annual Poor Law feature—"The Legal Poor of London"—has passed very strong censure on the "lax administration" of relief by the guardians of St. George's, Hanover Square. Says the writer:—

> The guardians of the union, judging by their inaction, do not appear to regard the question as one of very great importance, which is rather surprising when there are serving on the board men experienced in Poor Law work like Mr. J. G. Talbot, M.P.

And one of the inspectors of the L.G.B. (Mr. H. Lockwood), in his statement, contained in his report for 1903-4, made some very striking comparisons in the administration of relief in St. George's and in Bethnal Green, each with a population of 129,000, and with "facts contributory to pauperism and distress" not dissimilar. But the total number of paupers, according to returns, is in the former union 4,042, and in the latter 2,990.

❦ ❦ ❦

Strong Remarks by Inspector.

THE L.G.B. Inspector holds that the pauperism of a given union is usually in no small degree a question of administration, and he went so far as to say in this particular case:

> It is difficult to avoid the conclusion that the extra 1,100 paupers in the rich union of St. George's in excess of those in the poor parish of Bethnal Green are the victims of lax administration rather than of actual poverty.

At last these attacks have met with response. At the last meeting of the Board a special committee appointed to consider the matter presented a report, stating that, "having fully discussed the question with Mr. Lockwood, we are of opinion that the charge cannot be sustained."

❦ ❦ ❦

Special Committee's Reply.

THE charge of lax administration related particularly to able-bodied paupers, and this special committee admits that at the present time there are about 600 inmates of the workhouse. This fact alone is highly significant, and an attempt is made to explain it away by showing that the guardians are in a difficulty, and that they will be unable to effect an improvement until they have got a workhouse with sufficient room for work to be performed, and a taskmaster who will make the men work. There was one striking suggestion in this report. The members of the special committee—

> Were of opinion that the best means of dealing with the question of indoor pauperism would be by an amalgamation of the three unions within the City of Westminster, whereby a scheme of classification could be put into force, and the workhouses belonging to the three unions utilised for the purpose.

But at the last meeting of the Board it was decided by 11 votes to 9 to omit this clause. As showing the remarkable views of Poor Law administration expressed in the lengthy discussion which followed the report, it was stated by one of the speakers (Mr. Everitt), who first drew attention to the matter, and at a former meeting criticised the articles in the *Times*, that "he thanked God there were still some people left who allowed sentiment and sympathy to actuate them." That is just the difficulty with many guardians. They regard sentiment and sympathy as before justice. If the heart runs away with the head the poor are, in the long run, bound to be the sufferers, because picturesque poverty and poverty with the "long tale" will get the benefit, while the more deserving cases of shrinking poverty will stand little chance of ever being known.

❦ ❦ ❦

The Farm Colony Movement.

A SITE of 1,300 acres at Hollesley Bay, near Woodbridge, Suffolk, has been secured by the Guildhall Central Unemployed Committee to provide work for the unemployed. The estate has been used as an agricultural college, and its buildings will accommodate over 1,000 unemployed.

❦ ❦ ❦

Treatment of the Children.

THERE has recently been a recrudescence of interest in the treatment of Poor Law children. It is beginning to be felt that the various methods adopted for their training—cottage homes, scattered homes, boarding out—though good, do not exhaust the possible methods of treatment. There are, for example, at the present time three distinct schemes of emigration being put forward. Beside that of Mr. Kinlock Cooke, put forward a fortnight ago, there is Mrs. Close's scheme and a movement by the Metropolitan Boards of Guardians. We have remarked more than once on the strange indisposition on the part of many guardians to let their children go from under their eyes.

❦ ❦ ❦

Mrs. Close's Scheme and the Mansion House Meeting.

THESE movements, therefore, are interesting and promising. The scheme proposed by Mrs. Close "for the benefit of pauper children and for the reduction of the rates" has aroused extraordinary differences of opinion. The outline of this scheme is known to our readers, and we think it one which should not be allowed to drop. Lord Crewe, Dr. Barnardo,

"RONUK" (SANITARY) POLISH FOR FLOORS.

Polishes, Preserves, and Purifies. *Prevents the Harbouring of Germs.*

Used in the principal Hospitals, also in the National Gallery, Tate Gallery, Hertford House, &c., &c.

Awarded Bronze Medal of the Royal Sanitary Institute.
Only Award ever granted to a Polish.

CONTRACT DEPARTMENT.

"Ronuk," Limited, make a Speciality of Polishing all kinds of Flooring. A Large Staff of Specially Trained Workmen is kept by the Company, and inquiries for Estimates for the first preparation or maintenance of any new or previously unpolished Floors will receive immediate attention.

CAUTION.—Customers should see that every package bears the Registered Trade Mark, as endeavours are made to substitute inferior articles on the ground that they are the same as "RONUK."

A Sample, with Full Particulars and Prices, will be sent Free to any Institution on application.

"RONUK," Ltd., Head Office and Factory, **Portslade, near Brighton.**

LONDON DEPÔT: 86, York Road, Lambeth, S.E. MANCHESTER DEPÔT: 285, Deansgate.

Mr. Albert Spicer, and others honestly think that the scheme is unworkable. His lordship—who, by-the-bye, did not seem to be present on Monday at this Mansion House meeting—thinks that the proposed Poor Law farm homes in Canada, though small, scattered, and undistinguishable from the ordinary Canadian farm houses, would carry the dreaded pauper taint.

❦ ❦ ❦

DR. BARNADO thinks it would be almost iniquitous to send children out at so early an age as three years and upwards. But this figure, we take it, was only mentioned tentatively. Mr. Albert Spicer thinks that if existing agencies could only be strengthened it would be better for the children and more economical than Mrs. Close's proposals. The undeniable fact, however, is that only two or three hundred Poor Law children are each year emigrated under existing agencies, and this number shows a tendency to fall away. Another important consideration is that at the present time only the strongest and healthiest children are sent abroad, while under Mrs. Close's scheme, which has received the sanction and promise of support by the Provincial Governments of New Brunswick and Nova Scotia, children in indifferent health could be sent to the bracing and healthy climate of the Dominion, and the guardians would have the option of taking back the best amongst them before they cease to be chargeable to the ratepayers. There was much difference of opinion at this meeting, but the Lord Mayor, who presided, declared that a motion in favour of the scheme was carried by a large majority. This ruling has since been questioned in some quarters.

Other Objections and a Reply.

❦ ❦ ❦

MEANWHILE something like two-thirds of the 42,000 Poor Law children in this country remain in our workhouses amongst the derelicts of humanity. We are glad to notice that the York Union is now making a move to get the children from that atmosphere. Eighteen months ago, in a special article on the outlook at York, by our Poor Law Commisssoner, this needed reform was strongly urged, as was the necessity for building a nnrses' home. Both matters, it is gratifying to notice, have now been attended to. At the last meeting of the Skipton Guardians it was unanimously decided to appoint a committee to formulate a scheme for taking the children out of the workhouse and putting them in cottage homes in the country. At the last meeting of the Salford Union the L.G.B. Inspector (Mr. H. Jenner Fust) complimented the guardians on the cottage homes which they had built for the children at Culcheth, near Warrington.

ELECTRICITY SUPPLY.

Conservation of Energy Looked at from a Financial Point of View. Words on Transformers. What may be Gained by their Use, and a Moral. The Position at Stafford and Bexhill as Shown by an Analysis of the Latest Reports. Rivalry Between Gas and Electricity.

TO those who disbelieve in the keenness of the competition between gas and electricity we would recommend a perusal of the Stafford accounts. During the past three years the quantity sold has gradually decreased, the maximum having been reached in 1902 with 245 803 units, and a figure of 180,145 units being the record for the last financial year. This is attribntable to sales by contract having dwindled until this item has disappeared. At the same time the lamp connections have grown, although slowly, so it may be that the contract sales represent some special class of business, of which no particulars are furnished in the accounts. The principal features of the accounts are:—

The revenue derived from sales of current, &c., amounted to	£2,879
And the working expenditure to	1,332
Leaving a gross profit of..	£1,547
Out of this sum the following requirements should have been met:—	
Interest on mortgage debt	£889
Instalments of principal repaid	963
Bonus to employees	15
Depreciation charged...	611
Total of capital and special charges..	£2,478
Less gross profit as above	1,547
Gross deficiency for year	£931

The figure given will be seized upon by critics, but it is unduly inflated by the charge for depreciation being made as an item of expenditure. In this respect it resembles the action of the Glasgow Corporation some year or two ago, when by reason of a similar charge being made the accounts were made to show a deficit instead of a surplus. In this instance the deficiency is nearly trebled by the treatment of the depreciation allowance.

❦ ❦ ❦

Stafford Details.

THE revenue, owing to the changes already referred to, was less than in the previous year by £218, and the capital charges greater by £57, but the expenditure was lower by £275, so that the loss, excluding the arbitrary item of depreciation, was reduced by £32. In face of a falling revenue, this result is one which is more satisfactory than might have been anticipated. The receipts were as follows:—

STAFFORD.	Units.	Yielding.	Per unit.
Private consumers took...	172,007	£2,694	= 3·759d.
Public lamps consumed...	8,138	182	= 5·367d.
Interim total ...	180,145	£2,876	= 3·832d.
Sundry receipts	—	3	= ·004d.
Revenue in all ...	180,145	£2,879	= 3·836d.
Units used on works ...	15,272	(The maximum load was 173 kilowatts.)	
Total accounted for ...	195,417		
Utilised on distribution.	36,194		
Total units generated	231,611		

The average received per unit has increased by ·642d., and the expenditure by ·138 l., while capital charges took ·567d. more, the difference of the first two items was ·504 l.; so the increase in the deficiency of ·063d. is easily explained. The sum received was taken up and allocated thus:—

	Amount.	Per unit.
Works cost	£1,002	= 1·335d.
Rates, taxes, and management	297	= ·396d.
Total cost	£1,299	= 1·731d.
Public lamp maintenance ...	48	= ·064d.
Gross cost	£1,347	= 1·795d.
Interest charges...	889	= 1·184d. } 2·467d.
Sinking fund and repayments	963	= 1·283d. }
Total actual cost of units sold	£3,199	= 4·262d.
Less nett deficiency for year...	320	= ·426d.
Revenue in all	£2,879	= 3·836d.

❦ ❦ ❦

Bexhill.

THE electricity supply department of the Borough of Bexhill has nearly completed its fifth year of working, and the accounts to March 31 last therefore cover the fourth year. Although the financial result was a deficiency of £731, the capital upon which interest and other charges had to be paid was partly unremunerative in consequence of a new boiler and superheater, a 300 kilowatt steam-generating set, and sundry other extensions having been carried out. An alteration to the switchboard was also paid for out of revenue. The policy of charging the lowest possible price has been consistently maintained, as it is considered that, although this may cause losses to be incurred for a time, it will undoubtedly encourage custom, with a steady growth in the business, and as all that is required to turn the deficiency into a surplus is an increase in output, the success of the undertaking is thereby ensured. The rate received is considerably less than at Eastbourne, Hastings, Folkestone, or Hove, the first two of which are municipal, and the latter two company, undertakings. The growth at Bexhill is sufficient indication of the success of the policy.

To Mar. 31st. Year ...	1901.	1902.	1903.	1904.
Units sold	107,700	231,734	293,404	358,635
Maximum load. ...	177 k.w.	223 k.w.	275 k.w.	326 k.w.
No. public arc lamps...	26	41	47	47
No. of public incandescent lamps ...	117	148	180	211

The revenue derived from sales of current amounted to	£6,500
And the working expenditure to	4,544
Leaving a gross profit of	£1,956
Out of this sum the following requirements should have been met:—	
Interest on mortgage debt	£1,430
Sinking fund and instalments repaid	1,257
Total capital charges	£2,687
Less gross profit as above	1,956
Deficiency for year	£731

❦ ❦ ❦

Revenue and Total Capital.

THE debit balance brought forward was £2,336, and as £975 was received from the rates, the amount carried forward was £2,092. The receipts were:—

BEXHILL.	Units.	Amount.	Per unit.
Private consumers took ...	235,537	£3,834	= 3·907d.
Public lamps consumed ...	123,098	2,254	= 4·394d.
Interim total	358,635	£6,088	= 4·074d.
Meter rentals	—	196	= ·131d.
Sundry receipts	—	216	= ·145d.
Revenue in all	358,635	£6,500	= 4·350d.
Units used on works... ...	12,835		
Total accounted for	371,470	(The maximum load was 326 kilowatts.	
Utilised on distribution ...	58,192		
Total units generated ...	429,662		

The amount received was taken up and appropriated thus:—

	Amount.	Per unit.
Works cost	£3,002	= 2·043d.
Rates, taxes, and management	1,014	= ·645d.
Total cost	£4,016	= 2·688d.
Public lamp maintenance ...	528	= ·353d.
Gross cost	£4,544	= 3·041d.
Interest charges	1,430	= ·957d. } 1·798d.
Sinking fund charges ...	1,257	= ·841d. }
Total actual cost of units sold	£7,231	= 4·839d.
Less deficiency for year ...	731	= ·489d.
Revenue in all ...	£6,500	= 4·350d.

The capital expenditure was covered by the following items:—

BEXHILL.	
Lands	£900
Buildings	7,808
Machinery	13,708
Accumulators	1,072
Mains and services	18,190
Meters	2,463
Electrical Instruments	68
Public lighting	2,187
Various	1,467
Total capital	£47,863

❦ ❦ ❦

Wasted Units.

IN these days of extremely economical generation, many details of station management are receiving attention which were passed by when decimal fractions of a penny could be ignored for a time. Take alternating supply for example. The magnetising losses are constant, and with a low load-factor represent a comparatively high percentage of the output. We do not overlook the products of inventive genius which have been tried only to be found wanting, but we do say that few instances can be cited to-day of transformers upon an alternating system being automatically connected and disconnected, to suit the varying conditions of the load. Some engineers who appreciate the importance of any losses which are continuous, and go on hour-by-hour, day-by-day, irrespective of the output, have made attempts to switch off such appliances as could be safely removed during the hours of lighter load. To leave this change to be done by hand is, however, to risk a great deal in districts subject to fog or variable demands due to one cause or another. At the same time, if no attempt be made to get rid of the units wasted in heating up the iron cores, the coal bill is allowed to take care of itself, and under such circumstances it will do so by showing a far higher average than will satisfy those who have to find the money to meet the expenditure. It is probable, therefore, that further attempts will be made to solve the problem of automatically controlling the number of transformers at work so as always to have those connected working at their best efficiency. Considering the extent to which self-governed mechanism is now employed, it is perhaps surprising that more has not been done in this direction already. The demand must, however, stimulate the supply, and as many engineers have by careful management inside their works brought the production of steam down to its lowest cost limit, and by careful selection of and attention to the steam utilising plant made it impossible to effect any large reductions in the coal bill by further improvements in the engine-house, the next thing will be to seek for and remove such sources of loss and degraded energy as exist on the distribution system.

❦ ❦ ❦

Old Transformers.

THE first thing that will be attempted is to displace old transformers by those of more modern make. The advances which have come about through greater scientific knowledge and the skill acquired by experience have led to the iron or stand-by magnetisation losses being cut down to a third of what was quite a fair average only a few years ago, and there are plenty of undertakings which could be made to pay if the transformers were modernised. Moreover, the change is not one which involves great expense; the older patterns of transformers, being liberally provided with copper in their windings, are worth intrinsically more than they were, owing to the condition of the metal market, and their scrap value being set against the cost of the change takes away many of its terrors. Another direction in which advantages may be reaped is the differentiation between such apparatus for power and for lighting. It is obvious that with a lighting load lasting only two or three hours out of the twenty-four, a transformer on a system where this predominates must be designed with a very small continuous (or iron) loss; but it then is lacking in the other valuable quality of a small copper (or maximum load) loss. If it is to be employed on a load which extends over the greater portion of the day and night, less attention need be paid to the iron losses, and more is given to the copper losses so as to minimise the latter. By combining the two types under the control of automatic appliances to interchange them at the proper time the advantages of each are derived, while their respective disadvantages are, if not eliminated, at least minimised. A small transformer with an inappreciable iron loss is provided for the load during such hours as it is small and non-productive, and a large one is exchanged for this when business is brisk and revenue-earning is the order (not of the "day," perhaps), but of the night. Amongst other gains, this large or small copper loss transformer "regulates" better, and the electrical pressure is, therefore, more uniform, giving the customer a better light and affording a more satisfactory supply. The moral of the tale is, let councillors never discourage an engineer who seeks to reduce the losses by modernising his transforming plant.

TRAMWAY TOPICS.

At Liverpool Halfpenny Fares Would "Seriously Jeopardise the Commercial Stability of the Undertaking." Proposed Convertion of the Municipal Tramways at Lincoln to Electric Traction. Deadlock to be Removed. Threatened Action Against Belfast Councillors who Possess Free Tramway Passes.

THE Birmingham Corporation is about to acquire another interest of the B.E.T. Co. in the city. It relates to the Trust's undertaking in the district of Balsall Heath, which became part of the city in 1891. The principal clause in the proposed agreement is:—"The Corporation to pay to the company £20,000 for (a) the lines of the Balsall Heath Tramway; (b) full satisfaction of their statutory liability in respect of the Balsall Heath system; (c) the concession stated in Clause 4." The purchase money is to be paid on Dec. 22, 1906, and the Corporation is to immediately lease the tramway to the company until that date, at a peppercorn rent. Clause 4, referred to in the first one, was as follows:—"Immediately on the execution of the agreement, the Corporation to be at liberty to enter upon the steam routes and horse routes in lease until December 31, 1906, for the reconstruction thereof, and to construct cross-over roads, increase or alter passing places, situation for loops, &c., and to make connections with junction to overhead equipments in accordance with a plan already signed by the managers." The committee recommends the approval of these terms, being satisfied that the cost to the Corporation would not be less if the leases were allowed to expire with no provision as to re-equipment, and that great public inconvenience will be avoided by ensuring an uninterrupted service when the transfer of control from the company to the Corporation takes effect in January, 1907.

❦ ❦ ❦

Spen Valley Light Railway.

THE formal notice of the British Electric Traction Company of its intended application to the Board of Trade for sanction to transfer the Spen Valley Light Railway to the new company, the Yorkshire (Woollen District) Electric Tramways, Limited, was this week submitted to the Heckmondwike District Council. It was reported that the notice has already been considered by the Law and Parliamentary Committee, which saw no reason for urging any objection at this stage.

❦ ❦ ❦

Liverpool and Halfpenny Fares.

THE general manager of the Liverpool Corporation system (Mr. C. R. Bellamy) has issued a report dealing with the question of halfpenny tram fares generally, and cheap fares for workmen before 8 a.m. The town clerk of Bootle wrote to the Tramway Committee some months ago suggesting halfpenny fares within that borough. The receipt of this letter led to an instruction to report upon the question as applicable to Liverpool as well as Bootle. Mr. Bellamy says that the advantages of the system of 1d. fares in vogue in Liverpool are that it is readily understood, is the least anomalous of all systems, and reduces the ticket issue and checking to a minimum. In Liverpool, with a penny stage averaging two and one-third miles, it had been shown to be commercially sonnd to carry passengers over the whole route lengths at that rate, and Mr. Bellamy says he is unable to accept the responsibility of advising the committee to further increase the facilities at present afforded to the long-distance passenger.

❦ ❦ ❦

Would Halfpenny Fares Pay?

DEALING with halfpenny fares, Mr. Bellamy refers to the experience of Glasgow and Sheffield, and the probable effect of the introduction of halfpenny fares in Liverpool. He says that, out of 91 per cent. of penny passengers, 30 per cent. rode less than a mile and 30 per cent. less than one and a half miles. Of the latter, it is fair to assume, says Mr. Bellamy, that with one-mile stages at least half the passengers in that group would take advantage of them by walking to the mile limit. It may, therefore, be reasonably calculated that under such stages 45 per cent. of the present penny passengers would pay halfpenny fares. On the present revenue, this would mean a reduction of £95,000 per annum.

❦ ❦ ❦

A Big Loss in Revenue.

TO provide for this loss of revenue at least 45,000,000 additional halfpenny passengers would be necessary, against the 9¼ millions which it is assumed would be obtained. There would, therefore, be a deficit of nearly 36,000,000 passengers, representing a loss in revenue of £75,000. To put the case most favourably for halfpenny fares, and assuming that in Liverpool the traffic figures would rise to those of Glasgow, there would be an increase of 23,000,000 passengers, which would leave a deficit of 22,000,000 passengers, representing a loss of revenue of £45,800, which would further be increased by about 20 per cent. in the operating charges due to the increased number of passengers, amounting to £68,000, and seeing that the service would also require to be increased by 20 per cent., involving the addition of 80 cars, there would be a further capital expenditure required of £44,000, which would increase the interest and sinking fund charge to the extent of £2,640.

❦ ❦ ❦

Against Halfpenny Fares.

HAVING regard to all considerations, Mr. Bellamy is strongly of opinion that the introduction of halfpenny fares would seriously jeopardise the commercial stability of the undertaking. The only change that could be usefully and safely recommended would be, he says, the institution of three-halfpenny fares, as it was probable a large number of passengers at present walk to or from the penny stage ending. Possibly a mile for an additional halfpenny added to the principal existing trunk stages would accommodate a large number of citizens, and add to the revenue.

❦ ❦ ❦

Workmen's Fares.

REPORTING on cheap fares for workmen before 8 a.m., Mr. Bellamy points out that the statutory fare for workmen was a halfpenny per mile, and that the average passenger charge in Liverpool is the lowest in the kingdom, ·42d. per mile, Glasgow coming second with ·45d., and Sheffield third with ·50d. These advantages "apply with greater force to Bootle." Mr. Bellamy suggests that the committee should refrain for a time from experimental concessions which it would be difficult to recall, and which might prove disastrous, "having regard to the threatened competition with electric tramways which has already commenced in some towns, apply the moderate available surplus to a reduction of the heavy capital obligations, which in Liverpool are more onerous by reason of the debt on the purchase of the horse system and the capital charges on the horse lines."

❦ ❦ ❦

Lincoln Deadlock.

THERE is reason to believe that the deadlock in connection with the conversion by the Corporation of Lincoln of the local tramways to the electric system has now been removed. The difficulty arose with the Board of Trade, because the special Act of Parliament obtained several years ago provided for the laying of a gauge of 3ft. 6in., and the Electricity Works Committee subsequently decided to adopt the universal gauge of 4ft. 8½in. It was feared that a new Act of Parliament would have to be obtained, necessitating great delay as well as further expense, but the Board of Trade has now intimated that the existing Act is sufficiently elastic to meet the case, provided that a space of 9ft. be kept between the outer rail and the edge of the kerb. This it appears, can be done throughout the contemplated route, excepting at one point, where it will be necessary to slightly reduce the width of the footway.

❦ ❦ ❦

Newcastle Managership.

AT a special meeting of the Tramways Committee of the Newcastle Corporation on Monday, the final selection of candidates for the local tramway managership was made. The following were selected:—

Mr. E. Hatton, Salford.
Mr. G. Connaty, Birmingham.
Mr. H. E. Yerbury, Sheffield.

It was decided that the chairman, vice-chairman, and Mr. Cail go to the places where the selected candidates are now engaged, and report.

❦ ❦ ❦

Croydon's Proposed Extension.

A POLL of the electors of Croydon was taken on Tuesday in reference to a clause in the Corporation Bill respecting a proposed extension of the tramway system to Upper Norwood and the provision of omnibuses, at a cost of about £150,000. The principal opponents were Sir William Treloar and other residents at Upper Norwood, and the Croydon Chamber of Commerce, the ground of objection being that the new lines would be unremunerative. There voted for the extension 3,523, and against 3,435.

❦ ❦ ❦

Tramcar Passes: A Threat.

THE Belfast City Council, at its last monthly meeting, voted its members free passes on the newly-acquired municipal tramcars. The town clerk (Sir Samuel Black) on Tuesday evening received a letter from a firm of Belfast solicitors intimating their intention, on behalf of certain ratepayers, to institute immediate legal proceedings in the Court of Chancery against all members who have accepted and used the passes. The solicitors further intimated that they will withhold the writs until the following day, to give the City Council an opportunity of rescinding what they describe as a most illegal resolution.

❦ ❦ ❦

Stealing Tramway Tickets.

TWO little boys, named Lawson and Steele, were charged at the Liverpool County Magistrates' Court, on Tuesday, with having on Sunday evening stolen 400 penny tram tickets, belonging to the Liverpool Corporation. The tickets were taken from the conductor's box, it was alleged, and were probably taken for the purpose of competing for a prize of £20 offered by a periodical for a collection of tram and 'bus tickets the numbers of which when added together made the highest total If the tickets had not been found the conductor would have had to pay their face value. The boys admitted the offence, and stated that they took the tickets for the purpose of getting the prize. They also admitted stealing a box containing 900 to 1,000 tickets earlier in the same evening at Bootle. They were discharged with a caution.

❦ ❦ ❦

Bootle Tramways Scheme.

DURING the past week a recommendation authorising an application for a Provisional Order to construct two tramway lines in Bootle has been put before the Corporation by the Parliamentary Committee. The proposed lines, when connected with the Aintree and Fazakerley line, will be worked by the Liverpool Corporation in conjunction with the existing tramways.

❦ ❦ ❦

North London Tramways.

AT the meeting of the London County Council on Tuesday, a tender, amounting to £27,925, of Messrs. John Mowlem and Co., Limited, was recommended for the execution of

the roadwork and platelaying in connection with the construction for the nndergrouud condnit system of electrical traction of North London tramways, anthorised by the London County Tramways Act, 1900, from Clerkenwell Road, via Rosebery Avenue and St. John Street Road, to the Angel public-house, Islington. It is proposed that in the first instance the lines shall be worked for horse traction, although it is desirable, in order to avoid the expense and inconvenience which wonld be caused by a second disturbance of the thoroughfares within a comparatively short time, to construct the tramways at once for electrical traction. The Highways Committee of the Council has arranged, however, that, until such time as electrical traction shall be adopted, the conductor rails shall not be placed in the tramways conduits; and it has also been thought desirable to construct certain of the junctions with existing tramways for horse traction only. The tramways when completed will be worked by the North Metropolitan Tramways Company in conjunction with the Council's (Northern) Tramways.

Contractors for the Work.

IT was a further recommendation by the Highways Committee at the last meeting of the London County Council in connection with these tramways that Messrs. John Mowlem and Co., Limited, be allowed to sub let to the undermentioned firms (or to such other firm or firms as might be approved hy the engineer under the contract) the following portions of the work:—(1) To the Hadfield Steel Foundry Company, Limited, of Sheffield, the manufacture of the special work, consisting of points, crossings, &c.; (2) to the Anderston Foundry Company, Limited, of Middlesbrough, the manufacture of cast-iron yokes, road boxes, and covers; (3) to the Associated Portland Cement Manufacturers, Limited, and Messrs. Martin, Earle and Co., the supply of cement; and (4) to Messrs. Bayliss, Jones and Bayliss, Limited, of Wolverhampton, the manufacture of the tie-bars and bolts.

Proposed Extension at Derby.

ON Wednesday a motion was before the Derby Town Council to the effect that the Tramways Committee be authorised to proceed with the making of the requisite arrangements for the construction of electric tramways from the Market Place to the borough boundary on Kedleston Road, including the necessary extension of the car sheds and the provision of additional cars. Several members asked for fuller particulars as to the cost, &c., of the extension, and, after some discussion, the resolution was withdrawn for one month.

Brighton Municipal Trams.

IN an article on the completion of the third year's traffic on two of the routes of the Brighton Municipal tramways, the *Sussex Daily News* shows that, although the total of 4,769,820 passengers exhibits a decrease of 134,457 on the number carried the previous year, the re-organisation and increase of fares have led to a revenue of £20,766 11s. 10d., or an increase of £332 2s. 1½d.

Tramways and Light Railways Association.

THE annual meeting of this association will be held on Friday next in the rooms of the Society of Arts. At these rooms Mr. G. A. Trube (member) will read a paper on "Brakes," at 8 p.m., on Thursday, February 23. By kind permission of Mr. Clifton Robinson, the members of the association will be shown over the works of the London United Tramways on Wednesday next. In the official circnlar for February a full report is given of the paper read by Mr. H. M. Sayers, M.Inst.C.E. (memher), on January 13, and of the discussion thereon. The visit to the Central London Railway on January 16 is also described.

THE Lord Mayor of Leeds (Mr, Robert Armitage), recognising the pressure of the times, has discarded for the present the customary civic receptions to citizens. He is, instead, issuing invitations to an entertainment to people in receipt of out-door relief in the Leeds Union. Tickets to the number of 6,150 are being distributed.

INDUSTRIES WANTED.

THE NEED OF NORTHAMPTON.

COUNCILLOR PITTS has given notice of the following resolution at the meeting of the Northampton Town Council on Monday last:—

> That, in view of the large number of unemployed in Northampton, the difficulty of obtaining situations with private employers, and the great amount of municipal work that requires doing at the present time, this meeting of the Council instructs the surveyor to reinstate the men discharged from the service of the Corporation last week. The Council further instructs the surveyor to discharge no workmen without the permission to do so from the Highway Committee.

THE Mayor of Halifax (Alderman E. Robinson) on Wednesday started a new generating set at the Corporation electricity works, which has been provided at a total cost of £6,631. Alderman Hey stated that this brought up their equipment to 8,000 horse-power, with a capacity of 4 500 kilowatts. They had now only a margin of one engine over the maximnm demand. If the rate of consumption increased as it had done hitherto they would before very long be compelled to extend their plant still further. The new engine was given the name of "Enoch Robinson," as a compliment to the Mayor.

COUNTY BOROUGH OF SUNDERLAND

ELECTRICITY DEPARTMENT.

TO MAKERS OF THREE-PHASE HIGH TENSION ELECTRICAL MACHINERY.

THE Corporation of Sunderland are prepared to receive TENDERS for the SUPPLY of four 250 k.w. Synchronous Three-Phase Motor Generators.

The specification and form of tender can be obtained on application to the Borough Electrical Engineer, Mr. J. F. C. Snell, M.Inst.C.E., at his Office, Town Hall, Sunderland, and on payment of a deposit of one guinea (£1 1s.), which will be returned on receipt of a bona-fide tender.

Sealed tenders, addressed to the "Chairman of the Electricity and Lighting Committee," Town Hall, Sunderland, must be delivered at my Office not later than 12 o'clock noon on Friday, the 24th day of February, 1905. Tenders to be endorsed "Three-phase Motor Generators."

The Corporation do not bind themselves to accept the lowest or any tender.

FRAS. M. BOWEY,
Town Clerk.

Town Hall,
Sunderland,
6th February, 1905.

COUNTY BOROUGH OF SUNDERLAND

THE Corporation are prepared to receive LOANS of £50 and upwards on security of the Rates of the Borough, at six months' notice or for a fixed period.

For further particulars apply to Haswell Brown, Borough Accountant, Town Hall. Sunderland.

13th December, 1904.

WILLESDEN URBAN DISTRICT COUNCIL.

FOR SALE.

VERTICAL BOILER, WASHINGTON LYON DISINFECTOR, AND LAUNDRY APPARATUS.

THE above Council, having recently erected a new Steam Laundry in connection with their Isolation Hospital, are desirous of disposing of the FITTINGS in the old Laundry, including a Vertical Boiler (7ft. by 3ft. cyclinder, 5 h.p.), Washington Lyon Disinfector with accessories, Benham Hot-Water Cylinder, Bradford Hand-washing Machine, vowel type, with Wringer attached, Kitchen Range, &c.

A list of the various articles, which are in good condition and can be inspected by appointment, will be forwarded on application by proposed purchasers to the undersigned.

By order.
STANLEY W. BALL,
Clerk to the Council.

Public Offices,
Dyne Road,
Kilburn, N.W.
1st February, 1905.

DISEASE FIGHTING.

Manchester has Opened a New and Important Laboratory of Public Health for the Study of Diseases, their Causes and Prevention. How Public Authorities Benefit by the Development of this Branch of the Manchester University. A Retrospect.

IN the opening of a new Public Health Laboratory Manchester now possesses one of the most important institutions of its kind in the north of England. The work conducted in this branch of the University of Manchester was initiated ten years ago at the Owen's College, and has met a distinct want in Manchester, Salford, and about 80 other sanitary districts, mostly situated in the counties of Lancashire and Cheshire. These districts have used the laboratory either permanently or occasionally.

An idea of the enormous extent of the work is gained from the fact that the aggregate population served amounts to between four and five million persons, but of these about one and a half million should be subtracted as being under authorities which have only occasionally required the services of the laboratory. The number of official reports alone issued during five years exceeds 20,000, without counting a large number of unofficial reports or consultations given by the director (Professor S. Delépine, M.B., B.Sc.) to authorities without any charge being made. Advice so given has often been of use in preventing unnecessary expenditure.

THE MUNICIPAL RESEARCH LABORATORY.

How this work has grown from small beginnings to its present important position is worth outlining before holding up the new building as an example to other large towns. The position taken by bacteriology is fairly well understood at the present time, and several important provincial towns, such as Liverpool, Sheffield, Birmingham, Aberdeen, Edinburgh, and Glasgow, have been provided since 1897 with more or less extensive and costly laboratories for the prosecution of bacteriological and chemical research applied to public health, and for the teaching of public health. The cost of these laboratories has been covered, partly by private donations, partly by municipal grants, and to a slight extent by fees. This Manchester bacteriological laboratory was the only one in the midst of a very populous district. Originally it was intended solely for teaching work, and was fitted and endowed accordingly. In 1891 the management could not appeal to authorities or to the public on the ground of established facts, and it had, therefore, to commence without assistance. But it began to be resorted to with increasing frequency by local authorities for the purposes of research work, and so in 1901 the Council of the College established the Public Health Bacteriological Laboratory as a special department, with Professor Delépine as director. At the same time an advisory committee was appointed, composed of representatives of county and municipal authorities and of the College and certain distinguished men interested in the development of public health laboratories.

The work of the department has been carried out by the director, three permanent medical assistants, three medical assistants, and a secretary. There are, in addition, three laboratory servants. Each sanitary authority desiring public health investigation makes a formal application to the director, which is submitted by him to the Council of the University for approval. The application states that the authority wishes to have the benefit of the facilities provided for, say, the diagnosis of typhoid fever, diphtheria, tuberculosis, or for the examination of water, milk, and various products as may be arranged from time to time. For these services a scale of fees exists.

During the ten years previous to 1903 over 250 medical men, veterinary surgeons, chemists, and agricultural teachers worked in the pathological laboratories with the object of acquiring a practical knowledge of bacteriology or of carrying out original research. Of these about 35 only attended short post-graduate courses bearing upon clinical bacteriology. The other 215 took advanced courses or entered as research workers. Among these there were more than 100 candidates for various diplomas in public health, and who, consequently, were also taking courses of chemistry as applied to public health. Several of these gentlemen have entered the pathological laboratory for more than one course; the total number of entries during the last 10 years being about 350. The income from this source has been on an average £120 a year—a sum insufficient to cover the teaching expenses. Some of the research workers entering the pathological department have done work which had no

bearing on public health, the work being connected with morbid anatomy. Of the laboratory students less than 20 have preferred to work at anatomical subjects; all the others have chosen to take up some bacteriological subject. The great work, therefore, which was the teaching of subjects connected with public health, has rendered a distinct service to the district generally, and to the local authorities in particular.

The rapid increase of the work of the department soon rendered it important that further accommodation should be obtained outside Owen's College—now the University of Manchester. In 1902, therefore, the laboratory was removed to what is known locally as the Stanley Grove Estate, departments being provided for research work as well as for the teaching of public health, bacteriology, and chemistry. In consequence, however, of the decision of the trustees of the Royal Infirmary to rebuild the Infirmary on the estate, it again became necessary to transfer the laboratory to another site. The buildings which have now been opened are in close connection with a new Infirmary in York Place, and it will thus be possible to co-ordinate an important branch of the pathological work at the Infirmary and at the University, and to avoid any unnecessary duplication. Of the £13,000 which the laboratory buildings and the site have cost, £6,000 has been contributed by the Board of Management of the Infirmary as compensation for displacement and in consideration of the selection of the rather expensive site close to the Infirmary. A gift of £2,000 has also been received from a friend of the laboratory. There remains a debt of about £5,000 upon the institution.

DR. A. SELLERS. DR. F. J. H. COUTTS.
DR. J. R. CARVER. PROF. SHERIDAN DELEPINE. DR. E. J. SIDEBOTHAM.

The new laboratory, opened by Mr. W. Crossley, is a plain and unpretentious building, yet admirably adapted for the purpose which it is intended to serve. Professor Delépine, who has planned the laboratory, has kept steadily in view the supreme importance of providing airy and well-lighted apartments in which the delicate work of the laboratory may be carried out effectively. There is not a room of any importance in the building which has not a range of windows running along its whole length. The laboratory faces north and south, but the main entrance is at the east end. Opening off the entrauce hall are, on the left, the caretakers' quarters, and on the right the clinical pathology laboratory, to be used in connection with the Royal Infirmary. Beyond and on the north side of the main corridor are the bacteriological class-room, a series of special research "cubicles," the general research room for the use of public authorities, and a preparation room. On the south side are a large chemical laboratory, a dissecting room, and various store-rooms and experimental rooms. On the first floor are rooms for the use of the director, the secretary, and the staff, together with a library and a large public health museum. The absence of a properly equipped museum has been long felt to be a disadvantage, and it will prove to be a very useful addition to the resources of the laboratory. One part of the new buildings has been given the name of the "Municipal Research Laboratory."

The tender of Messrs. W. Southern and Sons for the erection of the structure was accepted, and considerable assistance was given by that firm in helping, in the way of economy, in the demolition of the old laboratory and the building of the new.

The main objects of the work to be carried on in this new institution can be summarised under three general heads—(1) the continuous study of the conditions which are liable to cause disease in this country, so as to improve our methods of prevention; (2) the assistance of public authorities and medical profession in the diagnosis of obscure cases of disease; (3) the instruction of medical men, chemists, and veterinary surgeons who wish to devote themselves to public health.

MUNICIPAL ANNIVERSARY.

THE AMBITIONS OF WILLESDEN.

WILLESDEN, the largest urban district in England, celebrated the 30th anniversary of autonomous life this week. Anciently described as "Wilsdon, near Edgware," it was in February, 1875, that the first meeting of the Local Board was held at "White's Hotel," Brondesbury. Then Willesden had a population of 18,000, with a modest expenditure of £10,604; now the population exceeds 132,000, with an outlay last year of £287,203. The rateable value then was £94,761, and now £732,138. It is interesting to note that the present surveyor, Mr. O. Claude Robson, was appointed in March, 1875, just a month after the new order of things had been established. Mr. Stanley W. Ball was appointed clerk in 1896, but was the former clerk's assistant.

At a meeting of the District Council on Tuesday night, Mr. Biddiscombe moved that, as the natural outcome of the resolutions passed by the Council in favour of incorporation, the clerk be instructed to call a meeting of the Incorporation Committee.

Mr. Pincombe wished to move, as an amendment, that the Middlesex County Council be asked to consider the question of creating a number of boroughs like those created in London; but this was ruled out of order, as was also a proposal to ask the London County Council to make Willesden one of the London Corporations.

The motion came on after a three hours' meeting, when several members had left, and the voting for Mr. Biddiscombe's motion was equal—five to five—and it consequently dropped, the chairman refusing to vote. Mr. Biddiscombe said he would bring his motion up again.

TOWN CLERK OF GLASGOW'S FAREWELL.

THE Town Clerk of Glasgow (Mr. J. G. Mouro), who is retiring from municipal service, attended a meeting of the Glasgow Corporation for the last time in his official capacity last week. The Lord Provost—Sir John Ure Primrose—in the course of remarks expressing his sorrow at the retirement, said they all looked back—many of them for a longer period than others—on a career of 36 years that had been full of honourable record of faithful service rendered to the Corporation. It was a full record of faithful service, and it was full of perfect courtesy extended to every member of the Corporation; and he personally would say that while Mr. Monro acted as town clerk he had the most valued and perfect assistance from him that any occupant of the chair ever had. All desired that when Mr. Monro retired he would have many happy and prolonged days, and with the recollection that they would cherish his memory as one who worked with them faithfully, honestly, and well. Other speakers expressed regret at the loss of so able an official, and Mr. Monro, who was warmly received, expressed his thanks for the kind expressions.

PRIZES FOR CLEANLINESS.

NOVEL SANITARY SCHEME OF THE BELFAST CORPORATION.

WITH the object of more effectually combating the present smallpox outbreak and preventing the spread of infectious diseases in Belfast, the Public Health Committee of the city has adopted the somewhat novel scheme of offering prizes to the occupiers of small houses the rent of which does not exceed 4s. weekly. The prizes consist of allowances to cover rent for specified periods, and these will be awarded to the competitors who keep their houses, yards, and premises, including furniture, fittings, utensils, and windows, the cleanest and in the most sanitary condition between certain given dates. The author of the scheme is Mr. Robert Meyer, chief clerk of the Corporation.

The circular which has been issued by the Corporation in connection with the matter is as follows :—

COUNTY BOROUGH OF BELFAST.

PUBLIC HEALTH DEPARTMENT.

PRIZE COMPETITION.

For the Occupiers of Houses in Belfast, let at weekly rents not exceeding 4s., who shall keep their Houses, Yards, and Premises, including furniture, fittings, utensils, and windows, cleanest and in the most sanitary condition during the period 1st March till 31st December, 1905.

1st PRIZE.—52 weeks' rent to be paid to the landlord or landlord's agent, entitling the winner to the free occupancy of the same house during the year 1906.

2nd PRIZE.—26 weeks' rent, to be paid as above.

3rd PRIZE.—13 weeks' rent, to be paid as above.

CONDITIONS.

1. The house to be occupied from the 1st March, 1905, till 31st December, 1905, by the competitor, who must be either a married man living with his wife and family; or a widower, living with his family; or a widow, living with her family.
2. The number of occupants during the entire length of above period to consist of not less than five, all of one family.
3. The house to be occupied by one family *only*.
4. The officers, male or female, of the Public Health Committee to have access to every portion of the house and premises any day (Sundays excepted), between the hours of 8 a.m. and 8 p.m., for the purpose of inspection.
5. The term "house" in these conditions includes yard and premises comprised in the letting.
6. The officers of the Department to inspect the house, &c., of each competitor at least ten times in the ten months, at irregular intervals, with not less than one inspection each month, and report on its condition by filling up the official report form.
7. The reports to be dated and signed by the inspecting officer, and deposited with the assistant executive sanitary officer.
8. The assistant executive sanitary officer shall present the reports and a summary thereof to the Public Health Committee on Thursday, 21st December, when the Committee shall award the prizes, and the Committee's decision shall be final and be subject to no appeal whatsoever.
9. Entrance fee sixpence.
10. Entrance forms and copy of the conditions to be had on application to the Assistant Executive Sanitary Officer, Public Health Office. The forms to be signed by the competitor and countersigned by the landlord or landlord's agent, and deposited with the Assistant Executive Sanitary Officer before 1st March, 1905.

February, 1905.

All that competitors in this novel competition have to do is to fill up the following form :—

ENTRANCE FEE, 6D.

COUNTY BOROUGH OF BELFAST.

Public Health Department. Dwelling House Competition.

I,....., of ....., being the tenant of said house, do hereby desire to enter the competition for the occupiers of houses let at weekly rents not exceeding 4s., who shall keep their houses, yards, and premises, including furniture, fittings, utensils, and windows, cleanest and in the most sanitary condition during the ten months to end 31st December, 1905, on the terms of the within conditions, and I declare that the rent I pay for this house is.....per week.

..... *Tenant.*

..... *Landlord or Agent.*

Dated this.....day of February, 1905.

FOSTERING A TOWN'S TRADE.

DROITWICH AND ITS INDUSTRIAL DEVELOPMENT SUB-COMMITTEE.

STRIKING RECOMMENDATIONS.

FOR some time past Droitwich, with other English towns, has suffered considerable depression in trade. Many towns, like many individuals, suffer depression and decline without making an effort to renew life. But not so Droitwich. Last autumn a town's meeting was called, and it appointed a Town's Improvement Committee, to which was entrnsted the consideration of means whereby the bathing and other industries of the town conld be improved. Two sub-committees were subsequently elected—one to suggest means for the improvement of the bathing industry, and the other having for its object the introduction and development of new industries. The Baths Committee has now recommended, *inter alia*, additions, alterations, and improvements at the baths.

But still more interesting is a special report of the Industrial Development Sub-committee. In this the committee states it is advised that if small holdings could be acquired there wonld be plenty of demand for them, and that their establishment in the district would lead to the development of labour. In its conclusions it was guided by the advice of the gardening instructor for the Worcestershire County Council (Mr. J. Udale), who had reported that the profitable nature of market gardening was specially demonstrated at Evesham. Droitwitch was a good centre for the purposes of distribution, and the soil, subsoil, and meteorological conditions of the neighbourhood were suitable for the profitable growth of fruits, flowers, and vegetables. Returns of crops under normal culture might be anything between £30 and £60 per acre, and nnder abnormal cultivation some crops gave a return of from £60 to £120 per acre. Two hundred and fifty acres of market gardens, giving an annual average return of £40 per acre, would cause a circulation of £10,000 per annum. He had within the past year received inquiries for more than 50 acres of land for market gardening purposes.

This sub-committee has also had under consideration the question of introducing the basket-making industry into the town; and, on the advice of an expert in the trade, has unanimously come to the conclusion that a basket-making business could be established with every prospect of success. These recommendations have been approved by the Improvement Committee, which decided to take steps to acquire or rent, on reasonable terms, from 50 to 100 acres of land for small holdings.

"TO SAVE THE BABY."

NEW PLAN FOR BERMONDSEY.

BERMONDSEY Borough Council is about to embark npon an interesting scheme with the object of lowering the high rate of infantile mortality in its district. In his last annual report, the medical officer (Dr. R. K. Brown) pointed out that while the general death-rate showed a steady decline, the fignres of infantile mortality, both in Bermondsey and the country generally, did not point to a similar conclusion.

Dr. Brown further explained that the majority of deaths at this age could be attributed more or less directly to gastro-intestinal disorders, largely, if not solely, traceable to improper feeding. As one remedy for this state of matters, it was recommended that mothers should have systematic instructions on infant feeding.

Dr. Brown has therefore drawn up a series of these, and suggests that they should be printed on stiff cardboard, so as to last. The question of the best method of having them distributed to mothers has been under consideration, and the first one which occurs is distribution by the registrars of births, or by making an arrangement whereby they would supply the council with the names and addresses of infants registered, by which method it would be responsible for each mother receiving a copy. From inquiries made it seems that children are generally registered within about five weeks of birth, which delay it seems to the medical officer is a drawback, becanse in this period a good deal of mischief may be done.

The registrars are willing to distribute or supply the addresses at one penny each. The cost would be about £18 per annum.

Another way, either alone or in conjunction with the above, would be to supply each midwife and doctor practising in the borough with a certain number of these cards. It would be advisable for the midwives to give these cards in all cases in which they attend, since their practice would be amongst the poorest classes, and those in which the mothers are most in need of instruction. The doctors might be asked to give them in those cases in which they think such instructions would be nseful. The addresses of the midwives practising in the borough are now or will be shortly available, since the London Connty Council, owing to the new Midwives Act, will have to keep a register. Dr. Brown is afraid, however, that this method would not prove reliable in actual practice.

Organisations in the borough which employ district visitors, nurses, &c., might also be pressed into service for the distribution of these instructions, and in many of these conld be accompanied by further verbal recommendations. This is pre-eminently a work in which the services of one or two female sanitary inspectors would prove most useful.

In order, however, that the present children in the borough may benefit by these instructions, each family in the borough should be supplied with one of these cards immediately they are ready.

Dr. Brown's circular is entitled "Instructions on the feeding and care of infants and young children," and contains some most valuable information for mothers. The first sentence in it insists upon the superiority of natural over all other forms of feeding, and the circular goes on to advise the best artificial means in case natural feeding is not possible. Dr. Brown includes the following "feeding-table," which is of exceptional interest :—

Age of child.	Milk.	Barley Water.	Total amount each feed	No. of feeds in 24 hours
	Tablespoonfuls.			
During first fortnight	1	2	3	10
,, second ,,	2	3	5	9
,, second month	2½	3½	6	8
,, third ,,	4	4	8	7
,, fourth ,,	5	4	9	7
